An even more striking illustration of the upgrading of a limited agreement into a *de facto* military obligation is provided by the series of agreements negotiated over the last sixteen years for the maintenance of bases in Spain. Initiated under an executive agreement in 1953, the bases agreement was significantly upgraded by a joint declaration issued by Secretary Rusk and Spanish Foreign Minister Castiella in 1963 asserting that a "threat to either country" would be the occasion for each to "take such action as it may consider appropriate within the framework of its constitutional processes." In strict constitutional law, this agreement, whose phrasing closely resembles that of our multilateral security treaties, would be binding on no one except for Mr. Rusk himself; in fact it is what might be called the "functional equivalent" of a treaty ratified by the Senate. Acknowledging even more explicitly the extent of our *de facto* commitment to Spain, General Wheeler, acting under instructions from Secretary Rusk, provided Spanish military authorities in 1968 with a secret memorandum asserting that the presence of American armed forces in Spain constituted a more significant security guarantee than would a written agreement.

Quite aside from questions of the merit or desirability of these commitments, the means by which they were incurred must be a matter of great concern to anyone who is concerned with the integrity of our constitutional processes. For at least thirty years powers over our foreign relations has been flowing into the hands of the executive. So far has this process advanced that, in the recently expressed view of the Committee on Foreign Relations, "it is no longer accurate to characterize our government, in matters of foreign relations, as one of separated powers checked and balanced against each other."³ To a limited extent this constitutional imbalance has come about as the result of executive usurpation; to a greater extent it has been caused by the failure of Congress to meet its responsibilities and defend its prerogatives in the field of foreign relations; but most of all it has been the result of chronic warfare and crisis, of that all but inevitable concentration of powers in time of emergency of which Alexis de Tocqueville took notice over a century ago.

Under circumstances of continuing threat to the national security, it is hardly surprising that the military itself should have become an active, and largely unregulated, participant in the policy making process. Bringing to bear a degree of discipline, unanimity and strength of conviction seldom found among civilian officials, the able and energetic men who fill the top ranks of the armed services have acquired an influence disproportionate to their numbers on the nation's security policy. The Department of Defense itself has become a vigorous partisan in our politics, exerting great influence on the President, on the military committees of Congress, on the "think tanks" and universities to which it parcels out lucrative research contracts, and on public opinion. I was, quite frankly, disturbed to learn some weeks ago that the Department of the Army actually planned a national publicity campaign, involving exhibits and planted magazine articles to be solicited from civilian scientists, in order to "sell" the ABM to the American public and to counteract the criticisms of Congressmen and the scientific community.

Again, let me emphasize that the danger I perceive here is not military men but militarism. Applying the same principle to the

executive as a whole, the danger of executive dominance over our foreign relations has nothing to do with the wisdom or lack of it of individual officials. A threat to democracy arises from any great concentration of unregulated power. I would no more want unregulated power to be wielded by the Congress than by the executive or the military—not even by the Senate Committee on Foreign Relations. The principle is an old and familiar one, and is just as valid today as it was when Jefferson expressed it in the simple maxim: "Whatever power in any government is independent, is absolute also."

In recent months the Senate has shown a growing awareness of the need for restoring a degree of constitutional balance in the making of our foreign policy. To a great extent this new attitude has been reflected in the debate on the anti-ballistic missile and a general disposition to bring the military budget under the same scrutiny that has always been applied to the budgets of the civilian agencies. In addition, the Senate is about to debate a "national commitments" resolution, the essential purpose of which is to remind the Congress of its constitutional responsibilities both for the making of treaties and the initiation of war.

These, I believe, are hopeful and necessary steps, but in the long run it is unlikely that constitutional government can be preserved solely by the vigorous exercise of legislative authority. No matter what safeguards of attitude and procedure we employ, a foreign policy of chronic warfare and intervention has its own irreversible dynamic, and that is toward authoritarian government. A democracy simply cannot allow foreign policy to become an end in itself, or anything more than an instrument toward the central, dominating goal of securing democratic values within our own society. I would indeed lay it down as a fairly confident prediction that, if American democracy is destroyed within the next generation, it will not be destroyed by the Russians or the Chinese but by ourselves, by the very means we use to defend it. That is why it seems to me so urgent for us to change the emphasis of our policy, from the security of means to the security of ends.

Finally, I would like to say a word about the moral price of our imperial role in the world. The success of a foreign policy, as we have been discovering, depends not only on the availability of military and economic resources but, at least as much, upon the support given it by our people. As we have also been discovering, that support cannot be gained solely by eloquent entreaty, much less by the devices of public relations. In the long run it can only be secured by devising policies which are broadly consistent with the national character and traditional values of the society, and these—products of the total national experience—are beyond the reach of even the most effective modern techniques of political manipulation.

History did not prepare the American people for the kind of role we are now playing in the world. From the time of the framing of the Constitution to the two world wars our experience and values—if not our uniform practice—conditioned us not for the unilateral exercise of power but for the placing of limits upon it. Perhaps it was a vanity but we supposed that we could be an example for the world—an example of rationality and restraint. We supposed, as Woodrow Wilson put it, that a rational world order could be created embodying "not a balance of power but a community of power; not organized rivalries, but an organized common peace."

Our practice has not lived up to that ideal but, from the earliest days of the Republic, the ideal has retained its hold upon us, and every time we have acted inconsistently with it—not just in Vietnam but every time—a hue and cry of opposition has arisen. When

the United States invaded Mexico, two former Presidents and one future President⁴ denounced the war as violating American principles. The senior of them, John Quincy Adams, is said even to have expressed the hope that General Taylor's officers would resign and his men desert.⁵ When the United States fought a war with Spain and then suppressed the patriotic resistance to American rule of the Philippines, the ranks of opposition were swelled with two former Presidents, Harrison and Cleveland, with Senators and Congressmen including the Speaker of the House of Representatives, and with such distinguished individuals as Andrew Carnegie and Samuel Gompers.

The dilemma of contemporary American foreign policy is that, while becoming the most powerful nation ever to have existed on the earth, the American people have also carried forward their historical mistrust of power and their commitment to the imposition of restraints upon it.⁶ That dilemma came to literal and symbolic fulfillment in the year 1945 when two powerful new forces came into the world. One was the bomb at Hiroshima, representing a quantum leap to a new dimension of undisciplined power. The other was the United Nations Charter, representing the most significant effort ever made toward the restraint and control of national power. Both were American inventions, one the product of our laboratories, the other the product of our national experience. Incongruous though they are, these are America's legacies to the modern world: the one manifested in Vietnam and the nuclear arms race, the other in the hope that these may yet be brought under control.

The incongruity between our old values and our new unilateral power has greatly troubled the American people. It has much to do, I suspect, with the current student rebellion. Like a human body reacting against a transplanted organ, our body politic is reacting against the alien values which, in the name of security, have been grafted upon it. We cannot—and dare not—divest ourselves of power, but we have a choice as to how we will use it. We can try to ride out the current convulsion in our society and adapt ourselves to a new role as the world's nuclear vigilante. Or we can try to adapt our power to our traditional values, never allowing it to become more than a means toward domestic, societal ends, while seeking every opportunity to discipline it within an international community.

We cannot resolve this dilemma by choosing to "err on the side of security," because security is the argument for both sides. The real question is: which represents the more promising approach to security in its broader dimension?

"THE HEAD OF LOCAL 1199" BY ANTHONY HARRIGAN

Mr. THURMOND. Mr. President, many of you are aware of the difficulty being experienced currently in Charleston, S.C.

Seventeen of my colleagues saw fit to sign a letter to the President urging the President's intervention in this matter. I have written each of those Senators

⁴ John Quincy Adams, Martin van Buren and Abraham Lincoln.

⁵ Charles A. Barker, "Another American Dilemma," *Virginia Quarterly Review*, Spring 1969, pp. 239-240.

⁶ The theme here developed, the dilemma posed by American power as against the commitment to an equality of rights in a community of world power, is adapted from an article by Professor Charles A. Barker of the Department of History of Johns Hopkins University, *ibid.*, pp. 230-252.

³ *National Commitments*, Report of the Committee on Foreign Relations on S. Res. 85, United States Senate, 91st Cong., 1st Sess. (Washington: U.S. Government Printing Office, 1969), p. 7.

and sent to them a copy of an article by Anthony Harrigan in the Charleston News and Courier, "A Profile: The Head of Local 1199."

Mr. President, I ask unanimous consent that the article entitled "A Profile: The Head of Local 1199" by Anthony Harrigan and the text of my letter to 17 of my colleagues be printed in the CONGRESSIONAL RECORD.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

A PROFILE: THE HEAD OF LOCAL 1199

(By Anthony Harrigan)

The News and Courier has obtained a file of material, including congressional reports and clippings from Communist Party journals, concerning Leon Julius Davis, president of Local 1199, Drug and Hospital Employees Union. The union is currently involved in a strike against two public hospitals in Charleston.

The record shows that Davis was born near Pinsk in Russia on Nov. 21, 1912. He came to the United States at age 9 in the company of an older brother. He became a drug-store clerk and formed Local 1199 in 1932.

In 1938, Davis was the signer of a Communist Party petition to place a candidate on the Communist Party ballot.

Davis' political activities first received considerable attention in the 1940s. He was listed in a House of Representatives report as having been affiliated with the Citizens Committee to Free Earl Browder, former head of the Communist Party in the United States.

Called to testify before the Committee on Education and Labor, Davis invoked the First and Fifth Amendments when counsel asked whether he was or ever had been a member of the Communist Party.

On Oct. 2, 1946, the Communist newspaper Daily Worker reported that Davis was one of 20 unionists in New York City who protested efforts by Democratic leaders in New York State to get the Communist Party off the ballot.

Davis' activities were not confined to the 1940s. While he is in the news this month due to his effort to organize striking hospital attendants in Charleston, his activities in the 1950s and 1960s have been fully reported in the Communist Daily Worker, The Militant, The National Guardian, The Daily World and other communist and leftwing publications.

The pattern of political activities is consistent for the period from the 1940s through the 1960s.

On April 13, 1949, Davis was a signer of an advertisement in The New York Times calling on Congress to reject the North Atlantic Treaty Organization pact.

On May 11, 1966, he signed another advertisement in The New York Times, urging a full pardon for Morton Sobell, who was convicted of atomic espionage for the Soviet Union.

On Nov. 14, 1966, Davis was a speaker at a Mobilization for Peace in Vietnam rally in New York City. The Militant reported that among the participants in the rally was Herbert Aptheker, leading Communist Party theoretician.

The Worker reported March 19, 1968 that an "all day Fast For Peace" was held by Local 1199 in New York City. Davis spoke at the meeting. Entertainment consisted of showing the film "Inside North Vietnam."

The National Guardian reported Nov. 12, 1966 that Davis took part in a "peace" rally in New York Nov. 5. Other speakers included Sue Eanet, regional coordinator of Students For A Democratic Society, and David Mitchell, draft resister.

Davis' primary field of operations has been labor affairs.

On June 7, 1960, the Greater New York

Hospital Assn. cited Davis' refusal to tell a congressional committee whether he was a communist. Local 1199 had threatened a strike against 10 non-profit hospitals belonging to the association.

Thirteen days later, Davis issued an ultimatum to the 10 hospitals, urging them to cease admitting patients until the dispute was settled. Seven of the hospitals had been involved in a 46-day strike in 1959, when the union sought unsuccessfully to win bargaining recognition.

The Greater New York Hospital Assn., in a public statement, characterized Davis as a "ruthless man using the sick and suffering as hostages in an attempt to set himself up as a dictator in our voluntary, non-profit hospitals."

Three years later, Davis was arrested after a melee outside Lower Fifth Avenue Hospital in New York City. Police were called to deal with more than 100 demonstrators picketing the hospital. The police made a number of arrests for disorderly conduct and unlawful assembly.

In early June of 1962, Davis and two of his organizers, Elliott Godoff and Marshall Dubin, were sentenced to 30 days in prison for defying a court injunction barring a strike at Beth-El Hospital in New York City.

The Communist Worker of July 17, 1962, reported that Leon Davis was sentenced to another term in prison—this time for six months—by Justice David Benjamin of Brooklyn for refusing to call off the strike at Beth-El Hospital. The Worker quoted extensively from a statement by Mrs. Leon Davis in discussing the strike.

On July 14, 1968 The Worker hailed the success of Local 1199 in getting new contract terms from the League of Voluntary Hospitals in New York City. The Worker reported that Davis was considering ways for "a quick follow-up of the victory with organization in other cities along the East Coast."

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., May 20, 1969.

DEAR SENATOR: Though I had no advance word from you, it came to my attention that you were among a number of my colleagues who called on the President to intervene on behalf of Local 1199, Drug and Hospital Employees Union, which is currently striking two public hospitals in Charleston, South Carolina.

As I understand the statement in which you concurred, your reasoning was that any demonstration which is temporarily non-violent must necessarily represent a just cause; therefore, all demands should be met before any violence occurs.

I cannot agree with your argument, which to me is specious to say the least; however, I have no quarrel with your right to express your views and I am sure the American people are pleased to know where you stand.

I am enclosing for your information a copy of an article from the "Charleston News and Courier" which gives some background on Mr. Leon Davis, President of the Union which you seek to aid.

With best wishes,

Sincerely,

STROM THURMOND.

EXECUTIVE COMMUNICATIONS, ETC.

The Vice President laid before the Senate the following letters, which were referred as indicated:

REPORTS ON ANNUAL BILLS OF ALL-ELECTRIC HOMES AND STATISTICS OF PUBLICLY OWNED ELECTRIC UTILITIES

A letter from the Chairman, Federal Power Commission, transmitting, for the informa-

tion of the Senate, a copy of report on All-Electric Homes in the United States, Annual Bills, January 1, 1968, Cities of 50,000 and More; and a report of Statistics of Publicly Owned Electric Utilities in the United States, 1967 (with accompanying reports); to the Committee on Commerce.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on Activities of the Center for Cultural and Technical Interchange Between East and West, Department of State, dated May 20, 1969 (with an accompanying report); to the Committee on Government Operations.

REPORT OF PROJECT PROPOSALS UNDER THE SMALL RECLAMATION PROJECTS ACT OF 1956

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a report on the receipt of an application for a loan and grant by the Water Supply and Storage Co., Fort Collins, Colo. (with an accompanying report); to the Committee on Interior and Insular Affairs.

PROPOSED CONCESSION CONTRACT FOR PADRE ISLAND NATIONAL SEASHORE, TEX.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract under which Padre Island National Seashores Co., will be authorized to operate facilities and services for the public at the North Beach Development (Malaquite Beach), Padre Island National Seashore, Tex., for a term of approximately 20 years from the execution date of contract through March 31, 1990, when executed by the Director of the National Park Service (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROPOSED LEGISLATION TO AUTHORIZE THE ADMINISTRATOR OF VETERANS' AFFAIRS TO ENTER INTO AGREEMENTS WITH HOSPITALS, MEDICAL SCHOOLS, OR MEDICAL INSTALLATIONS

A letter from the Administrator, Veterans' Administration, transmitting a draft of proposed legislation, to amend title 38 of the United States Code to authorize the Administrator of Veterans' Affairs to enter into agreements with hospitals, medical schools or medical installations for the central administration of programs of training for interns and residents (with accompanying papers); to the Committee on Labor and Public Welfare.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,
The following favorable reports of nominations were submitted:

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare:

John B. Martin, Jr., of Michigan, to be Commissioner on Aging; and

Ronald Rumsfeld, of Illinois, to be Director of the Office of Economic Opportunity.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution of the General Assembly of the State of Rhode Island; to the Committee on Finance:

"H1418

"Resolution memorializing Congress to institute a tax-sharing program with State and local governments

"Resolved, That the general assembly of the state of Rhode Island and Providence Plantations respectfully requests the Con-

gress of the United States to institute a tax-sharing program with state and local governments; and be it further

"Resolved, That the secretary of state be and he hereby is authorized to transmit a duly certified copy of this resolution to each senator and representative from Rhode Island in the Congress of the United States in the hope that they will use every effort to institute and expedite such a program.

"AUGUST P. LA FRANCE,

"Secretary of State."

A resolution of the General Assembly of the State of Rhode Island; to the Committee on the Judiciary:

"S436

"Resolution memorializing Congress with respect to the establishment of a Federal Bureau of Investigation Crime Laboratory in Rhode Island

"Whereas, the Federal Bureau of Investigation has under consideration the establishment of a regional crime laboratory, and

"Whereas, the location of a regional crime laboratory in the state of Rhode Island would be of considerable value to law enforcement officials in the State by providing speedier and more complete technological assistance in the pursuit of their duties; now, therefore, be it

"Resolved, that the general assembly does hereby memorialize congress to establish a regional crime laboratory in the state of Rhode Island; and be it further

"Resolved, that the secretary of state be and hereby is authorized and directed to transmit duly certified copies of this resolution to the senators and representatives from Rhode Island in the congress of the United States.

"AUGUST P. LA FRANCE,

"Secretary of State."

Two resolutions of the General Assembly of the State of Rhode Island; to the Committee on Labor and Public Welfare:

"H1039

"Resolution memorializing Congress to amend the provisions of the Fair Labor Standards Act of 1938, as amended, to permit 'school drop-outs' to be employed gainfully in industry under appropriate regulations promulgated by the Secretary of Labor

"Resolved, That the members of Congress of the United States be and they are hereby respectfully requested to make such amendment to the Fair Labor Standards Act of 1938, as amended, so that minors who are school drop-outs, so called, may be gainfully employed in industrial and manufacturing occupations involving the operation of machinery, under appropriate regulations to be promulgated by the secretary of labor for their safety and protection; and be it further

"Resolved, That the secretary of state be and he is hereby respectfully requested to transmit to the senators and representatives from Rhode Island in the Congress of the United States duly certified copies of this resolution in the hope that each will use every endeavor to have favorable action taken by Congress on this special matter.

"AUGUST P. LA FRANCE,

"Secretary of State."

"H1966

"Resolution memorializing the Congress of the United States to enact legislation establishing a Federal workmen's compensation law

"Whereas, Dissatisfaction with the adequacy and administration of state Workmen's Compensation laws is becoming widespread; and

"Whereas, An attempt was made in the 90th Congress to establish a National Commission on State Workmen's Compensation Laws which would undertake a comprehen-

sive study and evaluation of state workmen's compensation laws and methods of implementing the recommendations of the Commission; and

"Whereas, There are possibilities of the introduction of a bill setting minimum standards for all state workmen's compensation laws. One provision of which would be complete coverage of all occupations and employments, eliminating present exemptions based on the nature of the employer's business or the number of employees; now therefore be it

"Resolved, That the Congress of the United States be memorialized to enact legislation establishing a Federal Workmen's Compensation Law; and be it further

"Resolved, That the secretary of state be and he hereby is authorized and directed to transmit duly certified copies of this resolution to the senators and representatives from Rhode Island in the Congress of the United States in the hope that they will use every effort to further the passage of a Federal Workmen's Compensation Law.

"AUGUST P. LA FRANCE,

"Secretary of State."

A resolution of the General Assembly of the State of Rhode Island; to the Committee on Public Works:

"H1223

"Resolution memorializing the Members of the United States Senate and House of Representatives From the State of Rhode Island to Make Every Effort to See That Action Is Taken to Build a Breakwater in Bristol Harbor in the Town of Bristol, Rhode Island

"Whereas, Bristol, Rhode Island has suffered tremendous amounts of damage from past hurricanes, wave and tide action to its industry, business, railroad property, government property, and yachting facilities; and

"Whereas, A public hearing was held on this proposal on December 11, 1957, by the U.S. Army Corps of Engineers; and

"Whereas, Thereupon surveys and plans for this breakwater were made by the U.S. Army Corps of Engineers in 1958; now therefore, be it

"Resolved, That the members of the United States senate and house of representatives from the state of Rhode Island are respectfully requested to take proper action to have such breakwater constructed as soon as possible in Bristol harbor in said town of Bristol, Rhode Island; and be it further

"Resolved, That the secretary of state be and hereby is authorized to transmit duly certified copies of this resolution to the Rhode Island delegation in congress.

"AUGUST P. LA FRANCE,

"Secretary of State."

A joint resolution of the legislature of the State of Alaska; to the Committee on Labor and Public Welfare:

"S.J. RES. 33

"Joint resolution requesting restoration of funds proposed to be cut from the federal aid to schools in federally impacted areas program

"Be it resolved by the Legislature of the State of Alaska:

"Whereas Alaska schools educate the children of the large number of federal employees, including the military, who reside in the state; and

"Whereas the state is struggling under financial disabilities resulting from its position of relative economic underdevelopment, but is nevertheless attempting to provide highest quality education to all of the pupils in the state; and

"Whereas federal aid to schools in federally impacted areas was established to provide funds to schools attended by large numbers of dependents of federal employees and military personnel in lieu of the revenue from state property taxes which cannot be levied on federal property; and

"Whereas, at a time when this country's commitment to education is truly beyond debate, the cutting of these funds will place an extremely heavy burden on this state and on all those states which have heavy concentrations of federal employees and military personnel, and it is an extremely shortsighted response to the growing needs of our young people for meaningful quality education;

"Be it resolved that the Legislature of the State of Alaska requests the Congress of the United States to restore the funds proposed to be cut from the federal aid to schools in federally impacted areas program.

"Copies of this Resolution shall be sent to the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Richard B. Russell, President Pro Tempore of the Senate; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and the Honorable Howard W. Pollock, U.S. Representative, members of the Alaska delegation in Congress.

"BRAD PHILLIPS,
"President of the Senate."

A joint resolution of the legislature of the State of Alaska; to the Committee on Commerce:

"SJR 16 am H

"Joint resolution relating to the protection of fish and shellfish resources in waters over the continental shelf of the United States

"Be it resolved by the Legislature of the State of Alaska:

"Where as the present nine-mile contiguous fishery zone is an artificial area based on developing custom and not on the biological needs and migratory habits of species occupying the continental shelf, its overlying or superadjacent waters; and

"Whereas destruction and incidental catches by foreign gear of protected or fully utilized species, especially king crab, tanner crab and immature halibut, are causing deep concern among scientists, fishermen and the industry; and

"Whereas some domestic fisheries are either endangered, or have virtually ceased in some areas, or have been prevented from expanding in a free and orderly manner by the admitted over-exploitation of certain stocks, pre-emption of fishing grounds or the destruction of our gear by foreign fleets; and

"Whereas additional foreign countries have sent exploratory fleets to areas of our shores and are developing the ability to further exploit the shellfish, dimersal and pelagic fishes of our continental shelf, thereby compounding a serious and alarming situation;

"Be it resolved that the Sixth Alaska State Legislature respectfully requests that the government of the United States strive to extend its jurisdiction over and protection of all fishery resources of the continental shelf adjoining the states and territories of this country, including those species occupying the overlying waters of the shelf and those superadjacent waters that admit to the exploitation of the creatures of the continental shelf.

"Copies of this Resolution shall be sent to the Honorable Richard M. Nixon, President of the United States; the Honorable John W. McCormack, Speaker of the House; the Honorable Richard B. Russell, President pro tempore of the Senate; the Honorable William Rogers, Secretary of the Department of State; the Honorable Walter J. Hickel, Secretary of the Department of the Interior; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and to the Honorable Howard W. Pollock, U.S. Representative, members of the Alaska delegation in Congress.

"BRAD PHILLIPS,
"President of the Senate."

A resolution of the House of the Legislature of the State of Alaska; to the Committee on Commerce:

"H.R. 29

"House Resolution requesting an amendment to the Jones Act to exempt the ferry vessel *M. V. Wickersham* from several of its provisions

"Be it resolved by the House of Representatives:

"Whereas the State of Alaska has established, at its own instigation and expense, a modern marine highway system connecting Alaska and the 48 contiguous states through the Port of Seattle; and

"Whereas the Alaska Marine Highway System was devised and is operated to take the place of a highway because of the impossibility of actual road building in Southeastern Alaska; and

"Whereas there is a tremendous movement in commerce, trade and tourism between the South 48 states and Alaska; and

"Whereas, to better handle all of the traffic, the Alaska Marine Highway System purchased a foreign-bottomed vessel, the *M. V. Wickersham*; and

"Whereas, due to the provisions of the Jones Act, the vessel is prohibited from transporting passengers and vehicles between U.S. ports, thus creating a burden on the residents of the state, on the flow of commerce and on the visitors to Alaska; and

"Whereas, for the continued effective operation of the Alaska Marine Highway System, it is necessary that the *M. V. Wickersham* be exempted from certain provisions of the Jones Act;

"Be it resolved by the House of Representatives of the Sixth Alaska Legislature that the United States Congress is respectfully urged to amend the Jones Act to allow the transportation of vehicles and passengers between United States ports on the *M. V. Wickersham*.

"Copies of this Resolution shall be sent to the Honorable Richard M. Nixon, President of the United States; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Richard B. Russell, President Pro Tempore of the Senate; the Honorable Harley O. Staggers, Chairman of the House Interstate and Foreign Commerce Committee; the Honorable Warren G. Magnuson, Chairman of the Senate Commerce Committee; and to the Honorable Ted Stevens and the Honorable Mike Gravel, U.S. Senators, and the Honorable Howard W. Pollock, U.S. Representative, members of the Alaska delegation in Congress.

"J. M. KERTTULA,
"Speaker of the House."

A concurrent resolution of the legislature of the State of New Jersey; to the Committee on Finance:

"S. CON. RES. 55

"A Concurrent Resolution memorializing the Congress of the United States relating to Federal taxation of State and local government bonds

"Whereas, Equity among taxpayers is essential to popular confidence in the Federal revenue system; and

"Whereas, The Ways and Means Committee of the United States House of Representatives has conducted extensive hearings on proposals for equitable reform of the Federal personal income tax; and

"Whereas, Spokesmen for the National Governors' Conference, the National Legislative Conference, the National Association of Attorneys General and the National Association of State Treasurers, Auditors and Comptrollers have endorsed the objective of tax reform while urging the committee to refrain from changes which would weaken the capacity of the States to meet the needs for State services;

"Be it resolved by the Senate of the State

of New Jersey (the General Assembly concurring):

"1. The New Jersey Legislature commends the Congress of the United States and in particular the Ways and Means Committee of the House of Representatives for the current efforts to improve the equity of the Federal personal income tax.

"2. The New Jersey Legislature records its concurrence with the testimony before the House of Representatives Ways and Means Committee on behalf of State Governments in the following respects:

"a. that no change be made which would deprive State and local government obligations of their traditional immunity from Federal taxation;

"b. that no change be made which would result in constriction of the market for bonds issued by the States or local governments;

"c. that no change be made which would interpose Federal judgments relating to the policies of the States or local governments; and

"d. that no change is acceptable which would subject borrowing by the States and local governments to the uncertainties of the appropriation processes of the Congress.

"3. A copy of the resolution be sent to the Speaker of the House of Representatives, the President of the Senate, and all members of Congress from the State of New Jersey.

"HENRY H. PATTERSON,
"Secretary of the Senate."

A joint resolution of the legislature of the State of Tennessee; to the Committee on Rules and Administration:

"H.J. Res. 99

"A resolution memorializing and recommending to the Senate of the United States of America to establish a Standing Committee for the purpose of handling matters relating to veterans affairs.

"Whereas, The General Assembly of the State of Tennessee has been advised of the fact that there are numerous matters concerning veterans affairs being sent to the Congress of the United States of America; and,

"Whereas, The House of Representatives of the United States of America has established a Standing Committee for the purpose of handling matters appearing before their body that relate to veterans affairs; and

"Whereas, At the present time there are several committees in the Senate of the United States of America that are considering veterans affairs in connection with their regular duties; and,

"Whereas, The Disabled American Veterans Organization feels that this situation is not feasible and in the best interest of veterans since there are more than 27 million veterans in the nation and when the wives, widows and orphans of veterans are considered, this number constitutes about one-half of the nation's population; and,

"Whereas, It is generally felt across the United States of America that there is a sufficient number of matters concerning veterans affairs coming before the Senate of the United States of America to warrant such a Standing Committee; and,

"Whereas, In the Ninetieth Congress, a bill establishing a Senate Committee on Veterans Affairs was approved by the Senate Committee on Rules and Regulations, but the bill was never taken off the Calendar for floor action and therefore, the bill failed even though a majority of the Senators were recorded in favor of the measure; and,

"Whereas, The Veterans Administration is the second largest agency of the United States Government and it is only fair and equitable to the nation's taxpayers that all of the functions of the Veterans Administration be under one Senate Committee, as they are now under one House Committee; and,

"Whereas, In the Ninety-First Congress,

efforts will once again be made to establish a Standing Committee on Veterans Affairs in the Senate; and,

"Whereas, The General Assembly of the great State of Tennessee should go on record as having made a recommendation and request to the Senate of the United States of America as to the need for such a Standing Committee,

"Now, therefore, be it resolved by the House of Representatives of the Eighty-Sixth General Assembly of the State of Tennessee, the Senate concurring, That this Body, having been advised of the above situation and the divergent conditions created thereby, does hereby memorialize, request and recommend to the Senate of the United States of America to create and establish a Standing Committee on Veterans Affairs as it appears this would be in the best interest of the citizens of this great State; and,

"Be it further resolved, That suitable copies of this Resolution be sent to each member in the Senate of the United States of America, Washington, D.C.

"WILLIAM L. JENKINS,

"Speaker of the House of Representatives."

A resolution adopted by the town of Hot Springs, N.C., Carolinas Council of Housing and Redevelopment Officials opposing the proposed move of the Regional Office of the Department of Housing and Urban Development from Atlanta, Ga., to Philadelphia, Pa.; to the Committee on Banking and Currency.

A resolution adopted by the township of Morris, Morris County, N.J., opposing any change in the tax exempt status of municipal bonds; to the Committee on Finance.

A resolution adopted by the city of Elizabeth, N.J., opposing any change in the tax exempt status of municipal bonds; to the Committee on Finance.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. ERVIN, from the Committee on the Judiciary, without amendment:

S. Res. 162. A resolution for the relief of certain Kaw Indians (Rept. No. 91-183).

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MOSS (for himself and Mr. METCALF):

S. 2199. A bill to provide Federal assistance to States for improving elementary and secondary teachers' salaries, for meeting the urgent needs of elementary and secondary education, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. Moss when he introduced the above bill, which appear under a separate heading.)

By Mr. DOLE:

S. 2200. A bill to amend the Internal Revenue Code of 1954 to provide for the valuation of a decedent's interest in a closely held business for estate tax purposes; to the Committee on Finance.

S. 2201. A bill for the relief of Unruh's, Inc.; to the Committee on the Judiciary.

By Mr. DOLE (for himself, Mr. ALLOTT, Mr. BELLMON, Mr. COOK, Mr. CURTIS, Mr. DOMINICK, Mr. GOLDWATER, Mr. GOODELL, Mr. GURNEY, Mr. HANSEN, Mr. JAVITS, Mr. MILLER, Mr. PEARSON, and Mr. STEVENS):

S. 2202. A bill to amend the Rural Electrification Act of 1936, as amended, to provide an additional source of financing for the rural telephone program, and for other purposes; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. DOLE when he introduced the above bill, which appear under a separate heading.)

By Mr. MURPHY (by unanimous consent):

S. 2203. A bill entitled the "Consumer Agricultural Food Protection Act of 1969"; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. MURPHY when he introduced the above bill, which appear under a separate heading.)

By Mr. MURPHY (for himself, Mr. HATFIELD and Mr. TOWER):

S. 2204. A bill to establish the National Oceanic Agency; to the Committee on Commerce.

(See the remarks of Mr. MURPHY when he introduced the above bill, which appear under a separate heading.)

By Mr. STEVENS:

S. 2205. A bill for the relief of Kerstin Elisabeth Halversson; to the Committee on the Judiciary.

By Mr. TALMADGE:

S. 2206. A bill for the relief of Clayton County Journal and Wilbur Harris; to the Committee on the Judiciary.

By Mr. MONDALE (for himself and Mr. JAVITS):

S. 2207. A bill to amend section 235 of the National Housing Act to provide more flexible mortgage limits in order to encourage the development of homeownership in high-cost areas for lower income families; to the Committee on Banking and Currency.

(See the remarks of Mr. MONDALE when he introduced the above bill, which appear under a separate heading.)

By Mr. BIBLE (for himself and Mr. CANNON):

S. 2208. A bill to authorize the Secretary of the Interior to study the feasibility and desirability of a national lakeshore on Lake Tahoe in the State of Nevada, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. BIBLE when he introduced the above bill, which appear under a separate heading.)

By Mr. YOUNG of North Dakota:

S. 2209. A bill to authorize and direct the Secretary of the Interior to convey certain property in the State of North Dakota to the Central Dakota Nursing Home; to the Committee on Interior and Insular Affairs.

By Mr. HANSEN:

S. 2210. A bill to amend the Federal Property and Administrative Services Act of 1949 so as to permit donations of surplus property to public museums; to the Committee on Government Operations.

By Mr. TYDINGS:

S. 2211. A bill to amend the Internal Revenue Code of 1954 to raise needed additional revenues by tax reform; to the Committee on Finance.

(See the remarks of Mr. TYDINGS when he introduced the above bill, which appear under a separate heading.)

By Mr. YARBOROUGH:

S. 2212. A bill to authorize the appropriation of funds for Padre Island National Seashore in the State of Texas, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. YARBOROUGH when he introduced the above bill, which appear under a separate heading.)

By Mr. HARTKE:

S. 2213. A bill to amend the Tariff Schedules of the United States with respect to the tariff classification of certain sugars, sirups, and molasses, and for other purposes; to the Committee on Finance.

By Mr. MURPHY (for himself and Mr. CRANSTON):

S. 2214. A bill to amend Section 608(c) (2) of the Agricultural Marketing Agreement Act of 1937, as amended; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. MURPHY when he introduced the above bill, which appear under a separate heading.)

By Mr. YARBOROUGH:

S. 2215. A bill to amend the act entitled "An act to establish a program for the preservation of additional historic properties throughout the Nation, and for other purposes," approved October 15, 1966, so as to extend the provisions thereof for an additional period of 3 years; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. YARBOROUGH when he introduced the above bill which appear under a separate heading.)

S. 2216. A bill for the relief of Jean Rawls Fairbank; to the Committee on the Judiciary.

By Mr. SCOTT:

S. 2217. A bill for the relief of Yau Pik Chau; to the Committee on the Judiciary.

By Mr. PELL (for himself, Mr. YARBOROUGH, Mr. RANDOLPH, Mr. WILLIAMS of New Jersey, Mr. KENNEDY, Mr. NELSON, Mr. MONDALE, Mr. EAGLETON, Mr. CRANSTON, and Mr. HUGHES):

S. 2218. A bill to amend the Elementary and Secondary Education Act of 1965 and related acts, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. PELL when he introduced the above bill, which appear under a separate heading.)

By Mr. PASTORE (for himself, Mr. PELL, and Mr. ERVIN):

S. 2219. A bill to amend the Tariff Schedules of the United States with respect to the tariff classification of braided rugs composed of tubular braids with a core; to the Committee on Finance.

By Mr. TYDINGS:

S. 2220. A bill for the relief of Gheung Fuk-Lun A15960565; to the Committee on the Judiciary.

By Mr. MURPHY:

S. 2221. A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California;

S. 2222. A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California; and

S. 2223. A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MURPHY when he introduced the above bills, which appear under a separate heading.)

S. 2199—INTRODUCTION OF THE GENERAL EDUCATION ASSISTANCE ACT OF 1969

Mr. MOSS. Mr. President, I introduce today, for myself and Senator METCALF, an important bill, the General Education Assistance Act of 1969, which is designed to stimulate vastly improved schooling for our Nation's children and youth. This legislation was drafted by the teachers of America, speaking through the National Education Association. It is identical to bills introduced in the House of Representatives by Chairman CARL D. PERKINS of the Education and Labor Committee, Congresswoman EDITH GREEN, and Congressman ARNOLD OLSEN.

The bill provides that, beginning in fiscal year 1971, and extending through fiscal 1975, there will be two types of Federal grants to the States. The first will

be computed on the simple formula of \$100 per school age child, ages 5 through 17, based on the latest data, and distributed to the States on the basis of relative school population. Since my State of Utah ranks third in the Nation in this respect—outranked only by Alaska and New Mexico—we will fare well under this formula. If fully funded, grants under this section will total somewhat more than \$5.25 billion during the first year.

The second grant, a flat \$2.5 billion per year, will be distributed to the States on the basis of per capita personal income factor. Since the number of poor in my State is only point three of 1 percent of the population, we will not do as well under this grant as many other States, but we are grateful that this is so, and more than willing to share with those States which have a greater burden of poverty than we do.

I shall include at the conclusion of these remarks two tables—one which shows the estimated school age population as a percent of the total resident population in each State, and a second which shows the number of poor in each State and the total allocation to each State equalized under both grants in total amounts and pre-school-child payments.

The bill provides that at least 50 percent, plus the State's share of the \$2.5 billion equalizing funds may be used by the State to meet other urgent needs, such as employing additional teachers and teacher aides for summer school and preschool programs, and programs and activities in which children in attendance at private nonprofit schools may participate on a shared-time basis.

The urgency of this legislation is indicated by the shockingly low holding power of our schools. In some districts, as many as 40 percent of the students drop out of high school before graduation. The armed services reject a large number of young men who are unable to pass the mental tests.

Schools find it difficult to attract and hold good teachers. Studies by the Federal Government indicate that the average urban family of four needs an income of at least \$9,200 to maintain a decent standard of living; yet the average classroom teacher's salary in 1968-69 is \$7,908. My home State of Utah ranks second in the Nation in State and local expenditures as a percent of personal income, according to a recent study, but falls below the national average in current expenditures for public elementary and secondary schools. Many States are similarly limited in taxing powers and are thus unable to compete effectively in the market for adequately trained educational personnel.

While the Congress has enacted many valuable programs in education, and I am proud to have strongly supported these bills over the past 11 years, I am increasingly convinced that we have reached the point of diminishing returns in categorical, or specific-purpose aid. The legislation now on the books should be continued, improved, and, wherever possible, consolidated. But the States need a massive infusion of discretionary funds to solve their own particular edu-

cation problems. These funds must come from Washington.

This bill would help solve the critical shortage of qualified teachers and enable States to design programs to improve and equalize educational opportunity without restrictive direction from Washington. The most convincing argument for this kind of legislation comes from the teachers themselves, the people who are at the impact point of Federal legislation. They see the results of what we legislate, and they are telling us in no uncertain terms that the very quality of our education system is in peril.

Mr. President, the teachers know as well as we do that there are many urgent and competing demands on the money available for domestic programs, and that the situation is aggravated by our commitments abroad. But now is the time for Congress to examine and think through its policy on education. Federal aid, established in principle by the 1785 Northwest Ordinance, is no longer a matter for philosophical debate. We must now look at what the educational system needs and correct the deficiencies in our approach. I believe that this legislation will enable us to make a giant first step in the rebuilding of the Nation's school system.

I ask unanimous consent that the bill and the two tables be printed in the RECORD following my introductory remarks.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill and tables will be printed in the RECORD.

The bill (S. 2199), to provide Federal assistance to States for improving elementary and secondary teachers' salaries, for meeting the urgent needs of elementary and secondary education, and for other purposes, introduced by Mr. Moss (for himself and Mr. METCALF), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

S. 2199

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "General Education Assistance Act of 1969".

BASIC GRANTS AUTHORIZED

SEC. 2. (a) The Commissioner shall, in accordance with the provisions of this Act, make basic grants to State educational agencies for increasing the salaries of teachers and meeting the urgent needs of State educational agencies and local educational agencies within such States for current expenditures.

(b) For the purpose of making such grants there is hereby authorized to be appropriated for the fiscal year ending June 30, 1971, and for each of the four succeeding fiscal years an amount equal to \$100 multiplied by the number of children, aged five to seventeen, inclusive, in all the States.

ALLOTMENTS FOR BASIC GRANTS

SEC. 3. (a) From the sums appropriated pursuant to sec. 2(b) for each fiscal year the Commissioner shall allot to each State an amount which bears the same ratio to the total of such sums as the number of children aged five to seventeen, inclusive, in

such State bears to the number of such children in all the States.

(b) The number of children aged five to seventeen, inclusive, in a State and in all the States shall be determined by the Commissioner on the basis of the most recent satisfactory data available to him.

SUPPLEMENTAL EQUALIZATION GRANTS

SEC. 4. (a) For the purpose of making additional funds to local educational agencies to meet their urgent needs in providing educational services and programs, there is hereby authorized to be appropriated \$2.5 billion for the fiscal year ending June 30, 1971, and for each of the four succeeding fiscal years.

(b) From the sums appropriated under subsection (a) for any fiscal year, the Commissioner shall allot not more than 3 per centum among the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands according to their respective needs for assistance under this title. The Commissioner shall allot the remainder of the sums so appropriated among the remaining States proportionately according to the number of children in the State aged five to seventeen, inclusive, in a category described in clause (A), (B), or (C) of section 103(a) (2) of the Elementary and Secondary Education Act of 1965 (assuming a "low-income" factor of \$3,000). In making determinations under the preceding sentence, the Commissioner shall use the data prescribed under 103(d) of such Act.

(c) Subject to the provisions of section 6, the Commissioner shall for each fiscal year make a grant to each State educational agency equal to the State's allotment under subsection (b) for that year.

(d) From the grant made for a fiscal year under subsection (c), the State educational agency shall, except as provided in the next sentence, make a grant to each local educational agency in the State in an amount equal to the amount of the State grant which is attributable to children in the school district of such agency. Where satisfactory data are not available to determine the amount of a grant to a local educational agency under the preceding section, the State educational agency shall determine the amount of the State grant which is attributable to children in the county or counties in which the school district of such agency is located, and shall apportion the funds among the agencies whose school districts are located in such county or counties on such equitable basis as may be determined by the State educational agency, in accordance with basic criteria prescribed by the Commissioner.

(e) A grant received by a local educational agency under this section shall be used for current expenditures to meet its urgent needs in providing educational services and programs.

USES OF FEDERAL GRANTS

SEC. 5. The State educational agency shall use at least one-half of any grant or grants received under this Act from sums appropriated under section 2(b), in accordance with applications approved under section 6, for payment to local educational agencies within such State to be used by such local agencies for increasing the salaries of teachers employed by such local agencies, and for increasing the salaries of teachers employed by such State educational agency. The remainder of such grant may be used, in accordance with applications approved under section 6, for payment to local educational agencies within such State to meet the urgent needs of such local agencies for current expenditures, including expenditures for employing additional teachers and teacher aides for summer school and preschool programs, programs and activities in which

children in attendance at private non-profit schools may participate on a shared-time basis, and for State educational agencies to meet the urgent needs of any such agency for current expenditures, including expenditures for summer school and preschool programs.

APPLICATIONS

SEC. 6. (a) A grant or grants under this Act shall be made to a State educational agency upon application to the Commissioner at such time or times, in such manner, and containing or accompanied by such information as the Commissioner deems necessary. Such application shall—

(1) provide that the use of the Federal funds received under this Act will be administered by or under the supervision of the State educational agency;

(2) provide assurances that funds appropriated under section 2(b) will be used in accordance with section 5, prescribe criteria for achieving equitable distribution of such funds within such State and for identifying the urgent needs for current expenditures of such State agency and of local educational agencies within such State: *Provided*, That such criteria shall not permit the amount to be distributed to a local educational agency to be affected by the amount of its grant under section 4;

(3) provide assurances that funds appropriated under section 4(a) will be used for purposes set forth in section 4(e);

(4) set forth policies and procedures which assure that Federal funds made available under this Act for any fiscal year (A) will not be commingled with State funds, and (B) will be so used as to supplement and, to the extent practical, increase the level of funds that would, in the absence of such Federal funds, be available for the purposes described in section 5, and in no case supplant such funds;

(5) provide assurances that, to the extent consistent with law, programs and services designed to meet urgent needs for current expenditures will be provided on an equitable basis to children attending private elementary and secondary schools in the State which comply with the compulsory attendance laws of the State or are otherwise recognized by it through some procedure customarily used in the State;

(6) provide for such fiscal control and fund accounting procedures as may be necessary to assure the proper disbursement of an accounting for Federal funds received under this Act, and such reporting procedures, including an evaluation of the impact of Federal funds received under this Act, as the Commissioner may reasonably require; and

(7) provide adequate procedures for affording the local education agencies within such State reasonable notice and opportunity for hearing.

(b) The Commissioner shall approve an application which meets the requirements specified by subsection (a) of this section and shall not finally disapprove, in whole or in part, any application without first affording the State educational agency submitting the application reasonable notice and opportunity for a hearing.

PAYMENTS

SEC. 7. (a) From the amount allotted to each State pursuant to section 3, the Commissioner shall pay to the State educational agency of such State which has an application approved under section 6 an amount equal to the amount needed for the purposes set forth in such application.

(b) (1) The Commissioner is authorized to pay to each State amounts equal to the amounts expended by it for the proper and efficient performance of its duties under this Act, except that the total of such payments in any fiscal year shall not exceed—

(A) 1 per centum of the total of the amount paid under this Act for that year to the State educational agency; or

(B) \$150,000, or \$25,000 in the case of Puerto Rico, Guam, American Samoa, the Virgin Islands, or the Trust Territories of the Pacific Islands, whichever is greater.

(2) There is hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this subsection.

(c) Payments under this Act may be made in installments and in advance or by way of reimbursement, with necessary adjustments on account of overpayments or underpayments.

WITHHOLDING

SEC. 8. Whenever the Commissioner, after reasonable notice and opportunity for hearing to any State educational agency, finds that there has been a failure to comply substantially with any provision set forth in the application of that State approved under section 6, the Commissioner shall notify the agency that further payments will not be made to the State under this Act (or, in his discretion, that the State educational agency shall not make further payments under this Act to specified local educational agencies whose actions caused or are involved in such failure) until he is satisfied that there is no longer any such failure to comply. Until he is so satisfied, no further payments shall be made to the State under this Act, or payments by the State educational agency under this Act shall be limited to local educational agencies whose actions did not cause or were not involved in the failure, as the case may be.

JUDICIAL REVIEW

SEC. 9 (a) (1) If any State is dissatisfied with the Commissioner's final action with respect to the approval of its application submitted under section 6 or with his final action under section 8, such State may within sixty days after notice of such action, file with the United States court of appeals for the circuit in which such State is located a petition for review of that section. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Commissioner. The Commissioner thereupon shall file in the court the record of the proceedings on which he based his action, as provided in section 2112 of title 28, United States Code.

(2) The findings of fact by the Commissioner, if supported by substantial evidence, shall be conclusive; but the court, for good cause shown, may remand the case to the Commissioner to take further evidence, and the Commissioner may thereupon make new or modified findings of fact and may modify his previous action, and shall file in the court the record of the further proceedings. Such new or modified findings of fact shall likewise be conclusive if supported by substantial evidence.

(3) Upon the filing of such petition, the court shall have jurisdiction to affirm the action of the Commissioner or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

(b) (1) If any local educational agency is dissatisfied with the final action of the State educational agency with respect to any payment to such local agency pursuant to this Act, such local agency may, within sixty days after such final action or notice thereof, whichever is later, file with the United States court of appeals for the circuit in which the State is located a petition for review of that action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the State educational agency. The State

educational agency thereupon shall file in the court the record of the proceedings on which the State educational agency based its action as provided in section 2112 of title 28, United States Code.

(2) The findings of fact by the State educational agency, if supported by substantial evidence shall be conclusive; but the court, for good cause shown, may remand the case to the State educational agency to take further evidence, and the State educational agency may thereupon make new or modified findings of fact and may modify its previous action, and shall certify to the court the record of the further proceedings.

(3) The court shall have jurisdiction to affirm the action of the State educational agency or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

PROHIBITIONS

SEC. 10. (a) Nothing contained in this Act shall be construed to authorize any department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over the curriculum, program of instruction, administration, or personnel of any educational institution or school system, or the selection of library resources by any educational institution or school system, or over the content of any material developed or published under any program assisted pursuant to this Act.

(b) Nothing contained in this Act shall be construed to authorize the making of any payment under this Act for religious worship or instruction.

ADMINISTRATION

SEC. 11. (a) The Commissioner may delegate any of his functions under this Act, except the making of regulations, to any officer or employee of the Office of Education.

(b) In administering the provisions of this Act, the Commissioner is authorized to utilize the services and facilities of any agency of the Federal Government and of any other public or nonprofit agency or institution in accordance with appropriate agreements, and to pay for such services either in advance or by way of reimbursement, as may be agreed upon.

DEFINITIONS

SEC. 12. As used in this Act—

(1) The term "Commissioner" means the Commissioner of Education.

(2) The term "teacher" means any member of the instructional staff of a public elementary or secondary school who is engaged in the teaching of students, as further defined by the State educational agency of each State.

(3) The term "current expenditures" means expenditures for free public education, including expenditures for administration, instruction, attendance and health services, community services, pupil transportation services, operation and maintenance of plant, fixed charges, food services and student body activities, but not including expenditures for capital outlay, and debt service.

(4) The term "elementary school" means a day or residential school which provides elementary education, as determined under State law.

(5) The term "free public education" means education which is provided at public expense, under public supervision and direction, and without tuition charge.

(6) The term "local educational agency" means a public board of education or other public authority legally constituted within a State for either administrative control or direction of, or to perform a service function for, public elementary or secondary schools in a city, county, township, school

district, or other political subdivision of a State or such combination of school districts or counties as are recognized in a State as an administrative agency for its public elementary or secondary schools. Such term also includes any other public institution or agency having administrative control and direction of a public elementary or secondary school.

(7) The term "salaries" means the annual monetary compensation paid to teachers for services rendered in connection with their employment.

(8) The term "secondary school" means a day or residential school which provides secondary education, as determined under State law.

(9) The term "State" includes, in addition to the several States of the Union, the Commonwealth of Puerto Rico, the District of Columbia, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

(10) The term "State educational agency" means the State board of education or other agency or officer primarily responsible for the State supervision of public elementary and secondary schools, or, if there is no such officer or agency, an officer or agency designated by the Governor or by State law.

The material presented by Mr. Moss follows:

The estimated school age population (5-17) as a percent of the total resident population, compiled by the Research Division of NEA, follows:

	[In percent]	
1. Alaska	32.5	
2. New Mexico	30.9	
3. Utah	30.7	
4. North Dakota	29.6	
5. Montana	29.3

S. 2202—INTRODUCTION OF A BILL TO CREATE A RURAL TELEPHONE BANK

Mr. DOLE. Mr. President, I am introducing, along with 13 cosponsors, legislation to permit the creation of a rural telephone bank, initially under the supervision of the Secretary of Agriculture and ultimately converted to non-Federal ownership with operation and control by its borrowers.

RURAL TELEPHONE DEVELOPMENT HISTORY

The REA loan program is well known to us in the Congress. The original act authorizing rural electric loans was passed by Congress in 1936 and extended to include rural telephone loans in 1949. In 1949, only about 38 percent of the Nation's farms were receiving telephone service of any kind. In the ensuing 2 years to date, under the REA telephone program, approximately 82 percent have received telephone service. Eight subscribers per rural line was the standard set by REA when the program started, replacing the old 20 to 25 subscribers per line. With this new dial service the rural subscriber is using his telephone so much more today that the eight-party line is now more difficult to get to use than was the old system. These systems are now being upgraded to four-party, and where economically feasible, one-party service on a systemwide basis. Under this pro-

gram, loans are granted to eligible borrowers at the statutory rate of 2 percent, for which they are obligated to provide modern telephone service on an area coverage basis within their service areas. The loan repayment records of these companies—both private type and cooperative type—is outstanding. REA loans have been made to build and improve more than 500,000 route miles of telephone line to service approximately 2,400,000 subscribers in rural areas. REA telephone borrowers totaling 869—636 commercial companies and 233 cooperatives—have received loans of over \$1.6 billion since the beginning of the telephone program in 1949. They will need more than twice this amount in the next 15 years. It is simply not realistic to expect Congress to provide it all through direct annual appropriations.

The present REA 2 percent lending program is being maintained at about \$125 million per year. If the 2-percent program alone were to bear the burden of the expected future capital requirements, it would mean doubling the current appropriations. The Congress simply cannot be expected to provide such an amount, at such rate, but presently there is no other alternative.

NEED FOR NEW APPROACH

These REA telephone systems cannot go directly into the private money market, because most of them operate un-

der a very low subscriber-density handicap. REA telephone borrowers have an average subscriber density of 3.8 subscribers per route mile of line as compared to a subscriber density of 16 per mile for the total independent telephone companies and over 40 per mile for the Bell System companies. Under the provisions of the bill those systems with the least density would be able to continue to secure 2-percent financing, with those systems who could afford to pay higher rates of interest borrowing directly from the bank.

With the diverse demands upon the Federal Treasury, it is imperative that new and additional sources of capital funds, at usable interest rates, be developed if these needs are to be met. This is the purpose, Mr. President, of my bill.

RURAL TELEPHONE BANK

Enactment of this legislation will assure rural telephone systems access to reasonable-cost growth capital through private sources by establishing a supplemental credit mechanism to which the borrower systems may turn for all or part of their future capital requirements, thereby reducing the drain on the Treasury both for loan funds as well as subsidies. This proposed bank is modeled somewhat after the highly successful Federal land banks which have operated for over 50 years and have long since reimbursed the Federal Treasury for the Government capital investment and have become totally borrower owned and controlled. The demand for capital is demonstrated by the current backlog of telephone loan applications on hand at REA which was over \$309 million on April 30, 1969. This demand has been increasing each year and must be met if these companies are to survive and meet the demands of their subscribers and keep pace with the industry.

Through borrowings in the private money market and the mix of moneys from stock purchased by borrowers along with the Government investment in the capital stock, the bank will be able to provide additional funds needed over the present level of the 2-percent program to meet the needs of these borrowers. The Federal investment will be repaid under the provisions of this bill with interest.

A maximum of \$30 million a year through the annual appropriation process will be available over a 10-year period from repayments or outstanding 2 percent loans—rather than an additional drain of new money from the Treasury—for investment in the capital stock of the bank.

CONCLUSION

Mr. President, I sincerely believe that this legislation offers a very constructive approach toward solving the capital needs of this worthwhile rural program, a program which has worked well since its inception in 1949 for rural America and contributed much to the productive capacity of our Nation's farms. I personally view this bill as an important step in bringing about a fiscal realism and responsibility in the Federal role of government as it affects this particular program and one which I believe will adequately meet the future capital demands which these telephone systems

are facing in providing the kind of telephone service that our rural areas expect and deserve.

The REA program has traditionally been a program for people—the people of rural America and urban America and every time an REA financed line is built all of our people benefit. I think it is certain that if these systems are to have the growth capital that they need to extend their lines to all of our rural people and provide telephone service on a par with the city telephone subscribers, they must have this legislation enabling them to acquire much of the necessary funds from the private money market rather than total reliance on the current 2-percent program.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2202) to amend the Rural Electrification Act of 1936, as amended, to provide an additional source of financing for the rural telephone program, and for other purposes, introduced by Mr. DOLE (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

S. 2203—INTRODUCTION OF THE CONSUMER AGRICULTURAL FOOD PROTECTION ACT OF 1969

Mr. MURPHY. Mr. President, I introduce the Consumer Agricultural Food Protection Act of 1969 and ask unanimous consent that it be referred to the Committee on Agriculture and Forestry.

The VICE PRESIDENT. The bill will be received; and, without objection, will be referred to the Committee on Agriculture and Forestry.

The bill (S. 2203) the Consumer Agricultural Food Protection Act of 1969, introduced by Mr. MURPHY (by unanimous consent), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry, by unanimous consent.

S. 2204—INTRODUCTION OF A BILL TO ESTABLISH A NATIONAL OCEANIC AGENCY

Mr. MURPHY. Mr. President, I introduce a most important measure. The bill is cosponsored by Senators HATFIELD and TOWER. This bill deals with a subject which has been inextricably linked with the history, the economy, and the very security of our great Nation. It involves a subject which will not only loom more important in our Nation's future, but also in the future of all mankind.

The subject about which I am speaking is the ocean—its exploration and development for the benefit of all of our people. The oceans comprise about three-fourths of the surface of the earth. Yet, as Dr. George H. Sullivan, a member of the President's Commission on Marine Science, Engineering and Resources, which recently issued a comprehensive report, entitled, "Our Nation and the Sea," stated:

Almost nothing is known about the underwater expanse from ten miles outside New York to Le Havre, France.

The significance and importance of looking and moving seaward was succinctly stated in a passage from the President's Commission report, and I quote:

How fully and wisely the United States uses the sea in the decades ahead will affect profoundly its security, its economy, its ability to meet increasing demands for food and raw materials, its position and influence in the world community, and the quality of the environment in which its people live.

In 1966, as a coauthor and strong supporter of the sea grant college program, I characterized our ocean effort as follows:

For some time I have felt this nation's efforts in the exploration of the oceans have been inadequate and moving at a snail's pace . . . The Johnson Administration, however, has treated oceanology as a stepchild. It has failed to provide the leadership and the vision necessary to insure that the United States will be the leader in this endeavor.

The sea grant measure was enacted into law, and today is making an important contribution in preparing the country for an oceanology push. The President's Commission's report, to which I have previously referred, should give further impetus to our ocean efforts.

The truth is, however, Mr. President, that up to this time, we have only dipped into ocean exploration and development. I believe the time has come when we must reorganize our Nation's oceanology program for the plunge. I believe that the time has come when oceanology must be given the priority it deserves and which economic and security considerations demand.

The bill I am introducing, Mr. President, would reorganize our Nation's oceanology program to chart and give momentum to our ocean effort. The bill would establish a new National Oceanic Agency.

Mr. President, presently our oceanology effort is scattered among 23 agencies and departments with inadequate or no coordination among them. The President's Commission recommended the establishment of a new Federal agency.

Congressman BOB WILSON, of San Diego, America's Magellan of oceanology, has been advocating such an agency for years. His idea then may have been ahead of its time, but the time for the implementation of the idea is now.

I am hopeful, Mr. President, that President Nixon and his new administration will support the creation of a new agency. For, as the President's Commission in its report said:

The nation's stake in the uses of the sea is synonymous with the promise and threat of tomorrow.

There is promise in the great economic potential of the oceans. The dangers are represented by our own pollution of this resource, and the national security implications.

We are told the world's population will double by the year 2000. Particularly alarming is the projected population growth for less developed countries where two-thirds of the world's population lives. If the growth rates for these

less developed countries prove accurate, they will have four times as many people as the developed nations by the year 2000. Over the next 20 years, food producing must increase by 50 percent to keep up with population growth.

Mr. President, these are sobering statistics to a world already beset with problems of hunger and malnutrition. The need for additional sources of animal protein is already acute. Population growth will enlarge an already serious situation. The oceans hold a certain promise in helping to meet and to provide the protein need of the world.

The United States, however, lags in the harvesting of marine food products. Although, presently, fisheries represent the most important harvested economic resource of the ocean totaling over 1½ of all other resources and experiencing a growth rate of 6 percent yearly, the U.S. fishing industry has not participated in that growth. The U.S. catch over the past 30 years has stayed approximately the same. Our fishermen today land only 4 percent of the world's catch, despite the fact that our citizens consume approximately 12 percent of the total world harvest. In fact, our fishermen land only about one-third of the fish consumed in the United States. They harvest only one-third of the potential catch the U.S. Continental Shelf yields. With the exception of our tuna and shrimp fisheries, the U.S. fishing industry is technically outmoded. Thus, the present picture of our fishing fleet leaves a lot to be desired.

Foreign fisheries, with the benefit of great research and technological development, are rapidly moving into the global fishing areas including areas off our east and west coasts. Soviet Russia is actively fishing all over the world. The Japanese are very active. In 1956, the United States was second only to Japan as a fishing nation. When I spoke on the sea-grant proposal in 1966, we occupied fifth place, behind Japan, Soviet Russia, Red China, and Peru. Now, we are in sixth place, with Norway having moved ahead of us. This obviously is not a desirable position, fitting for the leading nation on the face of the globe. It is not a position that the American people want, nor one they should tolerate. Not only is it important that we regain prominence in the fishing competition, because we have been traditionally a nation that realizes the importance of the seas, but also the importation of fish and fish products into the United States added over \$564 million in calendar year 1968 to our critical balance-of-payments problem.

Mr. President, we know that minerals abound in the oceans. Scientists tell us that the oceans contain more minerals than those which have been mined by man in all his past history. As an example, we have been taking oil from the Continental Shelf for over 30 years. At the present time, 16 percent of the total free world's oil production results from offshore efforts. Twenty-two countries now or will soon be able to drill oil from offshore areas. Private industry currently invests \$1 billion a year, and this investment is increasing by 18 percent each year.

The President's Commission indicated that offshore oil production may "account for at least 33 percent of the total world production in 10 years." Today there are over 12,000 oil wells off the Nation's coast. The number grows by 1,200 each year. The concentration of oil drilling platforms is so great in the gulf area that freeways for entrance to and exits from gulf ports had to be established. Thus, man is mining the ocean in this important area.

The tragic oil spillage at Santa Barbara illustrates that economic considerations must not be the only considerations and that environmental factors must be carefully examined in connection with our offshore oil production. For, Mr. President, pollution such as occurred at Santa Barbara must be prevented. Santa Barbara made this lesson painfully clear. Santa Barbara showed us our precautions and regulations were inadequate. Santa Barbara demonstrated the inadequacies of our knowledge both in preventing oil spillages initially and the dearth of our knowledge in coping with spillages once they occur. This is an area which must be given priority.

In addition to the rich deposits of oil, gas, and sulfur on our Continental Shelf, the deep sea floor is rich in manganese, copper, cobalt, nickel, molybdenum, vanadium, zinc, and zirconium deposits. The United States now imports 66 of 77 strategic materials. Forty strategic commodities are imported from unstable areas of the world where our supply may be cut off. With world demand for minerals expected to double by 1985 and to triple by the year 2000, competition for these minerals will increase, so the United States is forced to continually look for new sources. Our ability to locate such minerals and our ability to extract them could be critical. While no one is under any illusions that the ocean will yield these key minerals easily, I am confident that our great scientific and technological know-how, which has made our recent flawless space feats possible, will be equal to the challenge of the inhospitable environment of the oceans.

Mr. President, coming from the West, I am acutely aware of the value of our priceless resource—water. The scarcity of water has tormented man down through many centuries. Today, our water needs are great and growing. Tomorrow, the demands for adequate water to supply industry, agriculture, and our exploding populations will be even greater. The world demand is expected to double before the end of the 20th century. In the United States, it has been estimated that, by 1980, water supplies will be inadequate to meet the water requirements of the population.

Yet, Mr. President, scientists tell us that the earth's original supply of water is still in use. Little has been lost or added. The centuries-old hydrologic cycles of water continue today. It is, therefore, not the total world supply that is of concern to man, but its management distribution and use that will determine whether adequate water will be available. Our water needs today and our projected needs of the future underscore the importance of accelerating our de-

salination efforts and environmental modification efforts.

As a member of the Senate Health Subcommittee, I naturally am interested in the use of the sea's animal and plant-life for medicinal raw materials. The President's Commission tells us:

The medical history of people bordering the seas is replete with evidence that products with pharmaceutical applications can be obtained from the plants and animals of the sea.

We desperately search for a cure of cancer. We know the strangely, invertebrate marine animals have not acquired cancer. Why not? We need to investigate this. Some scientists also feel that compounds in vertebrates may hold a clue to the "biochemistry of sanity and insanity." No one knows, but these hints of medical possibilities show yet another possible benefit of ocean development and research. Despite these medical possibilities, only 1 percent of marine plant and animal life "known to contain biologically active materials, have been studied," according to the President's Commission.

While the economic potentials of ocean development are important, there are even higher stakes, perhaps the very survival of our Nation, that compel us to move ahead in the field of oceanology. Recently, Admiral Gorschkov, Commander and Chief of the Soviet Navy, said:

The flag of the Soviet Navy now flies proudly over the oceans of the world. Sooner or later, the United States will have to understand that it no longer has mastery of the seas.

And, according to Admiral Rickover, Russia has just announced "a projected 50-percent increase in the size of their merchant fleet."

Mr. President, our merchant fleet has been rightfully called the Nation's fourth arm of defense. While Russia is moving full speed ahead with the development of their merchant fleet, our merchant fleet continues its decline. In 1966, our merchant fleet carried only 9 percent of our foreign trade. In 1967, this had declined to 7.9 percent. The United States has dropped to 12th place among world's shipbuilding nations. Russia, in contrast, has risen to seventh place. All this at a time when once again experience is demonstrating the importance of the merchant fleet not only in peacetime but in wartime as well. For, in this conflict our merchant fleet is again keeping the supplies, the lifeblood of our troops, and personnel moving. Nearly all of these supplies and most of the persons involved in the war have been moved by our U.S. merchant fleet. Mr. President, the Soviet Union's effort to achieve mastery of the seas has been treated with relative indifference in the United States. The Soviet space sputnik resulted in a national space effort. What bothers me, Mr. President, is that the Soviet government has quietly stepped up its program in the "inner space." I am hopeful that the Nation will not need another sputnik to make us realize the importance and necessity of extending our efforts in what has been called the neglected frontier.

Admiral Rickover, a great American and the father of our nuclear Navy, in a recent letter to Senator JOHN PASTORE, pointed out the great importance that the Soviet Union is attaching to sea power in the broadest sense. Mr. President, I ask unanimous consent that excerpts from his letter be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF LETTER FROM ADMIRAL RICKOVER TO SENATOR PASTORE

The Soviet Union is embarked on a program which reveals a singular awareness of the importance of sea power and an unmistakable resolve to become the most powerful maritime force in the world. They demonstrate a thorough understanding of the basic elements of sea power: knowledge of the seas, a strong modern merchant marine, and a powerful new Navy. They are surging forward with a naval and maritime program that is a technological marvel.

At the end of World War II, the Soviet Union had a fleet of 200 diesel-powered submarines. They then embarked on a massive building program, producing over 550 new submarines through 1968, at least 65 of which are nuclear-powered. During the same period, the United States built 99 submarines, 82 of them nuclear-powered. The Soviets have scrapped or given away all their World War II submarines as well as some built since. They now have a new submarine force of about 375; we have 143, which includes 61 diesel submarines most of which are of World War II vintage. Thus the Soviets have a net advantage of about 230 submarines. It is estimated that by the end of 1970 they will have a numerical lead in nuclear submarines.

To achieve this the Soviets greatly expanded and modernized their submarine building facilities. Just one of their numerous submarine building yards has several times the area and facilities of all U.S. submarine yards. They use modern assemblyline techniques under covered ways, permitting large-scale production regardless of weather conditions.

In the single year 1968, the Soviets put to sea a new type ballistic missile submarine as well as several new types of nuclear attack submarines—a feat far exceeding anything we have ever done. In looking to the future, it is estimated that by 1974 they will add about 70 nuclear-powered submarines to their fleet, whereas we will add but 26—further increasing their numerical superiority. In the case of the ballistic missile submarine the Soviets have undertaken a vigorous building program to surpass our Polaris fleet of 41. They have completed seven of the new Polaris-type submarines, and have the capability to turn out one a month. We have no Polaris submarines under construction or planned. We must assume that by the 1973-74 time period they will be up to us.

Numerical superiority, however, does not tell the whole story. Weapon systems, speed, depth, detection devices, quietness of operation, and crew performance all make a significant contribution to the effectiveness of a submarine force. From what we have been able to learn during the past year, the Soviets have attained equality in a number of these characteristics and a superiority in some.

In order to achieve the results so far attained in all areas of modern technology the Soviets had to develop their most important resource—technical and scientific personnel. The Soviet educational program enjoys highest national priority. The statistics on the total numbers of Soviet degree graduates are extremely impressive. The U.S. National Science Foundation data indicates that in 1966 alone, 168,000 engineers were graduated; the

U.S., on the other hand, produced but 36,000. With specific application to the Navy, the Leningrad Shipbuilding Institute, just one naval institute of several, had over 7,000 students in 1966 studying naval architecture and marine engineering. I doubt we had over 400 enrolled in these subjects in all U.S. colleges.

While we cannot specifically count the number of Soviet scientists and engineers devoted to naval work, it is apparent that they have created a broad technological base. They have committed extensive resources to support development of their naval forces. The steady build-up of the Soviet submarine Navy from an ineffective coastal defense force at the end of World War II to the world's largest undersea navy today deserves admiration; also it should deeply worry every American. By the end of this year we face the prospect of losing the superiority in nuclear submarines we have held for many years. The threat posed by their submarine force—with their new ballistic and cruise missile launchers and new attack types, is formidable. If more sophisticated types are added in the near future, as is likely considering their large number of designers and their extensive facilities, the threat will rapidly increase.

Mr. MURPHY. Mr. President, as Admiral Rickover indicates, the Soviet Union has produced over 500 new submarines since 1963, 65 of which are nuclear-powered. The United States on the other hand has built only 99 submarines, but 82 of them are nuclear-powered. The admiral further indicated that the Soviets have a new submarine force around 375, whereas we have only 143, of which 61 are of "World War II vintage."

Thus—

According to the Admiral—

the Soviets have a net advantage of about 230 submarines. It is established by the year of 1970 they will have a numerical lead in nuclear submarines.

It is a frightening thought that by the end of this year, the Soviet Union may gain superiority from us in nuclear submarines. We, of course, are aware of the tremendous capabilities of their Polaris—and its successor, the Poseidon—missiles, which are launched from mobile submarines having the expansive area of the oceans, 75 percent of our globe, as their area of operations. The problem of detecting and eliminating the dangers of submarine attack stagger the imagination. During World War II, my colleagues may recall, 4,786 allied merchant vessels were lost. In the early days of the war, our losses averaged around 100 per month. The Germans were able to destroy such large numbers during the early days of the war despite the fact that at the beginning of the war they had only 47 submarines. Russia, as previously indicated, has over 550. Need any more be said?

Our scientific understanding of the marine environment is obviously of vital importance to the Navy. The Navy has been the principal source of this Nation's basic research. Basic research will continue to play a major role in the Navy's total ocean program as the Navy carries out its mission of defense and deterrence. For example, the oceans, like the geography of our land, have peaks, valleys, and plateaus. There is a need to know

and to map the ocean, just as there always has been a need to have maps of our land surfaces.

If we are to increase our methods to detect hostile submarines and improve our accuracy at detecting targets, greater research in oceanology is greatly needed. One priority area, and the Navy has identified it as such, is underwater sound or acoustics. For our ability to seek, detect, and destroy an enemy under water depends upon our understanding of underwater acoustics. The basic science research has helped keep our Navy ahead of any potential aggressor. But, as the President's Commission warned:

The Navy of tomorrow may well operate in a context which a generation ago would have appeared implausible . . . It is certain, in our view, that the effectiveness of the Navy of tomorrow will be determined in considerable part by our level of scientific understanding of the marine environment, and that all aspects of basic science in this area are of concern to it.

Mr. President, in summary, I am convinced that ocean exploration and development demand greater priority of our Nation's resources. The ocean's resources, to today's explorers, might be thought of as at the same stage of development as our land resources during the days of our early pioneers. Investment in the oceans, our "neglected and last frontier," will result in great dividends for the Nation. The National Academy of Sciences has estimated that an investment of \$165 million in ocean research within a decade may produce a return of as much as \$3 billion yearly in resources.

Oceanology clearly is one of our tomorrow industries. In addition to promising economic returns and enhancing our national security, an accelerated oceanology effort will produce new jobs, new products, and new industries. Also, since the country is rightfully concerned with the problems of the disadvantaged, there seems to be great opportunity for employment of this group in ocean work. For example, I understand on board some of our ships, we have highly-trained oceanographers, who are doing work of technicians and technician aides. Clearly, this is a waste of skilled manpower to have these highly trained people streaming sample bottles. Information given to me indicates that such work is of a semiskilled nature and can be trained in short order. Our experience in the aerospace industry shows that for every engineer, additional technicians and technician aides are needed. A similar combination will undoubtedly hold true in our ocean programs.

Bordering the Pacific Ocean, Californians have always appreciated the importance of the ocean and have been cognizant of the benefits that might be derived by increased effort. Because of the great interest in oceanology in my State and the importance of the subject to the Nation, I urge the administration to support and the Congress to enact legislation reorganizing our total oceanic effort.

Speaking of seapower in the period when the English fleet was diminishing, Santayana wrote:

It will be a black day for the human race when scientific blackguards, conspirators, churls and fanatics manage to supplant him.

Fortunately for the free world, Mr. President, England was supplanted by the United States, and U.S. control of the seas has not only been essential for the economic health and defense of our Nation, but it has also helped to preserve freedom around the world. I believe that Admiral Rickover's statement clearly evidences the Soviet Union's absorbing interest in seapower in the broadest sense. The question that the Congress must long ponder is whether we are equal to the challenge. I am confident that the same technology, know-how, and resources that have made us No. 1 in space will enable us to be No. 1 in oceanology. This must be our national goal.

Mr. President, I ask unanimous consent that the text of the bill to establish a National Oceanic Agency be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2204) to establish the National Oceanic Agency, introduced by Mr. MURPHY (for himself, Mr. HATFIELD, and Mr. TOWER), was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 2204

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established an independent agency which shall be known as the "National Oceanic Agency" (hereinafter referred to as the "Agency").

SEC. 2. There shall be at the head of the Agency an officer to be known as the Administrator. The Administrator shall be appointed by the President, with the advice and consent of the Senate.

SEC. 3. The Agency shall establish a coordinated national program for oceanology and related sciences including meteorology. In order to implement that program the Agency shall have authority to carry out research projects and programs of the United States in this broad area.

SEC. 4. There is hereby transferred to the Agency all functions relating to oceanology and related sciences which are vested on the date of enactment of this Act in any officer, employee, department, agency, and instrumentality of the United States. There are hereby transferred to the Agency so much of the personnel, property, records, and unexpended balances of appropriations, allocations, and other funds, of any department, agency, or instrumentality of the United States with respect to which any function is transferred under this section as the Director of the Bureau of the Budget determines necessary in connection with the exercise by the Agency of the functions so transferred.

SEC. 5. All orders, regulations, directives, and other official acts of any officer or employee of the United States with respect to functions relating to oceanology and related sciences which are transferred by this Act and which are in force on the date of enactment of this Act shall continue in force until modified, amended, superseded, or revoked by the Administrator.

SEC. 6. In the performance of his functions the Administrator is authorized—

(1) to make, promulgate, issue, and rescind rules and regulations governing the manner of the operation of the Agency and the exercise of its powers;

(2) subject to the civil service laws and the Classification Act of 1949, as amended, to appoint and fix the compensation of such officers and employees as may be necessary to carry out its functions;

(3) to accept unconditional gifts or donations of services, moneys, or property, real, personal, or mixed, tangible or intangible;

(4) without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), to enter into and perform such contracts, leases, cooperative agreements, or other transactions as may be necessary in the conduct of its work and on such terms as it may deem appropriate, with any agency or instrumentality of the United States, or with any State, territory, or possession, or with any political subdivision thereof, or with any person, firm, association, corporation, or educational institution;

(5) to use, with their consent, the services, equipment, personnel, and facilities of Federal and other agencies with or without reimbursement, and on a similar basis to cooperate with other public and private agencies and instrumentalities in the use of services, equipment, and facilities, and each department, agency, and instrumentality of the Federal Government shall cooperate fully with the Agency in making its services, equipment, personnel, and facilities available to the Agency, and any such department, agency, or instrumentality is authorized, notwithstanding any other provision of law, to transfer to or receive from the Agency, without reimbursement, supplies and equipment other than the administrative supplies and equipment;

(6) to establish within the Agency such offices and procedures as may be appropriate to provide for the greatest possible coordination of its activities under this Act with related activities being carried out by other public and private agencies and organizations; and

(7) with the approval of the President, to enter into cooperative agreements under which officers and employees (including members of the Armed Forces) of any department, agency, or instrumentality in the executive branch of the Government may be detailed by the head of such department, agency, or instrumentality for services in the performance of functions under this Act to the same extent as that to which they might lawfully be assigned in such department, agency or instrumentality.

Sec. 7. Notwithstanding any other provision of this Act, no function shall be transferred under this Act which the President determines should not be transferred in the interests of national security.

S. 2207—INTRODUCTION OF A BILL TO PROVIDE MORE FLEXIBLE MORTGAGE LIMITS

Mr. MONDALE. Mr. President, I introduce today, for appropriate reference, a bill, jointly authored by Senator JAVRS and myself, to amend section 235 of the National Housing Act. Upon discovering that we were each working on this matter independently, Senator JAVRS and I decided to pool our efforts and produce a jointly authored bill.

The purpose of this bill is to provide more flexible mortgage limits in order to encourage the development of homeownership in high-cost areas for lower income families.

BACKGROUND

All Federal housing assistance programs impose maximum limits on total dwelling development costs to insure that only modestly priced housing is built

under these programs. These maximum limits vary according to program—public housing, 221(d)(3), 236, and 235—and from area to area. Each program recognizes that higher development cost limits must be allowed in high-cost areas where land and labor costs are higher. Generally speaking, the allowances for high-cost areas provided by statute for public housing and FHA multifamily programs like 221(d)(3) and 236 are realistic and adequate. This is not the case for the new 235 homeownership program. As a result, there are strong indications that the 235 program will often not prove to be economically feasible in many high-cost metropolitan areas—like New York City, Chicago or Washington, D.C.—which have some of the most severe housing problems in the Nation.

Joseph Gabler, Director of the FHA in Minnesota, has informed me that “the single major difficulty” of the section 235 program is the fact that the present mortgage limits “make it almost impossible to utilize section 235 in the metropolitan areas” of Minnesota. He points out that in the cities the only way to get new construction under this program is to build on urban renewal land where the cost has been lowered considerably below the market level.

The proposed amendment would give the Secretary of Housing and Urban Development the authority and flexibility to correct this problem when and where it arises.

THE NEED FOR THE AMENDMENT

In many high-cost areas, rental buildings costing up to \$19,000 or more per unit are now being built under the public housing, 221(d)(3) and 236 programs. Given today's high construction costs, these buildings are not elaborate structures. Present law establishes considerably lower cost limits in high-cost areas for houses built under the section 235 program than for those built under the rental programs, even though the income limits of the persons to be served by the 235 and 236 programs are exactly the same. This is paradoxical because the cost of detached or semidetached houses on separate lots is considerably greater than the cost of garden apartments. As a result, many builders in high-cost areas will be discouraged by the stringent cost limits from using the 235 program, thus frustrating Congress' purpose of widening opportunities for homeownership.

An example will help indicate how the present cost limits may inhibit production. Suppose a builder has an option on a tract of land on which section 235 houses might be built. Let us assume that the land has certain environmental deficiencies—like location in a deteriorating urban area—so that houses could not be sold if they were financed conventionally. In determining whether or not to exercise the option, the builder estimates all his costs—including a small allowance for profit—if he were to build houses under section 235. Let us assume further that his estimated costs total \$17,000, which is below the present statutory cost limit of \$17,500 in high-cost areas. He will still probably choose not

to take the land and participate in the program. He reasons that he will not complete construction for about 2 years, and that inflation may well erode his entire margin of safety by that time. Given the rapid rise of labor costs, interest rates, and lumber prices in the last few years, his actual costs may well exceed \$17,500, thereby destroying his profit margin. He is not certain that this will occur, but the chance is great enough to dissuade him from taking the risk. The existence of rigid statutory cost limits is the cause of this problem. If the builder knows that the Secretary of HUD has the authority to raise cost limits in response to inflation, he will be more likely to participate in the program. But he is obviously less confident that Congress will be able to act in time to adjust existing statutory cost limits in response to inflation.

THE AMENDMENT AND ITS EFFECT

The basic statutory development cost limit—technically it is the limit on the amount of the mortgage—under the section 235 program is \$15,000. The limit can be increased to \$17,500 for families of five or more persons. Under present legislation, an additional allowance of \$2,500 is allowed for high-cost areas.

Experience indicates that this allowance will be clearly inadequate in the years ahead. The 221(d)(3) and 236 programs permit development costs of up to 45 percent higher than their basic cost limits in high-cost areas. The proposed amendment, which adopts the language of sections 221(d)(3) and 236, would apply the 45-percent formula for high-cost areas that is used under these two sections to the 235 program.

Thus, the basic mortgage limits for ordinary sales units, units in cooperatives, and units in condominiums under section 235 would remain at \$15,000—and \$17,500 where the mortgagor's family includes five or more persons. But under the amendment, the Secretary would have the power to raise these limits up to 45 percent “in any geographical area where he finds that cost levels so require.”

It should be emphasized that this amendment would not necessarily result in higher cost units being built under 253. Rather, the amendment would give the Secretary the flexibility to raise the development cost limits in high-cost areas where spiralling costs require such an increase. The current allowance of \$2,500 does not give him sufficient flexibility.

It should also be pointed out that this amendment would not increase the monthly payments of many lower income families, since they will still pay 20 percent of their income. For those families who receive the maximum subsidy under the law, their cost per month would go up slightly in these high-cost areas. However, these families will still be better off, since there would be very little opportunity for families in high-cost areas to buy houses under section 235 in its present form; the builders are simply not going to participate in the program in such areas.

As a result of this amendment, builders

concerned about meeting cost limits will be just as likely to build sales units as they would rental units in most of our metropolitan areas. The end result will be to fully effectuate the purpose of the 235 program, which is now in serious trouble in those metropolitan areas of the country.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2207) to amend section 235 of the National Housing Act to provide more flexible mortgage limits in order to encourage the development of homeownership in high-cost areas for lower income families, introduced by Mr. MONDALE (for himself and Mr. JAVITS), was received, read twice by its title, and referred to the Committee on Banking and Currency.

Mr. JAVITS. Mr. President, I am today joining the Senator from Minnesota (Mr. MONDALE) in a bill, which he has just offered for us both, and I ask unanimous consent that my remarks, together with a copy of the bill, may appear in the appropriate place in the RECORD.

The VICE PRESIDENT. The remarks and bill will be printed in the RECORD at an appropriate place.

Mr. JAVITS. Mr. President, it has become increasingly clear in the past few months that the success of section 235, homeownership program, has been put in doubt by the present statutory cost limitations. Under section 235, the maximum mortgage amount for a house of three bedrooms or less is \$15,000, or \$17,500 in high-cost areas. Since downpayments must be kept low in this program which is designed for persons of low or moderate income, these maximums on mortgage amount naturally follow ceilings on sales prices.

In high-cost areas the section 235 program has had little impact because these statutory cost limits are much too low and builders are reluctant to get involved in the face of rapidly escalating construction costs. For example, 6 years ago the median price of new single-family houses built in the Washington area was \$21,300. By 1966, it had increased to \$26,500, and it has now increased to \$32,500. At the end of 1968, census data show that only 11 percent of new houses sold in the West and Northeast were priced at under \$17,500, and in the North Central United States only 8 percent were. The problem is particularly serious near the center of major metropolitan areas where high land and labor costs make the statutory maximum cost limitations in section 235 particularly serious. An FHA survey early this year in the Washington, D.C., area uncovered no new single-family houses on the market with sales prices under \$17,500. Thus, in the very areas in which this program is most needed, the housing industry is least able to meet the need.

In the face of this situation, Senator MONDALE and I—individually—were preparing legislation to amend section 235, to make the statutory cost limitations more flexible. We have decided to join in offering this bill, which would authorize the Secretary of Housing and Urban Development to increase the cost limitations by up to 45 percent in high-cost

areas. Such an amended limitation on costs in high-cost areas would be consistent with a similar provision of the section 221(d)(3) program.

Such an amendment to section 235 at this time is crucial, for there is every reason to believe that costs will continue to rise. Lumber products have undergone an unprecedented price rise in the last 2 years, prompting congressional hearings and administrative action. Land and labor costs have been consistently going up, and, of course, we are all aware of the almost unprecedented increases in financing charges.

Recent statistics from the Department of Housing and Urban Development indicate that the statutory maximums have limited activity under the section 235 program in New York and in other comparable high-cost areas throughout the Nation. In a letter to me of May 16, 1969, William B. Ross, Acting Assistant Secretary-Commissioner, Federal Housing Administration, noted:

In New York City there has been absolutely no activity under the Section 235 program. . . . To date, reservations have been requested for only 32 units for the city of Albany and 61 units for the city of Buffalo. Our experience in other major cities is very similar.

Mr. Ross continues:

When we consider the activity this program has engendered throughout the nation and the backlog of requests for assistance amounting to over 60,000 units which we have not been able to fund, we can better judge the impact of the cost limits in the high cost areas.

Mr. President, I ask unanimous consent that the correspondence with Mr. Ross be inserted in the CONGRESSIONAL RECORD at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. Mr. President, this increase in the statutory cost limitations in high-cost areas in the section 235 homeownership program has been endorsed by several major groups. At its recent conference, the National Housing Conference approved a resolution calling for such an amendment, and in recent hearings on lumber price increases before the Housing Subcommittee of the Senate Banking and Currency Committee, the National Association of Home Builders recommended that a 45-percent increase in costs for high-cost areas be allowed under section 235. Also, in a letter to Housing and Urban Development Secretary George Romney, the Council of Housing Producers stated:

Housing costs have increased approximately 10% or more since legislation was first drafted for the 1968 Housing Act. HUD should ask for legislation which would regulate increases on statutory limits for 235 and 236. With costs increasing as they have been in the past two years, it will be almost impossible, in many areas, to build single family housing within the present limitations. . . . Money will go unused in many cities because producers will not be able to build single family homes within the limitations.

Mr. President, I am pleased to join Senator MONDALE in offering this bill. I hope that it will have early and serious consideration in the Congress.

EXHIBIT 1

MAY 15, 1969.

Mr. MORTON BARUCH,
Director, Low and Moderate Income Housing,
Department of Housing and Urban Development,
Washington, D.C.

DEAR MR. BARUCH: I am deeply concerned about the possible impact of present statutory cost limits for high-cost areas in section 235 of the National Housing Act. It has been brought to my attention that the present limits are seriously inhibiting the success of this program in certain areas of the nation. Accordingly, I am considering introduction of legislation to amend section 235 to increase the cost limitations to 45 percent of existing dollar-limitations in certain geographical areas to be designated by the Secretary of Housing and Urban Development. Such a provision would be consistent with present limitations in "below market interest rate" programs.

In connection with this matter, could you indicate to me the number of applications and the general level of activity under the section 235 program in the New York Regional Office of the Department of HUD. In addition, I would appreciate information as to the level of activity in other areas of the nation with cost figures similar to that of the New York Region.

I would deeply appreciate your immediate attention to this matter. Please relay any information to my legislative assistant, Emil Frankel, in Room 320, Old Senate Office Building (225-6542).

With best wishes,

Sincerely,

JACOB K. JAVITS.

DEPARTMENT OF HOUSING AND URBAN
DEVELOPMENT, FEDERAL HOUSING
ADMINISTRATION,
Washington, D.C., May 16, 1969.

HON. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: I am replying to your letter of May 15, 1969, addressed to Mr. Morton A. Baruch of my staff concerning the statutory limits which have been established for the Section 235 homeownership program.

From our experience with the initial assistance funding made available to the program it would appear that the statutory maximums have limited activity in New York and other comparable high cost areas throughout the nation. In New York City there has been absolutely no activity under the Section 235 program either for project proposals for five or more units or on an individual basis for proposals involving four or less units. To date, reservations have been requested for only 32 units for the city of Albany and 61 units for the city of Buffalo. Our experience in other major cities is very similar. Assistance has been requested for only 181 units in Chicago; 250 units in Detroit; 73 units in Los Angeles and there have been no requests for assistance in the cities of San Francisco and Boston.

When we consider the activity this program has engendered throughout the nation and the backlog of requests for assistance amounting to over 60,000 units which we have not been able to fund, we can better judge the impact of the cost limits in the high cost areas.

You may be assured that within the legislative constraints every possible effort will be made to provide assistance to these areas by stressing the utilization of the Section 235(j) nonprofit rehabilitation program as well as rehabilitation under the regular homeownership assistance program. We will also permit maximum utilization of that percentage of funds available for existing housing.

In view of your request for our immediate

response in this matter, I am having this letter hand carried to your office.

Sincerely yours,

Wm. B. Ross,
Acting Assistant Secretary-Commissioner.

The text of the bill is as follows:

S. 2207

A bill to amend section 235 of the National Housing Act to provide more flexible mortgage limits in order to encourage the development of homeownership in high-cost areas for lower income families

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 235 of the National Housing Act is amended—

(1) by striking out the last proviso in subsection (b) (2) and inserting in lieu thereof the following: "Provided further, That the amount of the mortgage attributable to the dwelling unit shall involve a principal obligation not in excess of \$15,000 (or \$17,500, if the mortgagor's family includes five or more persons), except that the Secretary may, by regulation, increase the foregoing dollar amount limitations by not to exceed 45 per centum in any geographical area where he finds that cost levels so require"; and

(2) by redesignating subparagraph (C) of subsection (1) (3) as subparagraph (D), and by striking out subparagraph (B) of such subsection and inserting in lieu thereof the following:

"(B) involve a principal obligation (including such initial service charges, and such appraisal, inspection, and other fees, as the Secretary shall approve) in an amount (i) in the case of a single-family dwelling, not to exceed \$15,000 (or \$17,500, if the mortgagor's family includes five or more persons), or (ii) in the case of a two-family dwelling, not to exceed \$20,000: Provided, That the Secretary may, by regulation, increase the foregoing dollar amount limitations by not to exceed 45 per centum in any geographical area where he finds that cost levels so require;

"(C) where it is to cover a one-family unit in a condominium project, have a principal obligation not exceeding \$15,000 (or \$17,500, if the mortgagor's family includes five or more persons), except that the Secretary may, by regulation, increase the foregoing dollar amount limitations by not to exceed 45 per centum in any geographical area where he finds that cost levels so require; and"

S. 2208—INTRODUCTION OF A BILL TO AUTHORIZE A FEASIBILITY STUDY OF ESTABLISHING A NATIONAL LAKESHORE RECREATION AREA AT LAKE TAHOE, NEV.

Mr. BIBLE. Mr. President, on behalf of myself and my colleague, Senator CANNON, I introduce, for appropriate reference, a bill to authorize a feasibility study of a proposal to establish a national lakeshore recreation area at Lake Tahoe, Nev.

This bill, Mr. President, deals with one of our Nation's most prized scenic and recreation resources. It is an irreplaceable resource. And it is a resource that is gravely threatened by the relentless march of commercial development.

Joint efforts by the States of California and Nevada and the Federal Government to save the fabled purity of this mountain lake's waters have intensified in recent years, just as commercial development has intensified. But this is just one part of the overall problem. What is left of the Lake Tahoe's mag-

nificent natural shoreline also must be saved.

There is not too much of this natural shoreline left. And there is not much time left to save it.

The bill I introduce today culminates many years of hard work at all levels of government to preserve the lake's natural beauty and to set aside and develop a meaningful area for public recreation. It has the active support of the Governor and the Legislature of Nevada, and I am confident, the people of Nevada.

To date, the effort to provide a Lake Tahoe park and recreation area for the thousands of visitors from all over the Nation has been essentially a State project. Although State finances are obviously limited, Nevada has already committed considerable moneys to land acquisition. In working closely with former Gov. Grant Sawyer and his successor, Gov. Paul Laxalt, it has been my privilege to help secure some \$3 million in special Federal allocations from the land and water conservation fund to spur this effort along.

But all of us engaged in this park effort have had to face the reality that the overall project is too big for Nevada and the relatively limited assistance available in the land and water conservation fund. The project is big enough and the cause is important enough and the needs are urgent enough to merit a development of national proportions.

Recognizing this, I first proposed the establishment of a national lakeshore recreation area in a speech before the California-Nevada section of the National Wildlife Society in San Francisco last January. But I said then that the effort first required the full support of the Nevada Legislature and Governor. A supporting resolution was subsequently approved by the legislature and signed by the Governor.

Although I believe the ultimate answer will be the establishment of a national lakeshore recreational area, I realize this is but one approach.

All approaches should be explored. The Department of the Interior, through the Bureau of Outdoor Recreation and the National Park Service, is best qualified to conduct a thorough investigation of the problems and challenges and provide the most effective solution.

I must emphasize, Mr. President, the situation at Lake Tahoe presents a major challenge and demands fast action. Already, most of the lakeshore on the California side and too much of it on the Nevada side has been developed. The mountain slopes, the rocks and trees and the white beaches of this deep blue, mile-high lake have given way to the hotdog stand and the neon light. Public access for recreation is limited to a few small beaches and picnic areas which are not adequate to the needs of a fraction of the visiting public.

Fortunately, because a great deal of land has been held undeveloped in private ownership, long reaches of the Nevada shoreline remain in their natural state. But even this land is endangered because it is not under proper management and protection and could at any time be acquired and exploited by developers.

We are in a race with the bulldozer of commercial development. It is a race we must win.

Because of this situation there is an immediate and urgent need for land acquisition beyond what the State of Nevada has achieved. I have already consulted with the U.S. Forest Service over the feasibility of acquiring the proper acreage in the near future to protect the Federal interest. This may be possible under existing authority or with a slight modification of the Toiyabe National Forest boundary in the area. I shall pursue the most effective course in this regard.

Anyone who has ever seen Lake Tahoe knows it would be criminal not to extend every effort toward preserving its legendary beauty and managing its invaluable resources for countless future generations of Americans. Anything less and we stand indicted for neglect.

I hope this measure can be expedited in Congress and that the study it authorizes will be carried forward promptly. And when the solution is before us—in the near future, I trust—I hope Congress will take quick and effective action to achieve the goals I have set forth.

So that the RECORD will be complete, I ask that the full text of Senate Joint Resolution 15 of the Nevada Legislature, endorsing the proposed study and the ultimate establishment of a national lakeshore or national recreation area, be printed following my remarks.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The bill (S. 2208) to authorize the Secretary of the Interior to study the feasibility and desirability of a national lakeshore on Lake Tahoe in the State of Nevada, and for other purposes, introduced by Mr. BIBLE (for himself and Mr. CANNON), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The joint resolution presented by Mr. BIBLE follows:

SENATE JOINT RESOLUTION 15

Senate joint resolution requesting Senator ALAN BIBLE to introduce in the U.S. Senate certain legislation concerning Lake Tahoe.

Whereas, The 55th session of the Nevada legislature recognizes the unique natural characteristics and unsurpassed beauty to be found in the Lake Tahoe basin, and further recognizes the need for immediate action to preserve the clarity of the lake and its scenic forest environs as open space and recreation reserves; and

Whereas, Opportunities exist for establishment of large areas of open space and recreation lands in Nevada and the entire basin; and

Whereas, If steps to establish a portion of the basin's undeveloped lands for recreation and open space fail, the area may be subjected to overdevelopment and, further, the natural resources of the basin may be excessively exploited and their integrity impaired; and

Whereas, The Nevada legislature in recognizing the resource needs of the Lake Tahoe basin has enacted the following major programs in its effort to preserve Lake Tahoe:

1. In 1963, purchased Marlette Lake and surrounding lands in Washoe and Ormsby

counties for the preservation of a prime water supply and watershed;

2. In 1964, authorized the acquisition of 12,000 acres for park and recreation purposes in Washoe and Ormsby counties, which included 7 miles of shoreline, of which 3 miles have been purchased; and

3. In 1964, appropriated 1½ million dollars to finance the purchase of park lands, which, through the generosity of the Max C. Fleischmann Foundation was matched by an additional 1½ million dollars; and

Whereas, The Federal Government, through its Department of the Interior, Bureau of Outdoor Recreation, in recognizing the significance of Nevada's Lake Tahoe state park land acquisition project, approved a 3-million dollar Land and Water Conservation Fund grant to match state and foundation funds; and

Whereas, Nevada, through legislative and executive actions of the past several years, is making outstanding progress to preserve Lake Tahoe and its environs; and

Whereas, Lake Tahoe is recognized as a national attraction and deserves the financial support of the Federal Government to hasten preservation of the basin for the enjoyment of all the nation's citizenry; and

Whereas, The United States Forest Service administers national forest lands within the Nevada portion of the Lake Tahoe basin known as the Toiyabe National Forest; and

Whereas, The Toiyabe National Forest, if authorized and funded, could offer immediate assistance and supplemental support to the State of Nevada in preserving the integrity and beauty of the basin; and

Whereas, Expansion of that portion of the Toiyabe National Forest situated in the Lake Tahoe basin has not kept pace with general urban growth patterns and increased needs for additional recreation and open space lands in the basin; and

Whereas, The Toiyabe National Forest is immediately capable of contributing significantly to the overall development and protection of resource values in the Lake Tahoe basin; now, therefore, be it

Resolved by the Senate and Assembly of the State of Nevada, jointly, That Senator Alan Bible is encouraged and requested to introduce legislation in the 91st Congress of the United States:

1. Immediately to expand the Toiyabe National Forest boundary in Ormsby and Douglas counties to the shoreline of Lake Tahoe;

2. To appropriate funds to enable the United States Forest Service to implement an immediate land acquisition program for purposes of acquiring significant mountain and lakeshore lands while they are still available;

3. To authorize the Bureau of Outdoor Recreation, to conduct a recreation resource study of the entire Lake Tahoe basin to determine specifically actions and administrative direction that should take place in the management and development of federal public lands in the Lake Tahoe basin; and

4. To require that, after completion of the study, consideration be given to the establishment of a national park, national recreation area or national lakeshore in the Lake Tahoe basin, to be administered by the United States Forest Service, the United States Park Service or other appropriate state or federal agencies; and, be it further

Resolved, That copies of this resolution be transmitted forthwith by the legislative counsel to President Richard M. Nixon, Senator Alan Bible, Senator Howard Cannon and Representative Walter S. Baring.

S. 2211—INTRODUCTION OF THE TAX REFORM ACT OF 1969

Mr. TYDINGS. Mr. President, I introduce legislation to close the numerous

loopholes that have destroyed the equity of our Federal tax system.

I was encouraged by the administration's recent decision to support tax reform. However, I am deeply disappointed by the limited scope of the President's proposals.

Closing certain loopholes while leaving others intact will only result in a rechanneling of tax-exempt income behind the remaining tax shelters. Billions of dollars in potential tax revenue will continue to slip through these unchallenged loopholes into the pockets of a privileged few.

This "half-way" approach to tax reform is not likely to placate the rebellious American taxpayer. He is demanding an equitable tax system which requires that each contribute his fair share. Reform that fails to eliminate all major inequities will only serve to further weaken the fading faith in our tax system.

For a serious tax revolt is brewing. From my conversations with constituents across Maryland, it is clear that the taxpayers of this country are fighting mad over the swollen size of their tax bills, and the glaring loopholes in our Federal tax structure. And well they should be.

Last year a 10-percent Federal surtax was imposed to combat inflation. At the same time, an estimated \$50 billion a year that could be employed to curb price rises was escaping through the loopholes in our jerry-built tax system.

State and local sales and property taxes continue their astronomical climb to pay for needed Government services. At the same time, billions that could be used to finance these services are siphoned off for the private profit of the special interests.

The middle-income taxpayers on whom the tax burden falls most heavily and most unfairly struggle to make ends meet in this period of rapid inflation. At the same time, 155 Americans filed returns in 1967 on incomes of more than \$200,000 apiece and paid not one penny in Federal taxes; 21 members of this group earned more than \$1 million that year!

Is it any wonder that the average taxpayer is in a rebellious mood?

Comprehensive reform would not only relieve this growing restiveness by renewing public confidence in our tax system, it would also produce a number of significant economic benefits.

Many of the loopholes themselves contribute to inflationary pressures in the economy. Suspending the 7 percent investment tax credit would ease the inflated condition of the capital goods market. Eliminating unlimited tax deductions for hobby farms would help check the rising price of farmland.

In addition, such loopholes are indirectly responsible for the tight money policy and high interest rates that work such a hardship on State and local governments, small businesses, and on the home building industry. For example, suspending the investment tax credit would eliminate this special incentive to build capital equipment which has been feeding the demand for the Nation's scarce supply of money. The result would

be a reduction in the cost of money—lower interest rates.

Finally, far-reaching tax reform would render the proposed extension of the 10-percent surtax unnecessary. Additional revenue raised by repeal of the investment tax credit alone would have the same anti-inflationary impact on the economy as half the surtax. The other nine loopholes I propose closing, along with the minimum income tax offered in this bill, would provide enough new revenue to offset the remainder of the surtax.

Extending this additional burden on the average taxpayer to preserve the special advantages of a small minority is unconscionable. Enactment of the legislation I am proposing would make possible the immediate termination of the surtax without weakening our efforts to halt inflation.

This bill would eliminate the following loopholes in our Federal tax system:

CAPITAL GAINS UNTAXED AT DEATH

Increases in the value of shares of stock and other forms of property are subject to a tax as a capital gain. But the tax is not assessed until the property is sold and the increase in value is realized.

However, under current law, some capital gains are never taxed. For if an individual does not sell his property and it passes to his heirs, neither he nor his heirs will ever have to pay income tax on the increases in the property's value realized during the benefactor's life. The heirs are only responsible for future capital gains. This loophole costs the Treasury an estimated \$2.5 billion each year.

One way of eliminating this loophole is to simply tax capital gains at death. However, such a remedy might work a hardship on relatively poor beneficiaries who would be forced to liquidate their inheritance in order to pay the taxes on past capital gains.

This bill holds heirs responsible for past untaxed capital gains as well as future gains. But the taxes will not fall due until the property is sold. Thus, each time a property is sold, regardless of the number of times it has changed hands through inheritance in the interim, taxes will be paid on all capital gains realized since the previous sale of the property.

OIL AND MINERAL DEPLETION ALLOWANCES

The oil depletion allowance is one of the least justifiable and most defended loopholes in our tax system. It allows oil producers to receive 27½ percent of the gross income from their oil wells tax-free—provided it does not exceed 50 percent of net income. This is supposed to operate like the depreciation write-offs permitted in other industries.

However, unlike depreciation write-offs, the oil depletion allowance continues year after year as long as the well keeps producing; it does not stop when the cost of the well is recovered. Normal cost depreciation, by contrast, permits capital assets to be depreciated over their useful life, but total deductions cannot exceed the total cost of the asset.

The Treasury estimates the cost of the average oil well is recovered 19 times over. The effect of this on oil company tax bills is striking: In 1966, the 20 top

oil companies in the United States showed a total profit of more than \$4¼ billion yet they paid only 8½ percent of it in Federal income tax, about the same rate a man and wife earning \$3,000 a year must pay.

In addition, 41 other minerals currently enjoy a 23-percent depletion allowance.

This bill attacks this loophole by placing a 15-percent ceiling on all percentage depletions, the ceiling currently applicable to nonprivileged minerals. The net effect of this equalizing measure will be an increase in Federal tax receipts of nearly \$1 billion a year.

DIVIDING CORPORATIONS FOR TAX SAVINGS

The advantages of multiple incorporation are a product of the way the corporation tax is constructed: The first \$25,000 of a corporation's earnings are taxed at 22 percent, while all earnings above that are taxed at 48 percent. By dividing a business into a number of separate corporations, each reporting earnings of \$25,000 or less, the extra 26-percent tax is avoided entirely.

For example, a corporation earning \$100,000 a year which splits up into four \$25,000 corporations can save \$19,500 a year in taxes. There is a record of one corporation that divided itself into 734 separate corporations for an annual tax saving of nearly \$5 million.

By eliminating the benefits derived from multiple corporations, this bill will save the Treasury \$200 million a year.

PREFERENTIAL TAX TREATMENT FOR GIFTS

Under present tax law, property given away during a donor's lifetime is taxed at the gift tax rate, which is only three-fourths as high as the estate tax rate that applies to property transferred at death. In addition, \$3,000 can be given away each year without paying any gift tax.

This bill raises the gift tax rates by 25 percent, bringing them into line with the estate tax rates. No distinction would be made between property given away during a donor's lifetime or at his death. Closing this loophole would mean \$150 million in additional tax receipts each year.

USE OF HOBBY FARM LOSSES TO OFFSET OTHER INCOME

The "hobby farm" loophole allows wealthy individuals who get most of their income from sources other than farming to exploit farm ownership to escape paying large amounts of taxes. Under the present law, these part-time rustics can show "tax losses" which are not true economic losses, and then use them to offset nonfarm income. The result is often a large overall tax saving.

This loophole not only costs the Treasury approximately \$400 million a year, it also puts the full-time farmer at an unfair competitive disadvantage. For the genuine farmer is forced to compete in the marketplace with these wealthy hobby farmers to whom a profit in the ordinary sense is not necessary.

To deal with this problem, this bill limits the amount of nonfarm income that can be offset by farm losses in any one year. Those with nonfarm incomes up to \$15,000 are allowed to use farm losses to offset this nonfarm income in full. But, for each dollar of nonfarm

income in excess of \$15,000, the amount of nonfarm income that can be offset is reduced by a dollar.

Thus, an individual with a nonfarm income of \$30,000 or more could offset none of it with farm losses.

TAX EXEMPTION ON MUNICIPAL INDUSTRIAL DEVELOPMENT BONDS

Many communities issue municipal bonds bearing tax-free interest to finance commercial facilities and industrial plants for private profitmaking corporations. In effect, this is an unjustifiable public subsidy of plant construction for corporations fully capable of financing these plants themselves. In addition, these bonds flood the tax-exempt bond market and drive up interest rates on all tax-exempt bonds.

Virtually all States issue these bonds, which vitiates their principal function of luring businesses across State lines. Today they are no more than windfalls for private corporations provided at the taxpayers' expense.

Eliminating this loophole would save the Treasury \$50 million a year.

TAX EXEMPTION ON MUNICIPAL BONDS

Interest on State and local bonds has been tax exempt since the income tax was enacted in 1913. Consequently, these bonds have long been a favorite form of investment for the very wealthy.

While there is little incentive for the average taxpayer to buy municipal bonds at 4 percent when he can purchase corporate bonds that will pay him 7 percent, the tax-free bonds are very attractive to taxpayers in the 50-percent-and-up brackets. Over 80 percent of tax-free bonds held by individuals are held by the wealthiest 1 percent of the population.

However, this tax exemption does perform the important function of enabling hardpressed States and cities to raise the money to finance needed public facilities. Taxing the interest on municipal bonds without any compensating provisions would force municipalities either to pay higher interest rates—which few could afford—or to do without badly needed public facilities.

Representative HENRY REUSS of Wisconsin has devised a plan that would deny giving tax-free income to millionaires without penalizing municipalities seeking to raise funds for capital improvements. It calls for taxing the income from these bonds, but coupled with a direct Federal subsidy to States and cities to compensate them for their higher borrowing costs. The Treasury would come out nicely ahead on such an arrangement, since it now loses considerably more revenue—\$1.8 billion in 1968—than the States and localities save in lower borrowing costs—roughly \$0.9 billion.

Modeled after the Reuss plan, this bill establishes a Municipal Bond Guarantee Corporation to guarantee State and local bond issues against default, and to pay States and localities an interest subsidy sufficient to reduce their interest payments by one-third. In return for the guarantee and the subsidy, States and localities would be required to waive the tax-exempt status of the bond issues involved, thus allowing the Federal Government to tax the interest.

Under this legislation, municipalities could continue to issue tax-exempt bonds if they wished. However, in most cases, the Guarantee Corporation route would prove more attractive. According to Treasury Department estimates, municipal borrowing costs are only reduced 25 percent by their tax-exempt status; the Federal interest subsidy would diminish their borrowing costs by 33 percent.

UNLIMITED CHARITABLE DEDUCTIONS

The ordinary taxpayer may not deduct more than 30 percent of his income for charitable contributions, regardless of how much he gives. However, this is not the case for the very wealthy. They are allowed to deduct gifts to charities without limit if—in that year and 8 of the 10 preceding years—their charitable contributions plus Federal income taxes paid exceed 90 percent of their taxable income.

At first glance, it may appear that anyone this generous deserves a tax break. But there is a catch. It is only 90 percent of taxable income—not gross income—that must be given away or paid in taxes to be eligible for an unlimited deduction. The millionaire who receives most of his income from tax-exempt sources such as capital gains and municipal bonds has relatively little taxable income. A modest annual gift—possibly to his own foundation—grants him the privilege of an unlimited charitable deduction.

By eliminating this feature of our tax laws, the Treasury would stand to gain an additional \$60 million a year.

SPECIAL TAX TREATMENT FOR STOCK OPTIONS

This loophole enables top executives of large corporations to pay taxes on part of their incomes at low capital gains rates. The result is an annual loss of \$150 million in Federal tax receipts.

This is the way it works. If an executive is awarded a bonus or a raise by a corporation, he pays taxes on it like everyone else. However, if he is a top executive, the corporation may give him an option to purchase its stock instead.

The option permits the executive to purchase the company's stock at any time during a given future period at the price the stock is selling for at the time the option is given. Thus, he might be able to buy a stock for \$100 that is currently selling for \$500. The \$400 difference is regarded under present law as a capital gain, taxable at the low capital gains rates.

A man who received the same amount of income in the form of salary or a bonus would pay an income tax at least double that of the executive utilizing a stock option. This clearly makes no sense.

The Revenue Act of 1964 closed this loophole somewhat. The bill would eliminate it completely.

SEVEN-PERCENT INVESTMENT TAX CREDIT

In 1962, the 7-percent investment tax credit was enacted in an effort to stimulate the economy by providing a subsidy to private investment. This credit permits business firms to subtract 7 percent of the value of eligible new equipment installed during the year from their tax bills.

However, at this point, the investment

tax credit is doing its job too well. Projected spending for plant and equipment in 1969 amounts to \$73 billion, an increase of \$9 billion or 14 percent over 1968. This anticipated rise for 1969 contrasts with a 2-percent increase in 1967 and 4 percent in 1968. The presence of the 7-percent investment tax credit puts us in the paradoxical position of subsidizing the sector of economy generating the most inflationary pressure while employing monetary policies and the 10-percent surtax to cool things off.

This legislation would indefinitely suspend the investment tax credit for all property installed after its enactment, except for property which was ordered under binding contract before enactment. Doing this would increase Treasury receipts by \$3 billion during the first year.

MINIMUM INCOME TAX

As explained earlier, a number of extremely wealthy individuals in this country manage to avoid paying Federal income tax each year. Closing the major loopholes in our tax structure ought to eliminate this practice.

However, to make certain, this bill calls for the creation of a minimum income tax. This will insure that all taxpayers are taxed at the regular rates on at least 50 percent of their total income, regardless of how much of their incomes come from tax exempt sources.

It is estimated that such a tax would yield roughly \$500 million a year.

THE NEED FOR ACTION

We cannot afford to further delay the reform of our loophole-riddled tax system. Each loophole gives some special interest group unwarranted advantage over the average American taxpayer. Each one forces the rest of us to pay heavier taxes than we would with an equitable tax system.

Despite the outrageous nature of these loopholes and their obvious inequities, eliminating them will be a monumental task. Those who benefit from them are well-organized, well-financed, and determined to keep them on the books. The lobbyists for these special interests already are beginning to swarm over Capitol Hill.

However, the time has come to unite against those who perpetuate the privileges of the few against the many. No democracy can long tolerate such blatant inequalities in its laws and retain the confidence of its citizens.

I, for one, intend to fight for real tax reform until it is won.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2211) to amend the Internal Revenue Code of 1954 to raise needed additional revenues by tax reform, introduced by Mr. TYDINGS, was received, read twice by its title, and referred to the Committee on Finance.

S. 2214—INTRODUCTION OF A BILL TO AMEND THE AGRICULTURAL MARKETING AGREEMENT ACT OF 1937

Mr. MURPHY. Mr. President, I introduce a bill to update the Agricultural Marketing Agreement Act of 1937. The purpose of the act was to assist in sta-

bilizing prices of fruits and vegetables in the fresh market at a profitable level. Canning, the only major method of food preservation in 1937, was exempted from the act's provisions. By 1946 freezing was used commonly for food preservation and Congress again, in its wisdom, updated the act by expanding the exemption to include fruits and vegetables for freezing.

Today, many forms of processing are in use. Therefore, I think it would be advisable to place all processors of potatoes—canners, freezers, dehydrators, potato chippers and shoestring manufacturers—on a fair, equal and competitive basis.

Mr. President, I am convinced that this legislation is in the best interest of the potato industry, both growers and processors, the men and women of the working force who man the processing plants, and the consumers throughout this Nation.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2214) to amend Section 608(c) (2) of the Agricultural Marketing Agreement Act of 1937, as amended, introduced by Mr. MURPHY (for himself and Mr. CRANSTON), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

S. 2215—INTRODUCTION OF A BILL TO EXTEND THE HISTORIC PRESERVATION ACT

Mr. YARBOROUGH. Mr. President, among our most valuable assets is our heritage, passed on to us from our forebears. Though this Nation is young in years, it is rich in history. Every part of this Nation has a valuable and interesting history which has been cherished and preserved by those generations which have preceded us and which we must now pass on to our children.

This heritage is made up of intangibles—attitudes, thoughts, traditions—as well as tangibles—songs, stories, and the other aspects of our glorious history. But, the most important things are the works of man and, ironically, these sometimes seem to be the most easily lost. All of us have seen the sad spectacle of a beautiful and historic old home being torn down to make way for a parking lot, a school, or some other building of architectural and historic merit being removed to make way for an apartment house, a shopping center, or a freeway. Each such removal takes us further from our past. Each such act destroys a real, touchable link with our forebears.

I introduce this bill today to help preserve this heritage. The purposes of the Historic Preservation Act have been carried out remarkably well, considering the financial limitations under which it has been forced to operate. I hope that we will not let this effort die now. I urge that we prevent such a thing happening by extending this law.

Mr. President, I ask unanimous consent that the text of this bill, to amend the Historic Preservation Act, be printed in full at this point in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2215) to amend the act entitled "An act to establish a program for the preservation of additional historic properties throughout the Nation, and for other purposes," approved October 15, 1966, so as to extend the provisions thereof for an additional period of 3 years, introduced by Mr. YARBOROUGH, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 2215

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 108 of the Act entitled "An Act to establish a program for the preservation of additional historic properties throughout the Nation, and for other purposes", approved October 15, 1966 (80 Stat. 915), is amended by deleting "three" and inserting in lieu thereof "six".

ADDITIONAL COSPONSORS OF BILLS AND JOINT RESOLUTIONS

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Michigan (Mr. HART) and the Senator from New Jersey (Mr. CASE) be added as cosponsors of my bill (S. 338) to amend section 1677 of title 38, United States Code, relating to flight training, and to amend section 1682 of such title to increase the rates of educational assistance allowance paid to veterans under such sections.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YARBOROUGH. I ask unanimous consent, at its next printing, the name of the Senator from Michigan (Mr. HART) be added as a cosponsor of my bill (S. 1190) to provide for special programs for children with learning disabilities.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, on behalf of the Senator from Texas (Mr. YARBOROUGH), I ask unanimous consent that, at its next printing, the names of the Senator from Vermont (Mr. PROUTY) and the Senator from Massachusetts (Mr. KENNEDY) be added as additional cosponsors of the bill (S. 1519) to establish a National Commission on Libraries and Information Science, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from California (Mr. MURPHY) be added as an additional cosponsor of the bill (S. 1611) to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. PELL. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from New Jersey (Mr. WILLIAMS) and the Senator from Colorado (Mr. DOMINICK) be added as cosponsors of the bill (S. 1611), to amend Public Law 85-905 to provide for a National Center on Educational Media

and Materials for the Handicapped, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. HART. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Idaho (Mr. CHURCH) and the Senator from Rhode Island (Mr. PELL) be added as cosponsors of my bill (S. 2029), to provide improved judicial machinery for the selection of juries, to further promote equal employment opportunities of American workers, to authorize appropriations for the Civil Rights Commission, to extend the Voting Rights Act of 1965 with respect to the discriminatory use of tests and devices, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MURPHY. Mr. President, the name of the Senator from Arizona (Mr. GOLDWATER) was inadvertently omitted as a cosponsor of S. 2120, the Older Americans Act Amendments of 1969, when the bill was introduced on May 12.

I therefore ask unanimous consent that, at its next printing, the name of the Senator from Arizona (Mr. GOLDWATER) be added as a cosponsor of the bill (S. 2120) to amend the Older Americans Act of 1965 to extend its duration to authorize assistance for projects for foster grandparents and senior companies, to provide assistance to strengthen State agencies on aging, and to otherwise strengthen and improve that act.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Colorado (Mr. DOMINICK) and the Senator from New Jersey (Mr. CASE) be added as cosponsors of Senate Joint Resolution 59, proposing an amendment to the Constitution of the United States providing that citizens of the United States shall be entitled to vote for President and Vice President without regard to excessive residence and physical requirements.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that, at its next printing, the names of the Senator from Arizona (Mr. FANNIN), the Senator from California (Mr. CRANSTON), the Senator from California (Mr. MURPHY), the Senator from Colorado (Mr. DOMINICK), the Senator from Delaware (Mr. BOGGS), the Senator from Iowa (Mr. MILLER), the Senator from Kansas (Mr. PEARSON), the Senator from Kentucky (Mr. COOPER), the Senator from Montana (Mr. METCALF), the Senator from North Dakota (Mr. BURDICK), the Senator from Oregon (Mr. PACKWOOD), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Texas (Mr. TOWER), the Senator from Utah (Mr. MOSS), the Senator from Vermont (Mr. PROUTY), and the Senator from West Virginia (Mr. RANDOLPH) be added as cosponsors of Senate Joint Resolution 85, to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week."

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. COOK. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Texas (Mr. YARBOROUGH) be added as a cosponsor of the joint resolution (S.J. Res. 91) establishing the Federal Committee on Nuclear Development.

The VICE PRESIDENT. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF CONCURRENT RESOLUTION

Mr. MURPHY. Mr. President, I ask unanimous consent that, at its next printing, the name of the Senator from Colorado (Mr. DOMINICK) be added as a cosponsor of Senate Concurrent Resolution 24, to express the sense of Congress to encourage research and training in aging.

The VICE PRESIDENT. Without objection, it is so ordered.

REQUEST FOR STAR PRINT OF SENATE JOINT RESOLUTION 85

Mr. GOLDWATER. Mr. President, during the next few minutes I would like to direct the attention of Senators to the development of archery as a major competitive sport in the United States.

Of course, the origin of archery can be traced to ancient times. The legends and histories of brave deeds accomplished with the bow and arrow will forever stand out in the annals of history. William Tell, Robin Hood, the American Indian, and numerous other names will always bring to mind feats of skill and courage associated with the bow.

But the sport of archery is not lost among the pages of history. Archery as a competitive sport and recreation activity has grown to an all-time high of popularity in the United States during the past few years.

The extent of the widespread interest in archery is indicated by its establishment as a major intercollegiate sport throughout the Nation. And, Mr. President, I am pleased to add that one of our Arizona institutions—Arizona State University—under the direction of Miss Margaret Klann, has been paramount in attaining a major status for the sport of archery. Arizona State University has produced four all-American archers in the past 2 years. Northern Arizona University also deserves recognition, having produced the 1965 world champion, Mr. Charles Sandlin.

Much of the credit for the rise in interest and importance of archery in this country must also be given to the National Field Archery Association, which was founded 30 years ago, in 1939. This association, with a current membership of approximately 40,000 persons, has been a leader in the promotion of competitive and recreation-type archery.

The National Field Archery Association is a true, national body, with affiliate chapters in each of the 50 States. In fact, there are 2,100 local clubs that have been established as affiliates of the organization throughout the country. Also, the NFAA has created five international organizations, representing the areas of Europe, Mexico, Japan, England, and Okinawa.

Mr. President, the NFAA is a responsible, civic-minded organization. Through its bow hunting division, it has assisted each State in enacting legislation setting limited hunting seasons and has worked to develop good conservation legislation. Each State affiliate has a local, knowledgeable archer available to assist in local and State wildlife management problems.

In the area of competitive archery, the association has developed a tournament program ranging from local and State events to national championships, both indoor and outdoor.

The NFAA feels a particular sense of responsibility to the youth of the organization. Each year a specialized committee convenes at the NFAA annual meeting to review and examine the programs established for young archers. Two years ago the association developed a youth scholarship program guided by a committee of NFAA members professionally engaged in the field of education. The purpose of this project is to provide financial assistance to those student members of the organization who have the ability and desire to attend college, but lack the financial resources to do so.

In 1967 and 1968 this program was primarily financed by general association funds and contributions by individual members and clubs. In 1969 the organization has developed a National Archery Week program of events designed to generate additional income for the scholarship fund. This period will extend from August 23 to September 1.

In view of the successful development of the NFAA since its origin, its record of civic awareness and contributions, and the parallel steep rise in the popularity and importance of archery, I concluded that it would be entirely fitting that Congress should give its official recognition, on behalf of the American people, to the sport of archery and the related activities of the NFAA.

For this reason, I have introduced a joint resolution that would authorize the President to proclaim the 7-day period from August 26, 1969, through September 1, 1969, as "National Archery Week." Mr. President, I have made a thorough check of the proclamations issued last year and the statutes enacted since then and I can assure my colleagues that this period has not been reserved for any other occasion.

This year in particular would be an especially timely occasion for the enactment of the resolution—first, because 1969 marks the 30th anniversary of the founding of the National Field Archery Association; second, because the United States will be the host country for the world archery championships; and third, because it was announced this year that archery has achieved the status of an Olympic gold medal event for all future summer Olympic games.

Mr. President, it is with great appreciation that I announce that 16 Senators have asked to join with me in sponsoring the measure. In all, these Senators represent 15 separate States, which indicates the truly national support for this proposal. In order that the names of all Senators may appear on the printed

copies of the resolution and so that I may make some revisions in language to take account of information that was not available when the resolution was first introduced, I ask unanimous consent that there be a star print made of the joint resolution (S.J. Res. 85).

Also, Mr. President, I ask unanimous consent that at its next printing, the names of the Senator from Arizona (Mr. FANNIN), the Senators from California (Mr. CRANSTON and Mr. MURPHY), the Senator from Colorado (Mr. DOMINICK), the Senator from Delaware (Mr. BOGGS), the Senator from Iowa (Mr. MILLER), the Senator from Kansas (Mr. PEARSON), the Senator from Kentucky (Mr. COOPER), the Senator from Montana (Mr. METCALF), the Senator from North Dakota (Mr. BURDICK), the Senator from Oregon (Mr. PACKWOOD), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Texas (Mr. TOWER), the Senator from Utah (Mr. MOSS), the Senator from Vermont (Mr. PROUTY), and the Senator from West Virginia (Mr. RANDOLPH) be added as cosponsors of such joint resolution.

The VICE PRESIDENT. Without objection, it is so ordered.

SENATE RESOLUTION 197—SUBMISSION OF A RESOLUTION REPUDIATING THE BREZHNEV DOCTRINE

Mr. DODD (for himself and other Senators) submitted a resolution (S. Res. 197) repudiating the Brezhnev Doctrine. (See the above resolution printed in full when submitted by Mr. DODD.)

SENATE CONCURRENT RESOLUTION 26—SUBMISSION OF CONCURRENT RESOLUTION IN SUPPORT OF GERONTOLOGY CENTERS

Mr. DOLE. Mr. President, I submit for appropriate reference a concurrent resolution in order that the Congress of the United States might have an opportunity to go on record expressing our particular concern that an appropriate share of our national resources be used for basic research in the aging process. There are more than 19 million Americans age 65 or over. Our census experts tell us that their number increases at an annual rate in excess of 300,000. By the year 2000, we will have living in the United States over 30 million of our citizens who could thus be classified as older citizens.

It is my understanding that while we as a nation engage in substantial health research, that only a minor part of this is devoted to the aging process. For instance, in our great national institutes of health less than one-half of 1 percent of their research dollars are earmarked for special studies in the aging process. Gerontology is a relatively new science and those who specialize in it recognize to an increasing degree the importance of the interrelationships of such factors as economics, psychology, sociology, medicine, and biology on the aging process. As we can look further into the interdisciplinary influences, we can learn more about how to avoid or mitigate the impact of these influences on older people. There is no question for instance

that poverty can lead to grave medical problems or that medical problems can often impoverish older people or that psychological problems, or either, can cause or be the result of medical or economic problems.

Our specialists tell us that almost half of the older people in our population suffer from one or more chronic diseases. There is no question but that older age can reduce our resistance to these diseases. We as a nation must be able to provide our older population with further know how in taking care of themselves. I believe this great body is first to recognize that all of us look forward to more effective means of dealing with the problems of older age. Certainly effective programing in this area makes sense from a humanitarian standpoint, from a social standpoint, and from an economic standpoint, the billions of dollars expended by and for older people should be spent as wisely as we know how. I recommend that we go on record in support of this resolution expressing the sense of the Congress that programs of scientific research for training in aging will be recognized as a matter of critical national concern. In particular, I am concerned that more facilities such as is now being developed in California at University of Southern California, the Ethel Percy Andrus Gerontology Center, be recognized as a pilot effort in extending the interdisciplinary approach to aging studies.

Mr. President, I hope that this will lead to further interrelated study in this vital subject at all of our great centers of research, learning, and training, and I commend this resolution to you.

The VICE PRESIDENT. The concurrent resolution will be received and appropriately referred.

The concurrent resolution (S. Con. Res. 26), which reads as follows, was referred to the Committee on Labor and Public Welfare:

S. CON. RES. 26

Concurrent resolution in support of gerontology centers

Whereas there are over 19 million older Americans 65 and over, and

Whereas the number of older Americans increases by over three hundred thousand per year, and

Whereas by the year 2000, 34 per centum of our population will be 65 and older, and

Whereas the average life span of an American child born today is 70 years as compared with 47 years in 1900, and

Whereas Gerontology is a relatively new science, and

Whereas Congress is continually concerned with the well-being of older Americans, said concern having been demonstrated by the establishment of the Administration on Aging (Public Law 89-73); Now therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of Congress that programs of scientific research and training in aging, such as the Ethel Percy Andrus Gerontology Center located at the University of Southern California, be encouraged and supported.

FEDERAL WATER POLLUTION CONTROL ACT, AS AMENDED—AMENDMENT

AMENDMENT NO. 22

Mr. STEVENS (for himself and Mr. KENNEDY) submitted an amendment in-

tended to be proposed by them, jointly, to the bill (S. 7) to amend the Federal Water Pollution Control Act, as amended, and for other purposes, which was ordered to be printed and referred to the Committee on Public Works.

(See reference to the above amendment when submitted by Mr. STEVENS, which appears under a separate heading.)

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

R. Jackson B. Smith, Jr., of Georgia, to be U.S. attorney for the southern district of Georgia for the term of 4 years, vice Donald H. Fraser, resigning.

Charles E. Robinson, of Washington, to be U.S. marshal for the western district of Washington for the term of 4 years, vice Donald F. Miller.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, May 27, 1969, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Anthony J. P. Farris, of Texas, to be U.S. attorney for the southern district of Texas for the term of 4 years, vice Morton L. Susman.

Doroteo R. Baca, of New Mexico, to be U.S. marshal for the district of New Mexico for the term of 4 years, vice Emilio Naranjo.

Royal K. Buttars, of Utah, to be U.S. marshal for the district of Utah for the term of 4 years, vice Ellis Maylett.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, May 27, 1969, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF HEARING

EVERGLADES NATIONAL PARK HEARINGS SCHEDULED FOR JUNE 3 AND 4

Mr. JACKSON. Mr. President, for the information of Members of the Senate and the general public, informational hearings on the Everglades National Park's water supply, environmental pollution, and jet airport problems, have been scheduled for June 3 and 4. The hearing will be held in room 3110 of the

New Senate Office Building at 10 a.m. before the full Committee on Interior and Insular Affairs.

Congress established the Everglades National Park in 1934 and placed it under the administration of the National Park Service to preserve certain values for the enjoyment of present and future generations. In 1948, the Corps of Engineers, pursuant to a legislative authorization, the central and southern Florida flood control project, became involved in a water supply, flood control, and land reclamation project near the park. As a result of the corps activities this project intercepts and retains most of the water which once flowed naturally into the park. Today, the park's water supply is threatened and the ecological balance and the very life of the park is endangered. More recently, agencies of local government in the State of Florida have, in connection with the Department of Transportation, become involved in a project to build a 39-square-mile superjet airport within 6 miles of the park. This action could have a detrimental impact on the park's water supply. It would cause air and water pollution. It would create a noise problem and encourage urban, commercial, industrial, and residential development near the park's boundaries.

Mr. President, a satisfactory resolution to the problems facing the Everglades is necessary if the park and its wildlife are to survive for the enjoyment of present and future generations of Americans as Congress intended when the park was authorized in 1934.

The purpose of the June 3 and 4 hearings will be twofold: First, to receive an up-to-date status report on the planning, the alternatives and the negotiation now underway to minimize damage to park values. Second, to review the process of Federal decisionmaking which has contributed to the conflicting patterns of Federal, State, and local land use which presently threaten the Everglades National Park.

The present situation at the park is apparently the result of a lack of coordination and cooperation among Federal departments and agencies, State and local government, and committees of the Congress. I am not aware of anyone who seriously questions that these inconsistent Federal land-use policies and activities have and, unless changes are made, will continue to detract from the park's values.

The present situation in the Everglades National Park shows the type of problems which arise when different departments of Government, following different legislative mandates and policies, proceed with their own separate missions without adequate coordination and consultation. One of the questions I will want answered at the hearing is why the Department of Transportation provided \$500,000 for work on the proposed 39-square-mile superjet port and \$200,000 for a high-speed transportation study directly adjacent to the park boundaries without first undertaking studies to determine the impact these developments would have on water quality, on fish and wildlife, and on the park values which

Congress sought to preserve when the park was authorized. I will also want to know what interdepartmental consultation and discussions preceded this decision.

The real issue involved in the Everglades is not—as some Government officials are reported to contend—whether the “bird watcher types” are successful in protecting park and wildlife values. The real issue, in my judgment, is whether the Federal and State governments are doing an adequate job of cooperating in land-use planning and management. Rational planning involves the consideration of all relevant values and alternatives. On the basis of information available to me now, I do not think that all of the relevant values have been considered.

As Members of the Senate are aware, I have introduced legislation, S. 1075, designed to establish a national environmental policy. A statement of a national policy for the environment together with a requirement for official findings on the environmental impact of Federal decisions and legislative proposals would effectively make the quality of the environment everyone's responsibility. No agency would then be able to maintain—as many now do—that it has no mandate, no requirement, or no responsibility to consider the consequence of its actions on the environment.

I am preparing an amendment to S. 1075, which will require all agencies of the Federal Government to adjust their planning and their activities toward achievement of a balanced environment. This amendment will be available prior to the hearing and I will want to have the judgment of the Federal witnesses on what its effect would have been had it been enacted at the time the park was created by the Congress.

Another matter of concern which will be explored at the hearing is whether the Department of Transportation has ignored and perhaps even violated the provisions of section 4(f) of the Department of Transportation's organic act. I offered this amendment to the act which created the Department in 1966 and it was adopted by the Congress. Section 4(f)'s purpose is to direct the Secretary of Transportation to cooperate and consult with other Federal departments in developing transportation plans. The section also provides that the Secretary shall not approve any program or project which requires the use of public park and recreational lands or wildlife refuges unless: First, there is no feasible alternative; and, second, the program includes all possible planning to minimize harm to these areas resulting from such use.

I will want detailed information with respect to whether both of these provisions have been and are being complied with in connection with the development of the superjet airport and other transportation plans in the area of the Everglades National Park. I will also want to know what alternatives were considered; what planning has been done to minimize damage to park values; what interdepartmental and interagency consultations have taken place?

I have requested the Attorney General to furnish the committee with a Justice Department opinion as to whether the Corps of Engineers has authority to issue regulations for the control of water in its projects so as to assure the Everglades a protected supply of water without first getting the concurrence of the State of Florida. It is my understanding that the corps and the Department of the Interior at one time agreed that this could be done. Subsequently, however, it is alleged, the corps has changed its position. This matter was submitted to the Attorney General for resolution in November 1968. To date, however, no decision or opinion has been made public by the Justice Department. I believe it should be. I believe that the American people and the Congress have a right to an answer to these questions.

It is my understanding that the Public Works Committees of both bodies of the Congress requested the corps, in the early 1960's, to restudy the central and southern Florida project for the purpose of improving the water supply to the park. The modified project, as passed by the Congress added \$66 million to the previous authorization. The Federal Government, I am informed, bears 75 percent of these costs and 48 percent of the costs are attributed to park benefits. In view of these financing provisions, I see no reason why the water needed for the survival of the park, its wildlife and ecology could not and should not be made available.

In view of the complexity of this problem and the many different interests involved, the committee will want to receive testimony from each of the Federal agencies involved as well as from officials of the State of Florida, the Dade County Port Authority, and representatives of major conservation organizations. I have requested Secretary Volpe, Secretary Hickel, and the Chief of the Corps of Engineers, Lieutenant General Cassidy, to appear before the committee. A similar invitation is being extended to the Governor of Florida.

Mr. President, the problem of the Everglades National Park requires a reasonable and an early solution. Resolution is important because of the many scenic, recreational, wildlife, and scientific values found in the park which are found nowhere else. We cannot allow these to be destroyed; they must be preserved.

The Everglades is of importance for still another reason. It is a manifestation of what happens and what is happening in this country under the pressures of population, development, and man's applications of new technology. In pursuit of convenience and material wealth we are too often insensitive to the environment and to the values of the natural world.

NOTICE OF HEARINGS

Mr. KENNEDY. Mr. President, I wish to announce that the Subcommittee on Administrative Practice and Procedure of the Senate Judiciary Committee will hold a 1-day hearing on Monday, May 26 at 10:30 a.m. in room 2228, New Senate Office Building. The subject of the hear-

ing will be S. 1144, a bill to remove the statutory ceiling on appropriations for the Administrative Conference of the United States.

RECESS

Mr. JAVITS. Mr. President, I ask unanimous consent that the Senate stand in recess, subject to the call of the Chair.

There being no objection, (at 12 o'clock and 31 minutes p.m.) the Senate took a recess subject to the call of the Chair.

On the expiration of the recess (at 1 o'clock and 51 minutes p.m.), the Senate reassembled, and was called to order by the Presiding Officer (Mr. ALLEN in the chair).

THE HIGH COST OF DRUGS

Mr. LONG. Mr. President, this morning a great doctor, Dr. John Adriani, of the Charity Hospital of New Orleans made a statement that I believe every doctor in America should read. His statement was about the abuses of the drug industry as it exists in America today. As chairman of the Council on Drugs of the American Medical Association, Dr. Adriani is one of the outstanding experts on this subject.

I believe that Dr. Adriani qualifies for an award for service to humanity for the kind of work he has done in trying to provide for American citizens the best drugs at the lowest cost. Dr. Adriani, in the beginning of his remarks, made the following statement:

I preface my remarks to the committee with the statement that I am strongly biased in my views on matters pertaining to drugs and that my bias in this regard is 100 percent pro-patient and only pro-patient.

Dr. Adriani is a man who has spent his life working with drugs. He has done this not for money, but for the service that he could render to humanity. He understands the subject as well as anyone. Any doctor or any drugstore owner who would like to know why the public is complaining about the drug prices and practices and why people like the Senator from Louisiana and the Senator from Wisconsin complain and keep making speeches about the fact that the public is being victimized, oppressed, and outraged by the high prices charged for drugs produced at a low cost, ought to read Dr. Adriani's statement.

It takes great courage for a man such as Dr. Adriani to stand up and speak the honest truth when the drug companies are spending hundreds of millions of dollars trying to spread misinformation calculated to mislead and confuse the American people.

Dr. Adriani is perhaps second only to Dr. Alton Ochsner as a private citizen of Louisiana seeking to serve humanity as best he can.

Dr. Ochsner made the courageous fight in America to prove the connection between smoking and cancer, heart disease, and emphysema. He has insisted that the American Cancer Society and the American Heart Society should do something about it. He insisted that the Federal

agencies should do something about the health hazard, meaning no ill will toward the tobacco industry, but thinking in terms of suffering humanity.

I have mentioned Dr. Ochsner's name in connection with Dr. Adriani because they are both presently citizens of the New Orleans area. In terms of men in medicine who have done great work for suffering humanity, these two great Americans are persons of whom Louisiana can justly be proud.

Mr. President, I ask unanimous consent that the prepared text of Dr. Adriani's remarks be printed in the RECORD. I challenge any drug manufacturer to prove Dr. Adriani wrong on a single major point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT OF JOHN ADRIANI, M.D., CHARITY HOSPITAL, NEW ORLEANS, LA., TO SENATOR GAYLORD NELSON'S SUBCOMMITTEE ON MONOPOLY, OFFICE OF THE SMALL BUSINESS COMMITTEE, U.S. SENATE

Mr. Chairman and Members of the Committee: It certainly is a compliment to me, who is familiar with so little of the vast fund of available information on drugs, to be invited to appear before this committee. You do me honor by indicating that I may be of assistance to you. The accumulation of knowledge pertaining to drugs over the past several decades has been so phenomenal that no single individual, be he a practitioner of medicine, pharmacologist, pharmacist or other person whose primary interest is drugs, can be expected to know all of the important details concerning all drugs available for use in the treatment of disease.

I preface my remarks to the committee with the statement that I am strongly biased in my views on matters pertaining to drugs and that my bias in this regard is one hundred percent pro-patient and only pro-patient.

BACKGROUND AND QUALIFICATIONS

I am John Adriani of New Orleans, Louisiana. I am a Doctor of Medicine who graduated from the College of Physicians and Surgeons of Columbia University in 1934. My specialty has been surgery, but my interests have been diversified since I began medical practice. I majored in chemistry before entering medical school and gave strong consideration to becoming a chemist and concentrating my interests in drug chemistry before I finally decided to study medicine. I also had training in physiology under the renowned Doctor Homer Smith at New York University. My contact with surgery made me aware of the woeful lack of knowledge of the action of anesthetics and the primitive methods of administering these drugs which existed in the early 1930's. The methods were nearly as primitive as they were in 1842 when ether was first introduced as an anesthetic.

Anesthetics are drugs which are used to carry a patient halfway to eternity and back. Obviously, these drugs are lethal and the responsibility of administering them is great. The science and specialty of anesthesiology has developed as a result of the recognition by a few physicians three decades ago of the importance of the actions of these drugs and of the knowledge of their proper administration.

An anesthesiologist is one who uses and studies pain relieving drugs in patients. An anesthesiologist must also possess broad knowledge in matters pertaining to other types of drugs because the specialty encompasses the use of drugs which are either antagonists and overcome the effects of anesthetics or are used as adjuncts to augment the effects of anesthetics. In addition, some

drugs are used prophylactically to prevent unanticipated and unwanted side effects. Another point of importance is that patients who require anesthesia often are taking drugs prescribed by personal physicians, internists, and other specialists to treat diseases not directly related to the surgical disease for which they are hospitalized. An example would be the use of digitalis in a patient to treat existing heart disease, reserpine for the treatment of the high blood pressure which caused the heart to decompensate, a diuretic, which facilitates the elimination of salt and prevents accumulation of water in the tissues, quinidine to make the pulse regular, a tranquilizer to prevent excitement and apprehension, a vasodilator to prevent anginal pain, an anticoagulant to prevent clotting in the vessels of the heart and brain, and insulin to control diabetes. It is not uncommon to find a patient who needs an operation having all these conditions and receiving all these drugs. How these drugs interact with those prescribed by the anesthesiologist and surgeon is a matter of great importance. Little is known about many drug interactions and the subject is now becoming one of intensive study.

The anesthesiologist is, in essence, a clinical pharmacologist who is knowledgeable in the behavior of many drugs. He is familiar with their use in human beings who are ill and who are under treatment. His knowledge of drugs stems from their actual use in patients and not merely from information gathered in studies from normal human volunteers or from animals.

My experience in matters pertaining to drugs has been quite diverse, encompassing research in pharmacology, testing of new drugs, the teaching of pharmacology for over thirty years to undergraduate medical, dental, and postdoctoral students. In addition, I am engaged in the training of nurses to administer anesthetics, gases and mists for treating pulmonary (lung) diseases.

I have been a member of the Council on Drugs of the American Medical Association for six years and Chairman from the latter half of 1967 to date. I have been a member of the Revision Committee of the U.S. Pharmacopoeia for the past nine years and was a member of the panel on anesthetics of the Subcommittee on Scope of the U.S.P. ten years before I was made a member of the Revision Committee. I have been a consultant to the Food and Drug Administration since 1963 when the Kefauver-Harris Amendment was first implemented. I am now also Chairman of the Advisory Committee to the FDA on Anesthetic and Respiratory Drugs.

For the past nine years I have been Associate Director at Charity Hospital of New Orleans, Louisiana, in which capacity I have gained considerable insight into the budgetary problems concerning the care of the sick and the cost of medical supplies, particularly drugs. I have also been a member of the Pharmacy and Therapeutics Committee of Charity Hospital, serving in the capacity of pharmacologist.

My entire professional life as a physician has been devoted as a salaried employee in tax-supported institutions (Bellevue Hospital, New York, and Charity Hospital, New Orleans) in caring for those unable to finance their own cost of medical care. I have no private practice except occasional consultations, testifying as an expert in medicolegal matters, or the treatment of special cases referred to me for problems pertaining to pain. I submit this resumé of my activities to you and to your Committee, Mr. Chairman, to apprise you of the areas of my interest and experience and background in matters pertaining to drugs.

TOPICS REQUESTED TO BE DISCUSSED

I am appearing by invitation as an individual physician, representing no organization or institution. My statements reflect

my own thinking and opinions and are not to be construed as reflecting opinions of any organization or institution with which I am associated. I have been asked to express any general views I may have on drugs, but specifically to comment on antibiotic combinations, antibiotic overuse, and particularly the overuse of Chloramphenicol.

GENERIC NAMING

The problems of drug utilization and prescription methods are complex and are increasing in complexity as the number of drugs introduced into therapeutics increases. The situation can now be described as nearly chaotic. No semblance of order can be made of the existing chaos until all drugs and combinations thereof are designated by given, common, or generic names and not by proprietary, or brand names. Proprietary or brand names are, in essence, aliases. An alias, no matter how used, tends to confuse or to be deceptive. An alias is intended to conceal the true identity of whatever or whomever is being designated by an alias. The use of brand names for drugs serves no constructive purpose; on the contrary, the practice hampers rational drug utilization, rational prescribing and dissemination of drug information. Brand names should be abolished. The public's best interests shall not be served until this is done.

It is a function of the government to do for the people what the people cannot do for themselves. No private group or scientific organization possesses the capability or is empowered to institute reforms in drug nomenclature which are so sorely needed. Obviously, then, this is something that the people cannot do for themselves. Government, therefore, must intervene and act in the public's behalf. The record of the U.S. Government in assuring the public that food products supplied to a consumer are pure and properly labelled is commendable and is known to all. The citizens of no other nation on earth have the assurance that food products which enter interstate commerce are safe, as does the citizenry of this nation. Foods are dispensed by their given names and not by aliases. The brand and the name of the vendor or producer is inscribed on the dispensing container to permit the consumer to purchase the commodity of his choice and preference. It is difficult to understand why drugs, which are equally as important, if not more important than food, to the health of a nation and well-being of the public are permitted to masquerade under aliases. In essence, the pharmaceutical industry is being granted preferential treatment by being allowed to distribute drugs using brand names, since no other major industry preparing merchandise for human consumption is granted similar special privileges. The reasons given are that merchandise of one manufacturer varies in quality from that of another and that to do otherwise interferes with the physician's prerogative or prescribing a drug of his choice. It is ludicrous to conceive that items so vital to the public health are distributed by brand names, under the guise that to do otherwise would be interfering with the physician's prerogative of selecting the product of a manufacturer which he deems best for his patient. The arguments which have been advanced for justifying the practice of using brand names are not only illogical and superfluous, but even puerile. If it is the object of the pharmaceutical industry to promote ignorance and to confuse not only the physician, but the public as well, the use of brand names effectively accomplishes this purpose. The prime motive, if one gives the matter thoughtful consideration in using aliases for drugs, is to promote sales, to establish monopolies and to stifle competition of rival manufacturers.

GENERIC LABELING

It is my belief that carefully and thoughtfully prepared legislation should be adopted,

advocating that compulsory labelling of prescription drugs dispensed either in bulk to pharmacists and physicians or prescription drugs dispensed in individual packages be done by generic, or common names. "By 'common names' I refer to names that are shorter or better known than the generic name. Aspirin is a more common name than the generic name—acetylsalicylic acid. The generic labelling should appear in large, bold-faced type on the label, wrapper, container, brochure and all other identifying devices or documents. The brand name of the manufacturer, if such a drug has a brand name, should be in parentheses beneath the generic name in type no larger than one-eighth the size of the type used for the generic name of the drug. Interposed between the generic name of the drug, in type no larger than that used for the manufacturer's name and the brand name but large enough to be easily legible, should be interposed the chemical name of the drug.

A pharmacist who dispenses to a patient, on a prescription from a physician, a portion of the contents of a drug packaged in bulk should be required to label the package of the drug so dispensed to the purchaser with the generic, or common name of the drug. If the physician has specified dispensing a drug of a particular manufacturer, the manufacturer's name should be indicated in parentheses below the generic name, in order that the physician, as well as the patient, will know whether or not the specified item has been supplied. The labelling on the container given to the patient should be omitted if the physician indicates "do not label" on the prescription.

NAMING OF MIXTURES AND COMBINATIONS

Mixtures of drugs would be designated as Mixtures. For example, the mixture now available as Coricidin would be labelled as Chlorpheniramine, Aspirin and Phenacetin Mixture. The brand name Coricidin would not be included in the labelling. Instead, the name, Chlortrimeton, since it is a proprietary ingredient, would appear in parentheses in type one-eighth the size of type used to name the ingredients of the mixture beneath the name of the ingredient Chlorpheniramine, together with the manufacturer's name. The labelling of mixtures should also carry the chemical names of each ingredient, in fine print, with the generic or common name in parentheses and the amount of each ingredient in each tablet, capsule, or unit of liquid measure should be indicated in both milligrams and in grains. The latter stipulation would not be a requirement of the labelling applied to the package dispensed by prescription to a patient. These are of interest primarily for the pharmacist, pharmaceutical chemist, or the toxicologist in the event this information is required in cases of poisoning, homicide, determination of purity or biologic assay. An expiration date should be indicated for drugs which have expiration dates.

LABELING OF OVER-THE-COUNTER DRUGS

Producers of "over-the-counter drugs" are likewise enjoying special privileges which are far from being in the public's best interest. As a matter of fact, the surveillance of the firms packaging over-the-counter drugs is not as close as that of firms packaging prescription drugs. The FDA has no surveillance over claims of efficacy of over-the-counter drugs made in advertisements, in newspapers, magazines, telecasts, etc., and Federal agencies empowered to take action seldom do so.

Pharmaceutical firms which package a prescription drug which may also be sold over the counter in certain dosage forms often make claims in advertising in newspapers and nonprofessional magazines that would not pass the scrutiny of the FDA. I am thinking specifically of Neosynephrine, packed by Winthrop, in the form of nose drops, which is available over the counter,

which, in lay journals is claimed to be effective for "colds." The labeling of over-the-counter drugs should follow the same pattern as that of prescription drugs and the advertisements should be as informative concerning full disclosure and efficacy as prescription drugs.

REPACKAGING OF DRUGS

Drugs dispensed by "repackaging firms" should indicate the source of each ingredient, that is, the name of the manufacturer from whom each chemical was purchased. The same requirement should apply to firms distributing a repackaged drug under a brand name or to mixtures. The large manufacturing firms who buy drugs from other firms should indicate on the package that they did not make the drug, by indicating its source, in the same manner as required of the "repackaging houses."

In addition, the American Medical Association should indicate in its code of ethics that physicians should own no stock or interest in any pharmaceutical firm, repackaging firm or pharmacy, and insist that this be enforced at the county society level. No conscientious, ethical physician who lives up to his oath should object. The patient is at his mercy and purchases what he specifies and there should be no conflict of interest.

IMPACT OF GENERIC LABELING

Should one ask, "Will such a change in labelling as is being proposed be in the public's best interest?", the answer will obviously be, "It will." If one asks, "How?", the answer would be, "Everyone will learn and know the real name of a drug"; the physician, the pharmacist, the nurses who take care of the patient, the pharmacist's attendants and the relatives. Pseudonyms and aliases ultimately will disappear, without one bit of harm to the public.

Will physicians be restricted in their prescribing prerogatives if such a plan were placed into effect? The answer is, "Not at all." The physician will still be able to prescribe the drug he chooses, manufactured by the firm he prefers and in which he has confidence. He still will be able to prescribe in the dosage form he chooses and has always used in prescribing the drug. If, for medical reasons, a physician does not wish a patient to know the identity of a drug, it will still be his prerogative to request this.

Pharmacists will still be required to supply to a patient a drug a physician requests, made by the manufacturer that the physician indicates and prefers. An ethical pharmacist will not substitute an inferior drug, as has been argued that he might do by those who feel that the brand names protect the patient and protect the physician's right to prescribe as he sees fit. If a physician does not object to labelling, the patient is then told what he is to receive and can insist that the pharmacist supply exactly what is prescribed and what the patient is paying for. Patients may be able to shop and obtain a drug at its lowest cost.

The days of mystery in medicine are over. Medicine is a science as well as an art. Patients are not morons. They read, and they are becoming more knowledgeable, and there is no reason for not disclosing all pertinent information to everyone for the proper and safe use of a drug. By using a standard name for each drug, full disclosure will be provided for all persons involved. The chemically oriented physician will have the chemical name. The pharmacist, the pharmaceutical chemist, the toxicologist and the physician who have become accustomed to using brand names will have them at their disposal should they wish them, but in time they will be de-emphasized and brand names hopefully will disappear. Existing hospital formularies can be abbreviated and new ones prepared in hospitals where none now exist. Pharmacists will find that in due time physi-

cians' prescribing habits will change and they will need fewer items on the shelves.

GENERIC EQUIVALENCY

The arguments for retaining brand names prescribing have been shrouded and wrapped in that nebulous cloud referred to as "generic equivalency." The paucity of convincing and well-documented data of clinical significance causes one to suspect that this situation has been grossly exaggerated. Should a product of one pharmaceutical firm be chemically equivalent and more effective biologically, then this would be a selling point which a pharmaceutical firm could use in its advertising. The firm could, with justification, capitalize upon this point in its advertising and utilize it as a reason for selecting the drug of that particular firm. The firm thus could boast that its product is superior and has this advantage over that of competing firms. Considerable stretch of the imagination is required for one to see the justification for the use of an alias for designation of a product merely on the basis of generic equivalency. For example, should Ether prepared by SQUIBB be found to be biologically and clinically more effective than that of competitive manufacturers, and I doubt that it would, a physician who is aware of this would request Ether—Squibb. In the event Lidocaine U.S.P. prepared by Astra were demonstrated to be biologically and clinically superior to products distributed by a competing firm, this would not necessarily interfere with a physician's choice to prescribe Lidocaine—Astra instead of the alias, Xyllocaine. Neither would have been interference of the physician's prerogative to prescribe the product he deems most effective clinically, if indeed he can make such a distinction, and the best interest of the patient will still be served. The question of generic equivalency has been "ballyhooed" with both scientific and pseudo-scientific data, so that it is virtually impossible to determine what is fact and what is fancy. The situation is almost laughable. Much is said about crystal size, the effect of binders and mordants, coating, etc. This all sounds impressive and has some basis of fact, no doubt, Mr. Chairman, but no one has said what happens to one of these elite, "non-generic brand name drugs" when it is introduced into the stomach of a patient, the contents of which are not known, the acidity of the juices in the stomach are not known and other variable factors which are bound to exist are not known. What happens to one of these pills or capsules after they are introduced into the stomach and are followed by a martini, potato chips, shrimp remoulade, turtle soup, a steak, potatoes, some wine, salad and dessert. If a drug is readily soluble, the chances are excellent that chemical equivalency equals biological and clinical equivalency.

One cannot deny that in some cases biologic potency may vary from one product of one manufacturer to another or even from batch to batch of a given drug by a given manufacturer, but how much is known about all of this which is factual and clinically significant? It appears to me that no one has given this matter much thought over the years and now the matter is being called to the attention of the scientific community and we are becoming aware of something that only time will prove whether or not is important. The effectiveness of a drug taken before breakfast may differ from that of taking the same drug before lunch or before supper or at bedtime, or from one day to the next. Such variable factors as fever, the presence of other drugs, hydration and liver and kidney function may influence the efficacy of a drug. Generic naming must not be confused with generic equivalency. The two terms are distinct, separate entities and not synonymous.

ACCEPTABLE STANDARDS

Standards formulated by the U.S. Pharmacopeia, the National Formulary and other agencies are acceptable, reliable standards and should be adhered to at this time until additional well documented information is available, at which time these agencies and scientific groups can revise their standards. As time passes we will no doubt learn more about the so-called "biologic equivalency" and its clinical importance. The standards will then be modified in accordance with our added knowledge, but until such a time the present-day standards are adequate.

There must be a beginning to make order out of chaos, and now is the time to effect changes. The vociferous displeasure which will be voiced will be intense but it can be readily parried by asking, "Is what is being done in the public's best interest?" How can full disclosure of all details pertaining to a drug be anything other than in the patient's best interest?

COMPLEXITY OF GENERIC NAMES

The greatest objection and difficulty that one will encounter in attempting to establish uniform nomenclature of drugs will be the complexity of some of the generic names which have been assigned to drugs. This is a matter that will have to be resolved with time. Some names undoubtedly will have to be simplified. Chlorpheniramine, mentioned in the description of Coricidin, is a name that borders on the complex side. There is a tendency among physicians to abbreviate names or use "nicknames." For instance, cyclopropane is usually referred to as "cyclo" by anesthesiologists. Muscle relaxants are facetiously referred to as "arrow poisons." In the case of the muscle relaxants, for example, Decamethonium is the generic name for Sincurine and succinylcholine is the generic name for Anectine or Sucostrin. Tubocurarine is a non-patented generic name for Curare and should be retained. These generic names are not difficult to pronounce or spell.

The purpose, Mr. Chairman, in my recommending that the chemical names be included on the package and in the other types of labelling is that one wishing to know the chemistry would have it available. The United States Adopted Names, a committee composed of members of the U.S.P., N.F., Council on Drugs of the AMA, and the FDA, now attempts to incorporate in the name an indication of the chemical nature of the drug. If it were known that the chemical names are required on the labelling, perhaps the USAN would be more inclined to adopt the simpler names and not attempt to follow a chemical type of nomenclature.

LICENSING SYSTEMS

A code of good manufacturing practices and other criteria with a licensing system and registration for all individual pharmaceutical products is essential. All drugs would then meet the same standards. This, of course, would be imposing the same requirements on all firms manufacturing drugs equally and would do much to solve the problem and obviate the objection which allegedly exists that some drugs are chemically equivalent but not biologically equivalent. This is not an impossible problem to resolve.

FIXED RATIO COMBINATIONS

Physicians have, for years and years, used drug combinations. They will continue to use drug combinations in the future. I see no end to this practice. It is reasonable and logical in some cases. There is a difference, Mr. Chairman, between combinations and fixed ratio combinations. Combinations are essential and not necessarily objectionable. However, there are objections to the use of fixed ratio combinations because no two individuals respond to the same manner to a given drug. The argument advanced in the

use of fixed ratio combinations is that a patient then would receive all the medication in one tablet, capsule or teaspoonful of solution or injection. The use of fixed ratio combinations is as logical as selling combinations of salt and pepper in fixed proportions. I am sure that if pepper were combined with salt in a fixed ratio and sold on the premise that one would require only one shaker on the table instead of two the product would have limited sale. Individual tastes vary; some people would like more salt and less pepper and vice versa.

The same principle applies to drugs in combinations of fixed ratio, particularly when they are dissimilar chemically or therapeutically. I have in mind a particular fixed ratio combination which has been recently introduced on the market under the brand name of Innovar. This is a mixture of a new narcotic of great potency, Fentanyl, and a new "tranquillizer," Droperidol. The narcotic causes rigidity of the muscles and interferes with respiration. The tranquillizer has the capability of paralyzing the nerves supplying the blood vessels and causing a fall in blood pressure. The combination is packaged in a ratio of fifty parts of the tranquillizer to one part of the narcotic. When this combination is used, certain individuals overreact to the narcotic while others overreact to the tranquillizer. Such a mixture of fixed proportions is illogical. It has been promoted and, because of its newness, detailed information of its pharmacologic properties is lacking or it has not as yet drifted down to the practicing physician through the normal and unbiased drug information channels; that is, from physicians who actually are familiar with the drug and recognize its side effects. When an N.D.A. of a new product of this sort is approved by the FDA, the "detail men" are the first to acquaint the physician with the product. The package insert, in these cases, provides all of the required available information but this is not sufficient because in many cases the drug has been tested by individuals whom we facetiously refer to as "testimonial writers." Seasoned researchers are not interested in testing drugs in the manner proposed by a sponsoring manufacturer. The data on the N.D.A. applications is not always obtained from research of the highest quality. Side actions and other adverse effects often remain virtually unknown until a drug is subjected to widespread general use or is studied carefully by seasoned researchers. When a drug is first introduced, we are not fully aware of its actual usefulness and limitations. It is only with time and sad experiences that a drug finds its proper niche in therapeutics.

ANTIBIOTIC FIXED RATIO COMBINATIONS

Some fixed ratio combinations of antibiotics and chemotherapeutic agents available on the market are deemed ineffective in certain cases, from data studied by the Review Committee of the NAS-NRC. Inasmuch as the physicians and other scientists on these committees are knowledgeable in their fields and not biased, I would accept their recommendations. In instances where they say that a fixed ratio combination is not effective, this combination should be withdrawn from the market unless supplementary data of proof of efficacy is supplied by a manufacturer. Withdrawal of mixed ratio combinations of these types does not hamper the physician from using combinations. A physician will still be able to prescribe two of three drugs in quantities to suit an individual patient. Antibiotics and chemotherapeutic drugs are far from innocuous drugs. Each type is capable of producing sensitization, kidney, liver, and in some cases nerve damage. Where fixed ratio combinations are used, only one ingredient may be effective but the amount in the mixture is insufficient. The physician may increase the dose if the response is good but not as great as an-

ticipated. It is thus possible for the amount of the ineffective agent to be increased above the toxic level and cause harm to a patient.

CHLORAMPHENICOL

I have been asked to comment on the use of Chloramphenicol (Chloromycetin). Chloramphenicol is a valuable drug and certainly nothing should be done to curtail the intelligent use of the drug by knowledgeable physicians in instances in which it is indicated. It not only would be difficult to legislate when a physician should or should not use Chloramphenicol, but such a step would be ill advised. There is no doubt that there has been and probably still is some abuse of the drug. This appears to be decreasing. There are, however, other drugs in other categories that are equally as hazardous as Chloramphenicol but in other ways. They, too, are used thoughtlessly and indiscriminately in certain cases.

PHARMACY AND THERAPEUTICS COMMITTEES

The hospital pharmacy and therapeutics committees required by the Joint Commission on Accreditation of Hospitals in accredited hospitals could manage the problem of proper drug usage quite effectively. These committees, however, should be strengthened and be more active than they now are. Their scope should be broadened to include the reporting, not only of adverse reactions, but a review of a drug utilization and promotion of drug education to the hospital visiting staff. The premise upon which the Joint Commission for the Accreditation of Hospitals bases its requirements of accreditation, as far as the medical and surgical visiting staff is concerned, is that the visiting staff governs itself. The philosophy that the staff governs itself can be workable. It is effective in certain, but not all, hospitals. Tissue committees are quite effective in most hospitals in preventing unnecessary surgery. Utilization review committees which review duration of patient stay and hospitalization likewise have been effective; therefore, the same principle could be applied to drug utilization. The pharmacy and therapeutics committee could challenge a physician for using a drug such as Chloramphenicol in situations where it was not indicated or for administering the drug without performing the proper bacteriologic and sensitivity studies. Legislation is not the answer to this problem. The solution must be by education and self-regulation by the medical profession. The use of drugs presenting hazards similar to Chloramphenicol could be "policed" in a similar manner.

ROLE OF THE AMERICAN MEDICAL ASSOCIATION

I realize that the American Medical Association has, over the years, differed with Congressional leaders and governmental agencies in its views concerning the dispensing of health care to the public. I prefer not to say that I agree or disagree with the pronouncements that have been made by the Association because I must admit that I am not familiar with both sides of the story in some cases. I have either heard or read biased sides presented by physicians or read biased sides presented by the government in the news media. Therefore, it is difficult for me to have strong feelings one way or the other in this matter. Again, when in doubt, I apply the rule which serves as my guide—"Is what is being proposed in the best interests of the public?" I would like to emphasize, Mr. Chairman, that medicine, as it is practiced today, is the best in the history of the world. It would not be in the state of development that it is today had it not been for the American Medical Association. Many years ago Abraham Flexner submitted a report on the deplorable status of the various medical schools in the United States. Following the presentation of this report the American Medical Association took the initiative and established uniform stand-

ards of medical education in this country. We then surpassed the rest of the world as far as medical standards of medical education and medical practice are concerned. The American Medical Association is a scientific body which can, if it wishes, assemble scientific and medical talent of the highest calibre. The association has and must have a political superstructure. The part of the medical association that the public knows is the "political portion," which is a small portion. After all, the American Medical Association is a democratic organization. It is organized and operates in many ways as does the Congress or the various State legislatures. It is governed by an elected House of Delegates. The actions of the Congress, as depicted in the press, sometimes appear absurd. Likewise, the actions and resolutions of the American Medical Association may appear to be ridiculous and ill conceived to one on the outside looking in who does not know all the ramifications involved in a decision. The portion of the American Medical Association that one does not see is the conglomerate of scientific councils and other divisions not involved in medico-political affairs. The Association may be likened to an iceberg, one-eighth of which protrudes above the water. This portion is the political portion which the public sees.

The functions of the American Medical Association of which the public is not aware are the scientific functions. This is the portion likened to the iceberg which is beneath the water. The Council on Medical Education, which inspects and approves medical schools, internships, residencies and postgraduate programs, a costly and important undertaking, is a little-known body of the Association which serves the best interests of the public. The Council on Drugs, of which I am a member, is promoting the formulation of drug utilization policies, adverse drug reaction reporting and dissemination of medical knowledge to physicians. The activities of the Association are financed to a large extent by physicians' dues and voluntary contributions and to a lesser extent from income from advertising in periodicals published by the Association.

I may appear to be idealistic and naive in making this statement, but I believe the governmental agencies should take into their confidence and work closely with the various scientific bodies of a national stature, including the AMA, and attempt to cooperate and work jointly for the benefit of all. Any legislation which is hastily passed, ill conceived, is restrictive and appears to encroach upon the physician's prerogative to make decisions and to practice medicine as he deems best for the patient will be construed as punitive and will arouse resentment and resistance. A frustrating situation will be created and the main goal, namely, providing the best health care possible for the public which both the government and the American Medical Association are obligated to provide, will not be attained.

THE PHARMACEUTICAL INDUSTRY

In advocating uniform nomenclature I am not castigating or opposing the pharmaceutical industry. One must remember that the pharmaceutical industry operates in a manner similar to any other industry and its primary goal is profits. It has, however, a greater responsibility to the public than any other industry. The patient does not make the decision as to which and whose drug is to be brought. The physician does. The industry should remember this fact but does not always do so. If the profit incentive is removed, then expansion and progressive development of the industry will be stunted and this would not be in the best interests of the public. I am sure that you have information from your hearings which indicates that some pharmaceutical firms have been ruthless, have fixed prices, and have com-

mitted acts which have not been in the public's best interest. Nonetheless, the pharmaceutical industry has also contributed its share to the progress of medicine in this country. We need an active and vigorous pharmaceutical industry. There should be regulation of the industry but such regulation should be nonrestrictive in nature. It should create a more competitive environment than now exists and permit a firm to expand and progress and to develop significant and better products and not duplicate products. Any restrictions which are placed upon a firm that remove incentive will not be in the best interests of the public or the medical profession. Restricting monopolistic practices will, of course, encourage competition which is healthy and which is in the best interests of the public.

The question, Mr. Chairman, then is not should we abolish brand names and use generic names, but when? The sooner the better. It can be done, and it will be a step forward in medicine.

I think I have said enough, Mr. Chairman; thank you.

S. 2212—INTRODUCTION OF A BILL TO AUTHORIZE THE APPROPRIATION OF FUNDS FOR THE PADRE ISLAND NATIONAL SEASHORE

Mr. YARBOROUGH. Mr. President, I introduce, for appropriate reference, a bill to authorize the appropriation of \$4,129,829 to settle the final judgment rendered against the United States for the acquisition of lands and interests in land for the Padre Island National Seashore. This amount, plus \$1,581,321 already deposited in court, will be sufficient to pay the total amount of the judgment and interests as was provided in a stipulation signed by the parties involved and entered with the U.S. District Court for the Southern District of Texas.

According to the Secretary of the Interior, this appropriation would settle the last of condemnation proceedings relating to this national seashore. I ask unanimous consent that the text of Secretary Hickel's letter be inserted in the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., May 13, 1969.

HON. SPIRO THEODORE AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft of a proposed bill "To authorize the appropriation of funds for Padre Island National Seashore in the State of Texas and for other purposes."

We recommend that the bill be referred to the appropriate committee for consideration, and we recommend that it be enacted.

The bill would authorize the appropriation of such sums as are necessary to satisfy final judgments against the United States in the last remaining condemnation proceeding which was brought to acquire property for the Padre Island National Seashore in Texas. Two proceedings were brought, numbers 65-C-54 and 66-B-1, both of which have resulted in final awards to the property owners in excess of the amounts deposited in court by the United States as estimated fair market value of the properties. With respect to number 65-C-54, the 90th Congress enacted Public Law 90-594, which authorized the appropriation of \$6,-

810,380, plus interest, to satisfy the deficiency in that case. Enactment of the enclosed bill would authorize the appropriation of \$4,129,829, plus interest, to satisfy the deficiency in proceeding number 66-B-1.

This Department, in its letter to the Congress of June 4, 1968, recommended the enactment of a draft bill which would authorize appropriations sufficient to satisfy the awards in both proceedings. However, the authority with respect to proceeding number 66-B-1 was deleted by the House Committee on Interior and Insular Affairs (see House Report No. 1856, 90th Congress,

2d Session, to accompany H.R. 17787), and this deletion was concurred in by the Senate Committee on Interior and Insular Affairs (see S.R. No. 1598, 90th Congress, 2d Session). The deletion was made on the ground that a final judgment in proceeding number 66-B-1 had not been rendered, appeals filed by the Government and the former landowners with respect to tracts 14 and 16 not then having been disposed of.

Final judgments with regard to the four tracts involved in proceeding number 66-B-1 have now been rendered. The following table shows the sums involved:

Tract	Deposit	Final award	Deficiency	Judgment date
14 and 16.....	\$1,581,321	\$5,700,000	\$4,118,679	Dec. 18, 1968
15.....	7,200	11,000	3,800	May 14, 1968
17.....	14,400	21,750	7,350	Jan. 8, 1968
Total.....	1,602,921	5,732,750	4,129,829	

With regard to tracts 14 and 16, at trial the jury awarded the former landowners \$9,891,637.80. On motion of the Government, the court ordered a remitter in the amount of \$2,591,637.80, which would have reduced the award to \$7,300,000. Pending final action on the remitter, however, the former landowners offered to accept a total figure of \$5,700,000, provided the Government agreed to revestment of title to tract 16 and a portion of tract 14 in the former owners. These lands totaled 1,628.05 acres, and were deemed not now essential to the management and development of the seashore. The Government therefore joined the former landowners in a stipulation providing for revestment of the 1,628.05 acres and an award of \$5,700,000, which was approved by the court.

Under the stipulation mentioned above, interest on the deficiency with regard to tracts 14 and 16 (\$4,118,679) commenced to run on January 1, 1969. Under similar stipulations covering tracts 15 and 17 interest on the deficiency on tract 15 (\$3,800) will commence on May 14, 1969, and interest on the deficiency on tract 17 (\$7,350) commenced January 9, 1969. Interest will accumulate against the Government at the rate of 6 percent from the above dates on the deficiencies until they are paid. The funds authorized in this draft legislation will be sufficient to complete land acquisition for this national seashore under the current plans of the Department.

The Bureau of the Budget has advised that there is no objection to the submission of this proposed legislation from the standpoint of the Administration's program.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

Mr. YARBOROUGH, Mr. President, I am very proud to have been the sponsor of the bill creating this national seashore. President John F. Kennedy signed the bill creating this national seashore on September 28, 1962. This beautiful portion of the Texas gulf coast is now preserved in practically its natural state and will be enjoyed by all Americans for generations to come.

This legislation is needed so that the last settlement can now be made for the land acquired for this seashore.

Mr. President, I ask unanimous consent that the text of my bill to authorize the appropriation of funds for Padre Island National Seashore in the State of Texas, be printed in full at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately re-

ferred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2212) to authorize the appropriation of funds for Padre Island National Seashore in the State of Texas, and for other purposes, introduced by Mr. YARBOROUGH, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 2212

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any other provision of law, there are hereby authorized to be appropriated such sums as may be necessary to satisfy the final judgment of \$4,129,829 (that is \$5,700,000 less \$1,581,321 deposited in court) rendered against the United States in civil action 66-B-1 in the United States Court for the Southern District of Texas, for the acquisition of lands and interests in land for the Padre Island National Seashore. The sums herein authorized to be appropriated shall be sufficient to pay the amount of said judgment, together with interest as provided in a stipulation signed by the parties and entered with the court.

SENATE RESOLUTION 197—SUBMISSION OF RESOLUTION REPUDIATING THE BREZHNEV DOCTRINE

The PRESIDING OFFICER. Under the previous order, the Senator from Connecticut is recognized for 20 minutes.

Mr. DODD. Mr. President, I have asked for this time so that I may introduce a resolution and make some remarks about it. I consider it a very important resolution and I hope that my fellow Senators will carefully consider it.

On the heels of the invasion of Czechoslovakia, the Soviet Union promulgated the so-called Brezhnev doctrine, asserting its right to intervene in any so-called Socialist country.

Because this doctrine in effect nullifies the Charter of the United Nations and constitutes a continuing threat to the peace of the world, I believe that it would be helpful if the Senate of the United States went formally on record as repudiating the central concept of the Brezhnev doctrine, reasserting the right of all nations to sovereignty over their own affairs, and urging the Soviets to de-

sist from intervention in Czechoslovakia.

I submit for appropriate reference a resolution designed to make these points clear to the Soviets and to world opinion.

In submitting this resolution, I am honored to be joined as cosponsors by the Senator from Indiana (Mr. BAYH), the Senator from Hawaii (Mr. FONG), the Senator from Wyoming (Mr. HANSEN), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Utah (Mr. MOSS), the Senator from Oregon (Mr. PACKWOOD), the Senator from South Carolina (Mr. THURMOND), and the Senators from Texas (Mr. TOWER and Mr. YARBOROUGH).

It is my hope that the administration will be encouraged by this resolution to take those diplomatic measures that can and should be taken in advance to discourage the extremists in the Soviet politburo and to impose at least some restraint on Soviet actions in Central Europe.

The Brezhnev doctrine was spawned by recent events in Czechoslovakia.

What has happened in Czechoslovakia and what is happening there today has a significance that far transcends the fate of one country.

The Czechoslovak situation, indeed, is a great historical pivot, on the outcome of which may depend the future evolution of the Soviet Union and of Communist rule in Central Europe, and of the entire relationship between the free world and the Communist world.

On March 30, the Senate Subcommittee on Internal Security released a study captioned "Aspects of Intellectual Ferment and Dissent in Czechoslovakia," which had been prepared at my request by the Legislative Reference Service of the Library of Congress. Essentially this study was an analysis of events leading up to the Soviet invasion of Czechoslovakia, and of developments from the time of the occupation until roughly mid-February.

In the statement made at the time the study was released, I said that the recent events in Czechoslovakia, coupled with the smoldering discontent in the rest of Communist Europe and in the Soviet Union itself, call into question, in the most dramatic form, both the viability of the Communist system and the ability of Moscow to control the empire which it built up in the postwar period on the bayonets of the Red army. I also said that anything could happen in Czechoslovakia and anything could happen in Central Europe.

At the very moment this statement was mailed out to the press, a new and dramatic train of events began to unfold in Czechoslovakia and Central Europe.

On March 28, the victory of the Czechoslovak ice hockey team over the Soviet team triggered wildly enthusiastic demonstrations from one end of Czechoslovakia to the other. In the course of these demonstrations, certain unruly elements threw rocks at Soviet barracks and other installations, and broke into and vandalized the Soviet airline and travel office in Prague.

Responsible Czechs have charged that these provocations were the work of So-

viet stooges. Whether this was so or not, the Soviets reacted in the best Stalinist tradition.

On March 31, Marshal Andrei Grechko, Soviet Defense Minister, and Vladimir Semyonov, Soviet Deputy Foreign Minister, flew into Prague unannounced, accompanied by a top-level military delegation, and demanded a meeting with the Czechoslovak leaders.

According to reports, the Soviet emissaries gave the Czech leaders an ultimatum, warning them that if they failed to act at once to stop anti-Soviet demonstrations and criticism in the press, the Soviet army would again intervene and "would run over the demonstrators with tanks."

A few days later, on April 5, the press reported that the Czechoslovak leaders had been forced to agree to the stationing of three more Soviet divisions in their country, raising the total Soviet occupation force from approximately 70,000 to roughly 115,000 men.

These events, and other events of the last few weeks, strongly suggest that the Soviet leaders, after a period of apparent indecision, have now veered back toward a hard line on Central Europe.

On April 5, the Soviet press leveled against Yugoslavia some of the strongest criticism that had been seen in Moscow in more than a decade.

On April 9, Ivan Bashev, the Bulgarian Foreign Minister, reinforced these threats by telling the press that, I quote:

The Warsaw powers will invade any other alliance nation which follows Prague's example.

And then, on April 17, there came the ominous announcement that Dubcek was resigning as party secretary and that his place was being taken by Gustav Husak, a hardline Slovak party leader who for months now has been assailing the critics of Soviet actions.

At the point of the bayonet, the Kremlin appears to have succeeded in compelling the Czechoslovak Government to renounce their own freedom and the freedom of their people. But the situation is far from clear cut.

IN THE WAKE OF THE CZECHOSLOVAK INVASION

The Kremlin originally decided to intervene in Czechoslovakia because it felt its rule threatened by the contagion of freedom. But the process of political and ideological disintegration in Communist Europe and in the Soviet Union itself has probably only been accelerated by the invasion and occupation of Czechoslovakia.

Having invaded and overrun the country and having arrested and removed its leader, the Kremlin, for the first time in its long history of dictatorship and repression, found itself confronted with a situation which appeared to refuse to yield to force.

So united were the Czechoslovak peoples in their opposition to the old Stalinist tyranny of the Novotny regime that Moscow has had the greatest difficulty to find even the handful of traitors necessary to impose a viable quisling regime.

Czechs and Slovaks, intellectuals, students, and workers manifested their opposition to the Soviet occupation and

their opposition to the reinstallation of censorship, in an unprecedented show of national unity.

On top of all these things, the occupation of Czechoslovakia resulted in the universal condemnation by world opinion, a condemnation which has by no means been limited to the ranks of the confirmed anti-Communists.

On the heels of the Czechoslovak invasion, Moscow invented the so-called Brezhnev doctrine, under which it claimed the right to intervene in any socialist country if it believes that the socialist regime is threatened.

But the Rumanian and Yugoslav Communists, instead of muting their claim to independence, became bolder and more assertive than ever.

A major reason for the growing defiance displayed by the Yugoslav and Rumanian governments is the dramatic intensification of the Sino-Soviet conflict in recent months. This intensification runs so deep that there is now a distinct possibility of larger hostilities along the Sino-Soviet frontier.

No one can with certainty foresee the final outcome of the confrontation between the brute force of the Soviet Red army and the peaceful but stubborn national resistance of the Czechoslovak people.

With their ultimatums and troop movements, the Soviets have been able to compel the Czechoslovak leaders, against their will, to impose precensorship of the press, to suspend certain publications which they found most offensive, and to dismiss a number of officials.

But, despite the reported arrests of some hundreds of oppositionists, and despite any concessions their leaders may have been compelled to make, recent news suggests that the Czechoslovak people are in no mood for total capitulation.

For example, on April 24, the press reported a sit-in strike by the philosophy students at Prague's famous Charles University, protesting against the removal of Dubcek.

Even more indicative of continuing resistance was the report that when the hardline Communists ordered their journalistic followers to break away from the journalists union and set up an independent hardline union, only 71 out of 4,000 members heeded the call.

The Kremlin unquestionably has a much greater degree of political control in Czechoslovakia today than it had 1 month ago. But its control is far from complete, and anything can still happen in Czechoslovakia.

THE KREMLIN'S DILEMMA

If the Czechoslovak peoples, despite the Red army and despite the new pressures to which they are being subjected, succeed in preserving enough of the limited freedom which they won for themselves during the first part of 1968, then the contagion of freedom is bound to spread to the other Central European Communist countries. It is bound to feed the massive intellectual ferment that has grown up in the Soviet Union since the death of Stalin.

If, on the other hand, the situation in Czechoslovakia cannot be brought under control by Husak and his small band of hardliners, and if the Kremlin in des-

peration decides again to move its tanks in, the chances are that there would be large-scale bloodshed. Then, the U.S.S.R. would be able to govern only by means of mass arrests and open Red army rule.

Moreover, all the indications are that this would not really solve the problem which the Kremlin faces in dealing with the growing dissidence throughout Communist Europe, including the Soviet Union.

There is a serious possibility that, instead of snuffing out the flames of discontent, a second military intervention would only serve to feed them.

And even if they should succeed in temporarily controlling the situation, the men of the Kremlin must be asking themselves how many more East German uprisings, and Poznan rebellions, and Hungarian revolutions, and how many more instances of national defiance on the pattern of Czechoslovakia, the Red army will be able to repress by brute force.

There have been a number of indications of grave concern over the still simmering discontent in Communist Poland. On the surface, the Gomulka regime has been able to stabilize the situation since it put down the nationwide student strike of March 1968. But when the Congress of the Communist-controlled Polish Peasant Party convened in Warsaw in early March of this year, the secret police found it necessary to arrest more than 100 of the delegates to the Congress to assure that the leadership retained a working majority.

A press dispatch of March 4 quoted a high-ranking Soviet party official as saying that Moscow's greatest concern at the moment is the situation in Poland. This situation he described as roughly the same as the situation in Czechoslovakia at the end of 1966, that is, before the overthrow of the conservative Novotny government.

Against this background of universal discontent the Soviet leaders must be asking themselves whether the immediate advantages the Soviets might hope to gain from a second round of military intervention in Czechoslovakia are not outweighed by the ultimate disadvantages.

They must be wondering what they would do if the smoldering spirit of revolt throughout the Communist empire, including even East Germany, should erupt simultaneously. Specifically, they must be wondering whether the Kremlin would still be able to deal with such a situation by sending in the Red army.

And, above all, the men of the Kremlin must be asking themselves whether Moscow can afford to become involved in more crises in Central Europe, with Red China growing constantly more belligerent and threatening.

These are some of the many questions that must be tormenting the Soviet leaders in the dilemma they now confront in Czechoslovakia.

No matter which way the Soviet leadership decides to move, there is no solution to the Czechoslovak problem that they can feel comfortable about. Precisely because of this, their future handling of the Czechoslovak crisis remains unpredictable.

I would like to call to the attention of the Senate a plea addressed to American and world opinion by a group of striking Czechoslovak students. This plea has reached me via an intermediary. Why, they ask, do groups of American students protest and demand greater rights and more freedom for themselves while they completely ignore the massive denial of student rights in Czechoslovakia? Are American students only concerned with their own freedoms, but oblivious to the freedoms of students in other countries?

The letter which they wrote made this poignant remark:

All people towards the end of the 20th Century are supposed to have a future. You are supposed to look forward to one. Today, while the world ignores us here, we wonder if there is any future.

This is a valid question.

I hope that the resolution I have submitted today will be acted on promptly by the Foreign Relations Committee and by the Senate.

What is involved here is a very simple proposition.

My resolution does not call on us to take any warlike or threatening actions.

It does not involve the application of diplomatic pressures or economic sanctions.

It does not require that we sever relationships with the Soviet Union or with the other countries which participated in the invasion of Czechoslovakia.

What, then, is the purpose of this resolution?

Its purpose is to demonstrate to our own people and to the world that we are not morally dead, that we have not lost our capacity for indignation, that we do not intend to reconcile ourselves to the monstrous policy of permanent aggression which has now been enshrined in the Brezhnev doctrine.

Its purpose is to make it clear to the world that we do not share the posture of those foolish people who tried to sweep the invasion of Czechoslovakia under the rug, or who tried to brush it off by telling us that the Soviets were taking an essentially defensive action within their own sphere of interest.

Some of these people indeed went as far as to equate the Soviet invasion of Czechoslovakia with our intervention in the Dominican Republic.

This is like equating the action of a murderer with the action of a policeman who shoots a criminal in an effort to prevent murder.

I shall be more prepared to listen to those who equate the Czechoslovakia invasion with the Dominican intervention when the Soviet Union holds free elections in Czechoslovakia under international supervision.

The purpose of my resolution, finally, is to say on behalf of the Senate of the United States that the Brezhnev doctrine and the occupation of Czechoslovakia are wholly evil things. They must be condemned in resounding terms by civilized men throughout the world.

It is my hope that this resolution will encourage other legislatures in free countries to follow our example. News of this action will get through behind the Iron Curtain so that the brave people of Czechoslovakia and of the other Com-

munist-dominated countries will know where the American people stand on this issue.

In closing, I want to again commend Mr. Whelan's study on "Aspects of Intellectual Ferment and Dissent in Czechoslovakia" to all those who are concerned over the trend of world events. Because, if we are to develop a meaningful European policy geared to the realities of today rather than to the outdated impressions of yesterday, it is clearly essential that we give the most careful study both to the dangers and to the potentialities inherent in the Soviet-Czechoslovakia confrontation.

Mr. President, I ask unanimous consent that the full text of the resolution be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. HOLINGS in the chair). The resolution will be received and appropriately referred.

The resolution (S. Res. 197), which reads as follows, was referred to the Committee on Foreign Relations:

S. RES. 197

Whereas the Soviet Union, with the support of four other Warsaw Pact countries, invaded and occupied Czechoslovakia in August of 1968, in flagrant violation of international law and of the United Nations Charter; and

Whereas subsequent to the occupation of Czechoslovakia, Soviet Party Secretary Leonid Brezhnev promulgated what has since come to be called the "Brezhnev Doctrine," explicitly sanctioning Soviet military intervention in any so-called socialist country, "when a threat emerges to the cause of socialism in that country" and implicitly reserving to the Soviet Union the right to define what constitutes a socialist government; and

Whereas this doctrine, in effect, nullifies the Charter of the United Nations if it is permitted to stand unchallenged; and

Whereas the Soviet government has in recent weeks threatened renewed military intervention in Czechoslovakia and reiterated its adherence to the Brezhnev Doctrine in ominous terms; and

Whereas through its military and political blackmail, the Soviet government has been able to compel the Czechoslovak government to accept a serious abridgement of its own freedom and the freedom of its people: Therefore be it

Resolved, That the Senate of the United States reiterates its adherence to the United Nations Charter and to the principle of self-determination and respect for the territorial integrity of other countries which are at the heart of the Charter; and be it further

Resolved, That the Senate, by this present resolution, advise the world and advise the Soviet leaders that it does not accept the validity of the Brezhnev Doctrine because it considers this doctrine a most serious threat to the peace of the world and to the integrity of the United Nations; and be it further

Resolved, That the Senate deplores the fact that the Czechoslovak authorities have been obliged to bow before the military and political pressures exercised by the Soviet authorities in a manner which gravely compromises Czechoslovak freedom; and finally, be it

Resolved, That the Senate appeals to the Soviet leaders to abandon their intervention in Czechoslovakia, and to reconsider their claimed right to intervene in other "socialist" countries because of the peril that this doctrine constitutes to the maintenance of peace.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. MURPHY. Mr. President, I wish to

congratulate the Senator from Connecticut for the remarks he has made today. I wish to call attention to the fact that over the years no one has expressed these sentiments more forcefully to the American people than has the Senator from Connecticut. He has constantly exhibited himself as a student of these matters—and a careful student. His statements have been couched in fact. He places his finger on one of the most important aspects of our times; namely, the necessity for the complete truth to be told without restriction, so that the people, not only of this great Nation—where we enjoy the freest society that has ever been conceived—but also the peoples of other nations who aspire to freedom will have the opportunity to know the facts and the conditions, so that they can be the judge as to how their governments will be determined and the direction their future lives will take. I commend my distinguished colleague and congratulate him once more and wish to associate myself with the remarks he has made today.

Mr. DODD. Mr. President, I am grateful to the Senator from California for his generous references to me. I am not overly humble, but I really do not deserve them. There have been many others in the Senate who have done much—and others outside the Senate as well.

All I want is to make clear, as best I can, what I think is going on, and get the interest of others who have the same objectives in mind that I have.

The Senator from California has been a great leader in this effort.

I hope that we will do something about this resolution. For the purpose of making our moral position unmistakably clear.

I thank the Senator from California for his courtesy and his kind comments.

Mr. MURPHY. I thank my colleague.

Mr. TOWER. Mr. President, the string of rationalizations offered by the Soviet Union in justification of her occupation of Czechoslovakia have come to be known as the Brezhnev doctrine. Moreover, the Warsaw letter of July 15, 1968, from representatives of the governments of those nations who would later move against and occupy Czechoslovakia to the Central Committee of the Czechoslovak Communist Party, expressed the basic contentions of the statements issued after the occupation. The Warsaw letter warned that the Socialist community will never allow the Socialist system or the balance of power in Europe to be altered in favor of "imperialism," by peaceful means or otherwise, from within or without; and that a Socialist country can remain independent and sovereign only as a member of the Socialist community; and that no Socialist can speak of its sovereignty vis-a-vis other Socialist nations. Andrei Gromyko, in addition to reiterating the concept of the limited sovereignty of Socialist nations, in a speech before the United Nations on October 3, 1968, declared that the Socialist community is not subject to the prevailing rules of international relations since Socialist countries have their own responsibilities and vital interests such as the maintenance of mutual security and their own Socialist principles of mu-

tual relations based on fraternal aid, solidarity, and internationalism.

The inconsistency of the intervention in Czechoslovakia with the alleged Marxist-Leninist doctrine of "self-determination" is sophistically smoothed over with the argument that this principle is based on an abstract approach to the people's sovereignty and not on reasoning within the context of class struggle. Actually it is abundantly clear that, except in those instances where to do so suits their purposes, the Soviets refuse to be bound by either international law or even by the supposed philosophy which they ostensibly embrace.

An article published in Pravda of September 26, 1968, went even further in expanding the "right" to intervention in the affairs of other nations by stating that the laws and norms of right are subject to the laws of class warfare and the laws of social development. Thus the concept of national sovereignty is restricted in this view not only in the case of Socialist countries but also throughout the world. Briefly, the right to self-determination in this interpretation is nothing more than the right to be subservient to the Soviet Union. As seen by the Soviet Union, all nations have the "right."

Since a people will find its true happiness only under "Socialist self-determination," the armed aggression of the Soviet Union and the Warsaw Pact allies has the educative effect of helping its victims to recognize their own best interests.

Mr. President, this line of reasoning is so patently specious that one need only recite it to refute it. However, it is not a new concept in Soviet ideology. Similar arguments were employed to justify the 1956-57 intervention in Hungary. In the early 1960's, Soviet ideologists drew three main distinctions in international law: international law, as it is usually understood and as it is expressed in article 2 of the U.N. Charter, which is, according to the Soviets, only applicable to relations between capitalist and Socialist countries; the principles of intervention and hegemony, which, supposedly, governs the international relations among "capitalist" nations; and Soviet internationalism. In delineating this view of international relations, the Soviets have conveniently ignored the Warsaw Pact in which the signatories, including the Soviet Union, agreed to be guided by the principles, aims, and statutes of the United Nations organization. Such duplicity, by this time, is hardly surprising.

The true Soviet policy is to follow a course of convenience toward the ultimate goal of world domination; the Brezhnev doctrine is the ideological by-product of this policy and follows, rather than occasions, the aggressive actions of the Soviet Union. The revitalization of "Socialist internationalism," with its accompanying interventionist doctrines, in its present expanded version, is an attempt to justify the occupation of Czechoslovakia. More ominously, it anticipates justification of future intervention in both Communist and non-Communist countries.

No matter how the Soviets stretch their sophistries, the Brezhnev doctrine, as it is expressed and as it has been carried out, is a demonstration of flagrant

disregard for the spirit and the letter of international law as laid down in the United Nations Charter, the Warsaw Pact, or any other source, except the tortuous reasoning of Kremlin ideologists. Beyond the verbal obfuscation, the expansionist designs of the Soviet Union are clear. We must take to heart the stern lesson in Communist psychology provided by the armed aggression of the Soviets and their allies against the people of Czechoslovakia. Furthermore, we must express our strong opposition to this oppressive and illegal action if, in the future, we are to negotiate with the Soviet Union from a position of strength and solidarity.

Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the Dallas Morning News of May 1, 1969.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BREZHNEV DOCTRINE

President Nixon could profitably add junking of the Brezhnev Doctrine to his agenda of demands when he starts talks with Russia. The new Brezhnev Policy, expounded on the ruins of Czech freedom, asserts Russia's right to use force in any communist country when its leadership strays toward free institutions.

Our own Monroe Doctrine, which Russia sneers at, only warns foreigners out of the hemisphere. Judging by Cuba, it doesn't do a very good job of that. Our own liberals holler "world policeman" whenever the U.S. defends some little country's freedom.

Yet the Kremlin is asserting not only the right to subvert the world but also to keep conquered territories in bondage by force. The Red army stands behind the doctrine, which mocks the nominal sovereignty that the satellite nations assert.

Supporting a resolution in Congress condemning the new Red expansionist doctrine, Sen. John Tower has contrasted the Brezhnev Doctrine with the U.N. Charter, which proclaims the principles of self-determination and territorial integrity. He sees the Red policy as a "gross breach of international law" and a threat to peace and sovereignty.

It is that—and more. The Reds don't subscribe to U.N. principles but they don't scruple to condemn South Africa or Portugal or Rhodesia as being "threats to peace" because of their internal policies. The irony seems lost on the U.N., which wouldn't dare censor Russia for the dozens of captive peoples it has swallowed up.

The U.S. has no consistent policy of opposing communism wherever it shows itself in the free world. No amount of treaties and talks will make up for that deficiency or offset the explicit Red expansionist doctrine. It will be on Russia's list of nonnegotiables when Nixon comes calling.

S. 2221, S. 2222, AND S. 2223—INTRODUCTION OF BILLS ON OWNERSHIP OF CERTAIN LANDS IN RIVERSIDE COUNTY, CALIF., AND SUBMISSION OF COMPANION RESOLUTIONS, SENATE RESOLUTIONS 199, 200, AND 201

Mr. MURPHY. Mr. President, on two occasions earlier this session I submitted a series of bills and resolutions pertaining to the ownership of lands along the Colorado River. These were: On March 4—S. 1303 through S. 1360, and S. 1364, and Senate Resolution 103 through Senate Resolution 161, and on April 29—S. 2023 through S. 2028, and Senate Resolution 185 through Senate Resolution 190. On each of the occasions on which

I submitted these bills and resolutions, I pointed out that the bills involved the Secretary of the Interior and lands over which he claims control and that the resolutions, in turn, pertain directly to the bills. Then, on both occasions, I asked unanimous consent, which was granted, for all of the bills together with the accompanying resolutions to be referred to the Senate Committee on Interior and Insular Affairs. I now introduce three more bills and submit three more resolutions of the same type and again request unanimous consent that all of them be referred to the Senate Committee on Interior and Insular Affairs.

The PRESIDING OFFICER. The bills and resolutions will be received and, by unanimous consent, referred to the Committee on Interior and Insular Affairs.

The bills (S. 2221) to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the County of Riverside, State of California; (S. 2222) to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the County of Riverside, State of California; and (S. 2223) to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the County of Riverside, State of California; to the Committee on Interior and Insular Affairs, introduced by Mr. MURPHY, were received, read twice by their titles, and referred to the Committee on Interior and Insular Affairs, by unanimous consent.

The resolutions (S. Res. 199) to refer the bill (S. 2221) entitled "A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California," to the Chief Commissioner of the Court of Claims for a report thereon; (S. Res. 200) to refer the bill (S. 2222) entitled "A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California," to the Chief Commissioner of the Court of Claims for a report thereon; and (S. Res. 201) to refer the bill (S. 2223) entitled "A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California," to the Chief Commissioner of the Court of Claims for a report thereon, which read as follows, were referred to the Committee on Interior and Insular Affairs, by unanimous consent:

S. RES. 199

Resolution to refer the bill (S. 2221) entitled "A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California," to the Chief Commissioner of the Court of Claims for a report thereon

Whereas there is pending in the Senate of the United States a bill designated as S. 2221 to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title

it may heretofore claim to certain lands situated in the county of Riverside, State of California, unto David E. and Janet L. Buskirk: It is hereby:

Resolved, That the Chief Commissioner of the United States Court of Claims shall designate pursuant to section 1492 of title 28 of the United States Code, a trial Commissioner to proceed in accordance with the applicable rules to determine the facts, including facts relating to delay or laches, facts bearing upon the question whether the bar of any statute of limitations should be removed, or facts claimed to excuse the claimant for not having resorted to any established legal remedy. He shall append to his findings of facts, conclusions sufficient to inform the Congress whether the demand is a legal or equitable claim or a gratuity, and the amount, if any, legally or equitably due from the United States to the claimant.

S. RES. 200

Resolution to refer the bill (S. 2222) entitled "A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California", to the Chief Commissioner of the Court of Claims for a report thereon

Whereas there is pending in the Senate of the United States a bill designated as S. 2222 to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, California, unto Alvine E. Johnson and Mary A. Johnson: It is hereby

Resolved, That the Chief Commissioner of the United States Court of Claims shall designate pursuant to section 1492 of title 28 of the United States Code, a trial Commissioner to proceed in accordance with the applicable rules to determine the facts, including facts relating to delay or laches, facts bearing upon the question whether the bar of any statute of limitations should be removed, or facts claimed to excuse the claimant for not having resorted to any established legal remedy. He shall append to his findings of facts, conclusions sufficient to inform the Congress whether the demand is a legal or equitable claim or a gratuity, and the amount, if any, legally or equitably due from the United States to the claimant.

S. RES. 201

Resolution to refer the bill (S. 2223) entitled "A bill to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California", to the Chief Commissioner of the Court of Claims for a report thereon.

Whereas there is pending in the Senate of the United States a bill designated as S. 2223 to authorize and direct the Secretary of the Interior to relinquish and quitclaim any title it may heretofore claim to certain lands situated in the county of Riverside, State of California, unto Jack and Myrtle Utz: It is hereby

Resolved, That the Chief Commissioner of the United States Court of Claims shall designate pursuant to section 1492 of title 28 of the United States Code, a trial Commissioner to proceed in accordance with the applicable rules to determine the facts, including facts relating to delay or laches, facts bearing upon the question whether the bar of any statute of limitations should be removed, or facts claimed to excuse the claimant for not having resorted to any established legal remedy. He shall append to his findings of facts, conclusions sufficient to inform the Congress whether the demand is a legal or equitable claim or a gratuity, and

the amount, if any, legally or equitably, due from the United States to the claimant.

A TRIBUTE TO THE OIL INDUSTRY

Mr. STEVENS. Mr. President, on Friday last, the distinguished Senator from Louisiana (Mr. LONG), made an extended statement on taxes which the oil companies pay.

I want to commend him for his comments, and particularly for the comments he made pertaining to the Alaskan oil discoveries.

I certainly want to go on record in support of his position that the incentives the American oil industry have today are absolutely responsible for the oil discoveries, in my State particularly. The discoveries of oil on the North Slope and the new vast reserves that we have up there would not have been discovered had it not been for the existing incentives open to the oil industry through the tax laws.

FEDERAL WATER POLLUTION CONTROL ACT, AS AMENDED—AMENDMENT

AMENDMENT NO. 22

Mr. STEVENS. Mr. President, today the Senator from Massachusetts (Mr. KENNEDY) and I have submitted an amendment critical in its need, addressed to an emergency health situation among the village people of Alaska—a situation which demands immediate action.

The needs and grievous conditions of existence in which many of my native people live in rural Alaska have recently been brought to the Nation's attention. And this was all for the good. An informed public, jarred into the realization of the incredible need which exists in Alaskan villages today, will, I feel, support programs designed to overcome and remedy the conditions with which these people find themselves burdened.

Our village people exist primarily on a subsistence derived from fishing and hunting, both seasonal and rural in nature. The villages in which they live are plagued by unsanitary water and waste disposal conditions, they lack sufficient educational opportunities and live in dilapidated or substandard housing. The Alaska native is currently locked into a cycle of poverty more severe than any in the country; a cycle I believe we can and must break.

The remote housing plan for Alaska native villages, authorized under the leadership of the late Senator Bob Bartlett, has received its initial appropriation. An interagency community development plan holds great promise for Bethel. And the Federal programs in the Departments of Interior and Health, Education, and Welfare, among others, continue their progress.

However, much remains to be done.

The amendment we submit today will alleviate, partially, the poor health conditions which exist in these villages. Good health is basic to the ability to perform well in other endeavors—be it a child's ability to attend and concentrate at school or a father's capability for ef-

fective work. Without good health the success of other undertakings is immeasurably lessened.

Our amendment's impact on health will be immediate. Today only 8 percent of the native homes in Alaska have adequate sanitation facilities. In village after village contaminated surface water or water from streams where the village wastes are dumped is used by the villagers for cooking and drinking. In a survey made of 28 Eskimo villages in 1965, 86 percent of the dwellings had only a bucket for sanitary facilities.

The indices of their living conditions are many and dramatic in their impact.

The following are facts which testify to the severity and depth of the problem which now challenges us:

In our State the expected lifespan of a native is less than half that of other Americans, reaching only 34 years. The death rates for influenza and pneumonia are 10 times that of other Alaskans. Native children have been estimated to suffer significant hearing loss from chronic inner ear infections up to the astounding rate of 38 percent. The infant mortality rate seems more like that of an underdeveloped country than one of our own United States. In 1966 more than one-fifth of all native deaths occurred in children under 1 year of age, and among native infants from 6 to 11 months old the death rate is more than 12 times that of white Alaskans.

Many, many more statistics could be quoted. But I believe the severity of this problem has reached us all.

We find ourselves now at the point of action.

Such action is occurring on a variety of fronts. The Indian land claims are moving toward a settlement.

The severe health problems of these people have a variety of causes, but clearly a fundamental reason is their utilization of polluted waters from these rivers and sloughs.

This presents us with an emergency situation. Access to safe cooking and drinking water and a means of safe waste disposal are clearly necessary.

To meet this emergency we have introduced the Alaska Village Safe Water Facilities Act.

This legislation will provide a source of safe water to villages in Alaska which presently have no adequate supply of such water. The Secretary is authorized to institute and carry out a program designed to provide for the installation of such safe water facilities in Alaskan villages as are necessary to provide at least one such facility in each village.

The facilities constructed under this act will be housed in a suitable structure to allow year-round use by all residents of the village and include a source of safe water for cooking and drinking. Example, a well with pumping facilities or surface water treated so it is safe for use. Each building will also have shower and washing facilities for men and women, toilet facilities, and equipment for the washing of clothes by the villagers.

Parenthetically, I state that it would cost about \$1.80 for one machinefull of water in many of our native villages. In

many of the villages the people cannot afford that kind of money.

When appropriate, a community health service office for the village may also be located in this building.

Further, to insure maximum utilization and understanding of the health benefits derived from the use of this safe water facility, this legislation authorizes an educational program on the use of these facilities, to be conducted by the health aide in the village, for its residents.

Because the lack of safe water in our villages poses an emergency situation, this bill envisages only 4 years to complete this program. The need is so critical that further time simply must not be allowed to pass. We estimate that in 4 years, 150 native villages will be reached by this program.

No facility will be built without close consultation with and prior approval of each village council. And, upon completion of the facility, the title of ownership will be transferred to the village council. The basic responsibility for maintenance and operation of the safe water facility will rest on the village. Where they find themselves without adequate financial resources to carry out this effort, grants by the Secretary are authorized in the amount necessary to insure full operation and maintenance of the facility.

Mr. President, this amendment meets a health need which is so basic to our native communities that its necessity speaks for itself. Alaskan village residents cannot continue to use and drink polluted water or to have such an abhorrent lack of sanitation facilities.

Years ago we had the Alaska public works legislation which extended to the urban communities of our State. We envision this amendment as another public-works-project act, but designed exclusively for the Alaskan native villages.

I ask unanimous consent that the full text of the amendment be printed in the RECORD at this point, and ask that the remarks that the Senator from Massachusetts will make at a later time be incorporated in the RECORD following my remarks.

The PRESIDING OFFICER. The amendment will be received, and without objection the amendment will be printed in the RECORD.

The amendment was referred to the Committee on Public Works as follows:

Amendment numbered 22 to S. 7, a bill to amend the Federal Water Pollution Control Act, as amended, and for other purposes, viz: At the end of the bill insert a new section as follows:

"SEC. 8. The Federal Water Pollution Control Act is amended further by inserting at the end thereof a new section as follows:

"ALASKA VILLAGE SAFE WATER FACILITIES

"SHORT TITLE

"SEC. 21. (a) This section may be cited as the 'Alaska Safe Water Facilities Act'.

"FINDINGS OF FACT

"(b) The Congress hereby finds and declares that—

"(1) in numerous villages in the State of Alaska there are presently no facilities for the provision of safe water and hygienic sewage disposal;

"(2) because of the absence of such water

and sewage facilities in such villages and the attendant insanitary conditions stemming from such absence, there is a widespread incidence of sickness and disease which is responsible for serious, and in some instances, permanent impairment or even death to the residents of such villages; and

"(3) it is the responsibility of the Federal Government, in providing for the health and general welfare of Indian and native Alaskan citizens of the United States, to take appropriate measures to protect the lives and health of residents of such villages by enabling them to enjoy the benefits of safe water and hygienic sewage disposal facilities.

"DECLARATION OF POLICY

"(c) It is therefore the policy of this section to establish a special emergency program designed to provide safe water and hygienic sewage disposal facilities in Alaskan villages which presently do not have such facilities.

"PROVISION OF FACILITIES

"(d) (1) In order to provide safe water and hygienic sewage disposal facilities in villages in Alaska which presently do not have such facilities, the Secretary of the Interior (hereinafter in this section referred to as the "Secretary") is authorized to institute and carry out a program designed to provide for the installation of such safe water and hygienic sewage disposal facilities in Alaskan villages as are necessary to assure that there will be at least one facility for safe water and hygienic sewage disposal in each village.

"(2) (A) Any facility constructed under this subsection shall be available for use by the general public and be housed in a suitable structure, designed to assure year-round use of such facility, and shall include, at a minimum, a source of clean water (such as a well with pumping facilities or utilization of surface water treated so it is safe and healthy for use), shower bath facilities, an adequate means of hygienic sewage disposal, and facilities for the washing of clothes. The building housing any such facility shall, if the Secretary determines it to be feasible and appropriate, also contain suitable quarters to be used as a community health service office.

"(B) The location of any facility constructed under this subsection shall be determined after consultation with the village council (or other comparable governing body) of the village in which such facility is located, as well as with appropriate public agencies (such as, but not limited to, the Alaska State Housing Authority and the Federal Field Committee for Development Planning in Alaska), in order to achieve maximum coordination in public development plans and activities affecting the community in which the facility is to serve.

"(3) (A) The Secretary shall provide for the construction of facilities under this subsection in the most expeditious manner feasible, and is authorized to provide for such construction by contract or through grants to public agencies or private nonprofit organizations, or otherwise. No contribution toward the cost of the construction of a facility will be required from the users thereof.

"(B) Payments of any grants made under this subsection may be made in advance or by way of reimbursement and subject to such conditions as the Secretary may impose to assure that the purposes of this section will be properly carried out.

"(C) In the construction of any facility under this subsection, there shall be utilized to the maximum extent feasible workmen from the village in which such facility is being constructed.

"(4) It shall be the responsibility of the village council (or other comparable village governing body) to maintain and operate the safe water and hygienic sewage disposal facility constructed therein under this subsection, and, upon completion of such facil-

ity, the Secretary shall execute such transfers of title as may be necessary to vest complete ownership of such facility in such council or body. The Secretary shall not construct under this subsection any facility in any village unless he first receives satisfactory assurances from the village council (or other comparable governing body) thereof that such council or body will, upon completion of such facility, accept ownership thereof and will accept responsibility for the operation and maintenance thereof.

"(5) For purposes of carrying out the provisions of this subsection, there is authorized to be appropriated \$5,000,000 for the fiscal year ending June 30, 1970, and such sums as may be necessary for each of the next three fiscal years thereafter. Funds appropriated for any fiscal year under this paragraph shall remain available until expended and be utilized for both construction of the facilities and for the engineering and administrative costs necessary to design and plan such construction.

"(e) (1) The Secretary shall conduct through the health aide, in each community wherein there is located a safe water and hygienic sewage disposal facility provided under subsection (d), an appropriate educational and informational program designed to familiarize the residents of such community as to the health advantages to be achieved by their full utilization of such facility.

"(2) Whenever the Secretary determines that the village council (or comparable governing body), which has accepted ownership and responsibility for operation and maintenance of a facility provided under subsection (d), has financial resources which (when combined with the financial assistance available to it from the village, State, or other sources) are less than the amount necessary to enable such council or body properly to operate and maintain such facility, then the Secretary may make grants to such council or body in amounts which (when combined with the amounts available from other sources) will be sufficient to enable such council or body properly to operate and maintain such facility.

"(f) The Secretary of the Department actually administering the provisions of this section shall for the fiscal year which ends June 30, 1970, and for each of the succeeding three fiscal years, submit to the Congress a full and complete report of the activities undertaken pursuant to the authority contained in this section, which report shall indicate each of the villages wherein safe water and hygienic sewage disposal facilities under subsection (d) have been established, the extent to which such facilities are being utilized and the contribution made toward such utilization by the educational and informational program established pursuant to subsection (e) (1). The report of such Secretary for the fiscal year ending June 30, 1970, shall be submitted not later than July 30, 1970, and the report for each of the three succeeding fiscal years shall be submitted not later than the July 30 which immediately follows the close of such fiscal year.

"(g) There are hereby authorized to be appropriated for the fiscal year ending June 30, 1970, and for each succeeding fiscal year, such sums as may be necessary to carry out the provisions of subsections (e) and (f) of this section.

"(h) In order to prevent duplication of effort and to promote economy of administration, the Secretary shall to the maximum extent feasible utilize the facilities of the Department of Health, Education, and Welfare or the facilities of other appropriate public agencies in the administration of the provisions of this section."

Mr. KENNEDY. Mr. President, as chairman of the Senate Subcommittee on Indian Education, I recently spent 3

days in the State of Alaska investigating the quality and effectiveness of educational programs for Alaskan native children. In the course of our field investigation it became abundantly clear that one of the major factors causing the extremely low educational performance of native schoolchildren was the severe health problems afflicting the native population.

The health status of Alaskan natives is pointed up dramatically by the fact that, on the average, they live only half as long as the average American. It is shocking to discover that the average age at death of an Alaskan native is 34.5 years. It is even more shocking to discover that approximately 25 percent of the total native deaths occur in infants under 1 year of age.

Although the infant mortality rate has been reduced in recent years, it is still extremely severe and in any other part of our affluent Nation would be considered intolerable. During the period of time when a native infant is in the hospital following birth his mortality rate is only slightly greater than that of white Alaskans. When the infant returns to his village and home environment, during the next 20 days the mortality rate increases to 3 times that of white Alaskans. During the period from 1 to 5 months of age the mortality rate increases to 5 times that of whites, and among native infants age 6 months to 11 months the death rate exceeds more than 12 times that of white Alaskans. This is in itself a tragedy of major proportions—but it is only a part of the story.

In the course of our field investigation, we discovered that inner ear infections which cause broken ear drums and draining pus are practically universal among native children. It is obviously very difficult for a child with pus draining from his ear to function very well in school. Yet, we found these children in every village we visited and every teacher we spoke with complained of her students being hard of hearing. The long-range effect of this tragedy is borne out by a recent Public Health Service study in western Alaska which found that 38 percent of the children had significant hearing handicaps by the age of 4. There are presently over 2,000 children who have lost almost all of their hearing in one or both ears who are waiting their turn for surgical repair in Anchorage, Alaska.

It makes one angry to peer into a child's ear and find no ear drum left at all except for a rim. It makes one very angry to see children whose ears have been damaged to the extent that surgery will not help and the ear is simply sewn shut to prevent any further infections. In some cases the infection has eaten its way through to the brain causing an abscess and death or permanent brain damage.

Large numbers of Alaskan native children suffer from chronic upper respiratory infections. As a result, bronchiectasis, a very serious type of residual lung damage, is seen with frequency among native children and rarely, if ever, seen among children in any other part of our Nation. Despite a massive campaign over the last 14 years, tuber-

culosis continues at a rate 10 times the national average. During the early 1950's there was a TB epidemic in Alaska which many native children now in school grew up in the midst of. Many of the school population presently enrolled have, themselves, had long periods of hospitalization. Many have grown up with one or both parents dead or missing for long periods of time because of prolonged hospitalization. A recent study of a group of these children, aged 10–12, found that they cannot relate well to their families or other persons, are failing in school, and are also failing to grow in a normal fashion physically. This has occurred even though it was the parents, not the child, that was ill.

Infectious diseases such as impetigo and other skin infections are very common among native children. In one instance we were told of a child whose outer ear had been completely destroyed by impetigo. In many cases the skin infections result in permanent scarring. Infectious diarrhea and hepatitis afflict substantial numbers of native children and often lead to death or permanent brain damage. Even cases of dysentery and typhoid fever are not uncommon. There is a very high incidence of mental retardation among Alaskan native children, at least 50 percent of which was preventable. Most of this is due to acute infectious diseases suffered in early life.

Dr. Martha Wilson, of the Alaska Native Medical Center, has placed the overall severity of the problem in perspective for us in her testimony before the subcommittee. She stated:

The Alaska Native people have suffered epidemics of tuberculosis, pneumonia, influenza, otitis media, meningitis and bronchiectasis that have not to our knowledge been paralleled in any other population of the modern world!

All of the diseases I have mentioned and others combine to keep a large number of children sick a significant proportion of the time. Last year 3,000, or roughly 15 percent of the entire childhood population was hospitalized. And hospitalization itself is a very traumatic experience for native children. Imagine a child who becomes ill in a village, is taken perhaps 100 miles to a field hospital, often by someone other than his parents, transferred 400 to 600 miles to the referral hospital, spends 1 to 3 months, then returns home, again escorted by a stranger. During the period of time the child is in the hospital he more than likely does not see his parents or any relatives. The result of such an experience is often a severe emotional disturbance in the child.

In addition to disease, the Alaskan native child suffers from dietary deficiencies and general malnutrition which are, of course, debilitating in themselves as well as a significant factor in the high rate of sickness.

In summary, the health problems confronting Alaskan native children are horrendous and have a tremendous negative impact on their educational performance. Is it any wonder that up to 60 percent of the native students in rural Alaskan schools fall several years behind and drop out before completing elementary schools? Is it any wonder that

over 80 percent of native students drop out of high school before graduation? Is it any wonder that 24 out of 25 native students who enter college do not finish? In my judgment the waste of human resources, the extensive human suffering and pain and desperate poverty reflected in these figures is a national disgrace and an intolerable condition unbefitting this country. It must not be permitted to continue. The situation is an emergency and should be treated as such.

As a first step, Senator STEVENS, of Alaska, and I are jointly introducing a bill aimed at eliminating a major cause of the health problems—the widespread use of polluted and contaminated water by Alaskan native villages. I consider the matter of clean water supply and adequate waste disposal to be one of top priority and therefore one where emergency action must be taken.

In most villages water supply and waste disposal practices are primitive and unsanitary, and have important ill consequences for native health.

In a recent survey conducted in the villages of northwestern Alaska, it was found that 725 village households draw upon unsatisfactory surface waters for their total water supply. In all of northwest Alaska, there were only 19 toilets, and all but one of these were in a single village. Most of the households use pots or pails indoors for human waste, and deposit the waste later on the ground or sea ice. Water for domestic purposes in most villages is obtained from rivers and creeks near the villages. The water is hauled in buckets to oil drums in the homes. Ice is melted in winter for water, even in some BIA schools.

For the 58 villages in the western part of Alaska, conditions are equally bad and often worse. All four villages visited by the subcommittee in western Alaska were found to be using unsatisfactory or polluted water supplies. And, in all four villages there were serious health problems related to inadequate and unsanitary water supplies.

The legislation which we are introducing today contains provisions for a multipurpose facility which will provide clean water and a clean water distribution system; shower and hand washing facilities for both men and women; washing and drying facilities for clothes; toilet facilities for men and women and appropriate additional waste disposal facilities. In addition, the bill will provide space and training for the native health aide and provides for a health education program for each village where a new facility is constructed.

Consultation with native leaders in Alaska has indicated that the facilities contemplated will be exceedingly well received and utilized, and in short, will have a significant impact on the health, education and general welfare of the native population.

The legislation proposed is emergency legislation designed to solve long-standing deficiencies which have had a horrendous impact on the native population of Alaska. This Nation can no longer stand apathetically by while such conditions exist in our midst—and conditions for which the Federal Government

has a clear and longstanding responsibility. We must act now.

PERSONAL STATEMENT BY SENATOR COOPER

Mr. COOPER. Mr. President, the Washington Post of Monday, May 19, carried an article entitled "More Trouble in Paradise" by Mr. Nicholas Van Hoffman. In his article, Mr. Van Hoffman comments on the operations of the "Center for the Study of Democratic Institutions," a foundation located in Pasadena, Calif., and referred to Members of Congress, naming me as one who "gets fees and expenses for lectures and consultation" from the center.

While Mr. Van Hoffman may not have so intended, nevertheless it might be inferred from the language of his article that I have been, am now, or prospectively might be engaged and compensated by the center for lectures or consultations on a continuing basis. This is incorrect and I wish to set forth the facts for the record concerning the one honorarium I have received from the center.

Mr. President, I addressed to the editor of the Washington Post a letter dated May 19. I shall read the letter:

MAY 19, 1969.

The EDITOR,
The Washington Post,
Washington, D.C.

DEAR SIR: I have read the article by Mr. Nicholas Van Hoffman in The Washington Post of Monday, May 19th, entitled "More Trouble in Paradise", in which he comments on the "Center for the Study of Democratic Institutions", a foundation located in Pasadena, California.

In his article he stated that Members of the Congress, naming me as one, "gets fees and expenses for lectures and consultation" from the Center. As some might conclude that I have now, or have had some continuing association with the Center, for consultation or lectures, I should like to state the facts concerning my sole participation in one Conference held by the Center.

Last fall I was invited by Dr. Robert M. Hutchins, President of the Center, to participate in a Japanese-American Conference on China Policy, as viewed by Japanese and Americans, for which papers were to be prepared by participants, and on which a report was to be made. I prepared a paper, as did other members of the Conference, and the papers were used as a basis for discussion during the Conference.

The Conference was held January 24 and 25, 1969, and there were six panel discussions between the United States delegation and the Japanese delegation, in five of which I participated. I also participated in a public panel on the evening of January 26th, 1969, in Los Angeles, with members of the American and Japanese delegations.

I received an honorarium of \$2,000.00 for my participation in the meetings and preparation of my paper, and I paid my air line expenses, hotel expenses at Santa Barbara, and incidental expenses—totaling about \$500.00.

The above represents the only association I have ever had with the Center, and the only honorarium or payment of any kind I have ever received from the Center.

Yours very truly,

JOHN SHERMAN COOPER.

CHAIRMAN OF THE NATIONAL ENDOWMENT FOR THE ARTS

Mr. PELL. Mr. President, 2 months have passed since the present adminis-

tration declined to reappoint Roger Stevens as Chairman of the National Endowment for the Arts. At that time I spoke of our Nation's debt to Roger Stevens and my hope that the administration would act quickly to fill the vacancy so that the fine work and the momentum of the Endowment would not be allowed to falter.

As sponsor of the original authorizing act and chairman of the Special Senate Subcommittee on Arts and Humanities which has congressional oversight responsibility for this program, I have a particular concern in this body in this matter.

In the 2 months since the dropping of Mr. Stevens, there has been rumor and counter-rumor about a replacement for him. However, nothing definite has occurred. We have heard that it was to be a well-known museum director, newspaper publisher, former child star, businessman or other highly placed individual; however, their availability peters out with the increasing rumors.

It is interesting to note that the reason given for not reappointing Roger Stevens was that, once upon a time, some years before his appointment as Chairman, he had been a fund raiser for the Democratic Party. This profile as a Democrat is too high. Yet, evidently, the administration cannot find one of its own adherents who is interested in the more aesthetic areas of our national existence. This is truly a distressing void for it bespeaks of a lack of understanding and sympathy for this type of endeavor.

In the meantime the work of the Endowment for the Arts has been ongoing. I think the Senate should take notice of the fine work of Douglas G. MacAgy, Acting Chairman, who has very ably directed the Endowment in its continuing programs. However, on the 22d and 23d of this month the National Council on the Arts is meeting at one of its quarterly sessions, and unfortunately must meet without a chairman. And what is even sadder is that the National Council on the Arts is meeting for the first time in conjunction with its Canadian counterpart. I am afraid that the failure of the administration to fill the vacancy of chairman of the National Endowment for the Arts will put us in an ambiguous position at this international meeting.

It is my hope that this neglect of cultural activities is not indicative of the next 4 years.

To my mind, it is a sad reflection that our great Nation is unable to fill this void. Does it mean that no suitable Republican is interested? Or that there are no suitable Republicans? I would hope the answer is neither. But, then, the answer must be that the White House does not consider this a matter of priority, and that is pretty bad, too.

S. 2218—INTRODUCTION OF THE ELEMENTARY AND SECONDARY EDUCATION AMENDMENTS OF 1969

Mr. PELL. Mr. President, I introduce for myself and for Senators YARBOROUGH, RANDOLPH, WILLIAMS of New Jersey, KENNEDY, NELSON, MONDALE, EAGLETON, CRANSTON, and HUGHES, for appropriate reference, a bill to amend the Elementary and Secondary Education Act of 1965

and related acts, and for other purposes, which may be cited as the "Elementary and Secondary Education Amendments of 1969."

Mr. President, this bill would simply extend the programs authorized by the Elementary and Secondary Education Act of 1965, Public Law 874, 81st Congress, Public Law 815, 81st Congress, and the Adult Education Act of 1966, for 4 years. The extension would be without substantive change in present law and without changes from present authorizations of appropriations.

This bill is being introduced for the purpose of having hearings on elementary and secondary education which will be announced at a later date. When the hearings are held the subcommittee will consider this bill, together with other legislation affecting elementary and secondary education, which has been introduced.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2218) to amend the Elementary and Secondary Education Act of 1965 and related acts, and for other purposes, introduced by Mr. PELL (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

TRANSATLANTIC FLIGHT OF THE NC-4 IN MAY OF 1919

Mr. PELL. Mr. President, I should like to bring to the attention of my colleagues that five decades ago this month the first airplane crossed the Atlantic Ocean; and this historic occasion is being marked by the Rhode Island Heritage Month Committee, Inc., with the cooperation of the Public Affairs Office of the Newport Naval Base, by the display of exhibits recalling the flight of the NC-4 in May of 1919.

Rhode Island has much interest in this historic event. The hull of the flying boat was built by the Herreshoff Manufacturing Co., in Bristol. The commanding officer of the aircraft, Lt. Comdr. Albert C. Read, U.S. Navy, was on duty at Newport at the Naval Torpedo Station from 1913 to 1915. Among the crew of six officers and men who made the flight, one was a native of Newport, Lt. James L. Breese, Navy Reserve flyer.

The NC-4 was one of three aircraft which took off from Rockaway, Long Island, on May 8 for the first leg of their journey to Halifax, Nova Scotia. The aircraft passed over Block Island on their way northward from Halifax to Trepassey, Newfoundland, there was some mechanical trouble among the three planes. However, the three aircraft attempted the long stretch across the Atlantic to the Azores. Only one made it. From here the flight continued to Lisbon, Portugal, and Plymouth, England.

The NC-4 later that year was sent on a recruiting mission and flew up to Providence on October 1. The flyers were guests of the city overnight, and the next day visited Gov. R. Livingston Beekman at the State capitol. On the way up Narragansett Bay it was escorted by two other aircraft. The flight deviated from its course to Providence and flew over the

Herreshoff Manufacturing Co. buildings. All the workers waved at the NC-4 as it made its pass.

One man is still living who worked on the hull of the NC-4. He is Harry Town, who resides in Tiverton.

An exhibit of photographs and other material pertaining to this flight has been arranged by the Heritage Month Committee in the following libraries: Warwick Public Library; Newport Public Library; Providence Public Library; Westerly Public Library; Harris Institute, Woonsocket; Rogers Free Library, Bristol; North Kingstown Free Library, Wickford; and the station libraries of the Newport Naval Base and Quonset Naval Air Station.

DISPOSITION OF OBSOLETE LETHAL GASES

Mr. PELL. Mr. President, last week I remarked on some of the unresolved international legal and political aspects of the Army's plan to dispose of exceptionally large quantities of obsolete lethal gases at a point 250 miles off the coast of New Jersey; following up those remarks, I sent a letter to the Secretary of the Army asking for the legal basis of the disposal plan and requesting his comments as to the effects of the proposed action on the positions taken by the United States before both the United Nations Committee on the Peaceful Uses of the Seabed and the 18-Nation Disarmament Conference. I have received an interim reply from the Secretary. I ask unanimous consent that this correspondence be printed in the RECORD at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered. (See exhibit 1.)

Mr. PELL. While awaiting the Secretary's full reply to the questions and issues which I have raised, and in view of the numerous other points of inquiry which have been brought to bear against the Army's disposal plan, I think it prudent to ask that the Army delay indefinitely its plan until the Congress and the Nation as a whole can agree on the optimum method of disposal. I, for one, do not feel that the 2- or 3-week postponement, as suggested by the Army pending a review of the scientific aspects by the National Academy of Sciences, is fully responsive to settling the present controversy, particularly in view of the doubts raised within the executive branch itself by the Departments of State and Interior. In addition to the NAS study, I would hope that these Departments will undertake investigations aimed at covering the full range of legal, political, scientific, and technical issues.

I know that my colleagues and I will want to review all such studies, as well as give careful attention to the hearings held before the House Subcommittee on International Organizations and Movements. I hope these studies and hearings will be made available as soon as possible.

Accordingly, Mr. President, I would ask that the Secretary of the Army delay indefinitely the gas disposal project until my colleagues and I have had an opportunity to study all of the pertinent facts.

EXHIBIT 1

MAY 12, 1969.

HON. STANLEY R. RESOR,
Secretary of the Army,
Washington, D.C.

DEAR MR. SECRETARY: In regard to the Army's reported plan to dispose of a very large quantity of lethal gases by dumping them 250 miles off the coast of Earle, New Jersey, I would appreciate a detailed summary of the legal principles which you and your Department feel would permit such disposal at the selected site. I would also appreciate having any comments or observations which you may care to make as to the effect of the contemplated action on the United States position before both the United Nations Committee on the Peaceful Uses of the Seabed and the Eighteen-Nation Disarmament Conference.

Sincerely yours,

CLAIBORNE PELL,
Chairman, Subcommittee on Ocean Space.

MAY 14, 1969.

HON. CLAIBORNE PELL,
Chairman, Subcommittee on Ocean Space,
Committee on Foreign Relations, U.S. Senate.

DEAR MR. CHAIRMAN: On behalf of the Secretary of the Army, receipt is acknowledged of your letter of May 12, 1969 pertaining to legal and international implications as to the Department of the Army's plans of disposing of certain chemical munitions and agents by dumping at sea.

Action has been taken to develop the information requested and you will be advised. Sincerely,

ROY H. STEELE,
Chief, Investigations Division Office,
Chief of Legislative Liaison.

THE PROPOSED EUROPEAN CONFERENCE ON SECURITY AND COEXISTENCE

Mr. PELL. Mr. President, the April 23 issue of *Le Monde* carries an article by Paul Auer and titled "Free Opinions—Budapest's Appeal and NATO's Reaction," commenting on the declaration issued by the members of the Warsaw Pact in mid-March proposing a European conference on security and coexistence. I have had the article translated by the Library of Congress because it seemed to me to be a most perceptive commentary on the motivations of the Soviet Union in making this proposal.

I ask unanimous consent that the full text of the translation of the article to which I have referred be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREE OPINIONS: BUDAPEST'S APPEAL AND NATO'S REACTION

(By Paul Auer*)

During their Budapest meeting of March 17, 1969, the signatory states of the Warsaw Pact proposed that the European states hold a "Pan-European Conference on Security and Coexistence."

This initiative was taken at a time when a very strict censorship was reestablished in Prague and when preparations for new shipments of Soviet troops into Czechoslovakia seemed to be in the offing.

But Budapest's appeal also coincided with the events that occurred on the Sino-Russian border.

* Former minister of Hungary to Paris, honorary secretary general of the League for the Self-Determination of the Peoples.

What is all this about? What are the motives of the Russian initiative? It is obvious that the USSR tries to consolidate the present situation in the countries of Central and Eastern Europe. She would like to make sure that the NATO members, by signing a multilateral treaty, will accept the status quo as a final settlement in Central and Eastern Europe and thus indirectly be instrumental in that the happenings of 1956 in Hungary and those of 1968 in Czechoslovakia will not repeat themselves. She hopes that the signing of such a treaty will discourage the people of this area from doing something to obtain their right to self-determination.

The consolidation of the situation in Eastern Europe will become so much more important and even urgent to the USSR as China tries to organize herself politically and at the same time she prepares herself to become a nuclear power. The Kremlin knows very well of China's territorial claims against the USSR; the latter must thus concentrate more and more troops on the 6,000 km [appr. 3,720 miles] Sino-Russian border. She must therefore insure peace on her western borders and not run the risk of fighting on two fronts in case of a war with China or of being compelled to repress revolts in its own area.

It would be inadmissible to sign a treaty that would encourage the Kremlin to continue its policy of oppression of more than one hundred million Europeans and that would discourage these Europeans from even undertaking non-violent actions for the liberalization of the regime. We hoped very much that the evolution would lead to an effective liberalization in this part of the continent. Now, the events in Hungary and Czechoslovakia have, unfortunately, belied this hope. Soviet Russia's European policy will only change under Chinese pressure or under a pressure that will come from inside her own territory.

NATO's reply to Budapest's proposal, which was made when this organization celebrated its Twentieth Anniversary, testifies to wisdom. It would have been absurd to accept at this time the idea of holding a conference which would not have led to anything. On the other hand, contacts and soundings are certainly desirable, as we can hope that in the course of time the Kremlin will be obliged to revise its European policy and that the day will arrive when serious concessions can be obtained from Soviet Russia.

The leaders in the Kremlin know very well that if there were a neutralization combined with the presence of the U.N. and guaranteed by treaties and territories the USSR considers to belong to her sphere of influence, security and peaceful coexistence could be guaranteed by an international agreement. After having familiarized herself with this idea and once she will be obliged to accept this solution to the problem, the conference proposed by her can be held. Meanwhile, the list NATO intends to submit to the Eastern European governments and which shows the subject that could be discussed, should also contain disengagement and neutralization.

In their Potomac Declaration of June 30, 1944, the United States and Great Britain solemnly stated that they will never sign a treaty that "confirms or prolongs the involuntary subordination of sovereign states that have lost their freedom". The principle expressed in this declaration remains valid for all the big powers of the West and must be respected by them.

EXPLOITATION IN THE BIG THICKET—NATIONAL PARK NEEDED NOW

Mr. YARBOROUGH. Mr. President, Mr. C. L. Lundell, director of the Texas Research Foundation, has written an able but disturbing article on the exploi-

tation of the Big Thicket. He states flatly that "immediate action by the Federal Government is imperative if any of the remaining fragments of the east Texas Big Thicket are to be preserved under the park system of the U.S. Department of the Interior." He goes on to point out that Federal action is the "last hope, a slim hope" of saving the beautiful and unique Big Thicket.

Mr. President, I can only emphasize what Mr. Lundell has said, time is indeed running out. My bill, S. 4, to establish a Big Thicket National Park of not less than 100,000 acres, must receive immediate consideration by the Senate if we are to save some significant portion of this great wilderness area.

I ask unanimous consent that the article entitled "Big Thicket Almost Gone," appearing in the February 2, 1969, edition of the Dallas Times Herald, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dallas Times Herald, Feb. 2, 1969]

BIG THICKET ALMOST GONE

(By C. L. Lundell)

Immediate action by the federal government is imperative if any of the remaining fragments of the East Texas Big Thicket are to be preserved under the park systems of the U.S. Department of the Interior.

Our state government has failed abysmally to preserve any significant portion of the Big Thicket. There is indeed a question as to whether the government of the State of Texas has ever even wished, much less tried to preserve the Big Thicket.

Federal action is the last hope, a slim hope at best. Time is running out.

The original Big Thicket, an isolated world of natural beauty and botanical wealth, covered more than 3 million acres on the southeast corner of Texas, a territory generally extending from Houston and Huntsville east to the Louisiana border.

Though the Big Thicket itself is unique and highly distinctive, its original boundaries have never been clearly drawn.

The most definitive area of the floral and the fauna that distinguish the Big Thicket ecology was an irregular stretch approximately 115 miles long and 60 miles wide that extended over eight present-day Texas counties—Montgomery, Harris, San Jacinto, Liberty, Polk, Hardin, Tyler and Jasper.

Often described as one of the last true wilderness areas of the United States, the Big Thicket within its original boundaries includes more different soil types and a greater variety of plant and animal species than any other region of comparable size in the United States. The counts stand at more than 100 species of trees and shrubs and at least 300 species of birds, including the rare ivory-billed woodpecker. Plants rare to other sections of the country are common to the area.

Botanically, the Big Thicket is the western extremity of the woodlands that cover the southeastern United States. Because of this western presence many of the Big Thicket species reveal variations in some of their characteristics from plants of the same species found farther east. The variations are so great in some instances that the Big Thicket specimens may be classified as new species. The East Texas area therefore offers evidence of being a region of speciation.

The Big Thicket, moreover, is far more important to Texas than its botanical and zoological values.

Its natural scenic beauty is without equal as a tourist attraction for Texas. Its culture,

which predates the Republic of Texas, has produced five state governors: George T. Wood (1847-49), Sam Houston (1859-61), Will P. Hobby (1917-21), Allan Shivers (1951-57) and Price Daniels (1957-63).

The area adjoins the Alabama-Coushatta Indian Reservation, the only Indian reservation in Texas. The colony is immediately north of the Big Thicket, on U.S. 190 about 17 miles east of Livingston and 16 miles west of Woodville.

Today, the Big Thicket is fast becoming a tattered memory of its pristine glory. Less than one-tenth remains of the original acreage. Fire, logging, oil production and other industrial activities—as well as vandalism—have reduced the forested area to about 300,000 acres, largely in Polk, Tyler, Hardin and Liberty counties.

Chain saws, defoliants, killer chemicals and, of course, fire and vandalism are decimating the remainder at an estimated rate of 50 acres a day. The attacks are disjointed and directed on many fronts, with the result that the remaining acreage is in scattered fragments of which none is the minimum size—at least 5,000 acres—required by the National Park Service for classification as a wilderness area.

Two years ago, after studies dating back to 1938, the National Park Service proposed a Big Thicket National Monument, "a string of pearls," that would consist of nine separate units covering approximately 35,500 acres. The acreage would lie almost entirely in Liberty, Polk, Hardin, Tyler and Jasper counties.

When the public learned of the plans to convert parts of the Big Thicket into parks, the ever present vandalistic really increased in fury. Beautiful magnolias, hundreds of years old, were cut and left to rot in the ditches of thicket roads.

One magnificent magnolia, 1,000 years old, which marked the boundary corner of Liberty, Polk and Hardin counties, was deliberately destroyed with injections of arsenate of lead.

No point of natural beauty that might enhance the formation of a park was safe from vandals' hands—nor is such safe today.

For more than 60 years, men have tried to convert various areas of the Big Thicket into parks and wilderness areas. The protagonists have included many local residents of the Big Thicket, a few state officials, even fewer national figures, and more popular national conservation organizations. All have failed.

Obviously, Green Hills cannot compete with greenbacks. In East Texas, man has run and is still running true to form: Though he is the only form of life endowed with intelligence, he also is the only form of life—with the possible exception of molds and fungi—that consistently and completely destroys his natural habitat.

Unless he reverses his course in East Texas, he is going to lose something of infinite beauty and value, something neither he nor his sons nor his sons' son will ever be able to replace.

FOLK SINGER PETE SEEGER LENDS SUPPORT TO AMERICAN FOLK LIFE BILL (S. 1591)

Mr. YARBOROUGH. Mr. President, Pete Seeger is one of the best known of American folk singers. He has spent a lifetime in the folk life field, and has worked diligently to preserve and develop the musical heritage of our people. Some of his own compositions such as "Where Have All the Flowers Gone?" "If I Had A Hammer," and "Turn, Turn, Turn," have become contemporary classics. Due to his knowledge and experience in the folklife field, I am especially grateful to receive Mr. Seeger's support

for my bill, S. 1591, to establish an American Folklife Foundation in the Smithsonian Institution.

I ask unanimous consent that the letter from Mr. Pete Seeger endorsing my bill, S. 1591, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BEACON, N.Y.,

March 29, 1969.

DEAR SENATOR YARBOROUGH: I hope your bill (to give Federal support to the Smithsonian Folk Life Program) passes with flying colors.

They—Ralph Rinsler, and others at the Smithsonian—have proven that they can give responsible, far-sighted, imaginative, and honest direction in the field of bringing folk culture out of the corners of our country, and once again make it beloved by millions.

Sincerely,

PETER SEEGER.

THE DANGER OF CONTINGENT ELECTION: SENATE JOINT RESOLUTION 18 TO AMEND THE CONSTITUTION NEEDED NOW

Mr. YARBOROUGH. Mr. President, the election campaign of 1968 is now behind us and many Americans have already begun to forget the possibility of constitutional crisis which was so frighteningly clear less than a year ago. This crisis could have come about had the final choice of a President been forced into the House of Representatives.

To refresh my colleagues' memories, the Constitution provides that when the electoral college does not elect a President, then the choice devolves on the House of Representatives which chooses from among the three front runners. In balloting in the House, each State delegation has one vote.

If the electoral college fails to elect a Vice President, then the Senate has the responsibility of choosing a man to fill that office. The Senate selects one of the two men who have the most electoral votes and in this body, each Senator has one vote.

Mr. President, the October 11, 1968, edition of Time magazine contained an excellent essay on this potential for crisis, which should be read anew.

I should like to add, Mr. President, that I have introduced a proposal to remedy this situation. My proposal, Senate Joint Resolution 18, proposes an amendment to the Constitution to change the contingent election procedure in the House of Representatives from balloting on a one-State, one-vote basis to balloting on a one-man, one-vote basis. I believe that this very simple change in the Constitution would go far toward eliminating what Thomas Jefferson called "the most dangerous blot on our Constitution." I ask unanimous consent that the article "Allow If House Decides" be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT IF THE HOUSE DECIDES?

Archaic laws and institutions are often dangerous—a truism that Americans are re-

discovering in a rather special sense during the 1968 presidential campaign. They are doing so with the help of George Wallace. The Alabamian is gaining so many votes, says one happy Southern Congressman, that he is now as strong as "50 acres of horseradish." Other Congressmen are appalled at the possible result: the Wallace phenomenon may throw the election into the House of Representatives. The outcome could foil most voters' wishes and upset the two-party system in Congress. To House Majority Whip Hale Boggs, "the idea is absolute anarchy."

The problem is that a presidential candidate needs more than a popular plurality to win the election—he must also gain a clear majority in the Electoral College, which now has 538 electors. The Twelfth Amendment (1804) requires separate electoral votes for President and Vice President. But this originally clarifying rule has long been a potential source of confusion. If the popular winners lack electoral majorities, the House selects a President from among the three candidates who have received the most votes in the Electoral College. The Senate picks a Vice President in the same fashion, but considers only the leading two candidates for that office. Deadlocks are less likely in the Senate, with only two men at issue, than in the House with three. Under the entire system, however, incredible deals and pressures become possible.

The decision has not been referred to Congress since 1824, when Andrew Jackson lost the presidency (he later won it twice) despite having collected 42.2% of the popular vote, against 31.9% for John Quincy Adams and 13% each for House Speaker Henry Clay and Georgia's William H. Crawford. In the Electoral College, Jackson's three opponents denied him a majority. In the House, Clay threw his support to Adams, who thus became President. Though Clay hotly denied Jacksonian charges that he had made a deal, he was soon appointed Secretary of State by Adams. Tempers ran so high that Clay fought a duel with John Randolph, who had publicly vilified the Clay-Adams alliance as "the combination of the Puritan and the blackleg."

UNEASY CONTROL

A similar set-to, if not a duel, could possibly recur this year if Wallace won, say, the 47 electoral votes of Alabama, Georgia, Louisiana, Mississippi and South Carolina. In that case, either Richard Nixon or Humphrey would need 55% of the remaining electoral votes to take the election. A popular-vote cliffhanger such as 1960 might well send the election to Capitol Hill—resulting in all sorts of weird possibilities and permutations.

In the House, each state's delegation in a presidential showdown has just one vote—to be determined by a simple majority of the delegation. There are now 29 Democratic-controlled delegations in the House, with 18 controlled by Republicans, and three evenly split (a tied vote in a delegation neutralizes it). Yet 30 delegations are so closely divided that the shift of a single seat in November could change their makeup to Democratic, Republican or neutral. With the votes of 26 of the 50 House delegations needed to choose a President, the G.O.P. could increase its present control from 18 delegations to the required majority by simply electing one new Congressman in each of seven close states and two in another state.

Predicting a House decision is obviously impossible at this point. Even if the Democrats retained control of a majority of the delegations, some individual Congressmen, under pressure from constituencies or conscience, might bolt the party. Many Southern Democrats, whether pro- or anti-Wallace, might turn against the Administration leadership and vote the way their districts did—presumably for the Alabamian.

Speaker John McCormack and Majority Leader Carl Albert insist that House Democrats must stick to the party line, and they

are preparing to discipline renegades severely by stripping them of seniority and desirable committee assignments if they fail to vote for Humphrey. House Republican Leader Jerry Ford has cannily avoided making any such threats to G.O.P. Congressmen. For one thing, he knows how much easier it will be for Republicans to pledge their support to Nixon than it will be for all Democrats—particularly Southerners—to promise in advance to back Humphrey. In fact, Ford is prepared to welcome defecting Democrats into the G.O.P. and assign them to new committee posts befitting their talents and seniority. If Ford gets many takers both liberal Democrats and liberal Republicans may face a new majority of G.O.P. conservatives, many of them Wallacites.

Democrats, Republicans and Wallace partisans are all thinking up speculative election scenarios. One possibility is that neither Nixon nor Humphrey might win an apparent majority of electoral votes in November. Then, between the election and the official balloting of the Electoral College on December 16, Wallace would try to bargain his electoral votes for such concessions as a voice in selecting Cabinet members or Supreme Court Justices. If that fell through, Wallace could still throw his electors to one of the candidates—and loudly claim to have elected that man President.

Another possibility is that Nixon or Humphrey might win the presidency in the House—and then find himself with a Vice President of the opposite party after the Senate has acted. One scenario now current in Washington:

On Nov. 5, Nixon emerges with the most votes, popular and electoral, in the three-man race. Humphrey follows, but Wallace has amassed enough electoral strength to deny both men the presidency. Nixon and Humphrey refuse to bargain for Wallace's electoral votes. The election therefore goes to the House, where the Democrats have retained control of 27 state delegations. At the same time, the Senate meets to name a Vice President. There, the Democrats have retained control, 53 to 47. The rules eliminates the No. 3 candidate, out goes Curtis LeMay, the Wallace running mate. And enough Southern Democrats follow party discipline to elect Edmund Muskie as Vice President. In the House, however, all three presidential candidates are eligible. Southern Democrats, enraged by Humphrey's attack on Wallace during the bitter campaign, refuse to fall in behind the Minnesotan. Some cross party lines to vote for Nixon, but for days the House remains deadlocked. Thus, in accordance with the 20th Amendment, Muskie is sworn in as Acting President on Jan. 20 and serves "until a President shall have qualified"—conceivably as long as four years, if the House impasse continues.

BIZARRE PLAUSIBILITY

There are other odd—and rather chilling—possibilities. A sample fantasy: The Wallace-LeMay ticket runs second in electoral votes behind Nixon-Agnew. On New Year's Day, the Communist Chinese strike the U.S. in Asia, perhaps in Viet Nam; a tide of reaction floods the nation. The House remains deadlocked on a presidential choice after days of belligerent debate. Wallace supporters scent victory and refuse to bolt to Nixon. The Senate, meantime, bows to the nation's angry mood and by two votes names Curtis LeMay to be Vice President. With the House still deadlocked on Jan. 20, LeMay becomes Acting President. (If the Senate tied before Jan. 20, Vice President Humphrey's vote would be decisive.)

Should both the House and the Senate remain deadlocked, of course, then, according to the rules of succession laid down in 1947, the Acting President would be 77-year-old John McCormack—assuming that he wins a fifth term as House Speaker.

One New York lawyer argues that even Nelson Rockefeller could wind up in the

White House. This theory has a bizarre plausibility. Assume that Wallace carries only four Deep South states with a combined total of less than 43 electoral votes. As one result, both Nixon and Humphrey fail to gain the needed 270 majority in the Electoral College. As another, New York's 43 electors—chosen under Nixon's G.O.P. banner but not constitutionally bound to vote for him—revive old loyalties, cast their ballots for Rockefeller. Heeding the Constitution, the Electoral College sends the names of Nixon, Humphrey and Rockefeller to the House as the three top electoral vote getters. The House, unable to resolve a deadlock between Nixon and Humphrey, turns to a compromise choice—President Nelson Rockefeller.

Impossible? No, but highly improbable. And yet there is an uneasy feeling that none of these speculations can be totally dismissed. The American electoral system is so archaic and complex that, in uncertain times, it is bound to stimulate fantasy and even fear.

PEACE IN VIETNAM—OUR FIRST PRIORITY

Mr. JAVITS. Mr. President, now that the traditional moratorium surrounding the first 100 days of a new administration has ended, public discussion of the Vietnam war has been resumed and the President has himself spoken most importantly on this subject. Indeed, the search for an end to the American combat role in that conflict is uppermost in the minds of the American people.

On May 9, I addressed the Commonwealth Club in San Francisco. The subject of my remarks was: "Peace in Vietnam: Our First Priority."

President Nixon gave his first major address to the Nation concerning his administration's Vietnam policy on May 14. In view of the substance of the President's remarks and my own, I ask unanimous consent that the text of my remarks be printed in the RECORD, and that the text of a statement I released just after the President spoke also be printed in the RECORD.

There being no objection, the speech and press statement were ordered to be printed in the RECORD, as follows:

PEACE IN VIETNAM: OUR FIRST PRIORITY

(An address by Senator JAVITS, prepared for delivery to the Commonwealth Club, San Francisco, May 9, 1969)

The traditional first One Hundred Days of the Nixon Administration are over and the moratorium on public discussion of Vietnam policy has ended. Last November, the voters gave President Nixon an unmistakable mandate to end the war in Vietnam. But so far the signs indicate only that the Johnson Administration's Vietnam policy, in its essentials, continues to be the policy now as well.

If the present approach—which follows so closely the course of the previous Administration—is maintained then it is most unlikely that the new Administration will be able to carry out the will of the people expressed so clearly, as I see it, in November, 1968. If a basic change of direction on Vietnam is not soon indicated the consequences could be very serious for the President and the nation.

The time has come for a major shift away from the sterile and unsuccessful approach of the last Administration. The essential first step for the Nixon Administration is to free itself from the Johnson Administration's grievously mistaken concept of what the Vietnam struggle is all about. It must avoid giving the nation reason to believe

that it has adopted the old concept as its own. Indeed, even the few months delay in making this clear has already limited the time available to the new Administration for transition to a new policy.

Even the rhetoric of the past keeps turning up in the statements of the new Administration's spokesmen—the old myths, the old self-delusions, and the old phraseology recur again and again. For instance, Secretary Rogers' statement of March 27 is replete with phrases so reminiscent of the statements of Dean Rusk—"honorable peace"; "external interference"; "test of good faith"; "President Thieu's announcement is an act of statesmanship"; "elements who are prepared to renounce violence"; and so on. Perhaps this unfortunate repetition is attributable to the new Administration's decision to retain in certain key policy positions experienced persons who served under President Johnson. Ambassador Bunker continues on in Saigon, while his predecessor, Ambassador Lodge, is now in Paris. General Abrams, General Westmoreland and General Wheeler continue to occupy the top military positions and key positions in the State Department are held by Alexis Johnson and William Bundy (now succeeded by his former Deputy, Marshall Green).

All of these men are able, distinguished and experienced public servants. But that is not the point. The point is that we pay a price for their experience. They all played significant roles in shaping the Johnson Administration's Vietnam policy and it is understandable that they should use the familiar idiom and not be as quick to discard the old theories.

But, President Nixon, Secretary Rogers and Secretary Laird are not under the same compulsions. They are free to benefit the most from the experience and the errors of the past. The nation is searching for indications that they will do so.

If a recurrence of the bitter and divisive passions of 1967 and 1968 with respect to the Vietnam War is to be avoided the Nixon Administration must make demonstrable progress toward a peace settlement in the near future. Whatever may be the advantages and conveniences to the Administration of a policy of "private negotiations", such a course of action is not compatible with the temper of the American people in 1969.

As the Johnson Administration discovered, any policy which depends upon an acquiescent complicity of silence on the part of the Congress, the press and the American public, is *prima facie* not a viable policy. President Nixon stated his policy in this regard very succinctly at his last press conference:

"I think that is where this war will be settled—in private rather than in public. This is in the best interest of both sides, but public discussion of what I think is significant progress which is being made along the lines of private talks, I will not indulge in."

Perhaps if the American people had not been misled by the previous Administration on Vietnam so often in the past, there would be a greater willingness to rely on the President's assurances that everything is progressing satisfactorily behind the scenes.

As to what he is attempting behind the scenes, we have only the public statements to go on. From these statements it seems that the Nixon Administration is pursuing largely the same negotiating position which failed the Johnson Administration so conspicuously. In a major speech on April 21, Secretary of State Rogers explicitly announced that:

"The United States is committed to achieving a peace in Viet-Nam which will permit the people of South Viet-Nam to determine their own future, free from outside interference by anyone. That is our objective. It has been stated many times. It is known to all concerned. It is not subject to change. (Emphasis added.)

CXV—824—Part 10

When you analyze our negotiating position in detail it boils down to a set of objectives which may be highly desirable but are quite unrealistic. In effect, after announcing our willingness to work out a compromise settlement, we are asking Hanoi and the NLF to give in on the very things that the war is all about.

The U.S. position asks that U.S. and North Vietnamese troops mutually withdraw, with the Demilitarized Zone reestablished and infiltration routes sealed off. This would leave the South Vietnamese government and its army facing the NLF/Vietcong. The U.S. presumably would continue to equip and supply the South Vietnamese Forces while little outside help would be available to the NLF/Vietcong.

Also, we offer something equally unrealistic on the political side. To quote the words of President Thieu's speech of April 7 to the Joint Session of the National Assembly, the following political rights would be offered to the other side:

"Those now fighting against us, who renounce violence, respect the laws, and faithfully abide by the democratic processes, will be welcomed as fully members of the national community. As such, they will enjoy full political rights and assume the same obligations as other lawful citizens under the national Constitution."

Article IV of the Constitution states:

"(1) The Republic of Vietnam opposes Communism in all forms.

"(2) Every activity designed to propagate or implement Communism is prohibited."

Moreover, the South Vietnamese election law even prohibits the advocacy of "pro-Communist neutralism" and leading politicians have already gone to jail for advocating negotiations with the NLF.

In his statement of March 21 to the Senate Foreign Relations Committee, Secretary Rogers stated his belief that we "... are offering a reasonable and honorable outcome." He described our "combined position on military and political matters" as "clear and compelling."

The negotiating terms which Secretary Rogers has reiterated might be realistic and appropriate if we were dealing with a defeated enemy. But they hardly seem realistic as a basis for ending a stalemated war which is costing this nation in excess of \$30 billion and 10,000 lives annually. We are asking the NLF and Hanoi to stop fighting and accept the legitimacy and sovereignty of the Saigon government—the very thing they have fought to deny ever since 1956 when the Geneva Agreements which ended the 1954 war with the French, fell apart.

Perhaps because it does not have quite as much confidence that things are really progressing backstage, the Nixon Administration has suggested some unilateral steps which it may take that are not dependent on Hanoi's agreement. In his speech of April 21 Secretary Rogers stated it this way:

"We are not prepared to assume that the only alternative to early progress in the peace talks is an indefinite extension of our present role. That is why such high priority is being given to preparing South Vietnamese forces to assume a growing share of the combat burden and why the Government of South Viet-Nam is giving such high priority to developing the political unity of the country."

In private conversations and through press briefings, Administration officials have made it clear that they regard this "unilateral" course as a kind of veiled threat to the other side which is designed also as an inducement for it to negotiate a settlement along our lines.

Rephrased in a blunt way, the Administration is telling Hanoi and the NLF that they had better work out an agreed settlement with us while they have the chance because if they don't we are going to build up the Sai-

gon government into such a military and political power that they won't be able to get anything.

In my judgment, the new line of argument is double-edged at best. If President Thieu and Vice President Ky can maintain political control in South Vietnam and if the South Vietnamese forces prove able to hold their own militarily, the Government of South Vietnam would make a tougher party to make peace with on its own without the tempering influence of the United States. On the other hand, this argument could be unrealistic and unrewarding. However, United States disengagement from Vietnam could become conditional upon the Saigon Government becoming politically secure and militarily dominant before we phase out—further limiting U.S. freedom of action. It is good to keep the enemy guessing but it will take something more than this to make peace.

For fifteen years we have been trying—at great cost but with so little success—to make a going concern out of the military effort of the governments which have come to power in Saigon. Our efforts thus far have ended in disappointment. My doubts if present circumstances continue seem to be shared by two leading supporters of the war who are in a good position to know the facts.

Senator Stennis, the Chairman of the Senate Armed Services Committee, said in a public appearance on March 9 that the United States would be: "badly mistaken if we think we can depend too much upon this South Vietnamese Army winning this war or being able to hold the line. I don't believe they will be able to do it and I believe Hanoi knows this better than we do."

Defense Secretary Laird, in his testimony of March 19 to the Senate Armed Services Committee, said much the same thing:

"I regret to report, however, that I see no indication that we presently have a program adequate to bring about a significant reduction in the U.S. military contribution in South Vietnam. The current operating assumption as stated to me is that even the currently funded modernization program for the South Vietnamese forces will equip the South Vietnamese forces only to withstand the V.C. insurgents that would remain after all North Vietnamese forces had been withdrawn to North Vietnam."

The Nixon Administration has shown a genuine solicitude and responsiveness to the desires and sensibilities of the Saigon government and our other Southeast Asia allies. I hope very much that the United States can disengage from the Vietnam War in a manner which is satisfactory to them. But I am much more concerned that the Nixon Administration should proceed toward peace according to a plan which is responsive to the wishes of the American people and on a timetable which is compatible with the urgent and non-deferrable needs of our own severely strained society.

President Nixon's desire to deal with Vietnam in a quiet, orderly and unhurried manner is quite understandable. Under normal circumstances it would be entirely reasonable to do so. But these are not normal circumstances. This nation is under great pressure from the conjunction of a number of domestic and foreign crises, all of which have been intensified by the Vietnam War. The Vietnam War, as it was prosecuted under the Johnson Administration, resulted in a grave distortion of national priorities with respect to the allocation of national resources. For three years President Johnson attempted to assert his will concerning the Vietnam War—as it finally turned out over the will of the American people. This contest of wills became a crucible of pressures which was resolved only by the President's retirement from public life.

On May 3 the White House called the press in for a special briefing designed to counter-

act the speeches of Senator Aiken and Senator Scott advocating early withdrawal of some U.S. troops from Vietnam. The *New York Times* reports high White House sources as saying during this briefing:

"The President will not be deflected into hasty action by public or Congressional pressure."

This characterization, of course, relates to a peace plan by the President and to escalating the Vietnam war, yet, too great has been the communications gap with the people that even in the former context statements such as the one I have just quoted have an ominous ring to them. I hope—for the good of the nation and the success of the Nixon Administration—that the President does not in fact become impervious to the will of Congress and the people with respect to the Vietnam war.

In my judgment both the Congress and the general public want very much to support and assist the President in the execution of his awesome responsibilities—including the vital search for peace in Vietnam. He has great good will and understanding on his side with respect to this issue, which can be a source of the greatest strength to him, if he takes the nation into his confidence and uses its support in a creative way.

Our negotiating posture needs to be based upon the following four principles: 1) that we will accept the determination of the people of South Vietnam as to how and by whom they intend to be governed; 2) that such self-determination can best be manifested under transitional arrangements and under international auspices which assure both Saigon and the NLF a fair opportunity to persuade the people; 3) that we are determined to phase out of the combat responsibility in Vietnam and turn it over to the South Vietnamese on a timetable and under conditions which are congenial to us; and 4) that we intend to provide effective aid for the people of Vietnam and to participate in reconstruction at the conclusion of the war.

In concluding my remarks, I wish to express my belief that there are other incentives for Hanoi to work with us for a negotiated settlement of the Vietnam War.

I think a constructive inducement exists in the traditional American willingness to contribute generously to postwar reconstruction. It would certainly be in keeping with past practice for the United States to help in a major way to rebuild the war torn areas of Vietnam, and I do not think Hanoi would be wrong to assume that it, too, could share in regional reconstruction efforts if a negotiated peace is achieved. Indeed, President Johnson said as much in his Johns Hopkins speech in 1966!

I was very much encouraged in this line of thinking by something which Ambassador Averill Harriman said on January 26, in reply to a question on "Meet the Press." Ambassador Harriman was being questioned about his experiences as chief U.S. negotiator at the Paris peace talks. In response to a question about Hanoi's objectives, Ambassador Harriman said:

"They want to be independent of Peking. They want to have contacts with the West. They want to get technical assistance from the West. They are very interested in getting miracle rice, you know. They want to be independent of China for their rice supply. There are issues of that kind which are not normally considered. . . ."

In my judgment, these are just the kind of issues which should be given the highest priority and I urge the Administration to do so. I believe that our negotiating position can and should be reordered in a positive and creative manner. I am confident that the President would receive strong public support for an effort of this kind, and I believe the chances of reaching a negotiated peace settlement would be significantly enhanced in the process.

SENATOR JAVITS' STATEMENT REGARDING PRESIDENT NIXON'S VIETNAM SPEECH

The President's address was restrained, and properly recognized that the American people expect from this Administration an end to the Vietnam war. The specification of conditions was a suitable response to the ten-point plan of the NLF. The major new point was that international auspices must be provided when the people of South Vietnam exercise their right of self-determination under a peace arrangement as to who will govern them. But, what we are still up against is the question of a de facto veto by the government in Saigon as to when and how we can end our involvement in the Vietnam war. That Rubicon must still be crossed. This address is a real step on the road to peace, but we are not yet within sight of the end.

PRESIDENT NIXON'S POLICY ON THE VIETNAM WAR

Mr. GORE. Mr. President, President Richard Nixon has now spoken to the American people and stated his policy on the Vietnam war. I have made a careful examination of the President's speech, and I have, with some diligence and staff help, compared the President's statements and the points he made with statements of position by the previous administration and with previous statements of position by President Nixon, both before and since his election.

Moreover, Mr. President, I have undertaken to examine the speech for what the President did not say, particularly in comparison with what the President, both before and since election, has said, and with what the previous administration said.

I hope that I can make this comparison and draw certain deductions without the slightest tinge of partisanship. Certainly such is not intended. I seek rather to examine this as an historic example of subtle change—or subtle development—in the President's Vietnam war policy.

I would like first to examine the President's statements. Later I will allude to the omissions of points and to statements from the speech.

Early in the speech, the President said:

The time has come for new initiatives. Repeating the old formulas and the tired rhetoric of the past is not enough. While Americans are risking their lives in war, it is the responsibility of their leaders to take some risks for peace.

This was a hopeful beginning. After this hopeful beginning, there followed, in softened rhetoric, essentially the policy outlines of the last administration. However, the President omitted from his remarks certain important matters on which both he and the former administration had placed emphasis.

It may be, Mr. President, that we shall see that what the President did not say may be a better guide to the new negotiating position and may constitute the reasons why Mr. Thieu of the Saigon government insists upon a personal conference with the President. But first let me proceed with a comparison of what the President said last week with what he had previously said and with what the administration had previously said.

When the President spoke, I listened intently and my mind turned back to an event that occurred over 3 years ago when former Secretary of State Rusk was appearing before the Senate Foreign Relations Committee.

The then Secretary Rusk—and this was on February 18, 1966—presented the points constituting the Johnson administration's "elements for an honorable peace."

Beginning with this and with the statement of former President Johnson I would like to cite certain quotations from these distinguished Americans.

President Nixon said:

We seek no bases in Vietnam.

Secretary Rusk said:

We want no bases in Southeast Asia.

President Nixon said:

We insist on no military ties. We are willing to agree to neutrality if that is what the South Vietnamese people freely choose.

Mr. Rusk phrased it this way:

The countries of Southeast Asia can be non-aligned or neutral if that be their option.

President Nixon said:

We believe there should be an opportunity for full participation in the political life of South Vietnam by all political elements that are prepared to do so without use of force or intimidation.

We are prepared to accept any government in South Vietnam that results from the free choice of the South Vietnamese people themselves.

Secretary Rusk said:

We support free elections in South Vietnam to give the South Vietnamese a government of their own choice.

President Nixon said:

We have no intention of imposing any form of government upon the people of South Vietnam, nor will we be a party to such coercion.

Secretary Rusk did not address himself to this point that day—but President Johnson in a speech to the Tennessee State Legislature on March 15, 1967, said:

We do not seek to impose our political beliefs upon South Vietnam. Our republic rests upon a brisk commerce in ideas. We will be happy to see free competition in the intellectual marketplace whenever North Vietnam is willing to shift the conflict from the battlefield to the ballot box.

President Nixon said:

We have no objection to reunification if that turns out to be what the people of South Vietnam and the people of North Vietnam want; we ask only that the decision reflect the free choice of the people concerned.

Secretary Rusk said:

The question of reunification of Viet-Nam should be determined by the Vietnamese through their own free decision.

Then the President went on to propose specific measures as a negotiating position. But before I proceed to that, Mr. President, I ask if any essential difference emerges thus far from a comparison of these statements? The senior Senator from Tennessee is unable to detect any.

President Nixon said, on the withdrawal of troops:

As soon as agreement can be reached all non-South Vietnamese forces would begin withdrawals from South Vietnam.

President Johnson told members of my State's Legislature 2 years ago:

We will begin with the withdrawal of our troops on a reasonable schedule whenever reciprocal concessions are forthcoming from our adversary.

Secretary of Defense Clifford said on November 12, 1968, that, even without approval by the South Vietnamese Government, "we can sit down with Hanoi and begin to work out programs that would call for the withdrawal, both of North Vietnamese forces and of American forces."

President Nixon said:

An international supervisory body, acceptable to both sides, would be created for the purpose of verifying withdrawals, and for any other purposes agreed upon between the two sides.

Mr. President, here is where I wish to call to the attention of the Senate the development of a divergence. Let me repeat this sentence and call attention by way of emphasis to the last clause of the sentence:

An international supervisory body, acceptable to both sides, would be created for the purpose of verifying withdrawals, and for any other purposes agreed upon between the two sides.

The Manila declaration of October 24, 1966, states that "any negotiations leading to the end of hostilities incorporate effective international guarantees. They are open-minded as to how such guarantees can be applied and made effective."

President Nixon said:

As soon as possible after the international body was functioning, elections would be held under agreed procedures and under the supervision of the international body.

I call to the attention of the Senate that insofar as I can now recall—and I believe it is correct—this particular sentence is the first reference that President Nixon made in his speech to elections. And I reread the sentence in order to emphasize that the elections to which the President makes reference are to be under the supervision of an international body rather than under and by the terms of the constitution of South Vietnam.

Mr. President, before going further, I wish to emphasize that I am not attempting to be critical. I do not desire so to be. In the hope of adding to the information of the Senate and, possibly, of the American people, I wish to analyze this subtle, possibly major and historic, change in policy.

If my view of the speech is correct, President Nixon must have reached a decision to extricate the United States from the Vietnam war as quickly as he can, as best as he can, as honorably as he can. I believe this to be the case. I wish him well in that endeavor. I have some apprehension to which I will refer later. But I wish to proceed at this point in trying to understand what has been proposed.

Let me reread this sentence. President Nixon said:

As soon as possible after the international body was functioning, elections would be held under agreed procedures and under the supervision of the international body.

I have already quoted President Johnson's views in support of elections. President Nixon said:

Arrangements would be made for the earliest possible release of prisoners of war on both sides.

The Manila declaration stated the United States' "willingness to meet under the auspices of the ICRC—International Committee of the Red Cross—or in any appropriate forum to discuss the immediate exchange of prisoners."

President Nixon said:

All parties would agree to observe the Geneva Accords of 1954 regarding Vietnam and Cambodia and the Laos Accords of 1962.

President Johnson said many times, as he told the Tennessee legislators in 1967:

We believe that the Geneva Accords of 1954 and 1962 could serve as the central elements of a peaceful settlement.

Finally, President Nixon said that he was "quite willing to consider other approaches," and that "we are willing to talk about anybody's program. Hanoi's four points, the NLF's 10 points—provided it can be made consistent with a few basic principles I have set forth here."

Point No. 6 of Secretary Rusk's 14-point peace package contained in his statement to the Foreign Relations Committee on February 18, 1966, was that at a peace conference, "Hanoi's four points could be discussed along with other points which others might wish to propose."

So there you have it: The new initiatives, formulas, and rhetoric look suspiciously like "more of the same," amounting to a plea for time and patience at home. For years the American people have been subjected to pleas for a little more time. All the while the killing has continued, with the American losses now surpassing the total in the Korean war. Since President Johnson's decision on March 31, 1968, that a military victory was not in the cards, nearly 14,000 American boys have made the final sacrifice for their country in Vietnam and many, many more have been crippled for life.

While Americans are risking their lives in war—

The President said Wednesday night—

It is the responsibility of their leaders to take some risks for peace.

The risks which the President took are difficult to find. The killing of Vietnamese and Americans continues on Hamburger Hill and elsewhere—I think inexcusably so. Yet, Mr. President, I do take some heart from the President's speech, particularly in what he did not say. A careful examination of what President Nixon did not say may, in fact, as I have said, be a better key to his present negotiating position. For example, he did not refer to victory, not once. Indeed, he eschewed a military settlement of the issue in Vietnam.

Then, again, he did not refer to a coalition government of South Vietnam, as

both he and the previous administration have heretofore done.

When a coalition government was proposed by the late Senator Robert Kennedy, former Vice President Humphrey denounced it as "letting the fox into the chicken coop."

Just a little more than 1 year ago, President Nixon said:

A coalition with the Communists is like putting a cobra and a mongoose together. They try to eat each other.

However, from the speech last Wednesday, it is plain that the President would be satisfied, if not downright pleased, with a "self-determination" process through negotiation instead of election. Indeed, as I have pointed out, he only referred to an "election" after an "international control commission" is agreed upon, and that the election be held under the supervision of that international control commission, not under the South Vietnamese constitution, which would surely contemplate a temporary coalition or a temporary agreement upon some kind of transitional regime satisfactory to both sides.

President Johnson had called for elections—"one man, one vote." Mr. Nixon avoided this term altogether, or any other reference to a popular election, until after an election control commission should be in charge. As far as President Nixon went in this regard was that a settlement should include "a guarantee that this process of self-determination" would be fair.

Mr. President, election fairness is a Western value which we hold precious. But the Vietnamese people have had but scarce experience with fairness in elections.

I must acknowledge that as I listened to the President's speech on the radio, I was impressed that there was very little difference, if any, in what he had said from what he had previously said or from what former President Johnson or his Secretary of State had said.

It was only when I started examining what he had not repeated and what he did not say that it began to occur to me that a decided change had been made, but made very subtly, and that perhaps the President was speaking the Johnson-like hard rhetoric largely for home consumption, while the message to both Hanoi and Saigon was to be found in the omissions from the speech or, in other words, from what he did not say. Perhaps that is an explanation as to why our distinguished Secretary of State, Mr. Rogers, was dispatched to be in Saigon at the time of the President's speech, and perhaps there to explain and, if possible, to placate the Saigon generals. Apparently he was not too successful because President Thieu has demanded a personal meeting with President Nixon which, according to the announcement today, is soon to occur.

I cite this without criticism, but in the hope to bring public understanding of the developments which are now occurring and for which I wish the greatest good fortune.

One deep apprehension I have is that out of an inability to achieve a peaceful settlement, or out of an unwillingness to

accept the kind of peaceful settlement that may be available, President Nixon might turn to the alternative that I believe has been already prepared, which is a phased withdrawal of troops with a commitment that sufficient American troops would remain to maintain the Saigon regime in power. In my view, this would not be a formula for peace but, instead, for prolonged war and long term commitment on the order of South Korea, a costly client state.

In 1964 the American people voted against involvement in a land war in Asia. In 1968 they rejected the policies of the Johnson administration which brought on the very war they had voted against—a war in which their President had plunged them without the authorization of their elected representatives, brought our Nation to the brink of civil war, the dollar close to collapse, and the revulsion of much of mankind.

President Nixon was elected on a pledge to end this tragedy which has so sapped our Nation's spirit, our young men, and our treasure. I have waited for 4 months for a change in policy. I had hoped that on Wednesday night the President would turn away from the discredited and rejected policies of the past and reveal bold new initiatives for peace.

As I said, the bold new initiatives were hard to find, but a careful examination, in my opinion, does reveal a change, subtle though it may be, obscure though the sentences and omissions may appear.

This is a delicate and difficult political operation which the President of our country now undertakes.

Let us acknowledge that politics make wars and wars make politics, bitter and tragic politics, and that men's lives are lost while politicians avoid losing political face. This, too, is said in no criticism, but in order that we may understand or attempt to understand the difficulty of settling a war, particularly in a democracy, without victory. It will try the patience of our country and test the talents of our leaders.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. MURPHY. Mr. President, I wish to thank the distinguished Senator from Tennessee for a most enlightening analysis of the past history of the attempts of the former administration and the former Secretary of State, and efforts up to the present time to find a solution to the unfortunate problems in Southeast Asia.

Last year at the request of the President I did go to South Vietnam as one of those persons selected to observe the election. I did make a report when I came back that would indicate that the people of South Vietnam have had experience because I witnessed what I believe to be the freest and most carefully guaranteed election I had ever seen. I believe I recounted the story of some people who came to vote in a little town called Tilly Wah. I was supposed to be at that polling place. The head man had invited me to have a cup of tea. On the way into this little village, I had stopped to thank him for his courtesy, during

which time two plastic bombs went off, which had been set, I imagine, to get me. Two people were killed and 37 were injured badly. Of the 37 people who were injured, 36 went to the hospital and had their wounds treated, and they then walked back to vote. I have never witnessed a greater determination for democracy than I witnessed in that small country.

I sincerely hope, and I know the distinguished Senator from Tennessee joins me, that the time will come when these people will be given the chance to express their wishes and desires with respect to their own system of government, that all foreign governments can be taken away from the country, and that they can get back to living their own lives as they did for so many hundreds of years in the past. I hope that this can be accomplished as a result of the efforts of the former administration, added to by the efforts of the present administration.

Mr. GORE. Mr. President, I thank the able Senator for his generous remarks. I do recall his eloquent report after his visit to Vietnam. I point out that this election and all elections for a long while now, have been under the military protection of U.S. Armed Forces, and that the particular election to which he referred was held under the Vietnamese Constitution, which forbids certain of its citizens to vote or run for office. Indeed, a goodly number of political and religious leaders, even editors of newspapers, who have dared to suggest a peaceful settlement, a coalition government, or even neutrality of the area, have been thrown into jail. Only today the Associated Press publishes a story that two or three more newspapers have been suspended. That is why I took some encouragement from President Nixon's reference to elections under the supervision of an international control commission.

It seems to me that we must move in the direction of the Geneva accords, and that this is a step in that direction, the Geneva accords having been endorsed in principle by the leaders of all sides of this tragic contest.

I thank the able Senator from California for his generous references.

THE ABM SAFEGUARD SYSTEM

Mr. MURPHY. Mr. President, as with many of the proposed deterrent weapons systems in the past, a great furor has been raised lately throughout the country, and in the press and communications media, over the President's decision to begin construction of the Safeguard ABM missile system. The confusion caused by sudden, supposedly knowledgeable persons, including highly publicized scientists with impressive credentials, I think has done a great injustice to those charged with military decisions and those charged with our national security. It has caused anxiety and confusion among our people and in general has been a disservice to the peace and tranquility of this country.

Mr. President, we have listened at great length to the arguments against development and deployment of the Safeguard system. Clearly, and on close

inspection, I, for one, have heard nothing to dissuade me in my belief that this system is not only badly needed but should also be deployed without question as quickly and as successfully as possible.

In fact, it is time, I believe, to ask the question whether this is a move against the ABM system alone or is it really a move by some of the leaders of the opposition to continue unilateral disarmament of the United States?

The most important factor in all the debate which I have heard to date is to decide: Who sees the world as it is today, and who is seeing it as they wish it to be? Whether we deal in fact and reality, or in fantasy and fiction on great questions such as this, it becomes necessary, I believe, to view the facts as pragmatically as possible. I, for one, am most wary of those who would have us accept the view that this planet is one where we are so civilized that war cannot be possible, especially when it is widely acknowledged that one monolithic, political system has announced and continues to announce that it intends to dominate a free people by whatever means are available to it.

Some of those who oppose the ABM system have the advantage of having no responsibility for the security of this Nation. They are usually private citizens whose views on national defense are well known and who do not have to bear the consequences, should our country not be able to defend itself, should, pray God, it ever be needed. Many of these historic hysterical "pacifists" who seem to be affected only by obvious Soviet propaganda—who are now being joined by some of their frantic "peace at any price" brethren, backed up by some "international appeasers" who are mainly responsible, I believe, for our present dilemma because of their bad judgment in the past—are now suggesting that we walk into the four-power meeting, with nothing to trade, and attempt to bargain for the future security of our Nation from a position of extreme weakness.

Mr. President, this makes absolutely no sense to me. There are some who traditionally question all statements and policies made on our side and continue to rate credible all statements made on the side of the Soviets, a great deal of which is known to be pure propaganda. We know from history that attack is most surely invited by weakness. I sense from every corner of the Nation that the majority of Americans are steadfastly opposed to any further reduction in our military deterrent strength, as they know all too well that such reduction would invite aggression and further trouble where there is already too much trouble existing. Yet the appeasers would have us believe that the Soviet nations would rather have a cup of tea, so to speak, and not necessarily tea brewed in China.

Mr. President, I think it is important for us to examine the past records of some of those who oppose the ABM. One well-known scientist has a history of opposition to the development, for instance, of the Polaris submarine. He said the problems of guidance were so nearly insoluble that it won't work. Before that, this same gentleman opposed the

ICBM as being complete folly. Surely, it is now realized that had we heeded his advice, we would now be armed to fight our enemies—unfortunately, if we had to defend ourselves—possibly with sling-shots, were there still any of us left alive or unenslaved to go to the defense of our country.

I have heard another, with supposedly distinguished credentials, say that we have no defense against Soviet attack and that it is not possible to build one. If he is right, if there is no defense, then I would suggest that we might immediately turn our country over to those who have insisted they will dominate us eventually. Then we would have the great privilege of enjoying the kind of freedom we have seen lately imposed upon the great people of Czechoslovakia and, before that, the people of Hungary, who wish to be free.

Certainly, the American people are not fooled by these bursts of quasi-scientific rhetoric, since they know well that had we not been able to defend ourselves since World War II, we would quite possibly now be even in worse condition than we find ourselves.

Mr. President, some have said that the Soviets have stopped deployment of their ABM for various reasons, including the one, "maybe it does not work," or the "Soviets do not want to contribute to the arms race."

I heard one distinguished expert witness say with great authority that the Soviet ABM system would not work. I asked him whether that was from exact, scientific knowledge, or merely opinion. He agreed that it was merely opinion. I pointed out that that was a dangerous statement to make, and might confuse people as between his scientific background and credentials and the mere expression of his personal opinion.

Their basic thesis that the Soviets have slowed down or stopped deployment may or may not be correct. I am inclined to believe that it is not correct. But they have missed one very important possibility, and that is that if they were the Premier of Russia and observed the United States agonizing over whether to deploy the ABM—a weapon that the Soviets had already deployed and had already tested—what would they do? The Premier would hear the voices of those who would advise the American President not to build an ABM, appear to abandon his own system, placing his bet on the possibility that perhaps the United States might misread his reasons, and might not proceed in matters concerning its own defense.

Some scientists who oppose an ABM do so for technical reasons. They say it will not work. Some of these same scientists in years past said that jet aircraft would not work; that we could not break the sound barrier; that supersonic aircraft were not acceptable to the scientific world. All material was supposed to disintegrate from the impact on approaching the sound barrier. They said that nuclear weapons and ICBM's were not possible, either. Yet when American ingenuity, inventiveness, industry, and determination were turned to these problems, they worked beyond our wildest expectations.

I would compliment the Senator from Rhode Island, who recently quoted from a letter he received from Adm. H. G. Rickover, who said:

As for the assertion that the ABM cannot be made to work, I must disagree. If there is one lesson I have learned in the many years I have devoted to the development of nuclear powerplants, it is that, given the soundness of a theoretical concept, it can, with drive and imaginative engineering, be made to work.

Mr. President, some note must be made at this point of the status of Soviet preparedness and its so-called first-strike capability. It was only a short time ago that there was no necessity for concern about the Soviet capability. Now the question arises and there are some who are concerned that possibly the seat of power has changed from the United States and resides in the Soviet Union. We have heard much lately of the very powerful and versatile new Soviet weapon, the SS-9. The Soviets also have in their ICBM nuclear inventory the SS-7, SS-8, SS-11, and SS-13. The SS-13 is the Soviet mobile ICBM, which is difficult to locate, extremely difficult to destroy, and has not yet been shown publicly.

I call to the attention of this distinguished body that just on last May Day, for the first time in 23 years, the Soviet Union did not display any of its armaments. It had them. Its increase in deployment and manufacture has gone beyond our expectations, and the armaments were in the area of Moscow. It is believed by some persons that the decision not to display them was made at the very last minute. But they were there. They were present. We know that the Soviets can launch 2,450 warheads as soon as 1971, or 1,905 warheads by early next year. It is not a comfortable position, and I cannot understand those who say it is foolhardy for us to do everything possible to defend this great Nation.

What about the technical story of the Russian ABM? The Soviets began deployment in 1963, and its development was based on an organization founded as far back as 1954. This organization enjoys equal importance and status with the Russian Army, Navy, and Air Force. The Soviets are well aware of the value of their system, and they have obviously given it great emphasis. In fact, the ABM's deployed around Moscow are now, we believe, in operational status.

It is important for us to realize, as we proceed in consideration of the President's request for funds to begin the deployment of the Safeguard, that some of those who oppose the program do so with good intentions and honest intentions, but some of them would misguide us as to its technical capabilities, the status of Soviet armaments, and our position as a strong and free nation.

They represent some of those who have made mistakes in judgment before, who are overtrusting of our enemy, and who come from a group which seems to want our Nation to be run by a staff of self-selected intellectuals in residence rather than by the elected representatives of the people who meet in the Congress under the Constitution and the democratic

processes which have made our country so great.

As the distinguished minority leader in the House of Representatives has said, those who oppose the deployment of an ABM are often the same people who would unilaterally disarm the United States. They do our country a disservice and, if acceded to, they may place us in great peril.

Mr. President, I would, after careful consideration, suggest that the ultimate safety of our people and our Nation must not be neglected in these matters. It demands the most careful scrutiny and study of all possibilities. As the highly publicized scientists admit, insofar as I am able to ascertain, there is no other system available. There are highly publicized scientists whose reputation in the past, I am sure, is as great as that of those who oppose, who urge with all enthusiasm that we should proceed with deployment of the ABM, proceed with research and development, and do everything possible to make certain that this great Nation not become a second-rate nation simply because we have neglected our duties to our people.

Mr. President, I look forward to an extended debate here in this Chamber on this most important matter, and I sincerely hope that the entire debate will be carried by the communications media to our people, so that all may understand all of the conditions, all may understand the necessity, all may understand the true figures and the facts.

In closing, I would hope, as sincerely as anyone here, that, at long last, in the coming meetings which our President is preparing to attend, we may find some other solution than the need of great armaments and great deterrents, at tremendous cost to our already overtaxed people. But until such agreements, with safeguards and guarantees, are arrived at, I recommend that the President's request for the ABM be acceded to and that the Members of this body stand firmly in his position, in his corner, so that the security of this country may be as safe as it is possible for scientific achievement and for the will and wishes of the men representing our people in this Chamber to achieve.

I thank the Senator, and I yield the floor.

MESSAGE FROM THE HOUSE—ENROLLED JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled joint resolution (S.J. Res. 104) to authorize the President to reappoint as Chairman of the Joint Chiefs of Staff, for an additional term of 1 year, the officer serving in that position on April 1, 1969.

THE DOUGLAS RETAINER

Mr. CURTIS. Mr. President, a second shock and a second wave of sadness has struck the American people in connection with the Supreme Court of the United States. It was but a few days

ago that an Associate Justice of the Court resigned because of circumstances growing out of the receiving of money from a foundation which had a connection with a defendant who had been indicted and convicted.

Now the people are confronted with a new account which recites that between the years 1962 and 1968 Supreme Court Justice William O. Douglas was paid \$72,000 by the Parvin Foundation, a tax-exempt institution which has ownership in several gambling hotels and casinos in Las Vegas.

Back in 1965 I spoke against the confirmation of Mr. Abe Fortas for an Associate Justice of the Supreme Court. At that time I called the attention of the Senate to Mr. Fortas' role in the Bobby Baker and Walter Jenkins cases. I said then and I repeat now that I do not hold a lawyer guilty of any offense by reason of the fact that he represents clients who have violated the law. My objection to Mr. Fortas was that in many instances he practiced fixing and did not practice law.

On October 22, 1965, I opposed the confirmation of another Bobby Baker lawyer for U.S. attorney in the District of Columbia. The record will show that my objection was based upon the fact that the nominee issued a statement, which was never repudiated, to the effect that he did not know that Bobby Baker was connected with the Serv-U Corp. At that time I expressed my disapproval of the fact that the Bobby Baker gang was taking over our Government.

Now, Mr. President, we again find traces of Bobby Baker in the Justice Douglas matter. The article by Mr. Dan Thomasson in the Washington Daily News for May 19, 1969, reports the recent developments in the Douglas matter. Among other things it says that in 1965 when the Fremont Casino was purchased by Parvin-Dohrmann that there was an agreement that Edward Levinson, then an officer of the Fremont Casino, was to be paid \$100,000 a year for 5 years. The Mr. Parvin of the Parvin-Dohrmann Co. is the Mr. Parvin of the Parvin Foundation from which Mr. Douglas was paid his money.

The Washington Daily News item further points out that the Mr. Levinson, who was so generously treated by the Parvin interests, invoked the fifth amendment against possible self-incrimination when called before the Senate committee investigating Bobby Baker.

Mr. President, this whole story is a sad one. How can we have a return to morality, honesty, and law obedience on the part of all Americans until those individuals in high places of authority in our Government possess an integrity that is beyond reproach? High Government officials are leaders of the Government and leaders of the Nation and they should be the type of individuals who the entire Nation can look up to.

Mr. President, I ask unanimous consent to have printed in the RECORD the article from the Washington Daily News for May 19, 1969, to which I have referred.

There being no objection, the article

was ordered to be printed in the RECORD, as follows:

FOUNDATION TO DOUGLAS: \$72,000 FOR ADVICE
(By Dan Thomasson)

Between 1962 and 1968, Supreme Court Justice William O. Douglas was paid \$72,000 for his advice on how to spend about \$450,000 in charitable contributions made by the Parvin Foundation, a tax-exempt institution partially financed by an interest in a Las Vegas gambling hotel.

Justice Douglas' association with the foundation, which ignited a flurry of controversy when first revealed two years ago, has come under renewed public and congressional attack in the wake of the resignation from the Supreme Court of his fellow associate justice and protege, Abe Fortas.

In Congress the question is being asked whether Mr. Fortas' acceptance, but later return, of a \$20,000 fee from the family foundation of jailed financier Louis E. Wolfson is much different from the \$12,000 a year Justice Douglas earns as president of another foundation created by a man once named by the government as an alleged co-conspirator with Wolfson in a stock manipulation case.

That man is Albert Parvin, former president of the Parvin-Dohrmann Co., a firm that originally supplied equipment for hospitals and other businesses but later acquired interests on the Las Vegas gambling strip. Mr. Parvin set up the foundation—principally supported by an interest in the Flamingo Hotel in Las Vegas—in 1960 after reading a book by Justice Douglas.

NAMED PRESIDENT

He asked Justice Douglas to serve as president and director and Justice Douglas, according to another director, ex-newspaper editor Harry S. Ashmore, named a board to guide the foundation's activities.

Most of the activity over the last six years has centered on Justice Douglas' own pet project of stimulating the understanding of Western culture in Latin America's underdeveloped nations through granting fellowships to promising young scholars from "emerging nations."

Besides the original Flamingo Hotel interest, the foundation owns shares of Parvin-Dohrmann which, in turn, owns the Alladin, Fremont and Stardust hotels' casinos in Las Vegas.

BAKER LINKS

In 1965 when the Fremont casino was purchased by Parvin-Dohrmann the agreement stipulated that Edward Levinson, then an officer of the Fremont casino, was to be paid \$100,000-a-year for five years. Mr. Levinson invoked the Fifth Amendment against possible self-incrimination when called before a Senate Committee Investigating the dealings of Robert G. (Bobby) Baker, former secretary of the Senate who later was convicted on several criminal counts.

Mr. Levinson was a co-stockholder with Baker in the Serv-U Corp., a vending machine firm from which some of Baker's troubles stemmed. The firm's counsel during part of the Serv-U case was Mr. Fortas.

The Parvin Foundation, it was learned, also hired Mr. Fortas wife, attorney Carolyn Agger, in 1966 to look at his tax situation at a time when the IRS had begun an investigation of the foundation.

Mr. Ashmore said Mrs. Fortas employed the services of an independent auditing firm which proved nothing was wrong in the foundation's tax returns. Mr. Ashmore said he believes the IRS was satisfied because no action against the foundation ever was taken.

He said the difficulties with IRS apparently stemmed from the foundation's stock portfolio, which was being managed by a finance committee headed by Mr. Parvin. It was about this time that the foundation, in its 1966 returns, finally reported to IRS a transaction which took place in 1961.

In the 1961 deal, Mr. Parvin sold the foundation 95,000 shares of Webb and Knapp, Inc., a real estate and construction firm now in receivership at market value.

Mr. Ashmore said he believes this transaction and the general management of the portfolio had caused IRS concern. Since then the foundation's stock inventory has been managed by an independent brokerage firm, he said.

Mr. Parvin himself was named by a Federal grand jury in a bill of particulars as an alleged co-conspirator with Wolfson in the Merritt-Chapman Scott stock manipulation case. Mr. Parvin never was indicted.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. CURTIS. I yield.

Mr. MURPHY. The Senator referred in his speech to the purchase by Parvin-Dohrmann of the Fremont Casino in Las Vegas.

Mr. CURTIS. I quoted the Washington Daily News.

Mr. MURPHY. This Senator would inquire, what is the Fremont Casino?

Mr. CURTIS. I would yield to the distinguished Senator from California to describe it. I understand it is a hotel.

Mr. MURPHY. A hotel?

Mr. CURTIS. Yes.

Mr. MURPHY. Does the hotel contain a gambling house?

Mr. CURTIS. There again, I would have to rely upon someone else to tell me.

Mr. MURPHY. It is located, to the best of the Senator's knowledge, in Las Vegas; is that not true?

Mr. CURTIS. That is right. It is generally reported by the newspapers as being a part of the gambling apparatus.

Mr. MURPHY. Here again, as is often the case, this is not the type of establishment that used to be familiar to the Senator from California as a casino. Mrs. Murphy and I danced, years ago, in a place in New York, in Central Park, which was known as the Central Park Casino—a place where they had music and dancing, and served food, but there was no gambling. This is, I believe, a different type of casino, where they serve food, and it is also basically a gambling casino, is that correct?

Mr. CURTIS. That is my understanding from the press descriptions, yes.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. CURTIS. I am happy to yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. I might add to the Senator's comments that there is no question as to where the money comes from or their source of revenue. It is well known that the major part of the assets of the Dohrmann Co. is derived from gambling activities. As I understand, the only two agreements for payments were made to Mr. Levinson and Justice Douglas. So here we have a member of the Supreme Court and a man who takes the fifth amendment to avoid self-incrimination, both planning to get on the payroll of the same group of Las Vegas gambling interests.

I think that is not the type of person we should have on the Supreme Court. I must say I have been very much concerned that the bar association itself has not paid more attention to the Douglas

transaction. I expressed concern in this body 3 or 4 years ago about Justice Douglas' being on the payroll of this foundation.

I think that the bar association has a responsibility when it recommends all these people who have been referred to as Bobby Baker's friends. It recommended them most enthusiastically, including Mr. Fortas, Justice Douglas, Mr. Bress—all of them. They supported all of them when their nominations were before the Senate. I think the bar association has a duty to investigate the conduct and character of those it recommends a little bit more carefully than it has been doing.

Mr. CURTIS. I thank the Senator. I think, in fairness to some of the members of the American Bar Association, many of them have expressed regret and chagrin at the bar association's endorsement, for instance, of Mr. Abe Fortas for Chief Justice. Later on, those responsible for the endorsement seemed to contend they were speaking only as to legal ability.

Mr. President, that should not be. The selection of a Supreme Court Justice is a very serious and far-reaching matter. Anybody can turn to Martindale and find out how someone is rated as a lawyer.

No individual, no organization, or no committee should recommend to the U.S. Senate that an individual be elevated to the Supreme Court of the United States without knowing what they are talking about, after having made a thorough investigation as to the man's total background and his total competence to serve in that capacity.

I am sure that this ill-advised action of a committee of the American Bar Association was disapproved by many members of that organization.

Mr. WILLIAMS of Delaware. There is no question about that; it is a matter of record. Many members of the bar did oppose their confirmation, and I think the bar association has learned its lesson not to conduct just a preliminary telephone conversation with a few members just to approve someone when the President is trying to get one of his cronies on the bench. I believe that in the future we will get a little more careful study from the bar association; at least I hope so.

Mr. CURTIS. Mr. President, I agree with the Senator completely. It is also my opinion that no President should send to the Senate a nomination of any person for the Supreme Court who is not recognized by everyone as an eminent lawyer or an eminent judge. Otherwise, I cannot see much good service in a bar association's recommendations with respect to the Supreme Court.

I would not apply that rule to other courts, to specialized courts, tax courts, and the like, because it would not be infrequent that we would have a nominee unfamiliar to many Senators. Their professional organizations, if they do a thorough job and examine their total qualifications, can render a service. But it is inconceivable that any President of the

United States should send to the Senate the name of someone for a lifetime appointment to the Supreme Court of the United States unless that individual had established his preeminence as a lawyer and a judge in the eyes of the general public before such nomination was made.

THE AMERICAN BAR ASSOCIATION CONDEMNS FORTAS

Mr. WILLIAMS of Delaware. Mr. President, under date of May 7, 1969, I addressed a letter to Mr. William T. Gossett, the president of the American Bar Association in Chicago.

I read the letter:

U.S. SENATE,
Washington, D.C., May 7, 1969.

Mr. WILLIAM T. GOSSETT,
President, American Bar Association,
Chicago, Ill.

DEAR MR. GOSSETT: Canons 4 and 24 of the Judicial Ethics of the American Bar Association read as follows:

"Canon 4: A judge's official conduct should be free from impropriety and the appearance of impropriety; he should avoid infractions of law; and his personal behavior, not only upon the Bench and in the performance of judicial duties, but also in his everyday life, should be beyond reproach."

"Canon 24: A judge should not accept inconsistent duties; nor incur obligations, pecuniary or otherwise, which will in any way interfere or appear to interfere with his devotion to the expeditious and proper administration of his official functions."

In this week's Life magazine Justice Fortas is charged with having accepted a \$20,000 fee from a private foundation controlled by Louis Wolfson, who at the time was under investigation by various agencies of the United States Government, including the Department of Justice.

I am sure that the American Bar Association has read both the charges as outlined in Life as well as Justice Fortas' answer thereto; therefore, I am asking the question: Does Justice Fortas' acceptance of this fee under circumstances as outlined violate the Canons of Judicial Ethics of the American Bar Association?

Yours sincerely,

JOHN J. WILLIAMS.

This letter was mailed on May 7. I have just received a letter from Mr. Gossett which was hand delivered about 3 minutes ago. It is a copy of the letter as that contained in the press release which was released by their office 2 hours ago downtown.

It reads:

MAY 20, 1969.

Senator JOHN J. WILLIAMS,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR WILLIAMS: This is in response to your letter of May 7, requesting an interpretation of Canons 4 and 24 of the American Bar Association Canons of Judicial Ethics.

The ABA Standing Committee on Professional Ethics, having considered the matter at my request, has issued a Formal Opinion and an Informal Opinion, a copy of each of which is enclosed.

Both Opinions are being released to the news media today.

Sincerely yours,

WILLIAM T. GOSSETT.

I will read the enclosures. The first one is signed by the committee. It reads:

AMERICAN BAR ASSOCIATION,
STANDING COMMITTEE ON PROFESSIONAL ETHICS,

Chicago, Ill., May 18, 1969.

HON. WILLIAM T. GOSSETT,
President of the American Bar Association,
Chicago, Ill.

In re informal opinion No. 1114 former Associate Justice Abe Fortas.

DEAR MR. GOSSETT: The Standing Committee on Professional Ethics of the American Bar Association, whose jurisdiction includes both professional ethics and judicial ethics, in view of the importance to the profession and in recognition of the public interest in the controversy, is submitting to you as President of the Association the Committee's opinion on this question: Did former Justice Abe Fortas' conduct and relationship with Louis E. Wolfson and the Wolfson Family Foundation violate the Canons of Judicial Ethics?

The Committee is aware that during the pendency of the controversy, Mr. Justice Fortas resigned from the Supreme Court of the United States. Nevertheless, it is the Committee's judgement that the circumstances require that its opinion be submitted to you so that, to the extent possible, the ethical issues shall be made clear for the legal profession, for members of the judiciary, and for the public.

STATEMENT OF FACTS

The Committee is not and has no means of acting as a fact-finding body. Therefore, we have assumed the essential accuracy of the following statement of facts taken from then Justice Fortas' letter, in connection with his resignation, to Chief Justice Warren, of which a copy is attached. Any substantial difference between these stated facts and any facts that may be subsequently disclosed might change our conclusions.

1. Prior to his appointment and confirmation as an Associate Justice of the Supreme Court of the United States, former Justice Fortas was engaged in the private practice of law as a senior partner in a prominent law firm, and the firm represented certain corporations, in which financier Louis E. Wolfson and his associates held high office or had substantial investments, in connection with securities law problems. Mr. Fortas became acquainted with Mr. Wolfson, and they discussed the program of the Wolfson Family Foundation, established by Mr. Wolfson and his family, for improvement of community relations and the promotion of racial and religious cooperation, which were of special interest to Mr. Fortas, as well as the legal matters being handled by Mr. Fortas' law firm.

2. In the fall of 1965, after he became a member of the Supreme Court, Justice Fortas indicated to Mr. Wolfson his continuing interest in the Foundation's program, and they discussed the participation of Justice Fortas in the project on a long-term basis, for which he would receive \$20,000 per year for his life, with arrangements for payments to his wife if she survived him. Pursuant to the agreement, the Foundation paid \$20,000 to Justice Fortas in January of 1966. In June of 1966, Justice Fortas attended a meeting of the trustees of the Wolfson Family Foundation in Jacksonville, Florida. Louis Wolfson may not have been present at the meeting. After the meeting, Justice Fortas visited with Mr. Wolfson at his farm residence near Ocala, Florida, apparently staying overnight.

3. During this period (fall of 1965-June of 1966), federal authorities were conducting intensive investigations of Mr. Wolfson and his associates, for possible criminal violation of federal security laws. Justice Fortas was aware of the investigation, and Mr. Wolfson talked and wrote to Justice Fortas about the problems.

4. Some time during June, or perhaps earlier in 1966, Justice Fortas learned that Mr. Wolfson's file had been referred to the Department of Justice for consideration as to criminal prosecution. In the latter part of June of 1966, Justice Fortas wrote a letter to the Wolfson Family Foundations' general counsel, cancelling the \$20,000 per year agreement subject to completing projects for the year and reciting only the burden of Supreme Court work as the reason for the cancellation.

5. In September and October of 1966, Mr. Wolfson was indicted on separate federal charges stemming from stock transactions. In December of 1966, Justice Fortas returned to the Foundation the entire \$20,000 which it had paid to him the preceding January.

SUPPLEMENTAL FACTS

Mr. Wolfson, in 1967, was convicted of at least one of the charges for which he had been indicted in the fall of 1966, and in April of 1969, the Supreme Court with Justice Fortas announced as not participating, refused to review the conviction.

The relationship between Mr. Fortas and Mr. Wolfson was the subject of an extensive article, signed by William Lambert, in the issue of Life Magazine released on or about May 4, 1969, which immediately resulted in wide publicity and discussion. Mr. Fortas stated in his letter to the Chief Justice that he did not, while a member of the Court, intercede or take part in any legal, administrative or judicial matter affecting Mr. Wolfson or anyone associated with him.

On May 14, 1969, Mr. Fortas submitted his resignation as Associate Justice to the President, and it was accepted. The resignation was made public on May 15, 1969.

ETHICAL CONSIDERATIONS

In 1924, the American Bar Association promulgated its Canons of Judicial Ethics, stating in the preamble, "... the American Bar Association, mindful that the character and conduct of a judge should never be objects of indifference, and that declared ethical standards tend to become habits of life ... adopts the following Canons, the spirit of which it suggests as a proper guide and reminder for judges, and as indicating what the people have a right to expect from them."

The following provisions of the Canons of Judicial Ethics bear upon the Fortas question:

Canon 1. "The assumption of the office of judge casts upon the incumbent duties in respect to his personal conduct which concern his relation to the state and its inhabitants..."

Canon 4. "A judge's official conduct should be free from impropriety and the appearance of impropriety; ... and his personal behavior, not only upon the Bench and in the performance of judicial duties, but also in his everyday life, should be beyond reproach."

Canon 13. "A judge, ... should not suffer his conduct to justify the impression that any person can improperly influence him or unduly enjoy his favor, or that he is affected by the kinship, rank, position or influence of any party or other person."

Canon 24. "A judge should not accept inconsistent duties; nor incur obligations, pecuniary or otherwise, which will in any way interfere or appear to interfere with his devotion to the expeditious and proper administration of his official functions."

Canon 25. "A judge ... he should not ... enter into any business relation which in the normal course of events reasonably to be expected, might bring his personal interest into conflict with the impartial performance of his official duties."

Canon 26. "A judge ... should, so far as reasonably possible, refrain from all relations which would normally tend to arouse the suspicion that such relations warp or bias his judgment, or prevent his impartial

attitude of mind in the administration of his judicial duties."

Canon 31. "... He may properly act as arbitrator or lecturer upon or instruct in law, or write upon the subject and accept compensation therefore, if such course does not interfere with the due performance of his judicial duties, and is not forbidden by some positive provision of law."

Canon 34. "In every particular his conduct should be above reproach. He should be ... indifferent to private political or partisan influences; he should ... deal with his appointments as a public trust; he should not allow other affairs or his private interests to interfere with the prompt and proper performance of his judicial duties, nor should he administer the office for the purpose of advancing his personal ambitions or increasing his popularity."

Viewed in the light of the foregoing provision, it is our opinion that the conduct of Mr. Fortas, while a Supreme Court Justice, described in his statement of the facts, was clearly contrary to the Canons of Judicial Ethics, even if he did not and never intended to intercede or take part in any legal, administrative or judicial matters affecting Mr. Wolfson.

The Chairman of the Committee having recused himself did not participate in the deliberations leading up to or the action approving this opinion.

The opinion of the committee is unanimous.

Respectfully submitted,

THOMAS J. BOODELL,

C. A. CARSON III,

CHARLES W. JOINER,

KIRK M. MCALPIN,

SAMUEL P. MYERS,

FLOYD B. SPERRY,

BENTON E. GATES,

Acting Chairman.

I ask unanimous consent that the enclosed formal opinion, No. 322, accompanying this letter be printed at this point in the RECORD.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

FORMAL OPINION 322

All judges, of the lowest as well as the highest courts, must in all their personal business and social intercourse act not only in a manner that is lawful and proper but one which gives the impression and appearance to the public that it is proper. Appearance of impropriety is to be determined from all facts and circumstances and will vary depending on all facts, including matters beyond the judge's control. A judge must order his life so as to avoid the appearance of impropriety.

Canons Interpreted: Judicial Ethics 1, 4, 13, 24, 25, 26, 31, 32, 33, 34.

In view of the current public interest in the conduct of judges, the Committee on Professional Ethics has formulated this opinion as to the ethical propriety related to personal, social and business activities of judges.

The Canons of Judicial Ethics that may have some bearing on this matter are as follows:

CANON 1. RELATIONS OF THE JUDICIARY

The assumption of the office of judge casts upon the incumbent duties in respect to his personal conduct which concern his relation to the state and its inhabitants, the litigants before him, the principles of law, the practitioners of law in his court, and the witnesses, jurors and attendants who aid him in the administration of its functions.

CANON 4. AVOIDANCE OF IMPROPRIETY

A judge's official conduct should be free from impropriety and the appearance of im-

propriety; he should avoid infractions of law; and his personal behavior, not only upon the Bench and in the performance of judicial duties, but also in his everyday life, should be beyond reproach.

CANON 13. KINSHIP OR INFLUENCE

A judge should not act in a controversy where a near relative is a party; he should not suffer his conduct to justify the impression that any person can improperly influence him or unduly enjoy his favor, or that he is affected by the kinship, rank, position or influence of any party or other person.

CANON 24. INCONSISTENT OBLIGATIONS

A judge should not accept inconsistent duties; nor incur obligations, pecuniary or otherwise, which will in any way interfere or appear to interfere with his devotion to the expeditious and proper administration of his official functions.

CANON 25. BUSINESS PROMOTIONS AND SOLICITATIONS FOR CHARITY

A judge should avoid giving ground for any reasonable suspicion that he is utilizing the power or prestige of his office to persuade or coerce others to patronize or contribute, either to the success of private business ventures, or to charitable enterprises. He should, therefore, not enter into such private business, or pursue such a course of conduct, as would justify such suspicion, nor use the power of his office or the influence of his name to promote the business interests of others; he should not solicit for charities, nor should he enter into any business relation which, in the normal course of events reasonably to be expected, might bring his personal interest into conflict with the impartial performance of his official duties.

CANON 26. PERSONAL INVESTMENTS AND RELATIONS

A judge should abstain from making personal investments in enterprises which are apt to be involved in litigation in the court; and after his accession to the Bench he should not retain such investments previously made, longer than a period sufficient to enable him to dispose of them without serious loss. It is desirable that he should, so far as is reasonably possible, refrain from all relations which would normally tend to arouse the suspicion that such relations warp or bias his judgment, or prevent his impartial attitude of mind in the administration of his judicial duties.

He should not utilize information, coming to him in a judicial capacity, for purposes of speculation; and it detracts from the public confidence in his integrity and the soundness of his judicial judgment for him at any time to become a speculative investor upon the hazard of a margin.

CANON 31. PRIVATE LAW PRACTICE

In many states the practice of law by one holding judicial position is forbidden. In superior courts of general jurisdiction, it should never be permitted. In inferior courts in some states, it is permitted because the county or municipality is not able to pay adequate living compensation for a competent judge. In such cases one who practices law is in a position of great delicacy and must be scrupulously careful to avoid conduct in his practice whereby he utilizes or seems to utilize his judicial position to further his professional success.

He should not practice in the court in which he is a judge, even when presided over by another judge, or appear therein for himself in any controversy. If forbidden to practice law, he should refrain from accepting any professional employment while in office.

He may properly act as arbitrator or lecturer upon or instruct in law, or write upon the subject, and accept compensation therefor, if such course does not interfere with the due performance of his judicial duties.

and is not forbidden by some positive provision of law.

CANON 32. GIFTS AND FAVORS

A judge should not accept any presents or favors from litigants, or from lawyers practicing before him or from others whose interests are likely to be submitted to him for judgment.

CANON 33. SOCIAL RELATIONS

It is not necessary to the proper performance of judicial duty that a judge should live in retirement or seclusion; it is desirable that, so far as reasonable attention to the completion of his work will permit, he continue to mingle in social intercourse, and that he should not discontinue his interest in or appearance at meetings of members of the Bar. He should, however, in pending or prospective litigation before him be particularly careful to avoid such action as may reasonably tend to awaken the suspicion that his social or business relations or friendships, constitute an element in influencing his judicial conduct.

CANON 34. A SUMMARY OF JUDICIAL OBLIGATION

In every particular his conduct should be above reproach. He should be conscientious, studious, thorough, courteous, patient, punctual, just, impartial, fearless of public clamor, regardless of public praise and indifferent to private, political or partisan influences; he should administer justice according to the law, and deal with his appointments as a public trust; he should not allow other affairs or his private interests to interfere with the prompt and proper performance of his judicial duties, nor should he administer the office for the purpose of advancing his personal ambitions or increasing his popularity.

At the outset, attention should be called to a limitation of the jurisdiction of this Committee pertaining to questions of law. Rule 1 of the Committee provides that it shall not render opinions on questions of law and the Association's By-Laws giving rise to the Committee prohibit the Committee from dealing "with questions of judicial decisions or judicial discretion". The Committee at all times has refused to become involved in any questions about what is or what is not legal. Its function is to determine the ethical propriety of actions as prescribed by the Canons of Professional and Judicial Ethics of the American Bar Association. Therefore, any statement contained herein is not to be construed as dealing with the lawfulness of actions.

The Canons also make a careful effort to deal directly with some of the activities of judges that may give the appearance of impropriety even though no impropriety may actually exist. For example, Canon 32 prohibits a judge from accepting presents or favors from litigants or from lawyers. Canon 31 prohibits a judge of a superior court from practicing law. Canon 25, specifically grounded on avoidance of suspicion that a judge is utilizing the power or prestige of his office, enjoins him from persuading others to patronize or contribute to private business ventures or charitable enterprises and specifically states that he should not enter into private business or pursue any course of conduct that would justify such a suspicion, nor use the power of his office or the influence of his name to promote the business interest of others. He should not solicit charities nor enter into any business relationship which in the normal course of events could be reasonably expected to bring his personal interests into conflict with the impartial performance of his official duties. Canon 24 deals with the problem of inconsistent duties and states that he should not incur obligations, pecuniary or otherwise, that would interfere with the devotion to the expeditious and proper administration

of his official function. Canon 13 specifically enjoins the judge from acting in controversies in which there might be the impression that he could be improperly influenced because of rank or kinship or position or influence of a party or other person. Canon 4 deals specifically with the broad problem, stating that the judge's conduct should remain free from impropriety and the appearance of impropriety. It enjoins him to keep not only his official but his everyday life beyond reproach.

The thrust of all this is that although the judge may continue to mingle in social intercourse and is not to be deprived of the everyday enjoyments of living, he is and should be very much circumscribed in what he can do appropriately, and the lines are drawn not only as to what is lawful and what is proper, but as to what appears to be lawful and what appears to be proper. Because of the position of the courts and because of the needs of the citizens to understand that the courts are above reproach, the lives of our judges are far more circumscribed than the rest of us.

Most of the opinions interpreting the Canons of Judicial Ethics deal with actions of judges of inferior courts and courts of general jurisdiction. There are very few opinions involving judges of courts of review. The reason for this is obvious for there are many fewer judges of courts of review and as a matter of course they are farther removed from the ordinary activities of the ordinary lawyer. However, it should be clear that these Canons of Ethics apply to judges at all levels and probably, as they relate to appearances of impropriety, apply with greater strictness to the judges of higher courts, for the conduct of judges of higher courts sets the tone for the whole judiciary.

The opinions rendered by this Committee have made clear that the philosophy enunciated in the Canons has been carried forward in the opinions and that appearances of impropriety are equally as important as improper actions themselves.

Early in the history of this Committee it was asked to render an opinion upon the action of a judge in testifying as to the good character of a defendant in a criminal case; and although the Committee could find no inherent impropriety in giving such testimony and although the Committee recognized that there could be cases in which such testimony would be appropriate, the judge was cautioned that in so testifying he must give serious thought to the weight of his judicial position and dignity. He was specifically cautioned against "attempts of the defense to throw into the scales the weight of his judicial position." Formal Opinion 15. The Committee on two separate occasions has proscribed a judge from appearing on commercial radio broadcasts. Formal Opinions 166 and 298. It has also prohibited judges from accepting loans from lawyers. Formal Opinion 89. It has prohibited judges from becoming involved in solicitation of funds for charitable purposes. Formal Opinion 238 and Informal Opinion 390.

The Committee on one occasion, Formal Opinion 52, wrote that a judge who was writing a column for a newspaper on matters involving political and controversial subjects for which he should receive substantial remuneration, was not acting in accord with the standards prescribed by the Canons of Judiciary Ethics. The Committee pointed out that there "are many things which involve no wrong doing and which would not be considered as subject to criticism in the case of a lawyer, but are derogatory to the dignity of a judge". It specifically cited Canon 4 pertaining to the avoidance of impropriety and Canon 24 involving inconsistent duties, as well as Canon 34 pertaining to conduct above reproach. The Committee believed that although Canon 31 specifically permits a judge to lecture and instruct in law, this did

not permit him to write in the form of specific articles for the paper for extra compensation, because of the possibility of bringing the judicial system into disrepute, because of the fact that the outside activity might lead to the impairment of judicial efficiency and because of the public expression of views might influence the judge's decision on the bench. It is clear that this Committee has been consistent throughout its history in giving as much attention to the appearance of impropriety as to the question of impropriety.

It is therefore the opinion of the Committee there is nothing wrong with a judge maintaining his friendship with individuals with whom he had had social contact prior to going on the bench or with whom he had done business prior to this time. However, he must be careful to avoid action that may reasonably tend to awaken suspicion that his social or business relations or friendships constitute an element in influencing his judicial conduct. The kind of activity that may involve appearances of impropriety, of course, will vary from case to case and will depend in part upon matters beyond the judge's control. Efforts on the part of persons suggesting that they have special influence should alert the judge to the problems of propriety in connection with his personal affairs and to the appearance of impropriety in continuance of a relationship with such a person. The kind of relationship also will be of significance.

The thrust of the Canons and the opinions under the Canons make it clear that while few single acts of conduct in this area are specifically to be condemned, in each instance the judge is commanded to order his life in such a way that there are no appearances of impropriety and admonished that these can come from a combination of circumstances, some within and some without the judge's control. When the appearance of impropriety comes from beyond the judge's control, his obligation is greater to do, or refrain from doing, acts contributing to that appearance.

The right of the judge to disqualify himself on matters before the court does not answer all questions of impropriety of individual relationship to a judge for the Canon specifically proscribes actions by a judge that creates the appearance of impropriety. Friendship alone, prior representation alone, acceptance of fees alone might not be enough to make impropriety, but the Canons direct that the total appearance of the transactions be weighed. Although there may be no inherent impropriety in any specific act performed by a judge, a person in his position must give serious thought to the weight of his judicial position and dignity and is cautioned against permitting any person to throw onto the scales of justice the weight of his judicial position. See Formal Opinion 15. These principles apply to all judges, including the judges of the highest as well as the lowest courts of the land; and the reasons therefor are that the public must have absolute faith in the competence and the integrity of the courts and must have complete belief that the places of justice are wholly untainted and untarnished by scandal or suspicion of scandal.

The public is conscious of problems of possible conflicts of interest at the present time. The public is rightfully concerned with the interests of legislators, of lawyers, of businessmen and the basis on which their decisions are made. The public rightfully is interested in the appearance of impropriety on the part of its judges, and the public's judges should conform to the standards set forth many years ago by the thoughtful members of the legal profession and codified in the Canons of Judicial Ethics.

In view of the Judicial Canons and the opinions herein referred to, the Committee feels that a judge or justice should not undertake any obligations or enter into any

relationship of any kind or nature whatsoever which might in any way be inconsistent with his duties and obligations as a judge or which in any way might point to impropriety on the part of a judge.

Mr. WILLIAMS of Delaware. I ask unanimous consent to have printed in the RECORD the press release of the American Bar Association in connection with the same series of correspondence.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

AMERICAN BAR COMMITTEE SAYS FORTAS VIOLATED JUDICIAL ETHICS CANONS

WASHINGTON, May 20.—The American Bar Association Committee on Professional Ethics held in an informal opinion made public today that the relationship of former Supreme Court Justice Abe Fortas with Louis E. Wolfson and the Wolfson Family Foundation was "clearly contrary" to the Canons of Judicial Ethics.

The opinion was transmitted by ABA President William T. Gossett to Senator John J. Williams (R-Del.) in response to the Senator's request for an interpretation of the Canons as they applied in the Fortas case. It was made public simultaneously by the bar association.

The ABA ethics panel said it reached its conclusion unanimously on the basis of statements made by Justice Fortas in the letter he wrote to Chief Justice Warren when he resigned from the Supreme Court last week.

The committee cited eight separate Canons of Judicial Ethics as "bearing on the Fortas question," including several which stress the duty of a judge not only to avoid improprieties in his official conduct, but also any acts which might in any way give the appearance of improprieties.

"Viewed in the light of the foregoing provision, it is our opinion that the conduct of Mr. Fortas, while a Supreme Court Justice, described in his statement of the facts, was clearly contrary to the Canons of Judicial Ethics, even if he did not and never intended to intercede or take part in any legal, administrative or judicial matters affecting Mr. Wolfson," the opinion said.

The ethics committee said it was submitting the "informal opinion" (one given in response to a specific inquiry) in view of its "importance to the legal profession and in recognition of the public interest in the controversy" surrounding the case. The committee's statement to President Gossett added:

"The Committee is aware that during the pendency of the controversy Mr. Fortas resigned from the Supreme Court. Nevertheless, it is the Committee's judgment that the circumstances require that the opinion be submitted to you so that, to the extent possible, the ethical issues shall be made clear for the legal profession, for members of the judiciary, and for the public."

The committee said it addressed itself only to the question: "Did former Justice Fortas' conduct and relationship with Louis E. Wolfson and the Wolfson Family Foundation violate the Canons of Judicial Ethics?" Since the opinion was limited to ethical considerations, it should "not be construed as dealing with the lawfulness of actions" involved, the committee made clear.

The opinion said the committee "assumed the essential accuracy" of statements made by Justice Fortas in his letter to the Chief Justice, including the assertion by the former justice that he did not while a member of the Court intercede or take part in "any legal, administrative or judicial matter affecting Mr. Wolfson or anyone associated with him". In relying on the Fortas communication, the committee explained that it is not a fact-finding body, its function being solely

to interpret the Canons of Professional Ethics (applicable to lawyers) and the Canons of Judiciary Ethics.

At the same time it rendered its informal opinion, the ABA Committee also released a separate "formal opinion" (a general interpretive discussion of specific Canons) holding that all judges—"of the lowest as well as the highest courts"—must in their public and private lives "act not only in a manner that is lawful and proper, but (in a manner) that gives the impression and appearance to the public that it is proper".

The formal opinion cited ten Canons which have to do with propriety in judicial conduct. "The Canons make a careful effort to deal directly with some of the activities of judges that may give the appearance of impropriety even though no impropriety may actually exist", the formal opinion said.

"For example, Canon 32 prohibits a judge from accepting presents or favors from litigants or from lawyers. Canon 31 prohibits a judge of a superior court from practicing law. Canon 25 . . . enjoins him from persuading others to patronize or contribute to private business ventures or charitable enterprises, and specifically states that he should not enter into private business or pursue any course of conduct that would justify such a suspicion.

"Canon 24 deals with the problem of inconsistent duties and states that he should not incur obligations, pecuniary or otherwise, that would interfere with his devotion to the expeditious and proper administration of his official functions . . .

"The thrust of all this is that the judge . . . is and should be very much circumscribed in what he can do appropriately. The Canons of Ethics apply to judges at all levels, and probably, as they relate to appearances of impropriety, apply with greater strictness to the judges of the higher courts, for the conduct of judges of higher courts sets the tone for the whole judiciary."

The committee announced that all of its seven members joined in the formal opinion, but that Chairman Walter P. Armstrong, Jr., of Memphis, had not participated in the informal finding with respect to Justice Fortas. Justice Fortas is a former resident of Memphis.

Committee members in addition to Armstrong are Thomas J. Boodell, Chicago; C. A. Carson III, Phoenix, Ariz.; Benton E. Gates, Columbia City, Ind.; Charles W. Joiner, Detroit; Kirk M. McAlpin, Atlanta; Samuel P. Myers, Racine, Wis.; and Floyd B. Sperry, Bismarck, N.D.

Mr. WILLIAMS of Delaware. Mr. President, I appreciate the fact that the American Bar Association has ruled on the propriety of the conduct of Justice Fortas. Certainly, as they state in their letter, not only the American people but also Congress has a right to know the position of this organization, whose recommendations are sought and very properly given consideration at the time these appointments are made.

However, at the same time, I feel it incumbent upon the American Bar Association to follow the activities of these men and to render its opinion when we find something wrong, as it has in this instance involving Justice Fortas.

Therefore, I am most respectfully asking that they expedite a reply to my next letter, raising the same questions as to the propriety of Justice Douglas being on the payroll of the Parvin Foundation, whose sponsors likewise have been questioned by various agencies of the Government as to some of their activities. I am asking the Bar Association

for a similar ruling as to whether or not Justice Douglas' being on the payroll of that foundation violates their canon of ethics.

Mr. President, I ask unanimous consent that the text of my letter to the American Bar Association relating to the inquiry with respect to Justice Douglas be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,

Washington, D.C., May 20, 1969.

Mr. WILLIAM T. GOSSETT,
President, American Bar Association, Washington, D.C.

DEAR MR. GOSSETT: Canons of the Judicial Ethics of the American Bar Association read as follows:

"Canon 1: The assumption of the office of judge casts upon the incumbent duties in respect to his personal conduct which concern his relation to the state and its inhabitants. . . ."

"Canon 4: A judge's official conduct should be free from impropriety and the appearance of impropriety; he should avoid infractions of law; and his personal behavior, not only upon the Bench and in the performance of judicial duties, but also in his everyday life, should be beyond reproach."

"Canon 13: A judge . . . should not suffer his conduct to justify the impression that any person can improperly influence him or unduly enjoy his favor, or that he is affected by the kinship, rank, position or influence of any party or other person."

"Canon 24: A judge should not accept inconsistent duties; nor incur obligations, pecuniary or otherwise, which will in any way interfere or appear to interfere with his devotion to the expeditious and proper administration of his official functions."

"Canon 25: A judge . . . should not . . . enter into any business relation which in the normal course of events reasonably to be expected, might bring his personal interest into conflict with the impartial performance of his official duties."

"Canon 26: A judge . . . should, so far as reasonably possible, refrain from all relations which would normally tend to arouse the suspicion that such relations warp or bias his judgment, or prevent his impartial attitude of mind in the administration of his judicial duties."

"Canon 31: . . . He may properly act as arbitrator or lecturer upon or instruct in law, or write upon the subject and accept compensation therefore, if such course does not interfere with the due performance of his judicial duties, and is not forbidden by some positive provision of law."

"Canon 34: In every particular his conduct should be above reproach. He should be . . . indifferent to private political or partisan influences; he should . . . deal with his appointments as a public trust; he should not allow other affairs or his private interests to interfere with the prompt and proper performance of his judicial duties, nor should he administer the office for the purpose of advancing his personal ambitions or increasing his popularity."

I have your letter of May 20, 1969, stating that the conduct of Mr. Fortas in accepting a \$20,000 fee from the Wolfson Foundation while a Supreme Court Justice was "clearly contrary to the Canons of Judicial Ethics."

It is also a matter of public record that Justice Douglas has been on the payroll of the Parvin Foundation at a salary of \$12,000 per year, and the principals behind this tax-exempt foundation have likewise been the subject of investigation by various agencies of the Government, including the Department of Justice.

I am sure that the American Bar Association is familiar with Justice Douglas' arrangements for accepting fees from this foundation, whose members have close relationship with the Las Vegas gambling industry; therefore, I am asking the question: Does Justice Douglas' acceptance of this \$12,000 annual retainer from the Parvin Foundation violate the Canons of Judicial Ethics of the American Bar Association?

Yours sincerely,

JOHN J. WILLIAMS.

ORDER FOR ADJOURNMENT UNTIL FRIDAY, MAY 23, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon on Friday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY TO RECEIVE MESSAGES, FILE REPORTS, AND SIGN DULY ENROLLED BILLS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that during the adjournment of the Senate from today until noon on Friday next, all committees be authorized to file their reports, including any minority, individual or additional views; and that during the same period, the Secretary of the Senate be authorized to receive messages from the President of the United States and from the House of Representatives and that they may be appropriately referred; and that the Vice President be authorized to sign duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

"MAJORITY AND MINORITY LEADERS OF THE SENATE"—A COMPILATION

Mr. MANSFIELD. Mr. President, I send to the desk an original resolution, and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated.

The legislative clerk read as follows:

S. RES. 198

Resolved, That a compilation entitled "Majority and Minority Leaders of the Senate", prepared under the direction of the Secretary of the Senate, Francis R. Valeo, by the Senate Parliamentarian, Floyd M. Riddick, shall be printed with certain tables as a Senate document, and that an additional 2,000 copies be printed for distribution by the Secretary of the Senate.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. MANSFIELD. Mr. President, this meets with the approval of the distinguished minority leader. I know of no opposition to it. I understand it comprises less than 30 pages and is within the rules.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 198) was agreed to.

THE NATIONAL COMMITMENT RESOLUTION

Mr. MANSFIELD. Mr. President, earlier, today, the majority conference met in the Old Supreme Court Chamber. At the opening of the meeting I made a statement to the conference. I ask unanimous consent that this statement be printed at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MIKE MANSFIELD, MAJORITY LEADER, BEFORE THE DEMOCRATIC CONFERENCE, TUESDAY, MAY 20, 1969

This conference has been called, principally, to report to you on certain procedural matters. These matters have been under intense and, heretofore, confidential consideration in the Democratic Policy Committee. Since the beginning of the session, we have been examining in that Committee the situation of the Democratic Majority in the Senate in the light of the Republican occupancy of the Presidency.

For eight years, Democrats in the Senate looked to Democratic Presidents—to Presidents Kennedy and Johnson—for political as well as national leadership. In that same period, the strength of the national Democratic Party was measurable in major parts by the barometric readings which the people took of the efforts of the two Democratic Presidents. Democrats in the Senate could let the lead, so to speak, come from the White House. That is, obviously, no longer the case.

In present circumstances, as we examined them in the Policy Committee, a new approach by the Party in the Senate was indicated. We found, for example, that Democratic Senators were asking from time to time for a statement of the position of the Leadership on national issues before the Senate. Heretofore, Democratic Presidents had largely supplied that yardstick.

We felt, too, that the manner in which Senate Democrats lived among themselves—so to speak—and the ways in which Democrats responded to a Republican administration and to their Republican colleagues in the Senate would be closely watched for the next several years by the people of the nation. What was involved in what we did and how we did it in the Senate, it seemed to us, was not only the future of the Democratic Majority in the Senate but also, in significant degree, that of the Democratic Party in the nation.

Above all else, there was the question of how to evoke the largest possible contribution from the Democratic Majority in the Senate to the welfare of the nation, during a Republican administration.

In the light of considerations such as these, it was agreed that an effort should be made to delineate Democratic positions in the Senate on certain issues of significance in which there existed a substantial degree of unity among members of the Party.

This responsibility is assumed reluctantly by the Policy Committee. We are—all of us—aware of the difficulties which are inherent in trying to find common ground amidst our diversities. Yet, we believe the effort must be made. The Policy Committee is the political arm of the Democratic Conference of the Senate and it has a basis in law for the performance of the function. In addition, as presently constituted—that is, combined with the Legislative Review Committee—the Committee is accurately representative of the principal philosophical inclinations and the geographic derivations of the party in the Senate.

Lest there be any doubt, I want to make it very plain that the Committee will not in-

trude, in any way, upon the functions of any of the Legislative Committees. On the contrary, it will continue to follow its customary practice with regard to the regular scheduling of legislation for floor action. There will be no disposition now, anymore than in the past, to hold any legislation of significance from the floor. On the contrary, matters of prime importance to the nation, whether of Republican or Democratic origin, will receive every consideration and prompt scheduling. Routine legislation will continue to be scheduled by the Committee and disposed of by the Leadership—as in the past—on the basis of consultation, with as much accommodation as possible to the needs and wishes of individual members, both Republicans and Democrats.

What is additionally contemplated in the way of new procedures is for the Policy Committee to act on a special agenda. This agenda will be selected from issues submitted by members of the Committee itself or the Legislative Committees. The Committee will take a policy position on those issues which, in its judgment, lend themselves to broad support by Democratic members of the Senate. When the Policy Committee has agreed upon a position of this kind, the Leadership will then identify that position to the Democratic members, either in a Democratic Conference or by other means.

May I stress here the point that the Legislative Committee will, as always, delineate the legislation for floor consideration. What we are suggesting is in the nature of a political supplement to that responsibility.

In a similar fashion, the Committee has not the slightest intention of presuming to replace a Senator's individual judgment with a Party judgment. We may offer a Committee view, but members will continue to vote on the issues on the basis of their conscience and wisdom. Indeed, even when a position has been delineated by the Policy Committee, its individual members will still vote as they see fit when the issue reaches the Senate floor.

In sum, the new procedures are designed simply to re-introduce among the Democratic members of the Senate some of the unifying party cement which was formerly supplied by a Democrat President in the White House. Admittedly, it is not the equal. Equally, however, the arrangement can do much to insure that Senate Democrats will make, as a group, the maximum possible contribution to the nation in present circumstances.

May I say that the new approach will produce on occasion, differences with the Republican minority. That is to be expected, even as we have had differences in the past. On other occasions, however, the general position of the Republicans is likely to be similar or identical to that which may be taken by the Majority Policy Committee. In any event, it would be my hope and expectation that the two leaderships in the Senate will continue to work together for the benefit of the nation.

There is no predisposition whatsoever in this new approach to oppose for the sake of opposition. The Leadership will continue to give the President whatever support can be given in good conscience. He is the President, not of the Republican Party or of the Democratic Party. He is the President of the United States and he will be treated in that light.

In conclusion, I would point out that in addition to the unanimous endorsement of this new approach by the members of the Policy Committee, the chairman of the Legislative Committees with whom I met on May 7, also agreed, without objection, to this proposed course. I ask the Conference, now, as the organization of the Democratic Party in the Senate—not for votes—but for your confidence and cooperation in this effort.

Mr. MANSFIELD. The statement is self-explanatory. The new approach of the majority policy committee which is outlined therein received the unanimous vote of the Democratic conference.

Subsequent to the adoption of that policy statement, the conference was advised of the first formal action of the majority policy committee under the new approach. It pertained to Senate Resolution 85, the so-called "national commitment resolution." The policy committee had agreed unanimously to support this resolution. This fact was communicated to the majority conference in a statement which I now ask unanimous consent be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MIKE MANSFIELD, CHAIRMAN OF THE MAJORITY POLICY COMMITTEE, BEFORE THE DEMOCRATIC CONFERENCE ON SENATE RESOLUTION 85, MAY 20, 1969

In the near future, the Senate will consider Senate Resolution 85, the so-called "National Commitment Resolution." It was ordered reported from the Committee on Foreign Relations on March 12, 1969. The resolution has to do with emphasizing anew the constitutional functions of the Senate and the Congress in certain aspects of foreign policy, notably the commitment of the armed forces of this nation abroad. It is a measure which should help to strengthen the President no less than the Congress in the responsible management of the foreign affairs of this Government.

The substance of this resolution is, in no sense, partisan in nature. A similar resolution was reported out unanimously last year under a Democratic Administration. This year I believe the only Committee opposition is that of a Democratic Member.

It would be my hope that Members on the Republican side of the aisle would give the resolution their support on the floor, as was done by the Republican Members in the Committee on Foreign Relations. May I say that I have already notified the Minority Leader of my intention of bringing this matter before the Majority Conference.

Members of the Majority Conference are now advised that the Policy Committee has considered S. Res. 85. In that connection, the Policy Committee has had the advice and cooperation of the Chairman of the Committee on Foreign Relations. On May 13, 1969, the Democratic Policy Committee adopted the following resolution:

"Whereas, the Senate Majority Policy Committee has met and considered S. Res. 85, a resolution reported from the Committee on Foreign Relations, expressing the sense of the Senate relative to commitments to foreign powers;

"Resolved, that the members of the Democratic Policy Committee agree that S. Res. 85 should be adopted in the Senate since it is of constructive significance to the nation in its restatement of the Constitutional function of the Senate relative to the foreign relations of the United States."

Mr. MANSFIELD. The conference was not asked, as a caucus, to endorse the position of the policy committee as set forth in the statement. A vote was not sought. Democratic Members will be expected, on the national commitment resolution, as on any other, to vote not a party position but a personal conviction when the question reaches the floor.

The national commitment resolution is in no sense a partisan matter. It is

a Senate matter and a national matter. In my personal judgment, it will strengthen the capacity of the President no less than the Senate and Congress in asserting responsive and responsible control over the far-flung activities of this Government abroad. To emphasize the complete absence of partisanship, may I say to the Senate, that I notified the distinguished Republican leader, the Senator from Illinois (Mr. DIRKSEN), in advance, of my intention of bringing up the matter in the Democratic conference, and requested that he consider doing the same with the Republican Members of the Senate. I ask unanimous consent that my letter to the minority leader with respect to the national commitment resolution be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 20, 1969.

HON. EVERETT DIRKSEN,
Minority Leader,
U.S. Senate.

DEAR EV: I thought it proper and appropriate that I call to your attention the fact that I am today bringing up before the Democratic Conference S. 85, the so-called National Commitment Resolution.

This resolution was reported out of the Foreign Relations Committee unanimously last year, but was never called up. This year it was reported out of the Foreign Relations Committee with one Member, a Democrat, dissenting. This resolution has been discussed in the Democratic Policy Committee, and on the basis of its instructions, I am taking it up with the Democratic Conference today.

The point I want to emphasize, this is not—I repeat—this is not a Partisan proposal; nor is there anything personal or political behind it. It is a reassertion of the Senate's responsibilities, and, it is my belief, concurred in by my colleagues on the Policy Committee, that a resolution of this sort will not only be helpful to the Senate as an institution, but will be very helpful to the President, whoever he may be, at any given time. It does not take away any of the President's powers, rather it brings the Senate into a form of partnership arrangement, and does not preclude the President from acting instantly under extraordinary circumstances. It is not binding on the President; it is an indication of the Senate's interest as an institution, and regardless of Party, in the field of Foreign Affairs and overseas commitments; it is an indication of desire for more intensive collaboration and discussion; and a decided lessening of the policy of jumping into a situation before we think the matter through.

I would appreciate very much your bringing this to the attention of the Republican Conference, which is meeting today. I am asking for no assurances whatsoever, nor am I asking for any assurances or commitments from the Democrats in conference assembled. It will be called to their attention in the hope that if they see fit to do so, they will support it. It is being called to your attention so that you and your colleagues will be aware of what I am doing, and it is done so on the basis of seeking no assurances and no commitments, but only calling an important topic of prime interest to the Senate to your consideration.

With best personal wishes to you and your colleagues in conference assembled, I am
Most sincerely,

MIKE MANSFIELD.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

THE PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.
Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

THE PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL FRIDAY, MAY 23, 1969

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 noon on Friday next.

The motion was agreed to; and (at 4 o'clock and 16 minutes p.m.) the Senate adjourned until Friday, May 23, 1969, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate May 19, 1969, under authority of the order of May 14, 1969:

DIRECTOR OF THE GEOLOGICAL SURVEY

William T. Pecora, of New Jersey, to be Director of the Geological Survey.

IN THE AIR FORCE

Spencer J. Schedler, of New York, to be an Assistant Secretary of the Air Force.

TENNESSEE VALLEY AUTHORITY

Aubrey J. Wagner, of Tennessee, to be a Member of the Board of Directors of the Tennessee Valley Authority for the term expiring May 18, 1978, (reappointment).

IN THE AIR FORCE

The following-named officers for promotion in the Regular Air Force, under the appropriate provisions of chapter 835, title 10, United States Code, as amended. All officers are subject to physical examination required by law.

Major to Lieutenant colonel

UPPER GREAT LAKES REGIONAL COMMISSION

Alfred E. France, of Minnesota, to be Federal cochairman of the Upper Great Lakes Regional Commission.

IN THE ARMY

The nominations beginning Donald W. McAvoy, to be colonel, and ending Francis N. Yokoi, to be captain, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 7, 1969; and

The nominations beginning David M. Schofield, to be second lieutenant and ending Norris W. Whitlock, to be second lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 7, 1969.

HOUSE OF REPRESENTATIVES—Tuesday, May 20, 1969

The House met at 12 o'clock noon.

Rev. Danny Cottrell, Church of Christ, West Memphis, Ark., offered the following prayer:

Holy God, our Father, Creator of heaven and earth, we thank Thee for this day of life and the blessings thereof. We pause to pay homage and praise to Thy holy and righteous name. We ask Thy guidance upon the deliberations of this great body of Representatives. We pray Thy blessings upon all those who lead in the affairs of our Nation. During this time of international crises and internal turmoil, may we find the solution to our problems through the guidance of Thy word. Through Thy divine direction, may this Nation return to righteousness. We pray for a rededication to the basic principles upon which this great Nation was founded. And above all, help each of us, from the smallest to the greatest, to learn to rest our faith in Thee, the true and the living God.

For this is our prayer, in Jesus' name. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

RESIGNATION FROM THE CANADA-UNITED STATES INTERPARLIAMENTARY GROUP

The SPEAKER laid before the House the following resignation from the Canada-United States Interparliamentary Group:

MAY 6, 1969.

HON. JOHN W. MCCORMACK,
Speaker of the House,
House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: It is with much regret that I must advise you of my necessity to resign from the Canada-U.S. Interparliamentary Group. I understand this conference will take place in Canada from June 3 to June 8, and in checking my schedule for this time I find I have already accepted an invitation to address the graduating class of the Dunbar High School in my district.

This is an invitation which was extended and accepted last November, and it would cause serious difficulties if the date were to be altered or my presence canceled. Therefore, I thought it best that I disassociate myself from the Group in view of these circumstances.

Yours sincerely,

JOHN M. SLACK.

The SPEAKER. Without objection, the resignation will be accepted.

There was no objection.

APPOINTMENT AS MEMBER OF THE U.S. DELEGATION OF THE CANADA-UNITED STATES INTERPARLIAMENTARY GROUP

The SPEAKER. Pursuant to the provisions of section 1, Public Law 86-42, the

Chair appoints as a member of the U.S. delegation of the Canada-United States Interparliamentary Group the gentleman from Maine, Mr. KYROS, to fill the existing vacancy thereon.

GUEST CHAPLAIN, DANNY COTTRELL

(Mr. ALEXANDER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALEXANDER. Mr. Speaker, it is a real privilege for us to have a young minister from my home district with us today to offer our opening prayer.

Danny Cottrell is minister of the Church of Christ in West Memphis. At 29, he has already distinguished himself in several areas, having been recognized for his writing, speaking, and spiritual leadership. Just last year he was a winner of a Freedom Foundation Award for public address.

We in Congress are acutely aware that many of our problems can be solved only in the hearts and minds of our people, not by legislation. It is the dedication and leadership such as Mr. Cottrell is giving in eastern Arkansas that gives me cause for optimism as we face these troubled times.

I am proud to represent Mr. Cottrell and am proud to introduce him to my colleagues here today. It is my hope that we can have him lead us in prayer again in the future.

POLITICAL JOBS

(Mr. HAYS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAYS. Mr. Speaker, I have here a piece from the ticker which I would like to call to the attention of that assiduous watchdog of superfluous supergrades, the gentleman from Iowa (Mr. Gross). This article on the ticker just in reads as follows:

POLITICAL JOBS

(By H. L. Schwartz III)

WASHINGTON.—While the Nixon Administration talks about taking politics out of the Post Office, more and more jobs are being created in other departments that could be used for patronage.

In the past month, the Agriculture Department has gotten authority to create 20 new positions in the Farmers Home Administration.

A department official said frankly the jobs are of "political interest."

"We wanted them available but we don't have any plans right now to fill them," he said.

Most other Cabinet members have asked for and received Civil Service Commission authority to create new jobs with fat paychecks that can be filled at the Secretary's whim. . . .

The jobs in question fall under two categories known as schedule C and noncareer executive assignments or NEA.

NEA posts cover the so-called supergrades in the general schedule or GS scale and carry salaries between \$20,000 and \$30,000. . . .

Housing and Urban Development said its

NEA and schedule C positions have increased from 86 to 95 and it wants six more.

Health, Education and Welfare had 84 positions, now has 95 and is asking for more but won't say how many.

Transportation, which got authority to create five new jobs, was the only other agency queried that declined to say how many more it was seeking.

The Justice Department had 53 positions before inauguration, now has 60 and wants another.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I am glad to yield to the gentleman.

Mr. GROSS. I am glad that the gentleman called my attention to this matter. The Johnson administration last year asked, as I remember it, for about 450 more supergrades. This administration is presently asking for 150 additional supergrades.

Mr. HAYS. That is in addition to the 450.

Mr. GROSS. No, no; 150 supergrades.

Mr. HAYS. The gentleman raised a big fuss about the supergrades last year. How does he feel about them this year?

Mr. GROSS. The gentleman from Iowa will look very carefully at the request for even 150. He opposed the 450 request last year.

Mr. HAYS. I want to stop this 150, and then we will be even—right where we started.

PERMISSION FOR SUBCOMMITTEE ON TRANSPORTATION AND AERONAUTICS, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Transportation and Aeronautics of the Committee on Interstate and Foreign Commerce may be permitted to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PERMISSION FOR SUBCOMMITTEE ON COMMUNICATIONS AND POWER, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Communications and Power of the Committee on Interstate and Foreign Commerce may be permitted to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

VIETNAM—WITHDRAWAL OF AMERICAN TROOPS

(Mr. GILBERT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. GILBERT. Mr. Speaker, the Congress and the American people have, I believe, been generous with President Nixon. He was elected to office on a pledge to bring us peace. It was a pledge that exceeded all others in its importance and its appeal. He even promised the revelation of a secret plan for achieving peace. But, in his recent speech on Vietnam, he has offered us nothing but a modest modification of the program that failed President Johnson and the American people so grievously in the effort to extricate us from the war. It is small wonder that we are disappointed.

My purpose, however, is not to criticize the President, Mr. Speaker; that is a sterile exercise. My concern, rather, is for our country and for the men who are giving their lives every day to a cause that does not justify their blood.

Mr. Nixon says he is seeking a peace "we can be proud of." I am not sure what he means. But I am convinced that the act of which we as a people would be most proud, now and in the future, is the declaration that we will undertake no further offensive action in Vietnam and will begin withdrawing our troops at once. With that objective in mind, Mr. Speaker, I join a group of my colleagues in the introduction of House Concurrent Resolution 256, which declares that—

It is the sense of Congress that the President should call for an immediate cease-fire and should direct an immediate unconditional withdrawal of one hundred thousand United States troops from Vietnam.

SOUTH FLORIDA MIGRANT LEGAL SERVICES PROGRAM, INC., RECOMMENDED FOR RE-FUNDING BY OEO

(Mr. FASCELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FASCELL. Mr. Speaker, yesterday I was advised that the Office of Economic Opportunity, after evaluating the work of the South Florida Migrant Legal Services Program, Inc., over the last 2 years, has recommended that this program be re-funded in fiscal year 1970.

I concur wholeheartedly with these findings and urge support of this program so that it can continue to provide desperately needed legal services to migrants in a six-county area of south Florida.

The evaluators have said:

The program has reached the people in the camps, has won their confidence and has achieved formidably in their behalf, perhaps most notably in obtaining, in settlement of a law suit against American Foods, the only migrant labor bargaining agreement within recall of Florida memory. This view is shared by a number of non-migrants interviewed, including non-project lawyers.

I can think of no higher praise than this for a program which is specifically designed to help the poor—both migrant and nonmigrant—who are perhaps the least well represented group in our Nation.

Mr. Speaker, there has been some controversy over this program, primarily due to a lack of communication between dif-

ferent elements of the six-county area. However, as the evaluation report notes in its conclusion—

The abuse this program has taken publicly is remarkably disproportionate to the actual evidence of wrongdoing which can be produced against it.

The evaluation team did take note of some inadequacies in the program and made recommendations to correct them. However, its overall determination is that it is a good program which should be continued. I am delighted with these findings and join in the recommendation that the program be re-funded.

REPUBLICANS PRAISE PRESIDENT'S NUTRITION PROGRAM

(Mr. MORTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MORTON. Mr. Speaker, 64 of our colleagues join with me today in expressing heartfelt appreciation of the leadership President Nixon has given congressional efforts to banish hunger from our land.

In the last two sessions, congressional initiative has scored gains. Yet, as it must be under our system, meaningful programs to eliminate hunger and malnutrition had to await the comprehensive action available only to a President.

The national nutrition program proclaimed by Mr. Nixon in his message on May 6, 1969, is a major social breakthrough directed at a root cause of poverty in America.

Personally, and in the name of those in need, I pay tribute to the new leadership which offers realistic proposals to resolve contemporary social problems.

SUPPORT FOR THE PRESIDENT'S NATIONAL NUTRITION PROGRAM

(Mr. ANDREWS of North Dakota asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDREWS of North Dakota. Mr. Speaker, I am pleased to join with my colleagues in calling attention to and expressing support for the President's national nutrition program.

Coming from the most agricultural State of the Union, I feel I can speak on behalf of the great farmers of this country who are willing to provide the food-stuffs necessary to feed the vast number of hungry persons in this Nation.

Throughout the history of the United States, the farmers of this Nation have, without fanfare, provided food to support a vast majority of our people. And now I am confident our farmers are ready, willing, and anxious to grow the food necessary to provide a nutritious diet for all our citizens.

The problem of hunger must be approached immediately to eliminate this blight from our country.

President Nixon's proposal provides the leadership to get to the root of the problem.

The President has laid the groundwork. It is now our duty to join the campaign.

THE NATIONAL NUTRITION PROGRAM

(Mr. SHRIVER asked and was given permission to address the House for 1 minute.)

Mr. SHRIVER. Mr. Speaker, last week President Nixon sent to Congress a proposal for a comprehensive program to combat the problem of hunger wherever it exists in this country.

About a year ago I sponsored legislation in the House—H.R. 17611—which would have established a bipartisan commission with the responsibility of evaluating the problem of hunger and recommend remedial action.

Unfortunately, when the executive branch failed to support this measure, the Commission was not authorized.

Now the President has provided the leadership we sought last year to get to the root of the problem of hunger. He has mobilized the resources of the Federal Government to accomplish the objectives we sought a year ago.

I am pleased to join in this statement of support for the initiatives which the President has taken in meeting the needs of several million forgotten Americans.

CALL OF THE HOUSE

Mr. DERWINSKI. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 56]

Adair	Gaydos	Pettis
Ashbrook	Gray	Pollock
Ashley	Green, Pa.	Powell
Baring	Hall	Pryor, Ark.
Barrett	Hastings	Pucinski
Bates	Hébert	Rallsback
Blaggi	Helstoski	Reifel
Blester	Hicks	Riegle
Blanton	Hogan	Rodino
Blatnik	Howard	Ronan
Brook	Hungate	Rooney, Pa.
Broomfield	Jacobs	Rostenkowski
Buchanan	Kee	Rumsfeld
Burlison, Mo.	King	Ruppe
Bush	Kirwan	St Germain
Byrne, Pa.	Kuykendall	St. Onge
Cahill	Lowenstein	Sandman
Carey	Lujan	Scheuer
Chisholm	Lukens	Schwengel
Clark	McClory	Shipley
Coughlin	McCloskey	Skubitz
Cowger	McCulloch	Smith, N.Y.
Culver	McKneally	Steed
Davis, Ga.	Mayne	Steiger, Wis.
Dawson	Minshall	Stuckey
Delaney	Mizell	Talcott
Dent	Mollohan	Thompson, N.J.
Dwyer	Moorhead	Tunney
Eckhardt	Morgan	Waggoner
Edwards, La.	Morse	Watkins
Ellberg	Murphy, Ill.	Welcker
Esch	Murphy, N.Y.	Whitehurst
Ford	Myers	Wilson, Bob
William D.	Nichols	Wydler
Frey	Nix	Yates
Fulton, Tenn.	O'Hara	Yatron
Gallagher	Ottenger	Zablocki
Garmatz	Pelly	

The SPEAKER. On this rollcall 322 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN PRIVILEGED REPORTS

Mr. COLMER. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

PERMISSION FOR SPECIAL SUBCOMMITTEE ON EDUCATION, COMMITTEE ON EDUCATION AND LABOR, TO SIT DURING GENERAL DEBATE TODAY

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent that the Special Subcommittee on Education be permitted to sit this afternoon during general debate.

The SPEAKER. Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

HELEN KELLER MEMORIAL WEEK

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 99) to authorize the President to issue annually a proclamation designating the first week in June of each year as "Helen Keller Memorial Week."

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. Res. 99

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, in recognition of Helen Keller's outstanding contribution to the education, welfare, and rehabilitation of blind and deaf persons throughout the world, the President is authorized and requested to issue annually a proclamation designating the first week in June as "Helen Keller Memorial Week", calling upon the people of the United States to observe such week with appropriate ceremonies and activities.

AMENDMENT OFFERED BY MR. ROGERS OF COLORADO

Mr. ROGERS of Colorado. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROGERS of Colorado: On page 1, line 6, after the word "issue" strike out the word "annually".

On page 1, line 7, after the word "June" insert "of 1969".

The amendment was agreed to.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "To authorize the President to issue a proclamation designating the first week in June of 1969 as 'Helen Keller Memorial Week'."

A motion to reconsider was laid on the table.

PRODUCE THE TAX REFORM PACKAGE

(Mr. VANIK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. VANIK. Mr. Speaker, almost every Member of this body has spoken of the tremendous urgency for tax reform and tax relief reported from every section of America.

I continue to be amazed that the administration feels it can defer meaningful, revenue-raising tax reform until next year. Further study is not an acceptable substitute for action.

What is the administration position on depletion, capital gains and production payments? What will the administration learn in November that is not known now?

The urgency of these times must be utilized to produce the tax reform package for which America has waited a long time.

PERMISSION FOR SUBCOMMITTEE ON NATIONAL PARKS AND RECREATION TO SIT DURING GENERAL DEBATE TODAY

Mr. TAYLOR. Mr. Speaker, I ask unanimous consent that the Subcommittee on National Parks and Recreation of the Committee on Interior and Insular Affairs may be permitted to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

MAY 19, 1969.

The SPEAKER,
U.S. House of Representatives.

DEAR SIR: I have the honor to transmit herewith a sealed envelope addressed to the Speaker of the House of Representatives from the President of the United States, received in the Clerk's Office at 3:05 p.m., on Monday, May 19, 1969, and said to contain a Message from the President wherein he transmits to the Congress the Fourteenth Annual Report of the Board of Actuaries for the Calendar Year 1967.

With kind regards, I am

Sincerely,

W. PAT JENNINGS,
Clerk, U.S. House of Representatives.

FOURTEENTH ANNUAL REPORT OF THE BOARD OF ACTUARIES—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Armed Services:

To the Congress of the United States:

Pursuant to Section 1444(b), title 10, United States Code, transmitted herewith is the Fourteenth Annual Report of

the Board of Actuaries for the Retired Serviceman's Family Protection Plan, covering the administration of the Plan for Calendar Year 1967.

The Plan, inaugurated in November 1953, provides that members of the uniformed services may elect reduced retired pay during their lifetime in order to provide survivor annuities for their widows and children. The basic principle underlying the Plan is that reductions in retired pay shall be computed by the actuarially-equivalent method using actuarial tables selected by the Board. Thus, the Plan is to be self-supporting, imposing no added cost to the Federal Government, beyond administrative costs.

RICHARD NIXON.

THE WHITE HOUSE, May 19, 1969.

FIRST ANNUAL REPORT ON THE NATURAL GAS PIPELINE SAFETY ACT OF 1968—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read, and, together with accompanying papers, referred to the Committee on Interstate and Foreign Commerce.

To the Congress of the United States:

I am pleased to transmit the first Annual Report on the Natural Gas Pipeline Safety Act of 1968. This report covers the period from August 12, 1968, thru December 31, 1968.

RICHARD NIXON.

THE WHITE HOUSE, May 20, 1969.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

MUTUAL BENEFIT FOUNDATION

The Clerk called the bill (H.R. 2214) for the relief of the Mutual Benefit Foundation.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. HUNT and Mr. BROWN of Ohio objected, and, under the rule, the bill was recommitted to the Committee on the Judiciary.

FRANK KLEINERMAN

The Clerk called the bill (H.R. 3377) for the relief of Frank Kleinerman.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

PEDRO IRIZARRY GUIDO

The Clerk called the bill (H.R. 5000) for the relief of Pedro Irizarry Guido.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to

the request of the gentleman from New Jersey?

There was no objection.

REDDICK B. STILL, JR., AND RICHARD CARPENTER

The Clerk called the bill (H.R. 6400) for the relief of Reddick B. Still, Jr., and Richard Carpenter.

There being no objection, the Clerk read the bill, as follows:

H.R. 6400

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of \$17,318.90 to Reddick B. Still, Junior, of Spartanburg, South Carolina, and Richard Carpenter of Greenville, South Carolina, in full settlement of their claims against the United States for services rendered the Post Office Department in obtaining options on land within the city of Spartanburg, South Carolina, in connection with the relocation of the main post office in that city for which they were never compensated because the Government elected to condemn the land upon which the options to purchase had been secured. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding \$1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NOEL S. MARSTON

The Clerk called the bill (H.R. 6378) for the relief of Noel S. Marston.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. HUNT and Mr. BROWN of Ohio objected, and, under the rule the bill was recommitted to the Committee on the Judiciary.

JOHN VINCENT AMIRAULT

The Clerk called the bill (H.R. 2552) for the relief of John Vincent Amiraault.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

MARIA CAMILLA GIULIANI NIRO

The Clerk called the bill (H.R. 5615) for the relief of Maria Camilla Giuliani Niro.

There being no objection, the Clerk read the bill, as follows:

H.R. 5615

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, the provisions of section 312(1)

of that Act shall be inapplicable in the case of Mrs. Maria Camilla Giuliani Niro.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That, the provisions of section 316(a) of the Immigration and Nationality Act as they relate to residence and physical presence requirements for naturalization, shall be inapplicable in the case of Maria Camilla Giuliani Niro."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

REFERENCE OF H.R. 1691—JESUS J. RODRIGUEZ

The Clerk called the resolution (H. Res. 86) referring the bill (H.R. 1691) to the Chief Commissioner of the Court of Claims.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

EAGLE LAKE TIMBER CO., A PARTNERSHIP, OF SUSANVILLE, CALIF.

The Clerk called the bill (H.R. 1749) for the relief of Eagle Lake Timber Co., a partnership, of Susanville, Calif.

There being no objection, the Clerk read the bill, as follows:

H.R. 1749

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay out of any money in the Treasury not otherwise appropriated, to Eagle Lake Timber Company, a partnership comprised of M. W. Crook, John B. Crook, R. H. Emmerson, and A. A. Emmerson, of Susanville, California, the sum of \$43,690, in full satisfaction of all claims of the said Eagle Lake Timber Company against the United States for compensation for losses incurred in connection with the performance of a timber sale contract (dated May 25, 1964, Numbered 11-150) between the said Eagle Lake Timber Company and the Forest Service, Department of Agriculture, the said Eagle Lake Timber Company having failed, under the provision of the contract for amortizing road costs, to recover a substantial portion of the road construction cost incurred before the contract was terminated by mutual consent of the parties thereto.

Sec. 3. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding \$1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CAPT. JOHN W. BOOTH III

The Clerk called the bill (H.R. 1808) for the relief of Capt. John W. Booth III.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

MRS. BEATRICE JAFFE

The Clerk called the bill (H.R. 1865) for the relief of Mrs. Beatrice Jaffe.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

CERTAIN CIVILIAN EMPLOYEES PAID BY THE AIR FORCE AT TACHIKAWA AIR BASE, JAPAN

The Clerk called the bill (H.R. 2238) to provide for the relief of certain civilian employees of the Air Force.

There being no objection, the Clerk read the bill, as follows:

H.R. 2238

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person who was a civilian employee of the Air Force at Tachikawa Air Force Base, Japan, during the period beginning on April 2, 1961, and ending on April 13, 1963, and who was promoted during that period and erroneously granted an increased living quarters allowance although his actual housing expenses were substantially well covered by the living quarters allowance applicable to him before that promotion, is relieved of all liability to refund to the United States the amounts, which were otherwise correct, received by him as a result of this erroneous increase in his living quarters allowance. Any person who has made a repayment to the United States of any amount paid to him as a result of an erroneous increase in living quarters allowance covered by this section is entitled to have refunded to him the amount repaid.

Sec. 2. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for the amount for which liability is relieved by this Act.

Sec. 3. Appropriations available to the Department of the Air Force for the pay and allowances of civilian personnel are available for refunds under this Act.

With the following committee amendment:

On page 1, lines 3 and 4, strike "of the Air Force at Tachikawa Air Force Base," and insert "paid by the Air Force Accounting and Finance Officer at Tachikawa Air Base,".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to provide for the relief of certain civilian employees paid by the Air Force at Tachikawa Air Base, Japan."

A motion to reconsider was laid on the table.

MRS. AILI KALLIO

The Clerk called the bill (H.R. 1999) for the relief of Mrs. Aili Kallio.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

MRS. EZRA L. CROSS

The Clerk called the bill (H.R. 4744) for the relief of Mrs. Ezra L. Cross.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

COMDR. EDWIN J. SABEC, U.S. NAVY

The Clerk called the bill (H.R. 5419) to provide relief for Comdr. Edwin J. Sabec, U.S. Navy.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ALFRED LORMAN

The Clerk called the bill (H.R. 3006) to fix date of citizenship of Alfred Lorman for purposes of War Claims Act of 1948.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

AMALIA P. MONTERO

The Clerk called the bill (H.R. 6375) for the relief of Amalia P. Montero.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

LT. COL. EARL SPOFFORD BROWN

The Clerk called the bill (H.R. 6377) for the relief of Lt. Col. Earl Spofford Brown, U.S. Army Reserve, retired.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

BERNARD A. HEGEMANN

The Clerk called the bill (H.R. 6581) for the relief of Bernard A. Hegemann.

There being no objection, the Clerk read the bill, as follows:

H.R. 6581

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the legal guardian of Bernard A. Hegemann, incompetent, Beatrice, Nebraska, son of the late Bernard Anthony Hegemann, Senior (Veterans' Administration claim numbered XC 02097952), the amount which the Administrator of Veterans' Affairs certifies to him that would have been payable for said son of the veteran as death pension for the period prior to September 11, 1967, if application therefor had been filed within one year from May 19, 1965. No part of the amount appropriated in this Act for the payment of any claim in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with such claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding \$1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAJ. CLYDE NICHOLS

The Clerk called the bill (H.R. 6850) for the relief of Maj. Clyde Nichols, retired.

Mr. HUNT. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

ANTHONY SMILKO

The Clerk called the bill (H.R. 8136) for the relief of Anthony Smilko.

There being no objection, the Clerk read the bill, as follows:

H.R. 8136

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the annual leave account of Anthony Smilko, of Milwaukee, Wisconsin, an employee of the General Services Administration, there shall be added a separate account of three hundred and twenty-one hours of annual leave, in full settlement of claims of the said Anthony Smilko against the United States for compensation for the loss of such leave which was earned by him during the period beginning April 1959, and ending December 1965, inclusive, which, through administrative error, was not credited to his leave account.

Sec. 2. Section 6304 of title 5 of the United States Code shall not apply with respect to the leave granted by this Act, and such leave shall not affect the use or accumulation, pursuant to applicable law, of other annual leave earned by the said Anthony Smilko. None of the leave granted by this Act shall be settled by means of a cash payment in the event such leave or part thereof remains unused at the time the said Anthony Smilko is separated by death or otherwise from the Federal service.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CLIFFORD L. PETTY

The Clerk called the bill (H.R. 9088) for the relief of Clifford L. Petty.

There being no objection, the Clerk read the bill, as follows:

H.R. 9088

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) Clifford L. Petty of Seattle, Washington, a former member of the United States Navy, is hereby relieved of liability to the United States in the sum of \$588.50 representing amounts paid him as extrahazardous diving pay at the rate of \$5.50 an hour for dives performed in August, September, and October 1959, as a member of a Navy underwater demolition team in connection with a series of special dives near Wake Island. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for the amount for which liability is relieved by this Act.

(b) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Clifford L. Petty, an amount equal to the aggregate of any amounts paid by him or withheld from sums otherwise due him by reason of the liability referred to in this Act. No part of the amount appropriated in this section in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding \$1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JACK W. HERBSTREIT

The Clerk called the bill (H.R. 10149) for the relief of Jack W. Herbstreit.

There being no objection, the Clerk read the bill, as follows:

H.R. 10149

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of employee rights and entitlements conferred by or pursuant to subchapter IV of chapter 35, title 5 of the United States Code, the three-year limitation imposed therein or pursuant thereto shall be waived with respect to Jack W. Herbstreit, and such employee rights and entitlements shall be extended (1) until the expiration of his current term as an elected official of the International Telecommunications Union or until he ceases to serve in that capacity, whichever first occurs, and (2) for such additional periods following his separation and application for reemployment as are specified in said subchapter or regulations pursuant thereto. However, service as such an official is not creditable service for the purpose of the civil service retirement system if such service forms the basis, in whole or in part, for an annuity or pension under the retirement system for the International Telecommunications Union.

The bill was ordered to be engrossed and read a third time, was read the third

time, and passed, and a motion to reconsider was laid on the table.

FRANCES VON WEDEL

The Clerk called the bill (H.R. 10153) for the relief of Frances von Wedel.

There being no objection, the Clerk read the bill, as follows:

H.R. 10153

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of the net proceeds of interest representing vested property held in the United States Treasury, the sum of \$34,625.11 to Frances von Wedel, of Staten Island, New York, in accordance with the opinion rendered in the congressional reference case, Frances von Wedel versus the United States, numbered 1-67, filed on January 6, 1969, by the Chief Commissioner of the Court of Claims. The amount stated in this Act is to be paid to the said Frances von Wedel in full settlement of her claims against the United States for the return of money and proceeds of securities vested in and transferred to the Attorney General of the United States pursuant to vesting order numbered 10108 dated November 13, 1947, issued under the authority of the Trading With the Enemy Act, as amended.

No part of the amount appropriated in this Act in excess of 20 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding \$1,000.

With the following committee amendment:

On page 1, line 6, strike "\$34,625.11" and insert "\$35,625.11".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. BOLAND. Mr. Speaker, I ask unanimous consent that the further call of the Private Calendar be dispensed with at this time.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PFC. JOSEPH ANTHONY SNITKO

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of Private Calendar No. 75, H.R. 1948, to confer U.S. citizenship posthumously upon Pfc. Joseph Anthony Snitko.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 1948

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Private First Class Joseph Anthony Snitko, a native of Poland, who served honorably in the United States Army from September 11, 1967,

until his death on June 13, 1968, shall be held and considered to have been a citizen of the United States at the time of his death.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

L. CPL. THEODORE DANIEL VAN STAVEREN

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of Private Calendar No. 90, S. 256, to confer United States citizenship posthumously upon L. Cpl. Theodore Daniel van Staveren.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

S. 256

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Lance Corporal Theodore Daniel Van Staveren, a native of the Netherlands, who served honorably in the United States Marine Corps from February 24, 1967, until his death on April 10, 1968, shall be held and considered to have been a citizen of the United States at the time of his death.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

L. CPL. PETER M. NEE

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of Private Calendar No. 94, H.R. 10060, for the relief of L. Cpl. Peter M. Nee, 2465662.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the bill, as follows:

H.R. 10060

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Lance Corporal Peter M. Nee (2465662), a native of Ireland, who served honorably in the United States Marine Corps from April 15, 1968, until his death on March 31, 1969, shall be held and considered to have been a citizen of the United States at the time of his death.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SECOND SUPPLEMENTAL APPROPRIATION BILL, 1969

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11400) making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate thereon be limited to not to exceed 3 hours, the time to be equally divided and controlled by the gentleman from North Carolina (Mr. JONAS) and, myself.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11400, with Mr. HOLIFIELD in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous-consent agreement, the gentleman from Texas (Mr. MAHON) will be recognized for 1½ hours, and the gentleman from North Carolina (Mr. JONAS) will be recognized for 1½ hours.

The Chair recognizes the gentleman from Texas.

Mr. MAHON. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, we come to the consideration of the second supplemental appropriation bill for 1969, the first major appropriation bill for the 91st Congress. It deals with the fiscal year 1969 insofar as the funds are concerned. And it contains an important provision—an expenditure ceiling—with respect to fiscal year 1970.

I hope the items in the bill will be explored by the Members and that the House will work its will on this bill. In the Committee on Appropriations, we think we have done the best we could, but we make no claim of infallibility. We have cut the requests by some \$581 million. If there are further reductions which are desired, Members of course, are free to offer the amendments to bring about the reductions.

SUMMARY OF THE PENDING BILL

We have reduced the budget estimates which were before us by about 13 percent. Most of the items and the bulk of the total requests before the committee were of a mandatory character and we had no practical option to recommending approval of the necessary funds. We had to provide funds, for example, for pay increases which had been provided in previous legislation.

It is an old refrain that Congress in the regular appropriation bills reduces the annual money measures and then early in the next session restores the reductions which were made, and that therefore the reductions originally made result in no reductions at all. This is not correct. For example, in this bill less than 1 percent of the new funds provided represents a restoration of funds which were reduced last year. And the restorations—some \$34 million—represent about one-third of 1 percent of the approximately \$12 billion cut last year in new funds requested for fiscal 1969. That, I think, is a rather good record.

There are many, many items in the bill before us, and there is no way to be fully familiar with the contents of the bill other than to study the bill and the report, so I would commend to all a careful reading of the report on the bill.

There are innumerable items representing, I believe, practically every department and agency of the Government.

The bill proposes new appropriations, or budget authority, in the sum of about \$3,783,000,000. It is, as I said, about \$581 million less than the budget requests, a cut of about 13 percent.

Mr. Chairman, under leave to extend, I include, for purposes of elaboration, excerpts from the report summarizing the main features of the bill:

SUMMARY OF THE BILL

The bill is divided into five titles: I—Military operations in Southeast Asia, II—General supplementals (various), III—Increased pay costs, IV—Ceiling on 1970 expenditures, and V—General provisions.

The grand total of new budget (obligational) authority recommended in the bill is \$3,783,212,766, a reduction of about 13%, or \$580,794,190, from the revised budget requests of \$4,364,006,956 considered.

In addition, under title II there are proposed increases of \$82,500,000 in limitations on annual contract authorizations involving interest subsidies for homeownership and rental housing assistance and college housing. The budget requests for these total \$104,500,000, so there is a reduction of \$22,000,000. Also, numerous provisions in the bill would release \$82,766,000 held in reserve under the cutback provisions of Public Law 90-364.

The amounts in the bill are within the overall totals of budget authority for 1969 shown in the administration's budget review released April 15th. That is, they are well within the totals contemplated in that review. And they are also well below the supplemental provisions contemplated for fiscal 1969 in the budget last January.

The January budget projected fiscal 1969 budget authority supplementals of \$4,813,000,000, inclusive of \$198,000,000 dependent on legislation which is not yet enacted. Of the remainder (\$4,615,000,000), a total of \$4,365,000,000 in new budget authority was submitted to the House and considered in connection with the accompanying bill. An additional \$221,000,000 in new budget authority requests for 1969—finalized after House Committee hearings were closed out—was submitted to the Senate (S. Doc. 91-18) for consideration in connection with this bill. Thus the total of such budget authority requests now indicated is \$4,586,000,000, or, in round figures, \$29,000,000 below the \$4,615,000,000 mentioned above.

This is the way the total picture stands on 1969 supplementals as of this date. It is a net result; the new administration reviewed and revised many of the supplemental requests submitted by the previous administration and made a number of reductions. But as the totals now stand, increases submitted have offset all but \$29,000,000 of the decreases from the January budget that were projected on April 15 (again, not counting the \$198,000,000 that hinges on legislation).

Summary by titles

Title I, Defense military, includes \$1,234,000,000 for military operations in Southeast Asia. This compares with the revised request of \$1,496,900,000, a reduction of \$262,900,000, or about 17 percent.

Title II, for sundry general supplementals, includes \$1,365,914,312, a reduction of \$39,736,850, or just under 3% from the budget requests of \$1,405,651,162 in new budget (obligational) authority. Some releases of reserves and other non-add provisions are involved. Increases of \$82,500,000—a reduction of \$22,000,000 from the request—are also proposed in limitations on annual contract authorizations in certain interest subsidy programs in the housing field.

The details are set forth under the various chapters in the committee report, but the great bulk of title II relates to items not subject to effective discretionary control in the annual bills. Some 83% or \$1,132,000,000, of the total, for example, is involved in grants to states for public assistance; veterans compensation, medical, and other costs; unemployment compensation payments; military retired pay; and disaster relief.

Title III, for increased pay costs, includes \$1,183,298,454 in new budget (obligational) authority, an overall reduction of \$278,157,340, or about 19 percent from the revised budget requests of \$1,461,455,794. Release of \$62,277,000 of P.L. 90-364 reserves is also involved, plus numerous transfers between appropriations to enable greater absorption of pay costs.

These supplementals relate to unabsorbed portions of pay raises generally effective last July 1 that were not taken into account in the regular 1969 appropriations.

The Executive Branch had combed the estimates initially and the new administration had also reexamined them. Since the estimates are for mandatory-type costs that have been running all fiscal year, the Committee could not make drastic additional cuts all across the boards this late in the fiscal year without creating unacceptable disruption to operations.

Title IV, limitation on 1970 budget outlays, proposes an overall ceiling on expenditures of the government during the fiscal year 1970 that begins on July 1, 1969. The proposal is explained in considerable detail beginning on page 118 of the report of the committee on the bill.

Title V, general provisions, contains general provisions customarily carried.

Approximate effect on 1969 expenditures—budget outlays

It is the committee's tentative estimate that the reduction of \$580,794,190 in new budget (obligational) authority requests, plus the relatively minor changes in requested transfers between appropriations, and reserve releases, will translate into a reduction of approximately \$464,000,000 in budget outlays previously projected for fiscal year 1969, by titles of the bill roughly as follows: title I, \$165,000,000; title II, \$26,000,000; and title III, \$273,000,000. The reductions in the interest subsidy contract authorizations limitations would not affect projected 1969 outlays.

The outlay effect of the remainder of the reduction in new budget authority and interest subsidy contract authorization limitations would be of some consideration in determining the impact of congressional actions on fiscal 1970 budget outlays; perhaps to a minor extent, even on fiscal 1971 outlays.

I believe there will be a desire on the part of the House to discuss some of the military implications involved, and the war in Southeast Asia. Some may want to discuss the antiballistic missile program and other controversial or semi-controversial matters. We have agreed on the 3 hours in which to discuss these matters.

EXPENDITURE CEILING PROPOSAL—TITLE IV

Mr. Chairman, I should like to claim your attention, if I may, at this time for the purpose of discussing a portion of the bill which appears on page 61. The report deals adequately with this proposal. It proposes an expenditure limitation—a spending ceiling. I believe it is important that all Members be familiar with the expenditure ceiling.

I should like to read the ceiling which we propose to fix in this bill. Page 61 of the bill, title IV:

Expenditures and net lending (budget outlays) of the Federal Government during the fiscal year ending June 30, 1970, shall not exceed \$192,900,000,000: *Provided*, That whenever action, or inaction, by the Congress on requests for appropriations and other budgetary proposals varies from the President's recommendations thereon, the Director of the Bureau of the Budget shall report to the President and to the Congress his estimate of the effect of such action or inaction on expenditures and net lending, and the limitation set forth herein shall be correspondingly adjusted.

Mr. Chairman, that is the ceiling provision, subsection (a) of it.

Subsection (b) is the reporting provision, which I insert here for reference purposes:

(b) The Director of the Bureau of the Budget shall report periodically to the President and to the Congress on the operation of this section. The first such report shall be made at the end of the first month which begins after the date of approval of this Act; subsequent reports shall be made at the end of each calendar month during the first session of the Ninety-first Congress, and at the end of each calendar quarter thereafter.

Mr. Chairman, under leave to extend, and before proceeding further, let me insert an excerpt from the report which briefly states the nature of the proposition:

The committee has included a provision in the bill that would place an overall ceiling on budget expenditures during the fiscal year 1970 that begins on July 1, 1969. The precise terminology is "Expenditures and net lending"—which, taken together, constitute "budget outlays".

The amount specifically stated in the provision, \$192,900,000,000, is a beginning figure, not an ending figure. It is the revised projection of 1970 budget outlays announced by the President on April 12 and summarized in the Review of the 1970 Budget released on April 15. That summary appears in the Congressional Record of April 16, 1969, at pages 9351-9354.

Coupled to the \$192.9 billion figure is language providing—" * * * That whenever action, or inaction, by the Congress on requests for appropriations and other budgetary proposals varies from the President's recommendations thereon, the Director of the Bureau of the Budget shall report to the President and to the Congress his estimate of the effect of such action or inaction on expenditures and net lending, and the limitation set forth herein shall be correspondingly adjusted."

In other words, Congress would work from the President's proposed total spending estimate. It would do so through its actions, or its inactions, on requests for appropriations and other budget obligatory authority and outlay proposals in the various appropriation bills and certain other bills affecting the budget.

The language would operate continuously to adjust the ceiling, as appropriate, to comport with the estimated expenditure effect of specific congressional actions or inactions having budgetary impact.

It is a flexible provision—but in terms of aggregate spending, flexible only on the action of the Congress, not the Executive.

It does not seek to declare something of the end from the beginning; it sets a beginning point against which Congress would work in deciding, through its various spending actions, what the ultimate total should be, and supplies a mechanism for resetting the ceiling accordingly.

Unlike last year's ceiling provision, it does not impose an arbitrary broad-axe type ceiling cutback that would leave to the Executive the allocation of any congressional ex-

penditure reduction to specific agencies and programs.

It would be the first ceiling ever to place directly in the hands of Congress the specific decision as to the maximum amount to be taken out of the Treasury for payment of the Government's bills in a given 12-month period.

Mr. Chairman, we are at a moment when for the first time in the history of this Republic, Members of Congress are being called upon to vote on an expenditure ceiling which covers the entire Federal Government. This kind of legislation has never been passed by the Congress during the history of the country.

This is an expenditure limitation which is all inclusive. It includes the Veterans' Administration. It includes the Defense Department. It includes the war in Vietnam. It includes interest on the national debt. It includes all expenditures. Nothing is exempt.

POTENTIAL REDUCTION EFFECT AND COMPARISON TO LAST YEAR'S CEILING

We have an expenditure limitation for fiscal year 1969 and we had an expenditure limitation of sorts in the prior year. But in the fiscal 1969 version we have a series of exceptions and exemptions. Indeed we exempted about \$99 billion of fiscal 1969 currently estimated expenditures.

The Congress reduced expenditures by about \$6 billion in the fiscal year ending on June 30. However, we did not reduce net expenditures of the Government significantly due to increases in exempted areas. In those areas where we had made exemptions, expenditure increases totaled approximately \$6 billion. That offsetting increase left a relatively slight net reduction in the January 1968 budget estimate of expenditures for fiscal 1969. On the other hand, except for our action last year, expenditures would no doubt have increased by several billions.

Mr. Chairman, at this point I include additional excerpts from the committee report comprising title IV of the pending bill with last year's ceiling and drawing attention to the reduction potential of the ceiling now proposed.

It is a rigid ceiling; it cannot be exceeded except upon action by the Congress. And as indicated above, the ceiling would decrease if congressional actions on the budget so provide.

It lays the basis for potentially very significant retrenchment in expenditures. If such a ceiling had been adopted—and strictly adhered to—over the last many years, billions of expenditures would have been avoided.

More specifically, taking all 14 budgets for the post-Korea fiscal years 1955 through 1968, the projected expenditure totals in the original annual budgets were cumulatively exceeded by about \$50 billion. In 11 of the 14 years, the overruns aggregated \$53.3 billion. In 3 years, there were underruns aggregating \$3.5 billion. But overall for the 14 years, the government actually expended—for a variety of reasons—about \$50 billion more than the sum total of what was projected in the original budgets. That averages to about \$3.4 billion a year. So the potential is great, if the ceiling is adopted and adhered to.

Unlike the expenditure ceiling provisions enacted in the last session applicable to fiscal 1969, nothing would be exempt from the ceiling. Last year's ceiling provisions had a very significant impact on government spending in fiscal 1969. They significantly restrained the growth of spending that undoubtedly

would have otherwise occurred. And on the latest figures, it seems beyond reasonable debate that in the absence of the ceiling provisions, a much needed budget surplus for 1969 would not now be in prospect. But even with the ceiling and the \$6 billion cutback Congress did not, by its actions, diminish the originally projected budget expenditure (outlay) total of \$186.1 billion.

It did prevent that total from being exceeded. And it did restrain growth of spending.

More specifically, Congress exempted 50%—\$92.6 billion—of the \$186.1 billion from the \$6 billion cutback, and expressly permitted overruns to the extent determined necessary in the exempted programs. Those overruns were reestimated in the April 15 budget review at \$6.1 billion. The overruns in exempted areas wiped out the \$6 billion cutback in non-exempt areas.

In its specific actions on the individual appropriation and other spending bills, Congress last year contributed roughly \$3.7 to \$3.9 billion (depending on variable calculations) to the \$6 billion overall cutback, leaving the remainder to be allocated by the Executive. The April 15 Review reflects a total cutback of \$7.3 billion from the original estimates for non-exempted areas. Offsetting this gross cutback are the \$6.1 billion overruns in exempted areas leaving a net estimated cutback, as of April 15 of \$1.2 billion from the originally projected total.

Thus the latest estimate of spending for 1969 is \$184.9 billion, \$1.2 billion less than the \$186.1 billion projected in the original 1969 budget. But it should be noted that about \$1.5 billion of the \$7.3 billion reduction now shown in non-exempted areas is not a cut in the more conventional sense, but rather financing adjustments because the Banks for Cooperatives, the Federal Intermediate Credit Banks, and the Federal National Mortgage Association secondary market operations, which were in the original \$186.1 billion budget total, subsequently became 100% privately owned and thus dropped from the Federal totals.

Of course, the \$7.3 billion reduction figure is a composite of the specific congressional actions, the financing adjustments, actual curtailments of outlays, and administrative reestimates of expenditures—both up and down—in many items as conditions changed. There are signs that further reestimates upward in certain programs will substantially diminish the \$7.3 billion figure and thus in turn the \$1.2 billion figure.

The ceiling proposed in this bill would afford opportunity for maximum flexibility within the overall total to meet, as fully as reasonably possible, changed and changing expenditure requirements in certain specific programs that cannot be foreseen with great precision. The new administration has variously indicated that it intends to seek, on a continuing basis, economies in operations and to look for lower-priority areas when it needs room for increases within its stated policy of strict fiscal restraint. An aggregate ceiling would be facilitating in this regard.

Of course, the President can seek supplemental relief to meet necessary but unforeseen and unavoidable outlay increases which he finds cannot be accommodated within the overall total.

Setting a beginning ceiling in this fashion should in no way discourage the Executive Branch from its continuing commitment—and responsibility—for seeking to conduct the day-to-day management of government programs at the very minimum cost consistent with the public necessities, refraining from spending every dollar that can reasonably be saved. Constructive economy in public spending is not only a matter of legislative decision. It is also a matter of administration. The new administration has attached high priority to quality of performance in administering the government.

Wasteful and needless expenditures often do not become so until funds are poorly managed. The primary burden of getting a dollar's value for every dollar justifiably appropriated to the purposes of government lies mainly with those who administer, not with those who legislate.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MAHON. Mr. Chairman, I yield myself such time as I may require.

Now, there was a good basis last year for exempting agencies, but let me say to you that there is, in my judgment, based on presently available information, no good basis for exempting agencies this year. Last year, we were cutting the estimate of expenditures by \$6 billion and therefore we did feel some exemptions were desired and these exemptions were proposed. Then, of course, there were additional exemptions which were provided later. Last year, we proposed a cut in the estimate of expenditures, but in title IV of the pending bill, we are not proposing any cut in the estimate of expenditures. So it makes no sense to exempt the Veterans' Administration, or the interest on the national debt, or any other item. It makes no sense to exempt anything in this bill, because we are proposing an expenditure limitation or ceiling at the exact and precise limitations which have been estimated in the revised budget of the administration.

The budget this year ought to be more accurate in many respects than it was in many previous years, because ordinarily a budget is put into shape to a very considerable extent in the fall of the year preceding the year for which it begins, that is, the following January 1. However, we are now operating on an expenditure budget which was refined, redesigned, and reexamined since January 20. It is more up to date and should be more trustworthy. The revised budget of the administration on which this provision is based was submitted only a month ago.

So I hope we will not at this time yield to the temptation of trying to make any exemptions whatever.

THE ARITHMETIC AND MECHANICS OF THE PROPOSED CEILING

Mr. Chairman, let me hasten to add—and I realize this is a dull subject, but it is very important and will become increasingly more important—let me add that we will change this ceiling if we appropriate more money than was estimated for appropriation in the budget. In other words, if we increase appropriations and spending through appropriations, then this will be translated to the ceiling and increase the ceiling. If this year we were to do what we did last year when we reduced the President's appropriation budget by about \$12 billion, that would be translated into an expenditure reduction amount not of \$12 billion but into the amount that would be spent in the forthcoming year, fiscal 1970. That might be half that sum or one-third of that sum or some other percentage.

This ceiling is mandatory; it is inflexible; it is the law of the land from which the executive branch cannot escape. The executive branch will of course have the

authority to make adjustments within various programs and within those programs accommodate to better management and so forth. The administration can come to Congress and say, "Our estimates which we made as to spending last April have proved to be faulty and we would ask you to make certain adjustments to the ceiling." This would then be a matter for Congress to decide upon.

So, if we increase appropriations for various programs, then the budget ceiling will go beyond \$192.9 billion by whatever figure might be mandated by the increase.

Mr. Chairman, so that the RECORD will reflect more precisely how the ceiling would work, I include additional exploratory excerpts from the committee report:

THE ARITHMETIC AND MECHANICS OF THE CEILING

The ceiling begins by legislating a net reduction of \$2,372,000,000 in budget outlays projected for 1970 in the original (January) budget—from \$195.3 billion down to the \$192.9 billion April 15 revised projection of the present administration. But the gross ceiling reduction is \$4,020,000,000; this was offset by \$1.6 billion in the recent budget review by upward "corrections" in several specific projections in the original budget.

The \$4 billion cutback in outlays includes \$1.1 billion in defense, \$1 billion for a modification of the previously proposed \$1.6 billion increase in social security benefits, and \$1.9 billion for programs affecting almost every Federal agency.

In the April 15 review in which the \$4 billion cutback in outlays was projected the administration also proposed gross cutbacks of \$5.5 billion (\$4.2 billion, net after the "correcting" adjustments of \$1.3 billion) in appropriation and other budget obligatory authority requests. \$3 billion of this is in defense and \$2.5 billion in all other areas of the budget. Budget obligatory authority (appropriations, essentially) is the traditional basis on which appropriation and authorization bills are stated and voted on regardless of the year or years in which the funds are to be actually disbursed in the form of budget outlays.

The gross total for new budget authority for 1970 in the January budget is \$210.1 billion, and in the April 15 revision, \$205.9 billion—including so-called permanent budget authority, such as interest, trust funds, etc., which does not actually appear in the annual bills.

The Committee on Appropriations and several other committees have before them for consideration these revised appropriation requests and other budgetary recommendations for fiscal 1970. What Congress does in the bills dealing with these various budget authority proposals plus a handful of other proposals involving outlays but not budget authority basically determines what happens to the \$192.9 billion beginning ceiling in the accompanying bill.

For example, net reductions made through the appropriation bills would translate into net downward adjustments to the \$192.9 billion figure. And in this general connection, some \$38 billion of the appropriation budget requests are first subject to processing through the various annual authorization bills.

In the area of proposed legislation for which the outlay budget includes specific sums, several have the effect of holding the outlay total lower than it otherwise would be. Several, of course, involve additional outlays. For example, if Congress does not enact the proposed postal rate increase, the outlay ceiling, according to the latest estimate available, would be adjusted upward by some \$600 million. This is because postal revenues are counted as offsets to expenditures, not as budget receipts.

If the budget proposal to authorize the Farmers Home Administration to make insured rather than direct operating loans is not enacted, the outlay ceiling, according to the budget, would be adjusted upward by \$292 million.

If the budget proposal for legislation to restrict public assistance medical aid for patients in mental institutions to 120 days is not enacted, the outlay ceiling, according to the budget, would be adjusted upward by \$126 million.

Several legislative proposals designed to diminish budget outlays by the Veterans Administration are priced in the outlay total to save some \$288 million in 1970. Failure of those, according to the budget figures, would be the basis for an equivalent upward adjustment in the ceiling.

These four examples aggregate \$1.3 billion. On the other hand, again for example, if the President's proposal for social security benefit increases is not enacted, the \$600 million (of the original budget amount of \$1.6 billion) in the revised budget outlay figure would not now be needed for that purpose, in which case the outlay ceiling would drop by \$600 million.

As to the mechanics for adjusting the ceiling, timeliness in accommodating government programs to congressional changes is essential to orderly administration. Congress will be processing budgetary recommendations in many different bills, passing through various legislative stages over a period of several months—virtually all after the fiscal year begins. And it seems essential in the interest of consistency and otherwise to center responsibility in one place for at least tentative determination of congressional action impact.

The Director of the Budget is probably in the best position to make such determinations. The monthly reports submitted by the Director under subsection (b) of the ceiling provision can be evaluated currently. They can be checked for consistency and reasonableness with tentative estimates frequently made through the budget "scorekeeping" reports of the Joint Committee on Reduction of Federal Expenditures and with those of the Committees on Appropriations. Amendatory action can be taken if that seems to be necessary in the circumstances.

AUTHORIZATIONS AND APPROPRIATIONS: THE KEYS TO SPENDING CONTROL

Mr. Chairman, for a long time, I fought along with others the so-called Bow amendment fixing a ceiling on expenditures, and I do not apologize for that. But, I have come to the conclusion that an expenditure ceiling can be meaningful, and that it will encourage greater focus of attention by Congress and the country and the press upon spending. But in embracing this idea of an expenditure ceiling as here proposed, I do not want us for any means to delude ourselves. The best means and the most appropriate and effective way to reduce Government spending is to hold the line on authorizations and appropriations. That is a lead pipe cinch method of holding down Government spending. It is the surest and the safest. In a limit on spending in a given fiscal year—and this would limit spending only for the fiscal year, 1 year, which begins on July 1—we do not rescind the money, we do not recapture the authority—we simply say that in fiscal year 1970 you cannot spend more than so much, but the funds which have been appropriated in prior years will remain available for expenditure. So by all means, the best way for us to achieve a reduction in the cost of Government and effective control of Government spending

is to quit authorizing and appropriating so generously.

But, there are reasons other than those which I have stated for supporting an expenditure limitation. Government is growing bigger and more complex.

Now, let me give this figure which may shock some of the public, but which may not shock Members of Congress who are more aware of fiscal complexities.

If we should today appropriate all of the money and grant all of the authority requested by the administration in the pending budget in fiscal 1970 on July 1 the Government would have \$431 billion available for expenditure. But it is not now projected by the administration that more than \$192.9 billion will be spent. So, in this expenditure ceiling for the first time in the history of the Nation we are undertaking to say, "Yes, we fix the annual appropriations, but we are going a step further this year and are going to fix the annual expenditures." While we have previously authorized all the carryover funds involved, we by this limitation fix the overall rate of spending for a given year, namely fiscal year 1970.

This limitation, this ceiling, has been fixed in such a way that it ought to be, it seems to me, palatable to the rank and file of the Members of the Congress. We have drawn the limitation in such a way as to get, we hope, majority support.

Mr. Chairman, on the question of the most effective means of controlling spending, I include an additional excerpt from the report of the committee. It reflects a position long held in the committee:

While there are some grounds for doubt that the outlay (bill-paying) stage of the fiscal process is the most logical or the most effective point at which the Congress should seek to control government spending, an overall ceiling on outlays in a given year has some usefulness as a short-run regulating device, especially when the economic and fiscal situations are under great stress as at present. But there is room for great doubt that such a ceiling can realistically be regarded as an effective long-run control procedure.

As today is the consequence of yesterday, so tomorrow is the consequence of today. Legislative authorizations are the seedbeds of future expenditure growth. Initial authorization of a program or project is the beginning point in the legislative spending process. If the program or project, whatever it may be, is not authorized by the Congress, then no appropriation is in order. But the facts are that virtually every year new programs and projects are authorized, and old programs are often extended and expanded. Seldom are existing programs and activities deauthorized via the basic legislative route. Fiscally, the cumulative result is increasing demands on the Federal Treasury.

In the long range sense as distinguished from any particular fiscal year, too much emphasis is attached to controlling growth of government spending by applying the control at the end of the spending process. It is more logically and effectively applicable at the authorization and appropriation stages.

Appropriations are not in order unless there is first a legislative authorization. No funds can be withdrawn from the Treasury but in consequence of valid authority granted by the Congress to first create an obligation in behalf of the Government. That is the key to the situation. The most consistently accurate barometer to future spending levels is the dimensions of budget authority en-

acted by the Congress to enter into obligations on behalf of the Government.

Authorize something new or enlarge an existing authorization and a request for new obligating authority is almost certain to follow.

Denial of authority to obligate precludes a subsequent expenditure.

Curtail the input of new appropriations (and other forms of obligating authority) and spending will come down.

Grant authority to obligate and the obligation inevitably will follow in due time.

Once the obligation is made and the bill comes due, the check to pay it (the outlay) must also inevitably follow in due time.

FLEXIBILITY OF THE PROPOSED CEILING

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, I direct the gentleman's attention to the report where it says that this will be the first ceiling ever to be placed directly in the hands of the Congress. This is what the committee says in the report.

Mr. MAHON. Yes. It would be the first overall ceiling placed in the hands of the Congress, and Congress can work its will, and what Congress can do today, of course, it can modify tomorrow.

Some have said that the ceiling ought to be inflexible on the Congress. If you make it a mandate on the executive, they ask, why not make it a mandate on the Congress? There is no power on earth to fix a ceiling or a limitation on expenditures on the Congress itself. What Congress can do today it can undo tomorrow.

Mr. EVINS of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Tennessee.

Mr. EVINS of Tennessee. As the distinguished chairman of the Committee on Appropriations has pointed out, and as I understand the matter, we have set a spending ceiling at \$192.9 billion, about \$193 billion, which is exactly the Nixon budget, as a level.

We have set the ceiling at this level, which means spending cannot go beyond this amount, but if Congress takes action to increase the appropriations, by being a flexible ceiling, it goes up, or if the Congress fails to take action which is recommended in the budget it may go up or down, according to what the Congress does. The committee has set the budget at the Nixon level, but what may be the ultimate result will be dependent upon what Congress does in appropriations and in authorizations.

Mr. MAHON. The gentleman is correct. But this is going to be a limitation which is not aimed at the administration itself, as the gentleman will agree.

Mr. EVINS of Tennessee. Certainly.

Mr. MAHON. We have set for the last couple of years limitations of sorts, but they have not been passed this early in the year as this one would be, and they have been limitations predicated on cuts below the budget. Title IV of the pending bill is quite a different matter.

Mr. EVINS of Tennessee. If the gentleman will yield further, we are here setting a flexible limitation at the very outset on the Congress, which can be revised up or down, depending upon the actions of the Congress.

Mr. MAHON. That is correct.

I want to say this in defense of the administration, or of any administration: It is impossible for any administration to predict in January or April precisely what may be spent. It may be that the administration will find that certain adjustments cannot be made depending on the trend of events in the war, or otherwise, which might bring about a requirement for a change.

The administration of course would have the liberty, as it always does, to come before us with a supplemental—and the bill before us today is nothing but a supplemental presented to us by the present administration, the Nixon administration. It is a supplemental, and we inevitably have to have supplementals at times though they must be avoided wherever possible.

Mr. EVINS of Tennessee. Would the gentleman point out further that this is a flexible ceiling—I mean, this is a flexible thing which can be revised up or down, depending upon the actions of the Congress.

UNEXPENDED CARRYOVER BALANCES AND THE DIMENSIONS OF ANNUAL ACTIONS

The gentleman further points out in his report to the unobligated and unexpended carryovers. I believe this is very significant, as found on page 122 of the report. It says:

For example, total unexpended carryover balances at the beginning of fiscal 1970 will approximate \$226 billion—

That is, \$226 billion of money unspent in carryovers from previous actions of the Congress:

Mr. MAHON. This \$226 billion figure may at first glance seem to be perfectly outrageous and a reflection upon the Congress in making available such large sums that will be carried over in the pipeline to the next fiscal year.

But much of this money is in social security funds that have not been expended.

Much of it is in military procurement programs.

Much of it relates to space and atomic energy and such things as I am about to relate in this unexpended category. It ranges over the whole Government, really.

For example, the Federal Deposit Insurance Corporation has about \$3 billion. It is not anticipated that this will be expended, but it is available for expenditure. It is an unobligated carryover.

For example, the Congress passed a bill granting riot insurance and flood insurance, and there are \$500 million—a half billion dollars—involved in this fund. In all probability they would not be expended, but they are within the \$226 billion. I shall elaborate on that question a little further in my remarks.

Mr. EVINS of Tennessee. Would the gentleman say that this is a moderate limitation? Some have thought that it is a very small limitation, and it should go further. Would the gentleman characterize his amendment as a moderate one?

Mr. MAHON. I would so characterize it, and I thank the gentleman. I would say it is a moderate one.

It may be too firm for the Director of

the Bureau of the Budget. I can see why the Director may prefer not to have to live with this amendment. But it will help the Director of the Bureau of the Budget hold the line with the Government agencies and Government departments. If he gets into difficulty that is in any manner unavoidable, he can seek relief from the Congress.

There are also those who say it is meaningless, that it has no teeth, so it must be pretty good since we have opposition from both sides.

Mr. Chairman, under leave granted, I include further exploratory material from the committee report on the matter of carryover balances. And in this connection, I am inserting supplementary statistical material:

UNEXPENDED CARRYOVER BALANCES AND THE DIMENSIONS OF ANNUAL ACTIONS

The proposed ceiling provision, being all-inclusive, covers expenditures in fiscal 1970 from budget authority to be newly granted in this session; expenditures from so-called permanent appropriations that flow automatically from earlier laws; and expenditures from unexpended carryover balances of prior years. Very substantial portions of the \$192.9 billion beginning ceiling figure spring from each of these three general sources of expenditure availability.

For example, total unexpended carryover balances at the beginning of fiscal 1970 will approximate \$226 billion—about \$100 billion in social security and other trust funds and \$126 billion in Federal funds. But some \$77 billion of the \$126 billion of Federal funds will have been obligated for programs across the government but not yet actually paid out. The remaining \$49 billion, not obligated and not expended, is in many accounts across the government; there is a comprehensive and informative special analysis of it in the January budget, Special Analysis G, pp. 78-93.

But of the \$226 billion total beginning carryover, trust and federal funds combined, roughly \$86 billion is projected for expenditure (disbursement, that is) in fiscal 1970, and roughly that amount is thus counted in the \$192.9 billion ceiling figure. The remainder—some \$138 billion after a small lapse amount—becomes part of the total unexpended carryover projected into the following year, fiscal 1971.

Roughly then, it can be seen that only about \$107 billion of the newly projected outlay total for 1970 (\$192.9 billion, less the \$86 billion from carryovers) is estimated to come from the \$205.9 billion new budget authority requested or estimated for that same year of 1970. Funds appropriated in a given year are expended partly in that year and partly in subsequent years because of long lead-times, construction time, and other factors.

To put the relationship of budget authority and outlays in some better focus by way of extreme illustration, if the whole \$205 billion of new budget authority for 1970 failed, the expenditure outlay reduction in 1970, based on the budget, would be only \$107 billion. The remainder would be an expenditure avoided in subsequent years.

But to put the picture in sharper focus, it must be noted that Congress does not annually act on anywhere near the entire new budget authority total. Some of it is in the form of requests and some of it is in the form of estimates. Roughly \$66 billion, net, of the new budget authority total is estimated to go on the books in 1970 automatically—so-called permanent appropriations—under earlier laws, mainly trust funds, interest on the debt, and several others. The other \$139 billion goes through the annual bill process—mostly the appropriation bills—but it involves projected ex-

penditures, as to 1970, of roughly only \$90 billion, more or less which means that Congress, in the various annual bills, normally deals with new budget authority amounts that, in total, relate to less than half of the budget outlays projected for that same year. As noted, more than half of budget outlays in a given year now derive from carryover balances and from new budget authority that goes on the books automatically under various permanent appropriation arrangements enacted over the years.

The size of the unexpended carryover pipeline, of course, depends on what is put in and what is taken out. Addition of more new budget authority than is expended in a year increases the pipeline. During fiscal 1970, based on the recent budget projections, the total unexpended pipeline would increase from \$226 billion to \$237 billion, but all of the increase is more than accounted for in trust fund accumulations of balances. In Federal funds, there is a drop of \$1 billion, from \$126 billion to \$125 billion. Depending on congressional actions, this could drop further.

CONTROLLABLE VERSUS UNCONTROLLABLE EXPENDITURES

All expenditures are, of course, controllable by the Congress. All expenditures are controlled by Congress, because they flow from laws enacted by Congress. But as a very practical matter, not all are subject to effective discretionary control through the normal annual budget and appropriations process.

Very considerable expenditures arise from so-called permanent appropriations that do not pass through the annual appropriation bills. Interest on the debt and trust funds are examples.

Several programs that do pass through the annual bill process involve mandated-type expenditures fixed in basic law, which unless changed through legislation operate as a practical limit on the discretionary power to control them annually. Veterans pensions and public assistance matching grants are examples.

Payments for prior year contracts and obligations falling due cannot effectively be avoided. These run across the whole government.

There are a number of others. The January budget classifies some \$98 billion, or about half of the 1970 outlay budget, as "relatively uncontrollable civilian outlays under present law." The figure for the April 15 budget review under this classification is \$100 billion, meaning that better than half of the outlay budget for the year is not, as a practical matter, subject to the normal discretionary powers of appropriation without changes in the basic laws that more or less ordain them.

Similarly, though the makeup in detail does not exactly correspond, in the \$6 billion cutback provision of the Revenue and Expenditure Control Act last session, Congress exempted from the ceiling and from the cutback, programs involving about half of total outlays, in effect recognizing their relative uncontrollability without changes in the basic laws applicable or other compelling circumstances giving rise to them.

Looking at the matter in terms of increases rather than totals, about 75% of the outlay increase, 1970 over 1969, projected in the January budget was in these so-called relatively uncontrollable items. The proportion applicable to the \$8 billion outlay increase, 1970 over 1969, projected in the new administration's budget review is even greater.

The outlay ceiling proposed by the committee for 1970, while rigid and all-encompassing, does not and cannot of course come to grips with these fundamentals of basic laws. But by covering both controllable and

"uncontrollable" outlays, it will focus on the total, and keep it in focus.

It will tend to force attention on possible

alternatives and substitutions when upward pressures are exerted on the ceiling.

It will keep the hands of Congress on it.

TABLE 8.—BALANCES OF BUDGET AUTHORITY (FROM THE JANUARY 1969 BUDGET FOR FISCAL YEAR 1970)
(In millions of dollars)

Department or other unit	Start 1968		End 1968		End 1969		End 1970

ESTIMATED EXPENDITURES (BUDGET OUTLAYS)
FISCAL YEARS 1969 AND 1970

Mr. Chairman, we have been referring to the beginning ceiling figure of \$192.9 billion representing budget outlays projected by the administration in its budget review of April 15. I include a table based on figures in that review, showing a breakdown by departments and agencies of the \$192.9 billion:

TABLE 8.—BUDGET OUTLAYS, 1969 AND 1970
(In millions of dollars)

Agency	1969 current estimate	1970 revised estimate
Agriculture.....	8,409	7,197
CCC.....	(5,492)	(4,482)
Commerce.....	872	1,079
Defense—military and military assist- ance.....	78,400	77,903

Foreign economic assistance.....	1,925	1,760
Office of Economic Opportunity.....	1,880	1,870
Other agencies.....	5,136	6,538
Allowances for:		
Civilian and military pay increases.....		2,800
Contingencies.....		200
Undistributed intragovernmental trans- actions.....	-5,105	-5,745
Total.....	184,901	192,899

Note: Detail may not add due to rounding.

Mr. RIVERS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the distinguished gentleman from South Carolina (Mr. RIVERS), chairman of the Committee on Armed Services.

MILITARY SPENDING PROGRAMS

Mr. RIVERS. Mr. Chairman, I wonder if the gentleman realizes that the Congress is not acting—but that we are reacting. The gentleman knows, of course, that whenever we get ready to reduce expenditures, everybody looks to the military.

Now you have the terrible situation of the people assigning the worst sort of conduct and motives to the so-called military-industrial complex. I am sure the gentleman knows that on Mr. McNamara's procurements for ships there was a cost overrun and Secretary Packard tells me that it will be an overrun of \$100 million.

This morning and on Thursday we are trying to find out what caused an inaccurate estimate—it is not all overrun—on the C-5A aircraft. There are a number of factors involved. The gentleman knows as well as I do that this Congress has not got the courage to stand up here and stop some of these crazy programs that we have, for instance, the Job Corps and the OEO and a lot of these things we are spending money on all over hell's half acre. But they will go to the military and cut them to smithereens. This is what it is coming to.

We have inaccurate estimates all over the lot in the military and when you superimpose that on the escalation caused by the increased cost of living, our military is going to come up short and we are going to have half a defense.

It would be far better to abolish certain items for the military and come clean with the American people and say, "We do not want you to have the Polaris program—we do not want you to have new bombers—even though the B-52's are 15 years old. We do not want you to modernize your navy yards. We do not want you to have a good merchant marine program. We do not want you to go on with the new fighter needs that were denied us under the McNamara programs. We do not want you to have a moon shot."

This is where these things are coming to. That is the weakness of provisions such as the one to which the gentleman referred. Why do we not cross each bridge at the time we come to it?

Mr. MAHON. That is what we propose to do. We will cross each bridge at the time we come to it as each appropriation bill is before us, or each bill from a legislative committee which mandates certain expenditures is before us. Action on these bills will in effect maintain, or lower, or raise the expenditure ceiling.

Mr. RIVERS. We probably hold longer hearings in our committee than any committee of the Congress. We have a number of subcommittees going now. They are trying their best to save money. The distinguished chairman's committee, in its wisdom, has acted, and I would like to say that if there is anyone for whom I have a higher regard than the chairman of the Appropriations Committee, I have not found him. But let me say this: We cannot approach it in the manner proposed with any degree of accuracy. We cannot have all the programs. I have enumerated unless we have sufficient funds. I am afraid we are going to come up short in our commitments to our own people, and to the security of America and our commitments with whatever other friends we have, if we have any.

I want the gentleman to know that I do not agree with this approach. We should act on each program instead of reacting to the entire budget. The Constitution specifically provides that the one arm of our Government that has the direct responsibility of the Congress is the military. Yet we are neglecting this responsibility by provisions of the sort proposed, and I am afraid it is a mistake.

Mr. MAHON. According to the estimates—and we are, for the time being, accepting the expenditure estimates of the administration—the military will expend about \$78 billion this fiscal year and a similar amount for next year. The full amount so estimated for next year—fiscal 1970—is provided for in the proposed spending ceiling in the bill before us.

If our military people, those with stars on their shoulders and those in civilian capacities, will run the Defense Department in a businesslike and efficient way,

I would think that sums available and in prospect would be adequate. I would hope that the sums are more than adequate.

One of the things that disturbs me is that there have been so many mistakes made by the military. This has tended to generate a lack of confidence. I grant that the problems have been of great magnitude and complexity.

Let me say that I have confidence in the military. I do not have unlimited confidence in their managerial ability.

Mr. RIVERS. I do not know anybody who does.

Mr. MAHON. Let me give an example. I joined in cutting the military budget \$5 billion plus, last year. I am not beholden to any department of this Government. I want to make that clear. I am sure the gentleman from South Carolina shares this attitude completely.

With respect to management, just think of the humiliation we suffered a few days ago when the Navy, through neglect, let a submarine in a Navy shipyard go to the bottom. And what is that going to cost us? \$25 million. Of course, if we are going to let the defense dollar go down the drain in any such irresponsible manner as that, it would not be possible to supply the military with adequate funds.

I would say this: I have confidence in the administration and feel that expenditures in the military area will not be cut without any regard to the welfare of the country. I am aware that the Secretary of Defense served on the Committee on Appropriations of the House and the Defense Subcommittee for many years.

I cannot think of him in a role of an appeaser or a nonspender when it comes to necessary defense expenditures. So I would say, let us take the Pentagon at its word as a starting point on the amount of funds needed. When our hearings on defense programs are completed we can reduce or increase the budget figure and the final figure agreed upon by Congress and enacted into law will determine what can be spent in fiscal 1970.

Now, before I yield to my good and distinguished friend, my able colleague, let me say that I believe in the ABM. I believe in a strong military program. I deplore the low estate in which the military finds itself. I want to see confidence restored in this area. We need to have respect and to have reason to have respect for all departments and branches of Government.

I yield to the gentleman from South Carolina.

Mr. RIVERS. Mr. Chairman, the gentleman gave wings to the very things I was talking about. I do not wear anybody's collar either. I am looking for encomiums, and I do not get them around Washington, as the gentleman knows.

I want to say this, that the military now has reached deplorable conditions. We have 60 percent of our fleet which is not fit to live on or in because someone budgeted too low. The chairman has not heard the last of the results of McNamara's systems analysis crowd. We have not heard the last of that. They are bringing disrespect and derision on military men who have not made a decision

over there since McNamara darkened the doors of the Pentagon. We have deficits coming up day in and day out, day in and day out, over which the military men had no control.

We cannot think we can just put a hard, hidebound ceiling on any kind of restrictions and think we can let each tub sit on its bottom. That is, in my opinion, a mistake.

Mr. MAHON. There are some leaks in Government tubs and we are trying to close some of them.

Mr. RIVERS. I do not deprecate the efforts of the chairman, but I am sure an enlisted man did not pull the seacock on that submarine. It could have been sabotaged.

Mr. MAHON. I do not know who is responsible, but the Navy should find out who is responsible and see that he is adequately disciplined. If they want to gain higher respect, this kind of action must be taken.

Mr. RIVERS. I agree. We must restore responsibility in the military—and then hold them responsible. And let me tell the chairman, our committee is going to investigate that incident and, for whatever it is worth, we are going to report to the Chairman on this.

THE SO-CALLED PEACE DIVIDEND IN FEDERAL FUNDS

Mr. MAHON. Mr. Chairman, I thank the gentleman. The chairman of the Armed Services Committee has made a statement which makes it appropriate at this time for me to discuss a further situation.

Many of the programs and ships and weapons of the military are obsolete or are becoming obsolescent. There is no doubt of that. Large programs are going to be necessary to outfit the Navy and the other services with modern ships, aircraft, and other weapons. Defense spending is not going to toboggan downward when the war ends in Vietnam. There will be reductions but the costs will remain high.

Military spending is going to have to remain high because survival is the first law of nations. It is inescapable that the military programs are going to remain high and we are going to have to support them. That is one of the reasons we want a better job done by the military—by civilians and those in uniform—in order that we may get more for the dollar.

But those who are writing in the papers and saying in their speeches, "Wait until the war is over, and then we will have unlimited resources for all the social programs," are too optimistic. Some seem to think that Secretary Finch will have all the money he wants for education, for health, and the poor, and the Secretary of Housing and Urban Development will have all the money he wants to for housing and related needs.

That is incorrect. They are not going to have all the money they want. There is not enough money in the Nation to meet all these demands.

Besides that, money is not the only answer in defense, and it is not the only answer in our social programs. I think it is a little bit cruel for us to make statements which would lead the cities and

the mayors and the poor and others to believe that when the war is over we will have unlimited funds for all purposes which may be desired. We just will not have that kind of money, and let us tell the people that now.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Iowa.

SUPPLEMENTALS FOR INTEREST SUBSIDY PROGRAMS

Mr. SMITH of Iowa. Mr. Chairman, the gentleman said he does not want any exceptions to his limitations provision but, in fact, by not including some of the practices or programs under the limitation, there are exceptions. For example, there is no limit on the amount that they can obligate for interest subsidies. And now it is proposed, instead of having current expenditures within the fiscal year for a direct loan program and grants for college facilities, they will have a program to pay only \$11 million this year and obligate us for \$440 million, which does not show up in this year's budget. So in effect the limitation is no limitation so long as that is permitted, is it?

Mr. MAHON. I wish the gentleman would let his own statement stand as he made it. I am not quite sure of the import of the statement.

Mr. SMITH of Iowa. But it does not limit them from obligating us to pay for the next 35 years under these programs.

Mr. MAHON. Oh, I see what the gentleman means and his point is well taken.

I call the attention of the gentleman from North Carolina (Mr. JONAS) to this matter. Under the housing programs there is a provision in the bill providing authority for \$80 million for subsidies for 1 year. We provide a certain amount for 1 year, but when we do this we obligate ourselves for 40 years.

I believe the gentleman from North Carolina has tabulated the total amount of money in these housing programs that will be mandated as a result of this bill if we pass it. Will the gentleman give that figure?

Mr. JONAS. If the gentlemen will yield, it will be 40 times 80, and that is \$3.2 billion we will be obligating the taxpayers to pay over the 40-year period.

I remind the chairman that already in this fiscal year, we have provided \$50 million for those two programs, so we have to add that to the \$3.2 billion. You will find in these two programs, sections 235 and 236 of the housing law as amended, we will be obligating the taxpayers of this country to the amount of \$5.2 billion over the 40-year period.

Mr. MAHON. About \$5.2 billion. It looks very minimal when one looks at the bill, but when one looks at the costs which we are obligated to pay over 40 years it is about \$5.2 billion.

Mr. JONAS. Mr. Chairman, will the gentleman yield further?

Mr. MAHON. I yield.

Mr. JONAS. This has been said, but needs to be emphasized. This spending limitation does not purport to remain in effect beyond next year. It is only for 1 year; is that not true?

Mr. MAHON. It is only for 1 year. It

might be for only 30 days, if we change it, but this is not proposed for more than 1 year. Next year we can do something similar with respect to fiscal 1971 if we so determine.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Illinois.

Mr. MICHEL. If I might make a further point with respect to the institutions of higher learning and their construction needs, there is \$3.9 million in this bill for interest subsidy, which will construct \$145 million worth of college facilities. If you do not want that, then just wipe out the interest subsidy. It all depends on how much we appropriate in this bill for the interest subsidy, as to where that ceiling goes.

As the gentleman from North Carolina says, this is an expenditure ceiling for just the 1 year, not for 30 or 40 years.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. This illustrates my point very well. If they get the \$3.9 million interest subsidy, they will withhold the \$150 million already appropriated for direct loans. That \$150 million would be under the limitation, whereas the \$3.9 million is all of the \$145 million that shows up in the fiscal year. This is a big loophole.

Mr. MICHEL. It is not a permanent loophole if you choose to use that word. It is effective only for this year.

What we are saying is that since we are in such a bind, instead of a direct appropriation of \$145 million for direct loans let us do it by the interest subsidy route, and finance the balance through the private sector.

SCOPE OF PROPOSED EXPENDITURE CEILING FOR 1970

Mr. DE LA GARZA. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Texas.

Mr. DE LA GARZA. I should like to commend the gentleman from Texas for a most interesting and enlightening statement. I should like to ask a question on a problem I have dealing with appropriations.

An item in my district which was necessary was not included in the Nixon budget. Under this limitation would it preclude the Nixon administration from amending the budget and providing an item that is not in the present budget?

Mr. MAHON. There is nothing in this limitation that would preclude the Nixon administration from amending the budget and placing the item in it. There is nothing in this limitation which would preclude Congress from providing the funds for the unbudgeted items. So there is nothing inflexible insofar as the gentleman's problem is concerned in the resolution now before us.

Mr. DE LA GARZA. Therefore, if I understand the gentleman correctly, the limitation goes only to the amount and the Congress can act independently or the executive can revise its budget. Is that what the gentleman stated?

Mr. MAHON. I think the point is clear.

Mr. DE LA GARZA. I thank the gentleman.

Mr. ROGERS of Florida. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Florida.

Mr. ROGERS of Florida. I do not think this is such a novel approach. The Congress considered it before and in effect we have done it before.

Mr. MAHON. I believe we have never done it before, I will say to the gentleman. Not quite.

Mr. ROGERS of Florida. I think we have put a limitation in effect before when we put a limitation, for instance, on the national debt. In effect, we said that there was a limitation on the borrowing budget.

The gentleman will recall that the Hoover Commission recommended and this Congress debated the proposal that limitations on spending be placed upon each governmental department. In other words, taking the overall limitation which you are now proposing and breaking it down. The reason for the spending limitation was that the Congress could then control the expenditure budget, which we do not now control. All we can do here is appropriate the money, and the executive controls the rate of expenditure. The Hoover Commission's proposal, which you are proposing to carry out now, was to put a limitation on what the Congress itself might control. It does not mean that you cannot vary that figure if conditions change which call for it. Congress can vary it. But it is a restraint on additional spending. It also advises the Congress, the way it was originally proposed, and if there were slippages, we could find out why there were, and if there were overages proposed, we could find out why. So it is not so novel.

Mr. MAHON. The gentleman in effect is in favor of the limitation?

Mr. ROGERS of Florida. I certainly am. And I think it should be done even more. We should do it on each department. I wish the chairman had agreed some years ago, along with some other members of the Committee on Appropriations, to place expenditure limitations on Government departments because we could have been doing it all these years and prevented a great deal of the wild spending that we have had.

I thank the gentleman for yielding.

Mr. MAHON. My friend is entitled to his views. The ceiling should help but holding down authorizations and appropriations is the surest way to cut spending. No one can predict just what Congress will do, but I hope that the proposal here will be well supported by the House and by the other body.

COMPARISON OF TITLE IV OF PENDING BILL WITH THE LEGISLATIVE BUDGET PROPOSAL IN THE 1946 REORGANIZATION ACT

Mr. Chairman, in elaboration, may I add that the discussion recalls the efforts of the Congress, some 22 years ago, to enact a legislative budget, an important and really key feature of which was to put a ceiling on Government spending. I think it might be useful to insert an analysis comparing that effort with title IV of the pending bill:

By proposing a ceiling on the aggregate of government spending for fiscal 1970, title IV of the pending bill would secure something of what the framers of the legislative budget plan in the 1946 Reorganization Act had in mind, but which Congress in fact never accomplished. It would be useful to recall briefly what that plan was about, refer to the experiences in attempting to carry it out, and make some note of the similarities and dissimilarities between the provisions of the 1946 plan and title IV of the pending bill.

THE 1946 LEGISLATIVE BUDGET PLAN

The legislative budget plan was spelled out in the 1946 law. It is now a part of Rule XLII of the Rules of the House, and reads as follows:

"(a) The Committee on Ways and Means and the Committee on Appropriations of the House of Representatives, and the Committee on Finance and the Committee on Appropriations of the Senate, or duly authorized subcommittees thereof, are authorized and directed to meet jointly at the beginning of each regular session of Congress and after study and consultation, giving due consideration to the budget recommendations of the President, report to their respective Houses a legislative budget for the ensuing fiscal year, including the estimated over-all Federal receipts and expenditures for such year. Such report shall contain a recommendation for the maximum amount to be appropriated for expenditure in such year which shall include such an amount to be reserved for deficiencies as may be deemed necessary by such committees. If the estimated receipts exceed the estimated expenditures, such report shall contain a recommendation for a reduction in the public debt. Such report shall be made by February 15.

"(b) The report shall be accompanied by a concurrent resolution adopting such budget, and fixing the maximum amount to be appropriated for expenditure in such year. If the estimated expenditures exceed the estimated receipts, the concurrent resolution shall include a section substantially as follows: 'That it is the sense of the Congress that the public debt shall be increased in an amount equal to the amount by which the estimated expenditures for the ensuing fiscal year exceed the estimated receipts, such amount being \$_____.'

In other words, the joint committee, after study of the budget and consultations otherwise, was to bring in, early in the session, a concurrent resolution proposing an expression of the judgment of the Congress as to the probable budget revenues for the coming fiscal year and fixing a maximum budget expenditure goal for the year.

There was nothing mandatory or compelling about any ceiling so fixed upon.

It was not an enactment requiring approval of the President.

It was to be not a binding statute but only a target for the guidance of the Congress in processing the spending and revenue bills.

It was not directed to the Executive spending agencies, but only to the Congress. In its individual actions in the appropriation and the other spending bills, and on the revenue side, Congress could either hew to the disciplines implicitly suggested by the ceiling thus set, or it could ignore the ceiling.

In the first effort—in 1947—to put the plan into effect, both Houses adopted a concurrent resolution. The House proposed an overall cut of \$6 billion from projected fiscal 1948 budget expenditures. The Senate proposed a \$4.5 billion reduction. The conferees did not resolve the differences and the resolution died in conference. Thus no target ceiling was set.

The next year, Congress, on February 27, 1948, did adopt such a concurrent resolution with respect to fiscal 1949, setting—for itself—the goal of a \$2.5 billion reduction in budgeted expenditures by expressing the

judgment, "based upon presently available information", that " * * * expenditures during such fiscal year shall not exceed 37.2 billion dollars * * *".

Actual budget expenditures in fiscal 1949 were \$40 billion; they exceeded the target by \$2.8 billion, in effect wiping out the reduction goal of \$2.5 billion. They exceeded the original budget projection of \$39.7 billion by some \$300 million.

In 1949, a move was made to set the date for action on the legislative budget for fiscal 1950 back from February 15 to May 1. Nothing further happened. Nothing further has been done in direct response to the legislative budget plan.

Many post-mortems have been rendered on the experiment. It was said that the joint committee of 102 members was unwieldy.

It was said that the time limit of February 15 was too short.

It was said that to name an expenditure reduction total in advance in the manner proposed approximated a court rendering a verdict without evidence. It was said that to vote for a blanket reduction in advance of hearings and consideration of the individual budget proposals was a vote to cut without knowing what is to be cut, how much is to be cut, or where the cut is to be made.

It was said that no legislative budget, logically premised, could precede a detailed study of the estimate.

The majority report accompanying the first concurrent resolution submitted to the House in February, 1947, suggesting the goal of a \$6 billion cutback, had this acknowledgment:

"Of course, if the accompanying resolution be adopted there is no commitment as to any reduction in specific items contained in the budget. The resolution expresses an overall objective and its realization depends entirely upon the final action of the Congress upon budget estimates, individually and collectively."

THE 1946 PLAN AND TITLE IV—SIMILARITIES AND DISSIMILARITIES

There are a number of basic differences between the 1946 plan and title IV. There are also some similarities.

Of course, title IV does not deal with the revenue side. The 1946 plan did. But Congress knows what the revenue estimates of the Executive Branch are—although it should be noted that an up-dating of the January figures are needed; the April 15 budget review of President Nixon dealt only with appropriations and spending, not with revenues. The budget surplus of \$5.8 billion projected by President Nixon is subject to revision on that account.

Perhaps the most basic difference between title IV and the spending ceiling in the legislative budget resolutions of 1947 and 1948 is that title IV would legislate a rigid ceiling into law, whereas the earlier resolutions merely sought to set a goal against which Congress would work in its actions on the various spending bills.

The earlier "ceiling" was not really a ceiling because it was not enacted as a law and was not binding on either Congress or the Executive. Title IV would set a binding statutory ceiling. The ceiling figure, insofar as congressional decision is concerned, is a beginning, not an ending figure. But whatever figure Congress would wind up setting, that would become a maximum on the Executive Branch, changeable only by subsequent action of Congress. That was not the case in the 1947 and 1948 efforts.

Unlike the earlier efforts which sought to declare at the beginning that the spending budget "should" be cut by not less than a pre-determined, arbitrary amount but which was cast in such a way as not to ensure it, title IV would not impose any reduction in advance—either as a "goal" for Congress or as a "ceiling" that would leave to the

Executive the allocation of an arbitrary cut to specific agencies and programs.

Unlike King Canute who commanded the tide not to come in but was powerless to ensure it, title IV, unlike the earlier efforts "commands" that expenditures shall not exceed a certain sum and carries the mechanism to ensure the result. Of course, Congress can change tomorrow what it decides today, but that power, as to expenditures, is reserved to Congress by title IV.

Unlike the earlier effort, nothing in title IV calls on Congress to vote for a reduction—either as a "goal" or a "ceiling"—below the President's announced spending budget in advance of individual item consideration. The mechanism is there to adjust the initial ceiling figure—up or down—to comport with what Congress decides on each spending bill and proposition.

Not unlike what the majority report—quoted above—said about final results under the 1947 resolution "goal", what happens under title IV (which adopts the budget figure as a starting point)—... "depends entirely upon the final action of the Congress upon budget estimates, individually and collectively".

Like the words used in both the 1947 and 1948 resolutions, title IV is "based upon presently available information". The legislative budget effort was based on the initial budget. Title IV is also based on the initial projection of the new administration.

Like the earlier efforts, title IV encompasses expenditures from unexpended carryover balances of previous appropriations as well as expenditures from appropriations to be newly enacted in this session for fiscal 1970.

And unlike the noble but ineffective and impractical plan of 1946, title IV is a proposal logically based and practical of operation. If adopted and adhered to, it will not only focus on the total of government expenditures, but will keep the hands of Congress on the total. And the potential for retrenchment in expenditures is considerable.

CONTRIBUTIONS OF MILITARY PROGRAMS AND LEADERS

Now, Mr. Chairman, I wish to return to a matter I mentioned earlier, which is the business of military spending.

As I said in the colloquy with the gentleman from South Carolina (Mr. RIVERS), I believe in military strength. I believe we can negotiate with the Soviet Union better if we have military strength. I believe our main opponent in the world is not Korea or North Vietnam but the Soviet Union and Red China. I think we have to keep ourselves militarily strong. I do not think we ought to permit those to succeed who are trying to destroy the image of our civilian and uniformed military personnel. It is true our military establishments have prevented worrisome war III, which was and is the great catastrophic threat that has confronted us since World War II. Our military have won their wars insofar as they were able to do so under all of the facts and circumstances which pertained.

They have reflected great credit upon this country and they have also shown some considerable managerial ability.

It was Admiral Raborn who headed up the Polaris program. In this Polaris program he demonstrated leadership that was incomparable.

It was Admiral Rickover who headed up the development of the atomic submarine program. He has performed a magnificent job in that field.

It was Gen. Ben Schriever who headed

up the intercontinental ballistic missiles program of the Air Force.

Many good jobs have been done. There are countless examples of success by our military and civilian leaders. We cannot look only at shortcomings. We must look at the successes also, and we have reason to be proud.

Mr. Chairman, I have taken more time than I had anticipated but I believe it has given the members of the committee an opportunity to propound certain questions about programs in which they are interested.

UNEXPENDED CARRYOVER BALANCES

Mr. EVINS of Tennessee. Mr. Chairman, will the gentleman yield.

Mr. MAHON. I yield to the gentleman from Tennessee.

Mr. EVINS of Tennessee. I alluded earlier to unexpended carryover balances. The report reflects \$226 billion. I will ask if it is not correct that this \$226 billion unexpended carryover balance, if added to the Nixon budget request for new spending authority of \$205 billion, would not make a total of \$431 billion available for expenditure if the Nixon budget were approved as submitted?

Mr. MAHON. This is right. This \$431 billion would be, technically, available for expenditure in 1970. If we adopted the appropriation or obligational budget proposed by the President, there would be about \$431 billion available in fiscal 1970. But this requires a lot of understanding and analysis before it is intelligible to the average citizen. It is a very complex matter.

Mr. EVINS of Tennessee. If the gentleman will yield further, it is a very flexible budget and it is not really putting a crimp on the Bureau of the Budget the \$192.9 billion spending figure is the full amount projected by the Nixon budget review.

Mr. MAHON. I thank the gentleman for his contribution.

(Mr. BOW (at the request of Mr. JONAS) was given permission to extend his remarks at this point in the RECORD.)

Mr. BOW. Mr. Chairman, H.R. 11400 is the usual supplemental appropriation bill which we have each spring for those items not provided for in our regular appropriations bills approved during the preceding calendar year.

Overall, I think this is a good bill. The committee considered appropriation requests totaling \$4.3 billion, and approved appropriations of \$3.8 billion, thus we cut almost \$600 million below the requested amount. Moreover, the \$4.3 billion request was reduced some \$250 million by the Nixon administration under the amounts requested in the Johnson budget before we considered the request.

While I shall not repeat the detail presented by our distinguished chairman, the gentleman from Texas (Mr. MAHON), I do want to point out that of the \$3.8 billion provided \$1.2 billion is for military operations in Southeast Asia; \$1.2 billion is for pay increases resulting from the Pay Act of last year; and the balance of \$1.4 billion is for a variety of programs throughout the Government service.

Significant among the amounts provided are the funds requested by the ad-

ministration to fight crime throughout the United States. This effort to cope with organized crime should be welcomed by all law-abiding citizens. It is my hope that substantial inroads can be made by the Department of Justice and other investigatory and regulatory agencies in coping with the criminal problems which face us.

Although each of the individual chapters in the bill will be handled by the respective ranking Republican Members, I do want to point out that this bill provides for a spending limitation in fiscal 1970 which will restrict budget expenditures to \$192.9 billion. This \$192.9 billion figure is some \$4 billion below the adjusted amounts projected by the Johnson budget.

As we all know, President Nixon had the departments and agencies conduct an extensive review of their financial needs earlier this year, and the President was able to reduce projected expenditures by the aforementioned \$4 billion. As all members of the Committee know, for more than 3½ years I have offered the so-called Bow expenditure limitation amendment on most appropriation bills, and while it was adopted on a number of occasions by the House, in some instances unanimously, it was never approved by the Senate on an individual appropriation bill. However, last year such limitation was included in the Revenue and Expenditure Control Act of 1968 and it has had the effect of reducing projected Federal spending in the current fiscal year by some \$6 billion.

The provision before us which would limit budget expenditures in fiscal 1970 to \$192.9 billion is much more rigid than was the expenditure limitation of last year because a number of budget expenditure items were exempted from the provisions of the limitation last year. Expenditures in the current fiscal year for the war in Vietnam, expenditures for interest on the public debt, those for veterans benefits and compensation, and so forth, were excluded from the limit and their exemption had the effect of increasing spending for exempted programs and in the so-called uncontrollable areas by approximately \$6 billion above original estimates.

For example, interest on the public debt is up \$1.1 billion above the original estimate of a year ago and farm price support outlays have risen \$1.6 billion above the original estimate of last year.

Of the \$192.9 billion of proposed spending for fiscal 1970, some \$106.3 billion is in the relatively uncontrollable category. That includes \$81.1 billion for uncontrollable civilian programs and \$25.2 billion for special Southeast Asia support. Of the \$81.1 billion for relatively uncontrollable civilian programs \$49 billion is for outlays in the social security and public assistance programs.

Thus it seems to me that the administration will have serious difficulty holding expenditures in fiscal 1970 at \$192.9 billion since there are no exemptions for the uncontrollables such as the war in Vietnam, interest on the public debt, and so forth.

While it is true that expenditures may rise above or fall below the \$192.9 bil-

lion ceiling depending upon action or inaction by Congress on requests for appropriations, the ceiling is indeed rigid and leaves little leeway for unexpected changes in budget outlays.

As the ceiling is written in the bill it provides the following:

That whenever action, or inaction, by the Congress on requests for appropriations and other budgetary proposals varies from the President's recommendation thereon, the Director of the Bureau of the Budget shall report to the President and to the Congress his estimate of the effect of such action or inaction on expenditures and net lending, and the limitation set forth herein shall be correspondingly adjusted.

If, for example, Congress fails to approve the postal rate increase in the amount of some \$600 million, budget expenditures will rise by that amount since postal receipts are treated as offsets against spending. Similarly, the \$192.9 billion ceiling will rise by \$600 million since the postal rate proposal is accounted for in the expenditure total. But, it also follows that where other uncontrollable expenditures exceed current budget estimates, then expenditures for controllable programs would have to be cut below current estimates.

Mr. Chairman, I think this is a good bill in terms of the reductions which we have made in obligatory authority, and I urge favorable action by the House on it. I am somewhat distressed, however, by the rigid ceiling on spending since history clearly shows a wide variation between actual expenditures and those projected in a budget document some 18 months before the close of a given fiscal year.

Mr. JONAS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, we have just listened to 50 minutes of what I believe to be as interesting a discussion of budget problems that I have ever heard in this Chamber. The gentleman from Texas has handled this subject in a masterful way and in my opinion has covered it adequately. Actually, I see no real reason why I should extend the discussion, because I doubt if I can add anything that he has not already covered.

However, there are a few points that I would like to make primarily by way of emphasizing what the gentleman from Texas has said. Actually, this bill contains four separate titles. They will be discussed, undoubtedly, by the chairmen of the various subcommittees that handle those topics and by the ranking minority members who work with them.

In summary, it can be said that in this supplemental bill the committee considered budget requests amounting to \$4.364 billion, reduced that total request by \$580,794,190, and recommend to the House a bill providing for \$3,783,212,766, a reduction of 13 percent.

Mr. Chairman, it is not unusual to hear remarks to the effect that the House Committee on Appropriations marched up the hill last year and cut the budget by \$14 billion and now it is marching down the same hill and restoring nearly \$4 billion of that cut. But, as the chairman has pointed out, only about 1 percent of the funds contained in this bill amount to restora-

tion of funds that were eliminated in the regular bills last year.

The remaining part of the bill covers mandatory increases that have been made necessary because of action taken by the Congress subsequent to the enactment of the appropriation bills last year.

I would like to discuss briefly the title of the bill which covers independent offices, and with particular reference to the Department of Housing and Urban Development, because that subject was raised in the colloquy between the gentleman from Texas and a member of the committee.

It is customary to read in the press that Congress has been very remiss in looking after the problems of the cities; that we have neglected them and that we have spent a lot of money on farm programs and allowed the cities to grow up in slums and what-not. I believe at times such as these that it is appropriate to remind those who read the RECORD, and who report on these deliberations—because it is not necessary to remind the Members of the House, because I am sure they are all familiar with the facts—but to those who are not familiar with the facts, I believe they need to be reminded occasionally that Congress has been pretty generous in spending the taxpayers' money on urban problems.

For example, we have been hearing a lot this afternoon about unexpended balances; and the budget does reflect that there will be on hand at the end of 1969 \$226 billion in unexpended funds. But I do not believe it has been mentioned—and this is the most significant part of that figure—that \$139,238,000,000 of that total is not even obligated. The total of \$226 billion includes unspent and unobligated funds, but there is approximately \$140 billion in the hands of the executive branch of the Government in previously appropriated funds which have not even been obligated, or will not be obligated at the end of fiscal 1969.

The Department of Housing and Urban Development has on hand—or will have at the end of this year—\$20 billion of previously appropriated money which has not been spent. Some of it has been obligated, but it will have \$13.5 billion of unobligated funds at the end of this year.

We have appropriated to that Department nearly \$1 billion since 1967—\$948 million, to be exact, for the new model cities program, and very little of it has been spent. They announced nine grants a few months ago, and over the last week-end three more were announced.

I do not know what causes the delay. I know it took the previous Secretary of Housing and Urban Development 7 months after he had all of the plans in to even select the first group of cities.

So I do not believe Congress can be justly charged with any lack of a sense of urgency about these problems. I believe much of the delay can be attributed to paper shuffling, foot dragging and bureaucracy in the department.

Let me tell you in brief capsule form some of the programs Congress has funded for the aid of cities.

Urban renewal is one of the important

ones. Do you know that through 1969 the Congress has provided HUD and its predecessor with \$4.6 billion for urban renewal? Through 1969 the Congress has provided nearly \$3 billion public housing subsidies? Let me show you how the cost of the subsidy for public housing is increasing as the years go by.

The total was \$208 million in 1965.

It went up to \$241 million in 1966.

It went to \$261 million in 1967.

Then to \$295 million in 1968.

It went to \$350 million, plus a \$16 million supplemental or to \$366 million in 1969.

The 1970 budget calls for \$473 million.

New public housing starts are scheduled at 130,000 in 1970.

We have the rent supplement program.

We have the homeownership program, and we have the rental subsidy program.

We have the housing for the elderly and the rehabilitation program.

We have the below-market interest program and we have the community facilities program; the open-space land programs.

You name them—there are about 70 different programs in the Department of Housing and Urban Development being funded by the Congress from funds extracted from all of the taxpayers of the United States—70 different programs operated by one Department of the Government, in various aid to the cities.

Yet we are accused of doing nothing.

The truth of the matter is that we are spending about \$30 billion a year on urban problems.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. JONAS. Mr. Chairman, I yield myself 5 additional minutes.

Mr. Chairman, in a colloquy with the chairman earlier, I responded to the question as to what brandnew programs we are funding in this supplemental and what they will cost—and I refer now to the programs under section 235, that is the homeownership program, a program under which the Government will subsidize the interest for a homeowner who wishes to buy a house and cannot pay the interest charges.

The subsidy will amount to the interest which exceeds 1 percent. So if the current interest rate is 7½ percent, the Government will subsidize it at no more than 6½ percent.

We put in the regular bill last year \$25 million in contract authority for that program, and we are including in the supplemental an additional \$40 million in contract authority. That is \$65 million that is being voted this fiscal year for this new program which is just getting under way. That contract authority simply means that we give the department authority to commit the Government to spend \$65 million a year on homeownership interest subsidies for 40 years—or \$2.6 billion.

There is a companion program under section 236, known as the rental housing assistance program, which carried the same figure of \$25 million in the regular bill and another \$40 million in this supplemental. So under these two sections, these two new programs, in addition to public housing and in addi-

tion to urban area and in addition to community facilities and in addition to all of these other programs—here are two additional programs that are going to cost—even if we do not ever give them another dime in future years—that are going to cost the taxpayers \$5.2 billion.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the chairman of the committee.

Mr. MAHON. The gentleman is pursuing a very interesting aspect of Federal spending. I hope that he will place in the RECORD in connection with his remarks, if the figures have been assembled—and I know the gentleman's subcommittee has asked for them—the continuing costs that are mandated by previous actions on all these various housing-type programs, rent supplements, and so forth.

The reason I make this request is that there are those who feel that Congress is losing control of the purse. I think we are not losing control of the purse at all. When we appropriate money, we expect it to be spent for the programs which we have endorsed. In the past we have not tried to fix a rate of expenditure of the funds which we have provided for various programs except to a limited degree, which we discussed earlier. But if you approve a series of long-term programs and you grant the first down payment on a 40-year program, then for 40 years the Government is committed to that particular expenditure, because it is fixed by an action of the Congress. It is done by Congress. It is not a loss of control by Congress in the beginning, but we lock just that much more into the fixed and subsequently uncontrollable area of expenditure.

I would like to have the gentleman's views on that matter.

Mr. JONAS. I certainly agree with the chairman, and I believe he would agree with me that we ought to begin giving closer scrutiny to requests for contract authority. That is where the process begins. We cannot keep up with what is going on unless, as we grant contract authority, we know how long that authority is to extend and the total amount that will be involved, because when we grant contract authority, what we do is to pile up mandatory appropriations over the period of the contract. Some of those contracts go for 35 years, most of them for 40 years. What we are doing here, in funding sections 235 and 236, is a clear example of the mistake we make when we talk about appropriating \$80 million when the cost of the program is \$3.2 billion.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from Iowa.

Mr. GROSS. Between the statements of the distinguished chairman of the committee and the distinguished gentleman from North Carolina, we are almost drowned in figures concerning this bill, and it is proper that the chairman and the gentleman from North Carolina give us the figures contained in this bill. But let me see if I can get a small-sized handle on this big spending proposal in this way: This bill provides for

a ceiling of \$192,900,000,000, is that correct?

Mr. JONAS. That is correct.

Mr. GROSS. What are the total estimated expenditures for this fiscal year? In other words, this bill would fix a ceiling of \$192.9 billion for fiscal 1970. What will be the amount spent in this fiscal year which ends on June 30?

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the chairman of our committee.

Mr. MAHON. The expenditure for this year will be about \$185 billion. So, under the administration's expenditure projection, expenditures would go up by \$8 billion, 1970 over 1969, and appropriations would go up by about \$10 billion.

Mr. GROSS. The gentleman refers to the \$192.9 billion. Does that include the expenditures that he is giving the House now for the present fiscal year? Does that include the \$3.8 billion in this supplemental?

Mr. MAHON. Yes; the \$3.8 billion is all within these figures.

Mr. GROSS. They definitely include the \$3.8 billion in this supplemental?

Mr. MAHON. The gentleman is correct.

Mr. JONAS. Mr. Chairman, I am glad the gentleman from Iowa made that point, because I did not want to forget to remind the Committee that if we adopt the recommendations of our committee with respect to the spending limitation, that will not be the end. We are going to have to work hard on every single appropriation bill to make reductions, because otherwise any reductions that are made will have to be made by the executive branch of the Government. There are Members of this body who do not want to give him the discretion or authority to decide where cuts shall be made. So we reserve the right, if we do our duty and live up to our responsibility and do not abdicate to the President the authority to make these cuts, to make the cuts in subsequent appropriation bills for fiscal year 1970 as they come before the House for adoption.

We cannot just adopt this spending limitation and then sit back and rubberstamp all the appropriation bills, and we do not intend to do it, but we have to have some support on this floor.

I have already heard rumors that efforts are going to be made to increase the Nixon budget. While the majority leader in the other body is making statements that spending should be reduced \$10 billion below the Nixon budget. And, there are people on this side of the Capitol who are saying already that the spending cuts are too deep. I think it is true, as it has been in all but 3 of the last 14 years, that spending has been underestimated by whoever was in the White House, and I think spending this year in the 1970 budget is underestimated. I am sure it is underestimated in the interest on the national debt and in some other areas also.

I agree with the chairman that this is not going to be any sweet pill for the administration to swallow. It is something that the administration would like to avoid, I am sure. I certainly would not

want to have to live under this limitation if I were the Executive or if I were his Director of the Bureau of the Budget, but they understand full well that they have the responsibility of trying their dead-level best to live up to these spending limitations, and they are going to have to live up to them unless Congress should unwisely I think exceed the budget requests on some appropriation bills.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding. I do so merely to make the point that I agree again with the gentleman from Texas (Mr. MAHON) and the gentleman from North Carolina (Mr. JONAS) that we cannot emphasize too strongly the necessity for watching the authorization bills as they come in.

In that regard, I am not aware of a single authorization bill that has been approved so far in this session of Congress that has not carried an increase in spending. Is the gentleman aware of an authorization bill that has not been increased?

Mr. JONAS. I am aware of the fact that one adopted on the floor of this House a few days ago was substantially above the budget.

Mr. GROSS. I do not know of a single one that has not provided for an increased outlay of money.

Mr. JONAS. The gentleman from Iowa is correct. That is the first place to start. The second place to start is within the Appropriations Committee, and I think we are going to bring some substantial cuts here for the consideration of the House, and we are going to ask for the Members' cooperation as we undertake to make some substantial reductions this year.

Mr. Chairman, I yield 10 minutes to the gentleman from California (Mr. LIPSCOMB).

Mr. LIPSCOMB. Mr. Chairman, the need for supplemental appropriations for the Department of Defense for fiscal year 1969 has been recognized as needed and required for many months.

The Committee on Appropriations in their report dated July 19, 1968, No. 1735 on the Department of Defense appropriation bill for fiscal year 1969, discussed the budgetary effect of the war in Vietnam and the possibility of added funds. The report stated:

It is probable that the funds provided will not be entirely adequate through the end of the current fiscal year and that a supplemental request will be made in the next session of Congress. This has been the case in the past several years.

The committee in their report also informed the House that funds were not included for military or civilian pay increases which became effective July 1, 1968. The committee report when discussing other fiscal considerations stated:

In accordance with longstanding custom, this bill does not include funds for the military and civilian pay increase for fiscal year 1969, which became effective this month. There will be, as has been the case in the past, a supplemental estimate presented to the next session of Congress covering such costs government-wide.

On September 11, 1968, when the fiscal year 1969 bill was before the House of Representatives, I remarked on the need for added appropriations as follows:

It should also be noted that the Department of Defense will require additional fiscal year 1969 funds in order to meet present requirements, particularly in Southeast Asia. A supplemental request will be required. This has been the case in the past several years. Known increases already indicate consumption of certain specific ammunition items has greatly increased. Force deployments already approved are in excess of those upon which the budget was based. If the war continues at the present rate of expenditure of material, other costs will rise. The military and civilian pay increases which went into effect July 1, 1968, are not included in the budget now before the House.

The additional new obligational authority recommended in this second supplemental appropriation bill for fiscal year 1969, H.R. 11400, now before the House, for the Department of Defense, in titles I, II, and III is a net total of \$2,312,068,000.

These additional funds are required to support United States and our allies military operations in Southeast Asia. Funds are included for the pay of military personnel, for operation and maintenance, and for procurement of items to replace combat losses. The total request also includes funds for military and civilian pay increases already implemented under provisions of previously enacted laws and mandatory increases in military retired pay.

The supplemental budget estimates for fiscal year 1969 for the Department of Defense as proposed and transmitted to the Congress by President Johnson, January 17, 1969 totaled \$3,011,900,000. A reassessment by President Nixon's administration was completed in April and the revised estimate to Congress totaled \$2,871,200,000 a reduction of \$140,700,000. The Appropriations Subcommittee on the Department of Defense after devoting considerable time to analyzing the request, recommended a further reduction of \$559,132,000. The \$2,312,068,000 total recommended in this bill represents a total decrease of \$699,832,000 below the January 17, 1969 estimate.

For title I the revised estimates for military operations in Southeast Asia totaled \$1,496,900,000. The committee reduced this amount by \$262,900,000 and recommends appropriations totaling \$1,234,000,000.

In title II the committee recommends appropriations totaling \$226,050,000, a reduction of \$23,632,000 below the revised request of \$249,682,000. The largest part of the funds requested in this title, \$175,000,000, is for "Retired pay, military." The requirement for additional funds results from increased benefits paid in accordance with cost of living allowances previously authorized by law.

The balance of the appropriations in title II is funding for increased per diem costs for reservists in travel status based on a new law, Public Law 90-168, premium pay and employee benefits for National Guard technicians, depot overhaul of Guard equipment and aircraft, and funds for training and other operational costs.

Under title III there is recommended

\$852,018,000 for military and civilian pay increases. This is a reduction of \$272,600,000 below the revised request. The subcommittee reduced all requests for funds to meet increased pay costs as the requests were estimated on the total annual requirements which were based on first quarter obligations. Many of the estimates have been proven to be overstated at this point in time.

The gross amount recommended for the Department of Defense in this bill for military and civilian pay increases under titles I and II is \$903,768,000. Of this amount \$678,950,000 is for military pay and \$224,818,000 is for civilian pay. The additional pay costs and added funds stem from the second phase comparability pay adjustments effective last July 1. These increases were authorized in Public Law 90-206, the Federal Salary Act of 1967, and Public Law 90-207, increasing the basic pay for members of the uniformed services.

The Appropriations Subcommittee on the Department of Defense spent considerable time in analyzing the request for the funds requested to be assured that only those additional funds actually required were recommended. We feel that the funds which are included in this bill are needed and the appropriation should be approved.

MILITARY OPERATIONS IN SOUTHEAST ASIA

President Johnson's budget for fiscal year 1969 submitted in January, 1968, proposed defense expenditures for support of Vietnam operations in the amount of \$25.8 billion. It was known during 1968 that figure was a low estimate.

The present estimate for military operations in Vietnam for fiscal year 1969 is \$28.8 billion in expenditures. This amount includes the estimates submitted in connection with the pending bill.

In January of this year the supplemental requirement for fiscal year 1969 in support of military operations in Vietnam was estimated at \$1.632 billion. The reassessment which the new administration completed in April confirmed the validity of the requirement but reduced the funds requested to \$1.497 billion.

The committee, in the bill before us, recommends \$1.234 billion in funds for military operations in Southeast Asia which provides:

	Millions
For additional personnel pay costs....	\$239.5
For operational support and maintenance of equipment.....	354.4
For procurement of ammunition and ground force equipment....	640.1
Total	1,234.0

These additional requirements result directly from factors and events not contemplated when the fiscal year 1969 budget was prepared.

First, in January 1968 the Communist Tet offensive required the deployment of additional forces to Vietnam and required increased support operations, additional equipment, ammunition, and other consumables. Losses sustained were great and material had to be repaired or replaced.

Second, the seizure of the U.S.S. *Pueblo* and other aggressive actions by the North

Koreans resulted in the callup of Reserve Forces to meet the possible military threat, deployment of additional air and sea forces to the area, additional equipment, and other requirements.

This request now before us does not provide for increases to our current force levels which are somewhat below the presently authorized deployment of 549,500.

The committee procurement recommendation provides equipment and consumables for American and Allied ground forces and also to upgrade our production base. More than 65 percent of the procurement funds—\$419.5 million—is for ammunition.

The operation and maintenance appropriations require supplemental appropriations for Reserve callup and additional deployment, maintenance of material, aircraft fuel and oil and increases and modernization of the Armed Forces of the Republic of Vietnam.

Included in this supplemental are additional funds for the modernization and upgrading of the South Vietnamese Armed Forces. This is a very significant part of this supplemental bill.

President Nixon on Wednesday, May 14, said that the strengthening of the South Vietnamese forces has been speeded up and the President said:

That time is approaching when South Vietnamese forces will be able to take over some of the fighting fronts now being manned by Americans.

The funds in this bill will directly aid the speed up of the strengthening of the South Vietnamese forces.

Significantly this bill as recommended by the committee includes a total of \$246.4 million in funds which are for purposes which will enable the South Vietnamese to eventually defend themselves and thus to gain the opportunity to determine their own future.

Funds are included to procure for the South Vietnamese Armed Forces ammunition and equipment such as armored cars, trucks, rifles, communications, and electronic devices. Also included are funds for South Vietnamese training, as well as general supplies, spare parts, transportation, and depot operations associated with the major end items provided the South Vietnamese.

We must welcome the effective assumption by South Vietnamese forces of a larger share of combat operations for certainly our overall national interests do dictate that we begin reductions of U.S. forces as soon as is feasible and that our forces not remain in substantial number indefinitely if a negotiated settlement proves unattainable.

It is clear the administration requires the additional defense funds to meet our commitment in Southeast Asia and other already incurred obligations as provided in this bill.

Mr. Chairman, the committee has made every effort in deleting unessential items and funds not related to Southeast Asia military operations as well as correcting estimates which were overstated.

The funds recommended are necessary and should be appropriated.

Mr. JONAS. Mr. Chairman, I yield 10

minutes to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, there is a portion of this bill to which I would like to address myself, and it is that having to do with the Departments of Labor, Health, Education, and Welfare. This involves \$700 million of the bill, broken down as follows: \$35.9 million for the Department of Labor and \$677 million for the Department of Health, Education, and Welfare.

The first item having to do with the Department of Labor is a \$20 million item for unemployment compensation for Federal employees and ex-servicemen.

The members of the committee will recall that earlier in the year we passed a supplemental in the amount of \$36 million. This will be in addition to that in order to rectify those faulty estimates that were submitted to us at the beginning of fiscal year 1969.

Then, too, there is also an item of \$15.9 million for employees' compensation, claims and expenses. Now, both of these items are mandatory payments required by law. Both were set up by the Nixon administration, because the previous estimates, as I said, were too low.

Mr. Chairman, I think it should be borne in mind that compensation benefits paid to surviving children are involved in this particular item. Back in 1966 when we amended the law we provided that full-time students could receive payments until the age of 23; whereas, before they were cut off at the age of 18. We were told in our testimony that these payments to these children average \$110 a month or \$1,320 per year per child. This is one of the factors which goes into this increase.

Then, too, there is an item for the cost-of-living increase, and an increase in the maximum monthly allowance from \$525 to better than three times that amount, \$1,600. That amount has led to many of our Federal employees choosing workmen's compensation instead of sick leave. An injured employee has the choice or option to use sick leave or receive compensation. Twelve years ago only about 37 percent of our injured employees chose to use the compensation route rather than choosing sick leave. But today that figure is practically reversed to 57 percent of the employees using compensation rather than sick leave.

In the area of higher education the first item of interest is that of interest subsidy grants in the amount of \$3,920,000. This will initiate a new program of debt service grants authorized in the higher education amendments that we passed last year.

That was Public Law 90-575, signed into law October 16, 1968. It replaces the same amount of direct Federal loans permitting a substantial reduction in Federal expenditures for fiscal years 1969 and 1970, as we pointed out earlier in our colloquy on the subject with the gentleman from Iowa (Mr. SMITH). The Federal Government in this program pays the difference between the 3-percent interest rate and the going rate—and incidentally, in the fiscal year 1970 budget there is an item for interest

subsidy in the amount of \$10,670,000, which will provide for an increase then of \$6,750,000 for fiscal year 1970. Obviously this manifests itself in a greater construction of facilities at our institutions of higher learning in the years to come.

Incidentally, they told us in our hearings that there are applications on file for in excess of \$200 million worth of construction. As I said, this \$3.9 million will give us \$145 million of construction this first year.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from North Carolina.

Mr. JONAS. I believe the gentleman is approximately correct. We have the same problem in our bill in our subcommittee in funding HUD's requests. It is a lot better, I believe, to provide assistance with interest payments than for the Federal Government to go into the money market and compete with business enterprises and individuals for the available credit, and thus put our fiscal house more in disorder than is already the case.

Mr. MICHEL. I believe the gentleman from North Carolina makes a good point. Of course, Congress so expressed itself when we passed this law in October of 1968 providing for this.

I might say that this year we have about 6 million college students, and the projection is that in 1970 we will have 10 million students at our institutions of higher learning, so the need for the construction of facilities is paramount.

There is also an item in here of \$7,241,000. This is for the Federal City College, a direct payment, or a one-lump-sum payment to the Federal City College in the District of Columbia. This was the amount authorized in Public Law 90-354 as a one-time lump-sum appropriation in lieu of a land grant for the Federal City College in the District of Columbia. We were told that this sum will at the moment be invested in Government bonds to realize a return of some \$360,000 for the Federal City College of the District of Columbia to be used for salaries and other expenses of the university.

I might say, too, that over and above this the Federal City College will also receive a share of the annual appropriation for land-grant colleges under the Bankhead-Jones Act, and that allotment in fiscal year 1970 will be approximately \$168,000, out of a total figure of something like \$12 million for the entire country. So here we are for fiscal year 1970 giving the District of Columbia a proportionate cut of the shares that normally go to the other 50 States.

Then too under the second Morrill Act the Federal City College would come in for another share of \$50,000 out of the total allotment of \$2,600,000 for the country.

In the item of the public health service, comprehensive health planning and services, there is an item of \$128,000 for increased pay under Public Law 90-206 and 207. \$9,600,000, the biggest item here, is for a program to combat German measles, better known as Rubella, the 3-day type of measles. We have now been

told that an effective vaccine has been developed and is expected to be licensed within the very near future.

What we are doing here is actually a forward funding so that we will not have to wait to get this program underway until the normal appropriation bill can be passed later in the year.

Incidentally, to give you some idea of the proportions of the problem here, there is expected to be another epidemic either this year or next year. If we look back to the last Rubella epidemic that we had in 1964, there were some 20,000 children born with defects. The testimony before our committee states that this will cost us in the end some \$2.8 million in medical costs without even considering the rehabilitation costs for these poor children, the 20,000 or more who were born with deformities of one kind or another as a result of that Rubella epidemic in 1964.

So it is a very worthwhile project and one which should go forward immediately.

Then for District of Columbia medical facilities there is an item here of some \$15 million. This is a portion of the amount authorized under Public Law 90-457 for grants and loans to construct hospitals and other medical facilities in the District of Columbia.

The item was included in the 1970 appropriation bill but we moved it forward here in this supplemental to enable hospitals in the District of Columbia to move ahead with their construction which is already underway.

We have been told there are some very serious financial troubles among the various hospitals here in the District of Columbia.

This is a very worthwhile item.

The biggest item in this supplemental consists of HEW and has to do with grants to States for public assistance. This is a total of \$651,546,000. This figure merges together three appropriation requests—maintenance payments to States in the amount of \$343,524,000 and this is \$30 million under their request. Although we were told in the testimony that this is a legitimate figure now that adjustments have been made in the States and that is a bona fide figure.

If you add this supplemental to what we have appropriated in the 1969 regular bill of \$3,051,900,000, you have a total amount of payments to States for public assistance for maintenance alone an aggregate of \$3,395,424,000.

The second item is for medical assistance in this supplemental for \$278,022,000.

If you add that to the original appropriation in 1969 of \$2,118,300,000—we have a total in this item for the fiscal year of 1969 of \$2,396,322,000 or a grand total in this fiscal year 1969 in grants to the States of \$5,791,746,000. For the fiscal year 1970—and hold on to your hats—it is going up again—the projections are that it will be \$6,600,000,000.

The reasons they gave us for the increased payments are—and these are all required by law—the deferral of the AFDC—that was pushed back as you will recall; the increased average payments; the increases in the number of recipients; the increased use of inter-

mediate care facilities; then finally the rising medical costs.

So this is an astronomical figure that we are talking about here in these grants to the States for public assistance and something certainly has to be done to reorient this whole program or else we are going to have to shoot the moon in the future to come up with sufficient funds to cover these programs that have been authorized.

Mr. ANDREWS of Alabama. Mr. Chairman, I yield 3 minutes to the gentlewoman from Washington (Mrs. HANSEN).

Mrs. HANSEN of Washington. Mr. Chairman, inquiries have been made about chapter VI, the Interior and related agencies section of the supplemental bill, particularly in regard to additional funding for the increased production of timber.

There is \$610,000 provided in chapter VI to accelerate timber production in the fiscal year 1969 on national forest and Indian lands as part of the national effort to increase the timber supply and thus ameliorate the current shortage which has contributed materially to the increased price of lumber. Of that amount, \$150,000 is provided for the Bureau of Indian Affairs and \$460,000 is for the U.S. Forest Service. It is estimated this will produce an additional 75 million board feet from the BIA forests and an additional 270 million board feet from the U.S. Forest Service lands.

Mr. JONAS. Mr. Chairman, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from North Carolina.

Mr. JONAS. I am very glad that the gentlewoman from Washington made that explanation, because the timber shortage, I am told, is quite acute. It is very appropriate that we open up these lands for the scientific production of timber. I am very glad indeed that the record will show that these steps are being taken and that additional timber will be made available.

Mrs. HANSEN of Washington. I thank the distinguished gentleman from North Carolina. May I add that in the regular hearings of the committee for fiscal year 1970, volume 3, on the U.S. Forest Service, you will find an excellent discussion between the U.S. Forest Service and the committee on timber requirements and the funds that need to be spent in the national forests. You will also find similar discussions with the Bureau of Land Management and the Bureau of Indian Affairs in our 1970 hearings. The funding in this supplemental bill, \$610,000, is just "a piece of adhesive tape" to meet the total problem before us. I assure you the committee in its consideration and markup of the regular 1970 bill intends to provide the maximum funds possible for the increased production of timber.

Mr. JONAS. Mr. Chairman, I yield to the gentleman from Minnesota.

Mr. LANGEN. Mr. Chairman, I take this brief time merely to call to the attention of the House the items that are in the supplemental bill relating to the Department of Agriculture. There are just

four items, each of which is demanded because of an emergency, or because of mandatory provisions which require the expenditures, which is the true purpose of the supplemental appropriation bill, in my estimation.

The first item is a matter of \$1,400,000, which is needed in order to combat a very serious outbreak of screw-worm in the Southwest part of the United States, which we were unable to forecast during the course of the regular appropriations for the fiscal year 1969. This amount of money has actually already been spent. The Director of the Bureau of the Budget has the authority to authorize these expenditures in order to meet the emergency, and for that reason they have to be reimbursed at this time.

In addition, there is an item of \$218,000 which is to meet the mandatory Federal contribution to the retirement fund for the State extension personnel. These payments are related to the increased funds provided by the Congress in the regular 1969 appropriation bill to place the extension jobs on a salary basis more comparable with other agricultural personnel.

Then there is an item of \$7,500,000, which is necessary in order to meet the regular sugar beet payments, which is a mandatory payment that must be made. The increased moneys become necessary because the crop last year was greater than the estimate.

There are also increased pay costs necessary to be paid. They total more than approximately \$28 million, but there is only \$12,900,000 which is provided by supplemental appropriations. \$10 million is provided by releases from Public Law 90-364 reserves, and another \$5,182,000 is provided by transfers from funds within the Department.

Probably the most significant item within this supplemental appropriation as it relates to the Agriculture Department is the transfer of \$25 million out of unobligated funds from the FHA direct loan account to the emergency credit revolving fund. This becomes necessary in order to meet the emergency needs for credit. Some very unusual demands have been placed upon this emergency fund because of floods that have occurred throughout the Midwest, in Minnesota, North Dakota, South Dakota, Illinois, Missouri, California, and several other places. The demands are such that they are necessary in order to keep farm operations going during this coming fiscal year.

In view of the fact that the Department is out of money in this category now, it becomes most essential that these moneys are provided by a transfer from the direct loan account, and requiring also that the account be repaid as the loans are repaid.

I am sure it will be provide much needed relief to a great many farmers who otherwise would find themselves in economic distress were it not for this appropriation.

In conclusion, let me say that each of these items is essential and necessary to the proper operation of the Department

of Agriculture. I can very heartily recommend them to the House for approval.

Mr. JONAS. Mr. Chairman, I yield 5 minutes to the gentleman from Kansas (Mr. SHRIVER).

Mr. SHRIVER. Mr. Chairman, as the ranking minority member on the Subcommittee on Foreign Operations, I support and the minority members support the committee's recommendation for supplemental appropriations for the Cuban refugee program. The committee recommends the appropriation of \$2,700,000 of the \$2,853,000 requested in new obligatory authority, and the release of \$35,000 of the \$38,000 in requested transfers from the Revenue and Expenditure Control Act reserves.

The requested increase for this program will fund the following activities:

There is \$1,254,000 for unanticipated welfare costs of refugees resettled outside the Miami area, due to the higher number of refugees requiring such assistance. The Federal Government has a commitment to reimburse the various States for these welfare expenditures.

There is \$755,000 for increased per-pupil rates for Cuban children in the Dade County, Fla., school system. This increase is due to increased operating costs to the Dade County system because of higher teacher salaries and other costs. These per-pupil rates will be studied again when the committee considers the fiscal 1970 budget requests.

There is \$844,000 for costs of transporting refugees from Cuba to Miami. Last year, Congress included language in the fiscal 1969 appropriation bill to fund this expense from this account, instead of the State Department account as had been the case in the past. It was hoped at the time that these costs could be absorbed by the program, but this has not occurred, thus these funds are necessary.

Although the committee is recommending the appropriation of most of this request, I think it would be well to point out the rapidly increasing cost of the Cuban refugee program. In fiscal 1968, Congress appropriated \$49 million for this program; in fiscal 1969, including this supplemental, this figure had increased to \$70.7 million; and the committee now has pending before it a request for fiscal 1970 of \$87.3 million.

This represents an increase of \$38.3 million, or 78 percent, for the Cuban refugee program in only 2 years. The American people have been very generous with this program through the years, and our country has benefited from the influx of these energetic and enthusiastic immigrants. At the same time, we should be aware of these growing costs. In an effort to insure the most efficient operation possible for this program, the committee has recommended a decrease of \$153,000 from the request for new obligatory authority. It is expected that the administrators of this program can program these cutbacks to continue the effectiveness of their operations.

Mr. MAHON. Mr. Chairman, I yield 10 minutes to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Chairman, first let me touch on the immediate thrust of the

military sector of this bill. It is designed to provide weapons and equipment to strengthen the South Vietnamese forces; to permit these forces to assume a greater share of the burden of battle. This is most important. The South Vietnamese forces are showing greater capability and their battle effectiveness is much more encouraging. It would appear that American forces will no longer have to carry such a great part of the conflict and significantly, the South Vietnamese will be in stronger position to enforce peace when it comes. This is a very meaningful change in the overall picture.

As we consider overall additional expenditures for defense purposes, we find ourselves buffeted by conflicting winds from many sources. There is a taxpayers' revolt against high levels of spending by Government and of course the principal offender from the standpoint of the number of dollars involved is the military. This is an inevitable part of the inflation that we in Government have helped to build; have almost permitted to get out of hand. The cost of weapons and equipment is fantastically high and the costs of development of a new weapons system is even higher because of the unknown factors which are encountered. There have been a series of blunders, some of them colossal, which have shaken the faith of the people in the military and indeed in Congress and the Government. There was the TFX—the F-111 series—which was to be Mr. McNamara's great contribution and a great money saver. In the final analysis, it cost about twice as much as had been anticipated and, in some phases, has been junked. Just a few days ago, a new submarine sank at its dock while being fitted for service. It is absolutely inconceivable that such carelessness in workmanship could have or would have been permitted.

There is the usual flap about the dangers of chemical and biological weapons which always is good for column after column of horror stories in the liberal elements of the press. What they do not print is that the Russians have seven or eight times our capability in this field, and that we could be dangerously exposed in time to a Russian attack with these weapons as an alternative to a nuclear confrontation. In the field of nuclear weapons, we can at least trade destructiveness.

The question of the ABM has been greatly overplayed. It is a simple case of survival for our nuclear weapons capability. I have felt that at least equal protection should have been provided for people in cities but apparently in an effort to negate the antivotes, the administration has cut back on the scope and purpose of the ABM. Both aspects should have been approved.

In other words, we in America find ourselves completing the cycle we have seen on so many other occasions in our country. The commentators tell us that people are getting tired of war—that they want it ended—and that they want no more involvement in foreign affairs. They are saying in effect that we want to retreat to the security of our own

continent. All of this is more than a little disconcerting. I do not believe this fallacy is reflected in the thinking of the average American. I believe that a substantial majority of the American people know why we are fighting in Vietnam. They want this war won. They do not want us walking away from Vietnam with our tail between our legs, setting the tragic stage for another war when the Communists get ready for another takeover of territory and peoples.

Our first mistake was in trying too hard to fight this war without inconveniencing anyone—to fight it so that we could have both guns and butter. It is never possible to fight a war without inconveniencing someone. The fact of 35,000 being killed in a war which is not yet resolved attests to the fallacy of this approach in the Vietnamese conflict. The people should have been told why we were fighting. They should have been shown that it is in America's best interests to fight now and win rather than to risk having all of the Pacific fall into Communist hands in the years to come. We should have been told that it is patriotic to wear the uniform, patriotic to be proud of the flag, patriotic to stand up for our country. Because this was not done, the antiwar crowd has had a field day, with the Communists happily at work stirring up anti-American sentiment at every point.

As a part of this pattern, attacks are now being leveled at our military leadership. Unfortunately, this too has always been a part of the American way of conducting its affairs. When those in uniform are winning wars for us, they are our heroes. When we no longer need them, we pick them to pieces. The fact that many people now believe it is administration policy to get out of Vietnam regardless of the cost in strengthening the efforts of every person who seeks the eventual downfall of the American system of government.

The uncertainty which is sweeping America is not confined to defense. It goes much broader. It involves the whole spectrum of national security, and in this I include all of the unrest which is reflected in the news media day after day and which in too many instances is promoted by them.

We here in the House of Representatives have our responsibility. It has not changed because there is wholesale attack upon the military, or because there is concern about the cost of spending, or because people are tired of taxes. We have a responsibility to insure that those who fight our battles in Vietnam, under whatever orders they fight, receive insofar as it is possible for us to do so, every single item that they need. We have the responsibility of demonstrating to the world that we are determined that this Nation shall not, if we can avoid it, become defenseless in the years ahead. We have a responsibility to demonstrate that there is solidarity in Government, and that we will confront communism everywhere with determination. Don't think for a moment that the Communists are not watching what is happening here on the floor of the House of Representa-

tives today. Do not think for a moment that they are not noting loud and clear what we say and what we do. I do not think I need to remind those here today that we could, by responsible action, help set the stage to throw away in Paris what the uniformed services have fought for on the battlefields of Vietnam. We could throw away whatever chance is left for success in this long, terrible and costly struggle.

Those who say that America has lost the war or cannot win it, do our country a great disservice, for neither is true. By their steadfastness on the battlefield, America's fighting forces have brought the Communists to the point where they want peace. Now they are trying to achieve at the conference table what they could not achieve on the battlefield. More than ever, there is reason for unity at home and for a show of strength for America in this body, which really speaks with the voice of the American people.

One of the items of great interest is the ABM. The question of deployment of this system should be resolved without further controversy. I hope the House will follow with me some comments from informed sources on the real function and the need for an ABM system. For instance there are those who urge continuing research and development—and not deployment. The principal purpose of ABM under the present proposal is to offer protection, as needed, to our deterrent forces.

As Secretary Laird points out:

Simply continuing research and development on the ABM without any initial deployment, would leave us with no option to provide defense to our deterrent on the schedule that might be required by the Soviet threat if we do not reach an agreement with the Soviets on limiting strategic forces.

Before and since Secretary McNamara first included defense of our strategic deterrent as an option of the Sentinel system, there has been a substantial body of testimony supporting the effectiveness of this type of deployment.

Dr. Harold Brown said in testifying before the House Armed Services Committee in 1967:

Because our missile sites are small hardened targets, they are much easier to defend than cities. The exchange ratio is favorable to us for the defense of this type of target.

Dr. Edward Teller said in a recent U.S. News & World Report interview:

Twelve years ago it seemed that a missile defense was 30 times as expensive as an offense. Today the ratio is estimated at 3 to 1, although still in favor of offense. In some respects it is even estimated at 1 to 1. The main point is we don't really know. We can't find out except by actual deployment.

In rebutting recent unfavorable comment on the feasibility of defending Minuteman sites against a heavy threat, Dr. Foster made the following comment:

Various estimates of the cost of an interceptor including its assigned fraction and the radar and other systems costs have varied between \$2.5 million and \$7 million. The present cost to the U.S. and probably the Soviet Union for an offensive R/V is in excess of \$10 million. The advances which we

expect in our forces over the next few years may reduce these to about \$3 million. . . . In other words, the cost to attack and to defend in the 1970 time frame are roughly one to one.

Moreover, those who are responsible for our national defense have said that now is the time to get on with the deployment of the Safeguard system to defend our Minuteman sites. I agree.

Secretary Laird said before the Senate Foreign Relations Committee on March 21 of this year:

We cannot delay the decision beyond this budget that we presented to this Congress, covering the program for fiscal year 1970, which begins on July 1, 1969. We must include this deployment on two sites in this particular budget.

He had earlier said:

We have sufficient strength today in the combination of our strategic forces—our missiles, our bombers, and our Polaris capability—to respond to any attack that might be launched against the United States.

As Secretary of Defense, it is my obligation and my intention to keep it that way beyond any reasonable doubt. This is what the ABM discussion is all about.

And that is why we have no alternative but to protect our options to safeguard our deterrent forces. If the Soviet threat turns out to be, as the evidence strongly indicates, an attempt to erode our deterrent capability, we must be in a position to convince them that a first strike would always involve unacceptable risks.

In addition, and again quoting Secretary Laird:

Safeguard . . . offers protection, as needed, of the entire country from a small attack, such as the kind of attack that could be possibly delivered by the Chinese Communists during the decade of the 1970's or from an accidental launch.

The estimate of our intelligence community is that the earliest the Red Chinese could have this kind of capacity would be in the 1972-73 time period, and the estimate is that in the time period of 1975 and beyond, that the Red Chinese could have the capacity and the capability to have 15 or more missiles.

Dr. Edward Teller, in U.S. News & World Report, said:

A small nuclear force such as they will have in a few years could wreak real havoc on an undefended United States. We might have to give in to Chinese demands affecting not only South Vietnam but also Taiwan and even Japan, rather than take the slightest risk of their not bluffing.

In regard to the Sentinel system as a defense against the Chinese threat, Secretary McNamara stated July 1967:

This austere defense could probably preclude damage in the 1970's almost entirely.

Dr. Foster stated more recently—on May 12, 1969:

The Safeguard system has been designed by competent people, and the best that are available. Its design has been reviewed by outside experts. Those who do, in fact, study the aspects of the system that are within their area of technical expertise are convinced it will do what it is designed to do. There are some eminent scientists who, for one reason or other, claim it won't work. On that I'd like to say . . . that they have offered no problem which we have not long since addressed and resolved."

Finally Under Secretary Packard stated on March 14, 1969:

Locating sites away from major cities should make clear to the Soviet Union that the American defense is designed to preserve our deterrent—not to change the strategic balance.

It has been suggested in some quarters that the administration has somehow misled Congress about its intentions in deploying the Safeguard system.

I think it is useful to review the letter of the law here.

The current authorizations for the ABM defense system for procurement, research and development and military construction for the Army read as follows:

Public Law 90-500, for procurement:

SEC. 101. Funds are hereby authorized to be appropriated during the fiscal year 1969 for the use of the Armed Forces of the United States for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, as authorized by law, in amounts as follows: . . . For missiles: for the Army, \$956,140,000.

Public Law 90-500, for research and development:

SEC. 201. Funds are hereby authorized to be appropriated during the fiscal year 1969 for the use of the Armed Forces of the United States for research, development, test, and evaluation, as authorized by law, in amounts as follows: For the Army, \$1,611,900,000.

Public Law 90-408, for military construction:

SEC. 101. The Secretary of the Army may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including site preparation, appurtenances, utilities, and equipment for the following projects:

UNITED STATES ARMY AIR DEFENSE COMMAND

CONUS, various locations: Operational and training facilities, maintenance facilities, supply facilities, medical facilities, administrative facilities, troop housing, community facilities, utilities, and real estate, \$227,460,000.

The defense and military construction appropriation acts contain even broader language.

Clearly both the Safeguard and Sentinel systems fit under the language of the law.

In fact, there is an understanding in the Congress and in the Defense Department that funds must be spent for the purposes for which they were authorized and appropriated.

In the case of the ABM system, the purpose for which they were authorized and appropriated was to provide a defense against ballistic missiles. To accuse the officials of this administration of bad faith for deploying the best balanced ABM they can design is simply to disregard the previous actions of Congress.

Congress should not get into the business of trying to design the anti-ballistic-missile system either in its minute technical details or in its tactical deployment configuration. These decisions should be left to defense planners. I suspect that much of the agreement we hear, including many of the technical arguments, are being put forth by people who are already

over their head or who are not apprised of all the facts.

Congress has in the past given rather broad authority for the construction of the ABM system. If it wishes to change this method of operation, it can do so when the additional funds which will be required for the deployment of phase I of the Safeguard system are authorized and appropriated for fiscal year 1970.

There are other items of more than average importance which are likely to escape specific attention because they are not sensational and because there appears to be no pressing need that they receive other than casual consideration. Yet these may be of very great importance.

For instance, there is the problem of maintenance of real property facilities. The taxpayers should be very directly concerned with this problem. So should be the military officials. So it would seem would be the Congress.

Nevertheless, this subject presents an increasingly aggravated picture which I want to discuss at this point.

The Committee on Appropriations has for many years been urging that the military services properly and adequately maintain the extensive real property holdings within their jurisdictions. Some 15 years ago this interest was manifested in the appropriation of funds above the budget estimates for the then existing backlog of deferred maintenance. The committee found that much of this claimed deferred maintenance either did not rest on valid estimates or the need was subsequently ignored by the services and the practice of appropriating over the budget for real property maintenance ceased.

Indeed, during the ensuing several years it became apparent that moneys justified to Congress for the maintenance of real property facilities were being diverted to other uses in the absence of any restrictive law or legislative history. Consequently in recent years, the committee has recommended, and Congress has agreed to, language in the appropriation acts establishing floors or minimums in the amounts of money which must be devoted to real property maintenance. In the current Appropriation Act for the fiscal year 1969, for example, the language reads for the Navy: "of which not less than \$155,600,000 shall be available only for maintenance of real property facilities."

In the case of the Marine Corps the language reads similarly: "of which not less than \$22,661,000 shall be available only for the maintenance of real property facilities."

House Document No. 91-50 proposed revisions reducing those amounts. Testimony in the hearings on the second supplemental appropriation bill indicated that reductions were made in the floors on real property maintenance based on "congressional intent." It appeared from the testimony that this interpretation of congressional intent was based on the Revenue and Expenditure Control Act of 1968 and its effect on Government expenditures generally.

It would seem to me, Mr. Chairman, that we have here a situation of either ignoring, or violating, congressional intent by the military.

I should like to point out that the Revenue and Expenditure Control Act of 1968 was enacted into law on June 28, 1968, Public Law 90-364. While its terms and conditions allowed some flexibility, some considerable flexibility in the executive branch, there was not in connection with its enactment—at least to my knowledge—any discussion of an intent to cutback on the maintenance of real property facilities of the Department of Defense. Congress does not want these cutbacks.

Now I should like to point out that the appropriation bill for the Department of Defense for the fiscal year 1969 was enacted into law by virtue of the signature of the President on October 17, 1968, Public Law 90-580. The appropriation bill contains as a matter of law the phrases which I have previously quoted. I do not believe it likely that the Department can find a shred of evidence in the debate or in the committee reports on the defense appropriation bill indicating that the language of the law was intended to be set aside by any assumed or presumed interpretation of congressional intent stemming from the earlier enactment of the Revenue and Expenditure Control Act of 1968. On the contrary, it could be presumed that the enactment of the floors on maintenance of real properties in specific numbers and at a later date indicates the precise opposite, namely, that it is the intent that such an amount must in fact be expended for the purpose.

It is clear that much of the difficulty that we encounter in Congress, in the academic world, and through all facets of our society, stem from misinterpretations of honestly presented sets of facts. It is further clear that in most instances, if not in all instances, those who so misinterpret do totally and completely escape any remonstrance, much less punishment, for their willful acts.

Although I do not wish to magnify the incident out of all proportion, it is safe to say that the taxpayers of the country will at some future date have to shoulder the burden of new construction prematurely or unnecessarily because of failure to adequately maintain facilities that are now in being. Certainly, someone should be called to task for permitting such a situation to exist.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. MAHON. Mr. Chairman, I yield 5 additional minutes to the gentleman from Florida.

The CHAIRMAN. The gentleman from Florida is recognized for 5 additional minutes.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Texas.

ANTI-BALLISTIC-MISSILE SYSTEM

Mr. MAHON. The gentleman from Florida made reference to the anti-ballistic-missile program. The gentleman is aware that in the fiscal year 1970

budget which is before Congress, but which is not under consideration in this bill, there is about \$860 million for a continuation of the ABM program.

In my opening remarks, I took the position that we should go forward with the ABM program. I would like to amplify that by giving, in part, some of the reasons why we have been working on this program for years. The Soviet Union, our most formidable opponent, has a somewhat limited anti-ballistic-missile system deployed. It seems to me that it would be militarily and politically unsound and indefensible for us not to undertake to have a defense against the intercontinental ballistic missiles of the Soviet Union and of Red China.

My opinion is that we must proceed now with the anti-ballistic-missile program. It is my feeling that the Members of Congress, generally, will approve of this view, and I am convinced that the American people will approve of this view. I do not believe the American people want to be completely defenseless with respect to the intercontinental ballistic missiles of the Soviet Union or of Red China. This would be illogical while the Soviet Union is providing some defense for its people. Whether or not their system is very far advanced begs the question. Therefore we should undertake to provide some defense against the possibility of attack by intercontinental ballistic missiles of either nation.

I believe the gentleman's opening remarks should be read by all Members of the Congress.

Mr. SIKES. The gentleman from Texas has stated the situation precisely and he has stated it very well.

We are trying to assure at this point that we can retaliate if the need should develop—we are seeking to insure for our country a capability which at least parallels the development which has been proceeding on an ABM system within Russia for a number of years. I feel that the American people demand that this be done. I feel that their voice is not really being heard in the quarters where protests are raised against the ABM system.

It is my opinion that we would be making a most serious mistake if we should not proceed with at least the small ABM program that has now been proposed.

Mr. MAHON. Mr. Chairman, if the gentleman will yield further, I would ask the gentleman further if an article in the U.S. News & World Report, by Dr. Teller, one of the great scientists of the country, and a discussion by Dr. Wiesner, another great scientist, who are both very familiar with this problem, has been called to his attention.

We are aware that there is much discussion of the ABM in the scientific community, but as I see it this issue is one of judgment, and that is not an issue to be settled by the scientists alone. I would hope that those interested in this matter will probe deeply enough to understand what the fundamental issue is, and that is whether or not we shall let our chief opponent have a protection against our missiles and have none ourselves against his.

Mr. SIKES. The gentleman has stated the situation perfectly.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from California.

Mr. LIPSCOMB. Mr. Chairman, I concur completely with the gentleman from Florida and the gentleman from Texas in the need for the Safeguard ABM. I believe that it is absolutely necessary that we go ahead on this modified program as recommended by President Nixon.

The decision of President Nixon announced on March 14, 1969, calling for the deployment of the Safeguard anti-ballistic-missile system was made only after a searching and exhaustive analysis of the clearly emerging threat to the Nation and its people in the mid-1970's. All the available options and alternatives were thoroughly examined leading to the determination that Safeguard would provide a beginning toward the best protection against those threats.

In the judgment of the President, and of others within the Government who are charged with the direct responsibility for preserving our national security, the initial deployment of Safeguard represents the minimum action which must be taken now to preserve the credibility of our nuclear deterrent in the immediate years ahead.

The decision to deploy Safeguard is remarkable for the controversy which it has generated. Some Members of the Congress and some persons within the scientific community have taken issue with the President's decision. They have been joined in their opposition by others who find in Safeguard an excellent opportunity to give vent to their frustrations over the course of events in Vietnam, thereby injecting an emotionalism into a debate which, because of its critical importance to national security, should be governed only by rational and reasoned factual presentations.

Because the President is Commander in Chief of our military forces and, more than any other one man charged with the awesome responsibility of providing for the national defense, many Members of Congress, in the exercise of their constitutional responsibilities, have normally followed the practice of according great weight to such momentous determinations by the President. The President has immediately at hand the most sensitive intelligence information upon which these vital decisions must be based.

For my own part, I would have to be absolutely convinced that I was right and the President was wrong before I could, in good conscience, oppose him on a national security matter of this magnitude. Moreover, in cases where the issue might be described as somewhat doubtful, my conscience would dictate that such doubts be resolved in favor of the President's determination that his recommended action is necessary for our country's protection. This has been my position with respect to all Presidents, of either political party.

It is obvious that all the people of the United States have a vital stake in the

decision we make as to whether or not we should attempt a ballistic missile defense. It is appropriate to determine the desires of the people. And I mean all the people—not just those with the resources to publish and circulate their views, nor just those who participate in organized letterwriting campaigns to Congress.

When President Nixon assumed office in January of this year, he inherited from his predecessor the beginnings of deployment of an ABM system, the Sentinel. The decision of President Johnson, announced in September 1967, to begin deployment had been endorsed by Congress in 1968 and funds had been provided for a start on the system. Production of the various components of the system had been initiated, sites acquired, and, at some sites, work had commenced.

The Nixon administration suspended work on Sentinel deployment while it conducted a broad and thorough review of the general problems of ballistic missile defense including specifically the basic possible missions of such defenses and an analysis of the actual and potential Soviet and Chinese nuclear threat capabilities to our cities and to our strategic retaliatory capability.

An important part of the review included an analysis of the many alternative ways of accomplishing the ballistic missile defense missions. The alternatives examined included:

First, not building any ballistic missile defense at this time, maintaining the research and development program, and relying on improvements in our retaliatory weapons to deter Soviet and Chinese attacks on our cities and strategic retaliatory forces;

Second, defending our strategic retaliatory forces—our second-strike capability—by hardening our missile silos and further dispersing of our bomber bases; and

Third, several alternative ABM deployments, including: a "heavy" defense against Soviet nuclear attacks on our major cities, ballistic missile defense of our strategic retaliatory forces, the Sentinel defense against the expected Chinese threat and accidental attacks, a sea-based anti-ballistic-missile intercept system—SABMIS—and various combinations of these alternatives.

Finally, the review included a careful evaluation of the technical and operational feasibility of ballistic missile defense systems based on current technology and current intelligence.

After a careful consideration of the alternatives, President Nixon reached the following conclusions: First, the concept on which the Sentinel program of the previous administration was based should be substantially modified; second, the safety of our country requires that we should proceed now with the development and construction of the new system in a carefully phased program; third, this program will be reviewed annually from the point of view of technical development, the threat, and the diplomatic context including any talks on arms limitation.

The Safeguard system has been designed so that its defensive intent is un-

mistakable. It will be implemented not according to some fixed, theoretical schedule, but in a manner clearly related to a periodic analysis of the threat.

The Safeguard system provides for the phased protection of our land-based forces and the light, overall protection of population. This deployment will permit a shift of radar and missile sites away from major cities.

Both the Nixon administration and the Johnson administration agree on the capabilities and limitations of the ABM system which technology permits us to deploy at the present time.

Both administrations agree that our ABM system at its present stage of development cannot be expected, no matter how deployed, to provide an effective defense of all our Nation's population against a heavy nuclear attack.

Both administrations agree that our ABM system does have the capability, in several types of deployment, of defending all our population against a light nuclear attack.

Both administrations agree that our ABM system does have the capability of providing a strong, although not preclusive, defense of a specific target of limited area against a heavy nuclear attack.

This evaluation, concurred in by both administrations, is extremely important. It was not made lightly, nor by any one person, or by any persons specializing in one field. This is not just a weapon, but a weapon system. It consists of a number of components, including nuclear warheads, which were and continue to be designed and tested underground by our nuclear physicists; missiles, which have been designed, constructed, tested, repeatedly improved, and tested further; data processing equipment, which has also been built and tested; missile site radar, which has been built and tested; and perimeter acquisition radar, all the components of which have been tested. In addition, the system utilizes technology dealing with such diverse areas as component hardening and command and control.

An evaluation of the ABM system is a complex matter, requiring the participation of many specialists from various and sundry science and engineering fields, who base their evaluations on the results of the tests performed. This, however, is the very type of careful evaluation which enabled the Johnson administration and, thereafter, the Nixon administration to conclude that our ABM system would work, and would do the job proposed for it.

Obviously, no one scientist, however learned, can credibly assume personally to evaluate the entirety of the system, particularly if he has not been privy to the testing accomplished with the components of the system. An impressive number of scientists, however, believe that it either will work or can be made to work.

The Johnson administration, based on an evaluation of the limitations and capabilities of the ABM system, devised a proposed deployment to provide a defense of our cities against the potential Chinese Communist capability to launch a light nuclear attack in the mid-1970's.

This is what the Sentinel system, as designed by the Johnson administration, would have done; and this Safeguard will continue to do.

The preceding administration was also very much aware of the possibility that the Soviet Union might seek to develop a capacity to overwhelm our land-based missiles and bombers. It continued to watch the missile buildup in the Soviet Union, believing, however, as Secretary McNamara said in January 1968, that the growth of the Soviet ICBM force would decelerate instead of continuing at a high rate.

The Sentinel system of the Johnson administration has three purposes, according to Secretary Clifford:

First, to "prevent a successful missile attack from China through the late 1970's."

Second, to "limit damage from an accidental launch from any source."

Third, to "provide the option for increased defense of our Minuteman force, if necessary in the future."

Safeguard will provide for the first two purposes as enumerated by Secretary Clifford, but most importantly, it also will provide for the defense of our Minuteman force which under Sentinel, had been only optional.

Neither Secretary McNamara nor Secretary Clifford believed that the relative invulnerability of the missile forces of the United States was assured for the indefinite future. Both warned that additional steps might be required if that invulnerability was to be maintained in the 1970's. Just before leaving office, Secretary Clifford expressed his "increasing concern" about "the continuing rapid expansion of Soviet strategic offensive forces." He went on to warn that—

We must continually re-examine the various ways in which the Soviets might seek to strengthen their strategic forces beyond what now seems probable, and take appropriate actions now to hedge against them.

The decision on whether or not to deploy the Safeguard system turns, it seems to me, on the answer to two questions:

First. What is the nature of the threat which there is reason to believe will confront our Nation in the mid-1970's?

Second. Is Safeguard an effective way of coping with that threat?

When I speak of a threat to our security, I am not engaging in speculation about the intentions of any foreign power. As we should have learned from the Cuban missile crisis of 1962, it is dangerous to base our policy on assumptions relating to intentions. Anyone who is not privy to deliberations in the Kremlin can hardly speak with assurance about Soviet intentions at the present time. Even certain knowledge of present intentions would be a poor basis for judging the intentions of those who may be in power in the Soviet Union 5 years or more from now.

We would be derelict in our responsibility to the people if we failed to base our policies on an estimate of the capability that the Soviet Union or Communist China will have in the future if they continue on their present course and if we failed to take timely action to thwart that capability.

Projecting into the future the current rate of construction and deployment of the SS-9, we arrive at a figure of 600 such ICBM's in operation in the Soviet Union by 1976. If each SS-9 is equipped with three independently aimed warheads—a capacity which is technically feasible and on which the Soviet Union is working—our force of 1,000 long-range Minutemen would be in danger of annihilation from the 1,800 Soviet warheads. Let me quote Dr. John S. Foster, Assistant Secretary of Defense for Research and Engineering, on this point:

A missile system having a 20 percent failure rate and carrying 3 re-entry vehicles per missile, would require only 420 missiles to attack 1,000 silos. If the yield of each re-entry vehicle was a reasonable 5 megatons and the accuracy a reasonable $\frac{1}{4}$ of a mile, about 95% of the silos could be destroyed. This would mean 50 of the 1,000 Minutemen survive.

Our present strategic offensive force includes, of course, not only land-based long-range missiles but missile-carrying manned bombers and Polaris submarines. Can we not be complacent about the future, some may ask, since two of the three elements of our deterrent force would still be in existence after an SS-9 attack on Minuteman sites thereby enabling us to inflict retaliatory devastation on an attacking nation?

There are two answers to this question. First, if prudence had not required that we keep three elements in our deterrent force, we would not have developed and maintained three in the past. Our security is assured with three. The loss of one would leave us considerably less secure. We might get by with two, but that involves risks that we have been unwilling to take in the past. Further, we should remember that our bombers, even today, are to some degree vulnerable and that our submarines may become vulnerable in the future. We must now plan for our defense through the next decade. We know that the Soviet Union is at work on a fractional orbital bombardment system and other weapons which could make both bombers and submarines vulnerable to attack in the future. To assume that both will continue to be safe from attack would be sheer folly.

I do not want to overstate the case. In order to achieve, in fact, the capability of eroding our assured destruction capability in the future, it will be necessary for the Soviets to do a number of things, but all are things which they have demonstrated a competence to accomplish. They would have to equip their SS-9 missiles with multiple, individual targeted reentry vehicles and improve their accuracy. They would have to continue to increase the number of such ICBM's deployed. They would have to continue their ambitious submarine program and possibly add a submerged launch missile utilizing a depressed trajectory. They could improve and deploy a more effective ABM system around their cities. The accomplishment of these improvements in forces, or combinations of these programs, on all of which they are now engaged, could create doubts of

the effectiveness of our assured destruction capability, provided we take no steps not already programmed to prevent, or to prepare to prevent, such an erosion.

Because the Chinese ICBM development program has not progressed as rapidly as estimated a year or two ago, there has been a tendency to overlook this potential threat in the present debate on the ABM issue. Today, the intelligence community is indicating that the Chinese Communists may have an operational ICBM within 3 to 4 years. If that happens, it will be incumbent on the United States to have an adequate protective force.

There are a number of factors which point out the need for Safeguard to counter this growing Chinese threat. Most of them have to do with demographic factors. The United States has 63 percent of its population living in the 1,000 largest cities. The Chinese, on the other hand, have only 11 percent of their population living in China's 1,000 largest cities. One can conclude that the Chinese population is widely dispersed throughout her large land mass. Furthermore, as Mao Tse-tung has pointed out on numerous occasions, China, with its population of 800 million, could survive even with a loss of 200 million people from a nuclear attack. Thus, it is reasonable to conclude that our ability to deter Communist China with our strategic offensive forces is considerably less certain than in the case of the Soviet Union, whose population is much more concentrated than China's.

The population concentration factor has a vital bearing on our decision to proceed with the Safeguard program. The Chinese, with only a few, relatively crude ICBM's could inflict a great deal of damage on the United States. For the United States to retaliate against such a strike might require a greater portion of our deterrent force than we could safely commit. For, by responding to a Chinese provocation, we could leave ourselves naked to a Soviet attack.

These reasons, I believe, point out that Safeguard is a good investment for protecting against a possible Chinese attack as well as insuring the credibility of our deterrent against any possible Soviet attack.

The second question which we must ask to reach the decision about deploying Safeguard has to do with its effectiveness. Of all possible courses of action which we might take to guard against the potential threat of the mid-1970's, Safeguard is the most effective, the least costly, the least provocative.

There is strong support among the most respected scientists who are familiar with all aspects of our ABM program for the conclusion that Safeguard will provide effective protection to enough of our offensive force to make an attack upon that force unprofitable for any aggressor.

Among the eminent scientists who have publicly expressed support for deployment of Safeguard are: Dr. Edward Teller, Lawrence Radiation Laboratory, recognized as one of the world's foremost nuclear physicists; Dr. Eugene P.

Wigner, Princeton University nuclear physicist, elected to the National Academy of Sciences 1945, Atoms for Peace Award 1960, Nobel Prize for Physics, 1963; Dr. William G. McMillan, University of California at Los Angeles, professor of chemistry, noted specialist on strategic nuclear matters such as reentry vehicle vulnerability, penetration aids, nuclear weapons effects, and missile vulnerability.

If we could delay our decision on Safeguard until we determine whether or not the Soviet Union continues to increase its capability to threaten our security—or whether success comes of negotiations to limit arms, I would be in favor of deferring the decision. Unfortunately, we cannot wait. It will require more than 4 years to complete phase I of the Safeguard system, the deployment of protection for two missile sites in Montana and North Dakota. In the absence of authorization from Congress for fiscal year 1970, the Defense Department would be required to stop the activity in which it has been engaged under authority granted last year. It would have to close down developmental production lines, discharge skilled personnel, and cease engineering on sites. If Congress then gave authority to proceed in the next year, the program would be delayed 2 years, and the first two sites would not be in operation until 1976. Time would be lost in the search for personnel with the necessary skills and in the training of a new force to begin the work anew.

If we are not ready at the time a threat to our security comes into being, we will be no better off than we would have been if we had done nothing at all. As Secretary of Defense Melvin R. Laird has said:

Too little and too late has been the epitaph of more than one great nation in history. It must not be ours.

If, in fact, the decision to deploy Safeguard imposed an obstacle to fruitful negotiations toward arms limitation, this might well give us pause. But let us remember that Premier Kosygin in 1967, speaking of the embryonic ABM system which the U.S.S.R. had already begun to deploy, said:

I believe that defensive systems, which prevent attack, are not the cause of the arms race, but constitute a factor preventing the death of people.

Let us remember, too, that President Johnson's decision to deploy the Sentinel system, instead of hampering negotiations, was followed 4 days later by a statement of the Soviet leaders that they were interested in beginning talks on arms restrictions.

Safeguard is an inducement to arms limitation and a building block toward peace. We will go forward with talks on arms control with a better chance that these talks will result in effective agreements if it is clear to all the world that the United States does not intend to stand idly by while its capacity to defend its people is undermined. Indeed, an important inducement toward agreement is missing if the U.S.S.R. is led to believe that we will unilaterally limit our defensive capacity.

Safeguard is purely defensive. It is not an escalation of the arms race. It does not increase one whit the capacity of our country to inflict damage on any other nation. It is far more moderate step than the alternative some of its opponents propose—an increase in the size of our offensive missile force, or the reckless launching of our missiles upon a warning, that may or may not be valid, that we are about to be attacked. Increasing our offensive forces would step up the arms race and might give Soviet leaders some plausible ground for fearing that we were seeking a first-strike capability.

If the threat that may confront us in the mid-1970's fails to develop, whether because of international agreement on arms control or a change in the pace or character of the Soviet buildup, or for any other reason, Safeguard can be slowed down, altered, or abandoned altogether. Deployment is divided into phases so that our defensive precautions will match the threat and not become an overreaction to it.

President Nixon clearly made these points in his announcement of his decision on Safeguard on March 14 of this year. He said:

I have directed the President's Foreign Intelligence Advisory Board—a non-partisan group of distinguished private citizens—to make a yearly assessment of the threat which will supplement our regular intelligence assessment. Each phase of the deployment will be reviewed to insure that we are doing as much as necessary but no more than that required by the threat existing at that time.

Since our deployment is to be closely related to the threat, it is subject to modification as the threat changes, either through negotiations or through unilateral actions by the Soviet Union or Communist China.

To keep in perspective the decision which the Congress will be called on to make this year, it is important to keep in mind the phased program of deployment that is proposed. This year, we decide only whether to begin on phase I so that by 1974 we may have in being an antimissile defense of two of our missile sites. We do not commit ourselves to go beyond that, and the Congress will have ample opportunity to check on the progress of deployment and to reassess periodically the continued need for the system.

If in fact Safeguard deprived us of resources needed to deal with our pressing domestic problems, that fact might give us pause. But Safeguard is not short-changing any program designed to cure domestic ills. The decision to deploy this system involves spending in fiscal year 1970 only \$250 million more than would be spent if we limited ourselves to continuing with research and development. But a decision to defer deployment would add \$250 million to the total cost now estimated for deployment. The expenditure proposed for deployment in the next fiscal year amounts to three-tenths of 1 percent of the outlays proposed for defense. It amounts to a little more than one-tenth of 1 percent of proposed total Federal outlays. In its initial costs, it will be substantially less expensive than Sentinel would have been.

The estimated expenditure for the total Safeguard program is in the neigh-

borhood of \$8 billion, including the warheads. This expenditure would, of course, be made over the course of many years. It is unlikely that in any year Safeguard will demand spending that would equal even one-half of 1 percent of the budget.

To my mind, the basic issue which the Safeguard proposal presents is the degree of risk to which we are willing to expose the American people. I am not inclined to gamble when the stakes are the survival of our Nation and the safety of its people. I would rather be wrong by providing a measure of defense that the future might show we did not need than be wrong by failing to provide the protection required.

I hope that all Members of Congress, when they vote on Safeguard, are conscious that they may well be voting on the survival of the United States.

Mr. MAHON. Mr. Chairman, will the gentleman yield further?

Mr. SIKES. I am happy to yield to the chairman of the committee.

Mr. MAHON. Mr. Chairman, there is the feeling on the part of many—and that includes myself—that if we move forward with our own ABM system, and we can move forward only at a certain rate of speed, that if we move forward with this program the likelihood will be enhanced that we can sit down at the conference table with the Soviet Union and arrive at some arms control agreement, not on disarmament, which I believe is unobtainable, but some agreement for a limitation on armaments. But so long as the Soviet Union goes forward with the deployment of its ABM and we take no steps at all, we are placed in a position in this particular field of defense—and this is defense, and not of offense—of dealing from a position of weakness.

Mr. SIKES. It was after it was announced that we in this country were going ahead with the ABM system that the Soviets first agreed to hold a discussion on disarmament. This in itself is indicative of the validity of the statement the gentleman has just made: if we have a basis of strength from which to negotiate the Russians are much more interested in negotiating. There is no reason for them to negotiate if they have the field for themselves.

The CHAIRMAN. The time of the gentleman from Florida has again expired.

Mr. MAHON. Mr. Chairman, I yield the gentleman from Florida 5 additional minutes.

Mr. SIKES. I thank the gentleman for yielding the additional time.

CANCELLATION OF WEAPONS SYSTEMS

Mr. MAHON. Mr. Chairman, if the gentleman will yield further, the committee was advised yesterday of the cancellation of the procurement of the Cheyenne helicopter. It was canceled because it had not been possible for the contractor to solve the problems involved in developing this system. Of course, this program is subject to investigation by various appropriate committees. The Appropriation Committee intends to take a look at it.

The military from time to time, in their sincere desire to provide superior weapons programs attempt to stretch the

state of the art. They undertake to do things which are highly desirable by way of weapons development, but some of these things are not within the state of the art and cannot be accomplished.

Many years ago, we spent \$1 billion on a nuclear-powered aircraft, and finally we agreed that the state of the art had not progressed to where it was feasible to produce an acceptable plane of this type.

It is unfair and improper to condemn those who try to stretch the state of the art in order to improve our weapons. They make great efforts to add to the Nation's protection and to the budgeting capability of our servicemen.

Is it not understandable that in a stretching of the state of the art it is from time to time necessary to admit defeat? We are prone to call that "money down the drain," but if it is in the interest of trying to provide better defense it is not in the truest sense always money down the drain.

Mr. SIKES. This is of course the only way we can perfect our weapons systems. There must be trial and error. It is through this procedure that we have been able to develop the highly effective systems that we have. Fortunately most of them have not encountered problems as serious as the Cheyenne did.

In the case of the Cheyenne, unfortunately, hopes did not work out. Defense officials were seeking to develop a more effective weapons capability in a fast helicopter. The helicopter is largely a defenseless aircraft and yet it has been tremendously useful and has filled an extremely important need in Vietnam.

But it is highly vulnerable and the military were simply trying to provide a faster helicopter with an improved weapons capability that would enable it to stand off enemy attack and to provide greater support for the troops on the ground.

The thought was good. It would have been an extremely important development had it worked out—and eventually it probably will work out.

But in the effort to develop within a short time something that would be useful in the Vietnamese war, considerable moneys were expended. It has not been possible to develop the capability that is needed and rather than to continue to spend money on top of this already costly program, the military has decided to cancel the Cheyenne.

Mr. MAHON. Is it not true that the object of producing the Cheyenne was an effort to make our military men more effective and to save the lives of American soldiers in Vietnam?

Mr. SIKES. Yes, the purpose is to save lives—that is the primary purpose. It would have reduced the vulnerability of the helicopter, which is a very important vehicle, and made it into a gun ship.

Mr. MAHON. Pursuing the matter further, reference was made today to the so-called TFX and the Navy version, the F-111B.

Here was an effort to produce an airplane which would be suitable for all of the services. The objective was highly desirable. A great effort was made to achieve it, but as we look back with

20/20 hindsight, and I am sure the gentleman from Florida would agree, it was a mistake to undertake to make the F-111 conform to the Navy's requirements, which are in some ways quite different from the Air Force requirements.

Mr. SIKES. Yes, but we did not realize that at the time. The defense officials again felt that this was a way to save money. They made a very determined effort. The effort failed and we have to share in the blame because we financed what we thought would be a workable concept.

Mr. DAVIS of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield to the distinguished gentleman.

Mr. DAVIS of Wisconsin. I think all of us are indebted to the chairman of the committee and to the second ranking member of the defense subcommittee and the ranking minority member of the committee for this colloquy which is putting some of these things in the proper perspective, particularly with respect to the ABM system. I think this colloquy has made it clear that we do not, as a practical matter, have a choice between the development of the ABM system on the one hand and some agreement or other limiting arms on the other. Quite to the contrary, if we were to unilaterally make the decision and announce to the world, as some of our colleagues would have us do, that we are not going to defend ourselves against the ICBM, we would thereby destroy our capability of reaching any meaningful agreement with reference to either the ICBM or the ABM.

Certainly, if we announce beforehand that we are not in a position to defend ourselves, and that we do not intend to be in a position to defend ourselves, then we would be going to the conference table with no cards at all.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. MAHON. Mr. Chairman, I yield 5 additional minutes to the gentleman from Florida.

Mr. SIKES. Mr. Chairman, I take this additional time, first, to thank the distinguished gentleman from Wisconsin for this contribution which is sound, logical and meaningful.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield to the gentleman.

Mr. MAHON. It seems to make news to be against a major defense program, at this time the ABM, but it does not make news to be in favor of providing this barrier against an attack which might come from China or from the Soviet Union.

There has been so much talk in the country and so many news columns written in opposition to our building a defense system designed to help to protect the lives of American citizens and to avoid world war III, it occurs to me that it is well for the world to know that there are many—and in my opinion the overwhelming majority of people in this country who believe that this kind of protection, as imperfect as it may be, is something we must seek to attain.

I wish to thank the gentleman and my colleagues for making reference to these

matters. No one can convince me that the people of the United States want to be second best when it comes to self-defense. I do not think that we want our country to be second best, and I predict it will not be second best. I thank the gentleman for yielding.

Mr. SIKES. Let me add that the deployment of the ABM system, which is now proposed, does not mean that we will have an imperfect system. We will have a system which has the benefit of years of research and development, and as deployment progresses, it will be possible to build into it any improvements which the state of the art permits, to insure that we will have a fully workable and an effective system.

Mr. MAHON. Mr. Chairman, will the gentleman yield further?

Mr. SIKES. I yield to the gentleman from Texas.

Mr. MAHON. Is not one of the principal objectives of those of us who support the ABM to bring about a situation which will enable the United States and the Soviet Union—and other countries, we hope—to make some reduction in arms expenditures? That, after all, is our objective. I would hope we can join together in this effort and eventually through these procedures bring to a lower figure the vast resources we have to provide for defense.

Mr. SIKES. That is our objective. It is what we are working toward, and I believe it is a meaningful step in that direction.

The CHAIRMAN. The gentleman from North Carolina (Mr. JONAS) is recognized.

Mr. JONAS. Mr. Chairman, I have no further requests for time.

I yield back the balance of my time.

Mr. MAHON. Mr. Chairman, I yield 8 minutes to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Chairman, it is unfortunate and regrettable that the supplemental appropriation bill before us lumps together funds which are necessary and essential for important domestic programs with a request, as set forth in title I, for some \$1.2 billion for additional support for military operations in Southeast Asia.

Once again we are faced with a choice of either approving the entire package recommended by the Appropriations Committee, and thereby allocating still more funds to the prosecution of the war in Vietnam, or having to vote against the entire supplemental appropriation bill. I regret that the Appropriations Committee has put us in this situation again. There is strong and conscientious opposition to continuing to fund the war, and Members should have an opportunity to vote separately on the \$1.2 billion for military operations in Southeast Asia.

When the bill is open for amendment under the 5-minute rule, I intend to offer an amendment to strike title I of this bill, in order to eliminate the \$1.2 billion earmarked for Southeast Asian military operations. This would permit us to have an opportunity to vote on this question. However, of course, we know under the parliamentary procedure followed, there would be no opportunity for a rollcall

vote. If my amendment does not prevail, then I intend to offer a motion to recommend if I have the opportunity.

I believe that as long as these funds remain in this bill, it should be defeated. I have pointed out that one-third is allocated for the prosecution of the war in Vietnam. We have already allocated for this fiscal year some \$27 or \$28 billion for the war in Vietnam. Now we are confronted again with another supplemental request.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. RYAN. I am happy to yield to the distinguished chairman of the committee.

Mr. MAHON. Mr. Chairman, one of the things that has been undertaken in this bill is to provide additional funds for the equipping of the South Vietnamese military forces, so that a lesser effort will be required by the U.S. forces. I believe that this portion of the plan—of transferring to the Government of South Vietnam a greater responsibility for fighting the war and maintaining the peace when the war comes to an end—probably would meet with the approval of the gentleman from New York.

Mr. RYAN. Mr. Chairman, I would appreciate it if the gentleman from Texas, the chairman of the committee, would spell out exactly how much of the funds in the bill is for equipping the forces for South Vietnam. But it is clear also from the testimony, as I read it, that the supplemental provides funds for approximately 17,400 more American servicemen than were planned originally in the fiscal year 1969.

Mr. MAHON. Mr. Chairman, in the Army procurement portion of the bill before us, of the \$640 million, there are \$393.7 million for U.S. forces and \$246.4 million for the South Vietnamese Armed Forces modernization and improvement program. So a quarter of a billion in this bill is for the improvement and modernization of the equipment of the South Vietnamese forces. It is this quarter billion that the gentleman from Texas had in mind in propounding the inquiry of the gentleman. There are additional sums related to this procurement, such as \$50 million for the transportation of equipment, and so forth.

Mr. RYAN. Mr. Chairman, I appreciate the explanation of the chairman. Nevertheless, that does leave for U.S. Southeast Asian military operations approximately \$1 billion—a little less perhaps. And it raises a further question about our overall policy in Vietnam in relation to the forces of South Vietnam.

In any event, let me point out that according to the testimony, on page 361, of General Taylor, the supplemental also provides funds for 17,400 more troops, that is U.S. troops, than had been originally intended.

It also provides funds for a 50-percent increase in bombing by B-52's in South Vietnam. I should point out that in answering a question raised by the distinguished gentleman from Alabama (Mr. ANDREWS), General Crow said that the effect of the B-52 bombings was to make certain areas of South Vietnam look like the surface of the moon. The gentleman

from Alabama then observed that the United States has used more bombs in Vietnam than in World War II and asked:

I wonder how it is going to look when we get through over there. Will it be habitable? (Hearings, p. 296).

I think that is a good question: Will it be habitable? Will anything be left? Or will we continue to destroy the country in order to save it?

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. RYAN. I am happy to yield to the gentleman from Texas.

Mr. MAHON. Mr. Chairman, as the gentleman knows, this bill does not provide funds to send additional American fighting men to South Vietnam. It provides for the payment of the men who were sent over there as a result of the Tet offensive which caused us to increase our forces. It is not the intent of this bill to increase our manpower in South Vietnam.

Mr. RYAN. I understand the gentleman's argument. The impact, nevertheless, is to provide funds for a higher level of troops there than had been budgeted for fiscal year 1969.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. RYAN. I yield to the gentleman from California.

Mr. LIPSCOMB. Mr. Chairman, on the point the gentleman is making and the point the chairman of the Appropriations Committee made, the planned strength for U.S. forces in Southeast Asia has not been reached as yet, but the reason we are implementing funds in this supplemental bill is because the Tet offensive did extensive damage over there and made it necessary for us to commit more troops and more ammunition and other equipment.

Then, the seizure of the U.S.S. *Pueblo* by Communist North Korea took place. It caused us to supplement our efforts in the Korean area.

It was aggressive action by North Vietnam and North Korea which made this supplemental which is before us necessary. We are just supplying additional funds for those two aggressive actions by the Communists. That is the purpose of this supplemental.

Mr. RYAN. I do not quite understand how funds for the Korean situation come under title I, which is entitled "Military Operations in Southeast Asia."

Mr. LIPSCOMB. If the gentleman will yield, I will explain it.

Mr. RYAN. I do not have sufficient time.

Mr. MAHON. Mr. Chairman, I yield the gentleman 2 more minutes.

Mr. RYAN. I yield to the gentleman from California.

Mr. LIPSCOMB. At the time of the *Pueblo* incident, the House of Representatives and the Senate, in the appropriation bills, had included funds for Korea with funds for Southeast Asia.

I might point out to the gentleman that there are South Korean troops who are helping the United States and the South Vietnamese effort in South Vietnam.

Mr. RYAN. This supplemental appropriation bill is before us because of an underestimation of the cost of the war in Southeast Asia. Each year for the past 5 years Congress has been asked to appropriate supplemental money for the war in Vietnam.

I have pointed out on each one of those occasions—in 1965, 1966, 1967, 1968, and now 1969—that the only means the House has to change the Vietnam policy is to exercise the power of the purse. This bill presents us with another opportunity to vote on the conduct of the war.

Since last May, when the Paris peace talks were started, over 12,000 American servicemen have been killed in this war. There is no end in sight. The only way that the Congress, if it feels that this war must be ended, as I do, can exercise any influence on the direction of our foreign policy in Southeast Asia, is to vote "No" to these funds.

Therefore, I will offer an amendment under the 5-minute rule to strike title I. I hope it will have wide support so that we will be able to separate out the money for Southeast Asia military operations from the very essential funds contained in this bill for domestic programs.

Almost one-third of this appropriation is for military operations in Southeast Asia. H.R. 11400 provides total appropriations of \$3,783,212,766. Of this, \$1,234,000,000 or about 31 percent is allocated for Southeast Asia. This is above and beyond an estimated \$27.6 billion which Congress has already appropriated for Vietnam for fiscal year 1969.

Although President Nixon said in his nationwide television address last Wednesday that he intends to seek a mutual withdrawal of American and North Vietnamese troops from South Vietnam, testimony from officials of the Department of Defense suggests an increase in the size and scope of our military operation in Vietnam. The testimony of Gen. A. B. Taylor, director of the Army budget, reveals that approximately 17,400 more soldiers were deployed in Southeast Asia than were originally specified in the fiscal year 1969 budget. According to General Taylor, these troops were not sent as replacements but as additions to the existing force. General Taylor went on to say that additional troops would be deployed during the next fiscal year. Hearings on second supplemental appropriations bill, 1969, page 361.

For 5 years supplemental appropriations bills have been used to escalate the war and to deepen our military commitment in Southeast Asia. Although the appropriations sought in this bill may not result in the dramatic escalation that has occurred in the past, they will nonetheless be used to increase still further the killing and destruction that continues in Vietnam.

Each year the costs of the war have been underestimated in the initial budget. This happened in 1965, 1966, 1967, 1968, and now again in 1969. But each year the Congress has chosen to abdicate its responsibility to pass judgment on the war and has, instead, channeled more money into the quagmire in Southeast Asia.

For 5 years now, the critics of the war in Vietnam have been urging that we pursue alternative policies in Southeast Asia. In 1964, I urged a specific strategy for the neutralization of Southeast Asia to avoid broadening the conflict. But the conflict was broadened. In 1965, I argued against the Americanization of the war and against escalating our military commitment. But the war was Americanized and our commitment escalated. In 1966, I tried again to point to the policy alternatives available to us. But the choice of continued escalation was made. In 1967, I called again for renewed diplomatic efforts and an end to the bombing in the north. But diplomacy was secondary to the continued attempt to impose a military solution.

As I pointed out earlier in my remarks, the request for supplemental funds for Southeast Asian military operations has been tied in to other appropriations for some vital domestic programs which I support and, in some cases, have even proposed.

On January 30, I introduced an omnibus supplementary appropriation bill, H.R. 5562, to fully fund several important programs established under the Housing and Urban Development Act of 1968. Later, I reintroduced this legislation with 29 cosponsors—H.R. 7760, H.R. 7761. This legislation would provide supplementary appropriations to bring the section 235 homeownership program, the section 236 rental and cooperative housing program, the rent supplement program, the urban renewal program, and the urban renewal component of the model cities program to the full amount of funding authorized by Congress.

The bill before us today includes supplemental appropriations for three programs—section 235, section 236, and low-rent public housing program. Both section 235 and section 236 would receive an additional \$40 million for fiscal year 1969—which still leaves each program \$10 million less than the amount authorized by Congress. The low-rent public housing program—which remains the only effective way to reach low-income people in our larger cities—would receive an additional \$7,168,000 for fiscal year 1968 and \$16 million for fiscal year 1969 in contract authorization.

While I am pleased that the Appropriations Committee has recommended supplementary appropriations to these three programs, I am disappointed that the bill does not provide additional funds for the rent supplement program, the urban renewal program, or the urban renewal sector of the model cities program. Each year the rent supplement program has been starved for funds; the current fiscal year is no exception. While the administration recommended \$65 million for rent supplements for fiscal year 1969, Congress appropriated only \$30 million. Similarly, urban renewal in model cities, although it was authorized to receive \$500 million, has appropriated only \$312 million.

These programs must be funded to the full amount authorized by Congress if we are to mount an effective attack on the crisis in urban housing which confronts this Nation. As has been the case

so often before, the appropriations provided for Southeast Asian military operations in H.R. 11400 alone are greater than the amount which would be required to fully fund these vital housing programs.

I am also disturbed that a request from the Department of Housing and Urban Development for an additional \$2 million to carry out fair housing activities under title VIII of the Civil Rights Act of 1968 was denied by the committee. As Housing and Urban Development Secretary Romney stated in his testimony in support of this appropriation:

"It is simply impossible to attain this goal (providing a decent home in a suitable living environment for every American family) without a major and continuing effort in pursuit of fair housing for every person in this country." (Parenthesis added) (Hearings on Second Supplemental Appropriation Bill, 1969, p. 570.)

At present, the fair housing program has received only \$2 million to carry on that effort from Congress. If fair housing is to be guaranteed in this country, we must allocate more resources to pursuing that goal.

No doubt the argument will be made that, since the pending bill contains funds for several agencies which require supplemental allocations for their operations, as well as for programs, such as section 235 and section 236, it should be supported despite the title I appropriation for the war. I cannot accept that argument, which ignores two basic factors.

First, if the House refused to approve this bill as long as it contained war appropriations funds earmarked for military operations in Vietnam would be removed; and the other parts of the bill would come back to the floor.

Second, and more basic, it must be recognized that vital domestic programs will not be funded adequately until the bloody and costly war in Vietnam is ended. So long as appropriations bills continue to allocate one-third of our available resources to Southeast Asian military operations—as this one does—our cities will continue to rot, and the social fabric of our Nation will continue to be ripped apart. We will never mount the concentrated attack on the multitude of domestic problems facing us—including housing, education, discrimination, and pollution—so long as these programs receive only leftover scale allocations. The solution of our domestic crisis, in other words, must be preceded by an end to the war in Vietnam.

For 5 years the Congress has acquiesced in a disastrous policy. Some 35,000 American servicemen have been killed, and many more wounded and crippled. The country which we supposedly set out to save today lies in chaos and ruin. For 5 long years the resources of this country have been poured into an ill-conceived war, only to see our policymakers return the next year with requests for still more funds.

How long will this war go on? Another year? Another 2 years? Another 3 years?

If we are truly concerned with the con-

tinuation of this war—after it was thoroughly and roundly repudiated in the elections of last year; if we are concerned that after 1 year of negotiations in Paris we have not achieved peace; if we are truly desirous of terminating the death and destruction which continue to be wreaked on a small and unhappy nation—then let us now call a halt to this war through the only power the House possesses: the power of the purse.

Mr. MAHON. Mr. Chairman, I should like to state to the Members of the House that it is the purpose of the Committee to have read the first paragraph of the bill, which deals with "Military personnel, Army," lines 6 and 7 on page 2, and then I expect to move that the Committee rise. Of course, amendments will be in order, but I expect to be recognized by the Chairman to move that the Committee rise, and then the amendment period would come tomorrow.

I should like to say further that it is proposed on tomorrow before we begin further consideration of the bill, that the Rules Committee will offer a rule which will make in order the expenditure limitation, which is carried in title IV of the bill.

So, if the rule is adopted—and, of course, we hope it will be adopted—we will proceed with the reading of the bill under the 5-minute rule.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Iowa.

Mr. GROSS. The language that you would have read this afternoon, do I understand, goes to line 7 on page 2?

Mr. MAHON. Yes. It would end at the figure \$110 million in line 7 on page 2.

Mr. GROSS. That includes no language, then, that is subject to a point of order?

Mr. MAHON. No.

Mr. GROSS. The rule is designed to waive points of order.

Mr. MAHON. The rule is designed to protect against points of order only in title IV, which relates to the expenditure limitation. It will not protect any other part of the bill than the expenditure limitation.

The CHAIRMAN. The time of the gentleman from Texas has expired. All time has expired.

The Clerk will read.

The Clerk read as follows:

H.R. 11400

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated out of any money in the Treasury not otherwise appropriated, to supply supplemental appropriations (this Act may be cited as the "Second Supplemental Appropriations Act, 1969") for the fiscal year ending June 30, 1969, and for other purposes, namely:

TITLE I

MILITARY OPERATIONS IN SOUTHEAST ASIA

DEPARTMENT OF DEFENSE—MILITARY PERSONNEL

MILITARY PERSONNEL, ARMY

For an additional amount for "Military personnel, Army", \$110,000,000.

Mr. MAHON. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HOLIFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11400) making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members speaking on the bill this afternoon may be permitted to revise and extend their remarks and that I may be permitted to revise and extend my remarks and insert certain tables and excerpts relating to the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

SMALL BUSINESS ADMINISTRATOR ATTEMPTING TO COVER UP FUENTES AFFAIR

(Mr. PATMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PATMAN. Mr. Speaker, on April 26, Mr. Hilary Sandoval, Jr., the Administrator of the Small Business Administration, appeared before the Banking and Currency Committee to discuss an SBA loan to a New York company with alleged underworld ties.

Shortly before the hearing, I received a telegram from the Honorable HENRY B. GONZALEZ, a distinguished member of the committee, concerning "an alleged shakedown" of a small business loan applicant by Mr. Albert Fuentes, special assistant to Mr. Sandoval.

The telegram follows:

WASHINGTON, D.C.,
April 25, 1969.

HON. WRIGHT PATMAN,
Washington, D.C.:

Affidavits in my possession and on file with the Federal Bureau of Investigation show that there is reason to believe that Albert Fuentes, special assistant to the Administrator, Small Business Administration, has engaged in or attempted to engage in shake-downs of SBA loan recipients. I have requested the administrator to suspend Fuentes pending full investigation and request that you join in this action. I request that the committee under your able leadership investigate all loans either made or pending in Texas offices of SBA since Fuentes entered his position and that investigation be made particularly in the San Antonio area.

Sincerely,

HENRY B. GONZALEZ,
Member of Congress.

When Mr. Sandoval appeared before the committee, I asked him to look into the Fuentes situation and to report his finding to the committee. Mr. Sandoval agreed to this request. The transcript of the hearing clearly spells out what in-

formation Mr. Sandoval was to provide. The transcript states:

The CHAIRMAN. Now I will ask you to take this telegram and give me a report on Mr. Fuentes. You can do that, I assume?

Mr. SANDOVAL. Yes, sir.

The CHAIRMAN. And also to give me all the information about the loans in the San Antonio area.

Mr. SANDOVAL. Yes, sir.

The CHAIRMAN. And if any of them provoke your thinking along the lines as not being regular, call them to our attention.

Mr. SANDOVAL. Yes, sir.

Following Mr. Sandoval's appearance, I learned that SBA investigators had visited the San Antonio SBA office and looked into the Fuentes situation. After allowing a reasonable length of time for the investigators' report to be forwarded to Washington, I wrote to Mr. Sandoval on May 12. The letter asks Mr. Sandoval not only to provide the Fuentes report but also to furnish the committee with a document that is extremely important to the committee's investigation of the New York loan to the alleged criminal controlled company. The letter follows:

MAY 12, 1969.

Mr. HILARY SANDOVAL, Jr.,
Administrator, Small Business Administration, Washington, D.C.

DEAR Mr. SANDOVAL: It has come to my attention that a memo dated January 5, 1967, from Mr. William Bowling to then Small Business Administration Administrator, Bernard Boutin, contains a great deal of background information concerning SBA's involvement with A.N.R. Leasing Corporation. This memo is of vital importance to the Committee's examination of the A.N.R. loans and because of this, it is imperative that the Committee be given a copy of the complete memo immediately.

It is my understanding that there may be a problem in releasing the memo in that it contains FBI and Justice Department information. In this regard, it would be appreciated if you would take action to secure the release of the memo from the Justice Department and immediately forward it to the Committee.

In addition, you will remember that during your appearance before the Committee on April 26th, I asked you to make a complete investigation of the charges made against Mr. Albert Fuentes. While I realize you have turned the matter over to the FBI, it is my understanding that SBA investigators have been looking into Mr. Fuentes' relationship with the San Antonio office. Because of the importance of this matter, it would be appreciated if you would immediately inform the Committee as to the results of your investigation of this incident and also if any other loans involving alleged improper action on the part of Mr. Fuentes have been uncovered. Your earliest reply would be appreciated.

Sincerely,

WRIGHT PATMAN,
Chairman.

It is quite clear from even a most casual reading of the letter that two different subjects are covered in the letter. The staff of the Banking and Currency Committee had been informed by SBA officials that the memo from Mr. Bowling to Mr. Boutin contained information from the FBI and Justice Department and that permission would have to be obtained from these departments to release the memo. Because of this, my letter specifically asked Sandoval to take

action to secure release of the memo to the committee because of its important nature to our investigation.

The last paragraph of the letter deals solely with Mr. Sandoval's promise to supply the committee with the report on the Fuentes case.

It does not suggest that the Fuentes report, promised the committee by Mr. Sandoval, should be turned over to the Justice Department, nor does the letter make any reference to the Justice Department in connection with the Fuentes case.

After the letter was sent to Mr. Sandoval, a member of the Banking and Currency Committee staff called SBA to find out when the Fuentes report would be made available. He was assured that the report would be in the committee office the following morning, along with some other material that the committee had requested. The following morning, SBA did send information concerning its lending activities in cases under study by the committee, but did not send the Fuentes report. The SBA official who brought the material to the committee stated that he did not have a copy of the Fuentes report but that he would call back to his office and make certain that the report was placed on his desk and that he would personally hand deliver the report that afternoon. Later in the day, still another SBA official reported to the committee staff that the committee would not be able to get a copy of the report that afternoon because, "I do not know where a copy of the report is and even if I did, I do not have authority to release it."

He said that Mr. Sandoval was out of town and could not be reached. The following day, several members of the Banking and Currency Committee staff attempted to obtain copies of the report but were unsuccessful. The reason given at that time for the report not being made available was that Mr. Sandoval was out of town and the report could not be released without his approval. When the committee staff attempted to locate Mr. Sandoval they were told by his office that—

He is in New York but I don't know where to get in touch with him or exactly where he is.

The following day, Mr. James Reed, congressional relations director for SBA, called the committee staff to state that the Fuentes report had been turned over to the Justice Department and would not be made available to the committee.

Following Mr. Reed's disclosure, the committee staff contacted the Criminal Division of the Department of Justice and was told that the committee could not have the document. The Justice official did state, however, that if I wrote a letter to Justice stating that the report would be kept confidential, they would consider releasing the report to the committee. The Justice Department was informed that the SBA report on Fuentes did not belong to the Justice Department since it was the committee that suggested that SBA conduct the investigation and the suggestion was agreed to by Mr. Sandoval. The Justice Department of-

ficial admitted that his Department had not asked SBA to conduct such a study but, in fact, that the direction for the study came from the committee.

On Monday, Mr. Speaker, Mr. Sandoval responded, in a highly unresponsive manner, to my letter of May 12. The letter follows:

SMALL BUSINESS ADMINISTRATION,
Washington, D.C., May 19, 1969.

HON. WRIGHT PATMAN,
Chairman, Committee on Banking and Currency, House of Representatives, Washington, D.C.

DEAR Mr. CHAIRMAN: We have discussed your written request of May 12, 1969, with the Department of Justice as you suggested and have been unable to secure the release of any part of the information sought.

We understand the staff of the Criminal Division of the Department of Justice has apprised your staff of the Department's attitude in this matter.

We are sorry we cannot assist you at this time, but please be assured that when the Department of Justice is willing to release the material we will be most happy to cooperate with your Committee in any area in which we may be of service.

Sincerely,

HILARY SANDOVAL, Jr.,
Administrator.

It should be noted that Mr. Sandoval has attempted to merge both of the points in my letter into one convenient alibi for his failure to live up to the promise that he made before the Banking and Currency Committee. No mention was made in my letter of consulting with Justice concerning the Fuentes case, since the matter was clearly between SBA and the Banking and Currency Committee.

I can only conclude from what transpired last week between SBA and the staff of the Banking and Currency Committee and Mr. Sandoval's letter that the Small Business Administration is attempting to cover up the Fuentes case.

Over this past weekend, Mr. Fuentes called a press conference in San Antonio in which he repeatedly referred to Congressman GONZALEZ as an "unmitigated liar." Mr. Fuentes denies the allegations against him and, in fact, indicates that he will bring a number of suits against the people involved in making the charges.

It seems strange to me, Mr. Speaker, that while Mr. Fuentes is calling press conferences to deny his guilt and calling a respected Member of this body an "unmitigated liar," the Small Business Administration refuses to release its investigative reports on the Fuentes situation. In short, if Mr. Fuentes is innocent of any wrongdoing, Mr. Sandoval would be more than willing to comply with the commitments that he made to the Banking and Currency Committee.

It certainly is convenient that just when it appears that Mr. Sandoval will have to make good on his promise and provide the committee with the Fuentes information, the Justice Department rushes in and impounds the report, a report which I repeat was requested not by the Justice Department but by the Banking and Currency Committee. At virtually the same time this is happening, Mr. Fuentes calls a press conference to deny any wrongdoing.

Despite the attempt by Mr. Sandoval to cover up the Fuentes situation, I want to assure this body that the Banking and Currency Committee will not be fooled by the literary slight of hand and devious actions of Mr. Sandoval.

To this end, the Banking and Currency Committee will hold a hearing at 10 a.m. next Saturday, May 24, in room 2128, Rayburn House Office Building, to find out why Mr. Sandoval has not complied with the promises he made to the committee. I have asked Mr. Sandoval and other officials of the Small Business Administration to appear at that time and to deliver to the committee the Fuentes report.

If Mr. Sandoval does not provide the committee with the report, then I will seriously consider asking the staff of the Banking and Currency Committee to undertake a full and complete investigation of the Fuentes incident.

Perhaps this will be the only way that we can learn the true facts of the Fuentes case.

THE NADIR IN UNNECESSARY WEAPONS AND BARBARIC WARFARE

(Mr. PODELL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PODELL. Mr. Speaker, evidence mounts daily that our Nation has committed itself to a significant extent to preparing for the waging of chemical, bacteriological, and radiological warfare.

Research goes on apace at several facilities into the ultimate in horror—germ and chemical warfare. Nerve gas is stockpiled in several areas. Poison gas is retained and stored. Its very presence is a danger, as recent events have shown.

These are grisly facts, indeed. Destructive power of such newly developed agents approaches that of the most powerful nuclear or thermonuclear devices. Further, we know quantities are being produced and stored which pass beyond the unnecessary and enter the realm of the irrational.

Worldwide epidemics which were thought to have been buried with old wars are now a definite possibility. Such weapons are cheap to produce, compared to thermonuclear weapons systems. Their testing is infinitely less difficult than earthquake-causing proofs required of other devices. No bombers or missiles are necessary with which to deliver them. No massive defensive systems are a potential barrier to their delivery. As a result, we are producing and proliferating a poor nation's world destroyer—chemical and bacteriological devices.

We already know too that these weapons are much more susceptible to mishaps, as the Utah sheep kill proved. Damages awarded are mute proof that this is what transpired there.

It is with deep sadness that I again confess to our use of defoliants and irritating agents in Vietnam. Do we wish to edge closer to the thin, condemned ranks of those who used poison gas in war since 1925, when the Geneva pro-

toocol against use of poison gas was signed? Will we join a list headed by the Egyptians in Yemen and Japanese warlords in China? Ethiopia in the 1930's was the only other recorded instance. Do we wish to proudly stand alongside Nasser and the old warlords? How melancholy a sight we would present.

We are toying with elementary forces of nature, loosing them upon an unsuspecting world and people as well as upon a helpless, vulnerable environment. Nothing is known about tests of these horrors, because this is still another secret the people must be kept from knowing about for their own good. Where are they being tested? How? For how long? With what results? With what accidents? With what consequences to us in the future? I am not satisfied with feeble excuses and transparently false answers from gentlemen who vanish behind locked doors. If we allow this to continue, we shall fully deserve the fate which will overtake us.

There must be open hearings on this subject. We do not need this research, testing, or preparation for such methods of waging war. We must not take such chances with our Nation, world, and environment by toying with such volatile elementary forces. Even if we gain expertise and a "lead" over our potential opponents, in the process we shall compromise our ideals as a nation and our self respect as a people.

This country never appended its signature to the Geneva protocol of 1925 on use of poison gas. Would it not be an excellent step in the direction of world easing of tensions for the President to resubmit the protocol to the Senate for ratification?

Mr. Speaker, there is no rational argument in the mind of man which could possibly argue successfully for expansion or retention of our capability to wage such warfare. It is brutally against our history and daily protestations of virtue and morality. By its very nature it does violence to the spirit of man. For decades and more we have done honor and paid lip service to those who freed men from nature's scourges. Each time God laid a curse upon man, he gave another man insight with which to lift it from the brow of his children. Are we then to lift the cover caging the fiend from the pit who so many good and sublime people have sacrificed so much to place and imprison there? Are we to do so in the name of all ideals we claim to hold holy? Do they still mean anything after that?

ENVIRONMENTAL POLICY

(Mr. DADDARIO asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DADDARIO. Mr. Speaker, a major issue before Congress and the Nation is the quality and productivity of our natural environment. The variety of legislation and the number of different committees involved with these problems grows each session. I have noted on a number of occasions a call for a national

policy to guide the activities of both the private sector and governmental agencies. I believe that such a policy now exists and is well agreed upon. I come to this conclusion on the basis of two substantial efforts of policy formation.

Last July 18 a joint Senate-House colloquium on a national policy for the environment was convened by Senator HENRY JACKSON, chairman of the Senate Committee on Interior and Insular Affairs, and Representative GEORGE P. MILLER, chairman of the House Committee on Science and Astronautics. The colloquium met for an entire day with leaders from industry, universities, and Government. Formal presentations were received from Mr. Laurance S. Rockefeller, Chairman of the Citizens' Advisory Committee on Recreation and Natural Beauty; Secretary of the Interior Stewart L. Udall; Secretary of Housing and Urban Development Robert C. Weaver; Assistant Secretary of Agriculture John A. Baker; Dr. Donald F. Hornig, Director, Office of Science and Technology; Secretary of Health, Education, and Welfare Wilbur J. Cohen; Dr. Philip Lee, Assistant Secretary, Health and Scientific Affairs, Department of Health, Education, and Welfare; and Mr. Don K. Price, dean, John Fitzgerald Kennedy School of Government, Harvard University.

Over 100 informed and interested persons made up the participating audience, and the proceedings included written submissions from over 30 persons expert in one or another phase of environmental quality. As a result of the colloquium, the Legislative Reference Service prepared a congressional white paper on "A National Policy for the Environment," which was submitted to Congress over the signatures of Senators HENRY M. JACKSON and Thomas H. Kuchel, and Representatives GEORGE P. MILLER, JOHN A. BLATNIK, JAMES G. FULTON, CHARLES A. MOSHER, and myself. Support for this effort to set down the elements of policy is thus bipartisan and bicameral. The white paper lists the following essential elements:

It is the policy of the United States that: Environmental quality and productivity shall be considered in a worldwide context, extending in time from the present to the long-term future.

Purposeful, intelligent management to recognize and accommodate the conflicting uses of the environment shall be a national responsibility.

Information required for systematic management shall be provided in a complete and timely manner.

Education shall develop a basis of individual citizen understanding and appreciation of environmental relationships and participation in decisionmaking on these issues.

Science and technology shall provide management with increased options and capabilities for enhanced productivity and constructive use of the environment.

The second major policy delineation has come from the Committee on Environmental Quality of the Federal Council for Science and Technology in the Executive Office of the President. In response to my suggestion, a group of experts from a number of executive departments and agencies was convened to examine the proposals of the white paper and provide a coordinated statement

of response. The result is most impressive because the basic principles of the congressional report are endorsed and some valuable extensions and additions are suggested. In particular I would call your attention to the executive branch policy proposal for a stipulation that: First, each person has a fundamental right to a healthful environment, and, second, each person has a responsibility to contribute to the preservation of the quality of the environment.

Mr. Speaker, the exact words of these policy statements are not critical. We could very likely gather yet another group of environmental specialists and public scholars and produce different languages; but the essential points would remain the same. Therefore, I propose that the national policy is now clear in terms of the executive and legislative branch statements listed above. These elements of policy should now be accepted by the various congressional committees as they consider environmental ramifications of problems in their jurisdiction. It is imperative that the widest distribution of these policy statements be made to the public and to organizations and individuals for opinion leadership. With these elements of policy the executive branch should bring the action programs of the various agencies into conformity.

The President has proposed a Cabinet-level environmental coordinating committee. Several congressional proposals have been made for a Council of Environmental Advisers or similar high-level groups. The recognition and acceptance of policy may be more important at this time than the detailed form of organization.

We are familiar with the frequent episodes and dramatic ecological disruptions which are testimony to policy inadequacies. It is easy to become engrossed in the DDT story, offshore oil slicks, ocean disposal of CBW agents, or other headline-creating alarms. But preoccupation with these incidents is like skipping a flat stone across the water. It is interesting as it hops along but it soon slows and sinks leaving nothing changed. To continue the allegory, what Congress should be concerned with is a policy which will float and support our activities in the environment over the long voyage. Policy planning is slow and unglamorous but it is the basis for a real solution to the deep problems revealed by these occasional attention-getting events.

With the discussion and development of policy accomplished we can concentrate on a reduction to practice of these national objectives. Every action of the individual citizen, local community, State and regional agencies, industry, and Federal departments can be tested against these clear and simple statements. The results should be guidelines for everyday decisions in management of technology and the economy which will bring immediate and appreciable results. Environmental quality and productivity have never been mutually exclusive, but the balance has usually been far from optimum. With the economic and technological resources at hand, these policy

statements generated from both the executive and legislative branches should equip our organizational institutions to proceed in a logical manner toward specific practical gains for our natural environment and human welfare.

I include the communication from the Executive Office of the President, Office of Science and Technology, at this point in the RECORD:

APRIL 24, 1969.

DEAR MR. DADDARIO: Your letter of November 29, 1968, invited comments on the Congressional White Paper on A National Policy for the Environment.

In response to your suggestion, I invited the members of the FCST Committee on Environmental Quality (CEQ) to examine the proposals of the White Paper and to provide me with a coordinated statement of their personal views. Their comments and suggestions have been fully considered in the preparation of the enclosed document. Comments are restricted to Part III of the White Paper.

These comments are not to be taken as department or Administration views, but rather the personal views of individuals deeply involved in environmental quality matters.

We certainly appreciate the chance to comment on the White Paper and hope our reply will contribute to the formulation of a national policy for the environment.

Sincerely yours,

JOHN L. BUCKLEY.

COMMENTS ON PART III OF THE CONGRESSIONAL WHITE PAPER

1. We endorse the basic principles implicit in the five points listed in bold face in Part III of the White Paper as vital elements of any national policy dealing with the problems of the environment, namely:

a. Recognition of the worldwide and long-range character of the problem of environmental quality;

b. Essentiality of purposeful and intelligent management of the problem as a matter of national responsibility;

c. Continuing need for fuller, up-to-date information through intensified, in-depth research on the nature of the problems, as essential to responsible and effective management;

d. Systematic use of education on all levels as a means of facilitating public understanding and, as appropriate, of laying the ground for responsible citizen participation in community action programs;

e. Application of science and technology in developing and executing policies and programs concerned with the abatement and correction as well as the improvement of present conditions.

2. We suggest that the following additional issues are of major importance and should be raised to the level of basic principles:

a. The interrelationship between deteriorating environmental quality, rapidly expanding technology and population growth which necessitates an effort to bring the needs of the population into balance with natural resources, and

b. The international spread of environmental problems which calls for positive action on an international scale.

3. We wish to give special emphasis to the following points made in the balance of Part III, without prejudice to the order of priority:

That "the policy must recognize the responsibility to future generations of those presently controlling the development of natural resources . . .

That "priorities and choices among alternatives . . . must . . . be planned and managed at the highest level of our political system (and that) all levels of government must require developments within their purview

to be in harmony with environmental quality objectives . . .

That "alteration and use of the environment must be planned and controlled rather than left to arbitrary decision . . .

That "the system of free enterprise democracy must integrate long term public interests with private economic prosperity . . .

That "decisions to make new technical applications must include consideration of unintended, unanticipated, and unwanted consequences (and that) technology should be directed to ameliorating these effects so that the benefits of applied science are retained."

4. We propose that, in addition, a national policy dealing with the environment contain the following elements:

a. A declaration pronouncing the environment as a public resource whose quality must be:

(1) Defined and assured in terms of safety, healthfulness, productivity, social amenity, cultural portend and aesthetic appeal;

(2) Protected against abuse, irreversible damage and irretrievable loss; and

(3) Managed to provide an optimum state of physical, mental and social well-being and, at the same time, to permit the widest range of beneficial uses of the environment that is possible, without risk of degradation, to satisfy the present and future needs of man;

b. A stipulation that:

(1) Each person has a fundamental right to a healthful environment; and

(2) Each person has a responsibility to contribute to the preservation of the quality of the environment;

c. A national commitment upholding the first line responsibility of state and local governments to manage their environment, affirming the responsibility of the Federal Government to manage environmental problems which are of nation-wide scope or exceed the competencies of state and local governments, and recognizing the authority of Federal, state and local governments, within their respective area of jurisdiction to:

(1) Set priorities in dealing with environmental problems;

(2) Make a technological assessment to determine the effects of present and new activities on the quality of the environment;

(3) Study the ecological, biological, economic and social effects of environmental changes;

(4) Develop criteria and promulgate standards defining desirable levels of environmental quality;

(5) Establish measurements, mechanisms and systems for monitoring levels of pollution;

(6) Issue regulations prescribing observance of established standards and ensure that such regulations are effectively enforced so that parties responsible for breach of regulations be held fully accountable for their action;

(7) Utilize economic incentives designed to stimulate private enterprise to act in the public interest insofar as environmental protection and management are concerned; and

(8) Coordinate, as far as practical and desirable, activities of governments on various levels in the exercise of these responsibilities;

d. A definition of the role of the science community in its broadest sense in providing policy makers and program managers with the needed data and criteria for decision-making, specifically

(1) By devising measures for immediate action aiming at the arrest, abatement and correction of the most critical problems;

(2) By developing long-range programs aiming not only at the elimination of existing and the prevention of future hazards but at the restoration and the progressive improvement of the quality of the environment in its ecological, physical, social, cultural and aesthetic aspects;

(3) By formulating alternatives that might be available to decision-makers in all major programs and actions affecting the environment;

(4) By intensifying in-depth research on the nature, causes and effects of environmental changes with a view to determining critical thresholds of deterioration requiring preventive or corrective action;

(5) By choosing a systematic interdisciplinary approach which will ensure the integrated use of resources of the natural as well as the social sciences and the cooperation of scientists dealing with the physical and biological aspects of the problem and of those dealing with social and economic, specifically behaviorist and managerial, aspects; and finally

(6) By facilitating coordination among competent non-governmental organizations and by enlisting their assistance and mobilizing their resources in support of government programs and those of inter-governmental organizations;

e. An appeal to the citizenry

(1) To alert people everywhere to the existence and the growth of present hazards caused by abuse of the environment and by technological changes;

(2) To arouse interest in the need for systematic use of information media and of educational institutions on all levels for purposes of public enlightenment; and

(3) To foster a sense of civic responsibility on the part of the private citizen for broad community action in support of programs aiming at the preservation and improvement of the environment;

f. Recognition of the international aspects of the environmental problems based on the assumptions:

That, ecosystems are not limited by national boundaries;

That, for the sake of future generations, all of mankind has a responsibility to preserve the viability of this planet and the quality of the environment;

That, with the accelerated spread and transfer of technology creating new environmental hazards, and with pollutants drifting across political frontiers, more and more peoples and their national resources will be exposed to the threat of mutual pollution and degradation;

That, in view of the pressing population problem, depletion and destruction of national resources has become a matter of international concern and conservation a matter of common responsibility;

That, even where deterioration is purely a local or national phenomenon, similarity of causes, symptoms and effects to those in other countries is creating a worldwide community of interest of peoples thus affected;

That the difficulty in coping with these problems is compounded by the disparity of resources available for research, development and demonstration and remedial action, notably of developed as against less developed countries;

That, whereas the bulk of the problem and the heavier responsibility will continue to rest with national governments and local authorities, intergovernmental agencies and international non-governmental organizations must increasingly assume a subsidiary responsibility, notable for the solution of problems which exceed national capabilities and which require the mobilization and the coordinated use of national resources in support of agreed international priorities;

g. And a pledge of support of multilateral initiatives, resolutions and programs sponsored by intergovernmental or international non-governmental organizations and aiming at:

(1) Immediate measures to arrest, abate or prevent further deterioration in critical areas of the environment threatened by serious hazards to human life and health or

with the extinction of important biotic communities and species;

(2) The development of international arrangements to coordinate existing or initiate new programs, providing on a continuing or regularized basis:

Exchange of information and transfer of technical expertise;

Training of experts;

Worldwide information and education programs;

Joint research programs to help governments establish baselines, criteria and standards;

National, regional and global monitoring systems to measure pollution hazards and levels of pollution and lay the ground for a "world pollution watch," and eventually;

The establishment of a permanent international system to act as a coordinating body for the above activities carried out under national or international auspices, with authority to recommend the adoption of specific measures to national governments.

Mr. Speaker, a letter to the President follows, and is inserted as a significant step in the development of environmental policy:

MAY 14, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The quality and productivity of the environment have been recognized by both the Congress and Executive agencies as a major public policy issue. Your personal long-term interest in this question together with some recent important results of Congressional programs prompts me to suggest the possibility of immediate action which would enhance the productivity and quality of our natural environment.

In discussions of matters such as pollution, pesticide practice, and major ecological disruptions the appeal for guiding policies is made. I believe that the national goals and objectives which make up these elements of policy are now clear. An immediate declaration of policy by the Administration and the Congress could provide valuable guidelines for decisions affecting the environment which are made daily by individuals, corporations and the government.

Last July 18 a joint Senate-House colloquium brought together over 100 experts and opinion leaders from the private sector, and over 20 committee chairmen, interested Senators and Representatives. As a result of this day-long meeting a Congressional White Paper on a National Policy for the Environment was submitted to the Congress over the signatures of Senator Henry M. Jackson, Representative George P. Miller, Senator Thomas H. Kuchel, and Representatives John A. Blatnik, James G. Fulton, Charles A. Mosher, and myself. The support was bipartisan and bicameral. The White Paper identified the following elements of policy:

"It is the policy of the United States that:

"Environmental quality and productivity shall be considered in a worldwide context, extending in time from the present to the long-term future.

"Purposeful, intelligent management to recognize and accommodate the conflicting uses of the environment shall be a national responsibility.

"Information required for systematic management shall be provided in a complete and timely manner.

"Education shall develop a basis of individual citizen understanding and appreciation of environmental relationships and participation in decisionmaking on these issues.

"Science and technology shall provide management with increased options and capabilities for enhanced productivity and constructive use of the environment."

On April 24, 1969 I received a communica-

tion from Executive leaders in the Committee on Environmental Quality of the Federal Council for Science and Technology which added several valuable elements to the statements developed by Congress. Taken together, it is remarkable and significant that there is no point of disagreement in these elaborations of a national policy.

Having reached this stage, I am convinced that the call for policy can now be answered. The exact language or words of the statement are not crucial. With your leadership and the cooperation of Congressional interests it should be possible to move beyond this policy discussion stage into improvement of existing action programs. The setting of priorities for future Federal efforts can do much to reconcile the conflicts of use of our environmental resources and enhance the quality of our surroundings. In addition, a declaration of policy would enable this country to proceed effectively in the international situation which is so obviously a necessary context for many urgent environmental decisions. The United States should be in a position of demonstrated accomplishment and leadership at the time of the proposed United Nations Conference in 1972.

I believe that the Administration and the Congress must act promptly to bring these policy statements to the widest possible audience of citizens and to forums of opinion everywhere. I offer my personal cooperation to pursue this matter in the Legislative Branch, and I believe that a parallel declaration of policy from your office would give the greatest impetus to this effort. Could arrangements be made to this end?

Sincerely yours,
EMILIO Q. DADDARIO,
Chairman, Subcommittee on Science, Research, and Development.

STATEMENT OF PRESIDENT NIXON'S PROGRAM TO COMBAT HUNGER

(Mr. SCHWENGEL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, President Nixon is certainly to be congratulated for his excellent, forward-looking program for dealing with hunger in America. It is a reasoned and rational program which should be a good deal more effective than the emotional and uninformed response we have so often seen in earlier programs to eliminate hunger.

It was just a short while ago that we were hearing rumors from some quarters that President Nixon had "sold out" insofar as the hunger program was concerned. Those responsible for these rumors should be very red-faced indeed, for they should now be aware that President Nixon will in due time advance reasoned responses to the problems of this country. They should now end their repeated calls for instant solutions to the problems of this country.

An excellent summary of the steps and procedures leading to the final program is contained in an article by Mr. Godfrey Sperling, Jr., carried in the Christian Science Monitor of May 13, 1969:

NIXON'S PLAN TO BAN HUNGER NEVER
FALTERED

(By Godfrey Sperling, Jr.)

WASHINGTON.—The inside story on the President's recently announced \$1 billion

hunger program is that it was never shelved—as was widely reported.

Instead, it moved along steadily over a three-month period.

In fact, at no point did the President even slightly move away from the goal he set forth in a March 17 meeting of his urban affairs council, which was to develop the program:

"This administration," he told the group, "will produce the first comprehensive, far-reaching attack on the problem in our history."

The incident provides further—and highly significant—insight into the President's approach to decisionmaking.

What stirred reports that the President had pulled away from a hunger program, and, moreover, that it was presidential domestic-affairs adviser Dr. Arthur Burns who had dissuaded him from moving ahead?

The answer, from documents made available to this reporter and from conversations with those who were in on the decision-making process; is as follows:

The false reports came from certain officials within the Departments of Agriculture and Health, Education, and Welfare who thought they saw their hopes for a hunger program dashed by a Nixon budget that showed only \$15 million additional money for hunger-type programs.

STRONG QUESTIONS RAISED

At the same time, Dr. Burns was raising strong questions within the Urban Affairs Council about the hunger program. He asked where the money would come from, how much hunger there actually was in the United States, and he challenged the philosophical approach of providing free food stamps to the poor, without incentives.

These interested parties, at HEW and Agriculture, together with several highly interested congressmen and senators, put the small budget allocation and the Burns position together and came to the conclusion that the program was shelved.

So said a number of newsmen who reported the demise of a program that really was just moving along in the way that Mr. Nixon fully encourages—with much debate and with the pros and cons argued strongly.

Those close to the decision actually are not certain what Dr. Burns' position was. They say he is quite enigmatic in such a context. He is often the devil's advocate. But regardless of whether he was actually opposed or whether he merely was trying to encourage a full discussion, there was one outcome:

He stirred up a response of additional and better staff work on the subject. From this, the final program emerged.

At this time Secretary of Agriculture Clifford M. Hardin produced a new in-depth analysis of hunger in low-income areas of Texas, Louisiana, New York, and Kentucky. Other surveys and analysis also were provided to the council.

DATA CALLED SOFT

Budget Director Robert Mayo also was involved. He and Mr. Hardin worked closely together in searching for budget areas where money could be found—and reallocated—for a hunger campaign.

They found \$1 billion, of which White House sources will only say: "It was not taken from programs that were in any way connected with aiding the poor."

In describing the slow, emerging process involved in the making of the hunger program, one White House source said:

"The trouble was that the data on hunger was relatively soft, not the sort of thing you have in mathematics or economics. It is hard to prove empirically who the poor and hungry are, where they are, how many there are."

It was Dr. Burns who pushed the group, and, particularly, Mr. Hardin, toward the gathering of ever more solid information.

What Dr. Burns wanted was some indication of how many people were suffering from malnutrition because they didn't have enough money to buy the food they should be eating.

GROUP REMINDED

He wanted to separate this group from those who are suffering from malnutrition because of ignorance or misinformation—but who, in fact, have enough money to buy the necessary food.

Finally, the information desired was gathered and it was from this data that the President's expanded food-stamp program was put together.

It is directed toward helping those who are hungry because they are poor. This was seen as No. 1 priority.

Thus, the administration's program will for the first time provide free food stamps for those in the very lowest income brackets.

What then of the pressure from the critics on Capitol Hill? Did it have no bearing on the administration coming up with a hunger program?

The role of Congress in this instance does not appear to have been controlling, despite stories to this effect.

It is true that advocates of the program, within the Urban Affairs Council, at times reminded the group of the political liabilities involved in delaying too long an announcement of a program.

But—from at least one reading of the evidence—the question was never really whether there would be a Nixon hunger program or whether the President wanted such a program.

It was merely a question of how long it would take to put the program together.

In the last analysis, congressional critics may well have helped in hastening the putting together of the hunger package.

ROGERS OF FLORIDA SAYS OVERTHROW OF CASTRO WILL MARK SECOND INDEPENDENCE OF CUBA

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida, Mr. Speaker, I would like to join with freedom-loving Cubans around the world who are celebrating the 67th anniversary of Independence Day for Cuba.

Unfortunately, the day which normally takes a very high place in any nation's holidays, will not be celebrated in Cuba. For the people now living in Cuba are not allowed to celebrate Independence Day.

I find it sadly ironic that on this Cuban Independence Day, the people of Cuba are more dependent on a foreign power than at any time in this century. Russia's annual ransom to Fidel Castro for the use of the Cuban people and the island itself is now more than \$1 million per month.

Yet last week it was necessary for Castro to initiate rationing on bread to a quarter a pound per person per day. It is obvious that Castro's asking price from Russia for the enslavement of Cuba has been adequate to support him to the extent that he has lived well, but has not been enough to even feed the Cuban people.

Castro has perpetrated himself through a dictatorship without even the pretense of free elections which he promised when he came into power. But this is not unusual. He has broken about

every promise he made to the Cuban people. Their economy continues to slide downward and they continue to be a state enslaved by communism.

I think it interesting that even Castro has noted in recent speeches that acts of economic sabotage are on the increase. Especially noteworthy is the fact that most of this comes via robberies of food and clothing stores.

Since Castro took control, more than half a million Cubans have fled their homeland rather than live as Soviet slaves.

I can only say that I hope someday all Cubans will be able to celebrate the second Cuban Independence Day. That day will mark the date when Fidel Castro has been overthrown and a Cuban Government again controls the affairs of the Cuban people.

I am sure that the free nations of the Western Hemisphere and all democracies of the world look forward to that day when we all can join in the celebration of the independence of Cuba from its present enslavement.

And I hope that day will not be long in coming.

MISUSE OF FUNDS—A CLASSIC EXAMPLE

(Mr. GIAIMO asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. GIAIMO, Mr. Speaker, I have always advocated the use of Federal funds and grants from independent organizations such as the Ford Foundation in a sincere effort to solve the many problems which exist in our cities today. I have always felt that the problems of poverty, ignorance and hunger, among others, must be attacked with all the resources at our command.

Yet today I and many other concerned Americans are disgusted with what appears to be a chronic misuse of these funds, which are supposed to be used to create jobs, provide better housing, and improve education. We are disturbed over the flagrant use of these funds to promote activities which in no conceivable way are improving the lot of America's poor. We are dismayed by the seemingly callous attitudes of community action program employees toward these funds. Finally we are concerned about the improper use of tax-exempt grants and about the apparent attitude of the Ford Foundation and the organizations which receive these grants that they do not have to be accounted for.

The instances of this misuse of money are too numerous to mention here, but I would like to relate one classic example which occurred in my district recently. The incident, which concerned the activities of a VISTA employee in New Haven, Conn., also leads me to question the propriety of recent actions by certain federally paid poverty workers.

In order to describe both the chronology of events and my complaints, I would like to include at this point the text of my letter to the Office of Economic Opportunity, which runs the VISTA program and sponsors the New Haven anti-

poverty program, Community Progress, Inc.:

MAY 9, 1969.

Mr. BERTRAND M. HARDING,
Acting Director, Office of Economic Opportunity, Washington, D.C.

DEAR MR. HARDING: I am greatly concerned about the actions of a worker in your VISTA program in New Haven, Connecticut. Mr. Herbert Johnston was employed by VISTA at a salary of \$220 per month at the time of his arrest on February 26, 1969, for disorderly conduct at Lee High School.

According to the Hartford Courant of February 27, Johnston was arrested: "following an unscheduled speech he made at a Lee High School assembly program last week that erupted into fighting. Five students and one teacher were injured during the melee."

"According to some present, Johnston used inflammatory language in addressing approximately 800 black and white students attending a National Brotherhood Week program at the school."

As to what was said by this supposed "Volunteer in Service to America," I quote from the Connecticut Sunday Herald of April 20:

"Students questioned by The Herald after the disturbance said that a man they described as a 'Black Panther' grabbed the microphone and began spouting off against whites. He ridiculed everything and everybody in the white society, some said, and, as one girl put it, 'knocked us constantly and unmercifully.'"

Johnston is currently awaiting his trial on the disorderly conduct charge in the Sixth Circuit Court of Connecticut.

It disturbs me that a worker who is paid with Federal funds and who is supposed to be working for the betterment of his country has become involved in such an incident.

I am also distressed by the fact that \$100 of Johnston's legal fees was advanced to him by Community Progress, Inc., the New Haven anti-poverty agency, out of funds granted to that agency by the Ford Foundation. This "loan" to Johnston was admitted last week by CPI Executive Director Milton Brown after he had received a telephone inquiry from Ford Foundation Vice President for National Affairs Mitchell Swirloff.

While this loan was admitted by CPI only last week, I had been aware of it since early March, at which time I made inquiry to the Ford Foundation about it. In a letter dated April 4, Assistant Secretary William H. Nims replied, "Although in many cases it is within the rights of non-profit organizations to provide support for legal defense, it was not within the terms of our grant to Community Progress, Inc. We accordingly brought this to the attention of the Director, and the funds were replaced by contributions received subsequently."

I do not believe that this loan constituted proper use of tax-exempt funds, nor do I consider such action proper for a community action program under your auspices. Furthermore, there are agencies which could and would have afforded legal counsel to Mr. Johnston at no charge. This incident is another classic example of the misuse of money, and it reflects the callous attitudes of many of your community action program people towards funds which were intended to promote better jobs and housing for the poor. I want to know what steps you plan to take as the acting director of OEO to prevent this chronic mishandling of money by OEO-sponsored organizations.

I am even more interested, however, in a rumor that pending the disposition of his criminal case, Mr. Johnston has been employed recently by CPI. I hardly think that this action should have been taken at this time, but again it is so typical of the actions of community action agencies.

I would appreciate your looking into this matter.

Sincerely yours,

ROBERT N. GIAIMO,
Member of Congress.

According to their reply of May 15, the OEO is looking into the matter.

Even though the charges against Herbert Johnston were subsequently dropped, I still question his involvement in this incident and the role of Community Progress, Inc., and the Ford Foundation in his defense.

When I first became aware of this situation I wrote to the Ford Foundation asking for an explanation. The reply I received did nothing to answer my questions about the guidelines used by the foundation to govern its tax-exempt grants. I therefore found it necessary to write a second letter to Ford Foundation, the text of which I will include at this point in the RECORD. I have not yet received any acknowledgment of this letter:

MAY 9, 1969.

Mr. MCGEORGE BUNDY,
President, the Ford Foundation,
New York, N.Y.

DEAR Mr. BUNDY: On March 14, I wrote to you concerning the role your Foundation played in disbursing funds which were used to help defray legal expenses for Mr. Herbert Johnston, a VISTA worker in New Haven. I reiterate my statement that the time has come for Foundations which use tax-exempt monies to account for many of their actions. I again express interest in the guidelines, if any, which govern grants to organizations such as Community Progress, Inc.

The April 4 reply from Assistant Secretary William H. Nims did absolutely nothing to answer my questions. Mr. Nims told me that Mr. Johnston was arrested for breach of the peace in connection with an incident at Lee High School. I already knew this. He told me that CPI used \$100 to cover part of Johnston's legal expenses. This I obviously was aware of since I brought it to your attention. Finally, Mr. Nims admitted that this use of Ford Foundation funds "was not within the terms of our grant to Community Progress, Inc."

What were these terms, Mr. Bundy? That was one of the things I wanted to know and still want to know. What kind of control does your organization have over such grants? How do you determine the manner in which the grant money is to be used, and how do you insure that it will be used for those purposes?

Mr. Nims also noted that the funds used for Mr. Johnston's defense "were replaced by contributions received subsequently." Does this absolve CPI from blame? Can any organization which receives a Ford Foundation grant use the money any way it chooses as long as it replaces that money at a later date? Do you prescribe and enforce penalties for misuse of your funds?

I am greatly concerned that apparently such misuse of tax-exempt funds must be brought to your attention before it will be corrected. I wonder how many cases of this sort are never brought to your attention and are thus never corrected. How many organizations are using your funds improperly and what are you going to do about it?

It would seem that the highly sophisticated Ford Foundation could at least require a periodic audit or a statement from the grantee organizations accounting for how its grants are being used. If you do not use such a system at present, I strongly recommend that you give serious consideration to this proposal.

It is ironic that while many individuals connected with the Ford Foundation and grantee organizations decry the so-called "secrecy" of some portions of the Federal establishment, the Ford Foundation itself continues to issue large grants of tax-exempt funds in an equally secretive manner. I am pleased to note I am not the only legislator who is demanding that many of these grants be explained. In this time of increasing taxes, the people have a right to know how tax-exempt money is being spent. I will do everything in my power to see that they find out.

Please send me a complete description of the terms of your grant to CPI and an explanation of your guidelines for this and other grants. I suggest that you owe Congress and the public an explanation as to why the Ford Foundation should not be accountable for tax-exempt funds and why its funds should be tax-exempt in the first place.

In your 1968 annual report, you state, "The Ford Foundation is a private, non-profit institution dedicated to the public well-being. It seeks to identify and contribute to the solution of problems of national and international importance." I think it is high time that the Ford Foundation proves that its grants are indeed being used to solve such problems.

Sincerely yours,

ROBERT N. GIAIMO,
Member of Congress.

I might note here that my distinguished colleague, the chairman of the House Ways and Means Committee, has also expressed interest in this case and has received copies of both letters.

The questions I have raised remain unanswered. I and many other Americans want them answered quickly. It is time for the Ford Foundation and similar groups to explain why they should not be accountable for tax-exempt money. It is time for the Office of Economic Opportunity to stop this waste of money which is badly needed elsewhere. It is time for the local community action programs to use every cent of their money to improve the lot of the poor in this country.

For if Community Progress, Inc., and other poverty agencies can afford to defend the Herbert Johnstons, while at the same time providing better jobs, housing, and education for the millions who desperately need it, perhaps we will not have to appropriate more funds for them. If they cannot afford to do both, and I am sure they cannot, I say that it is time for them to help us complete the unfinished business of America in stead of misusing the resources which should be directed toward that goal.

MINING INDUSTRY WORKMEN'S COMPENSATION IMPROVEMENT ACT OF 1969

(Mr. DANIELS of New Jersey asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DANIELS of New Jersey. Mr. Speaker, I introduce, for appropriate reference, a bill entitled "The Mining Industry Workmen's Compensation Improvement Act of 1969." The purpose of this bill is to encourage the States to improve their workmen's compensation laws to assure adequate coverage and

benefits to employees injured in the mining industry.

It is an appalling fact that today by conservative estimates over 100,000 men suffer coal miners' pneumoconiosis—commonly called black lung disease. An additional 20,000 more coal workers have some state of silicosis and another 5,000 have a mixed dust pneumoconiosis.

Death and disability from coal dust inhalation is the price that coal miners have had to pay for their employment in an occupation among the most hazardous in the United States. In Great Britain, dust-derived diseases have been compensable since 1943, but in this country in only seven of the 26 States with coal mining is coal miners' pneumoconiosis specifically compensable.

Earlier this year, the eyes of the Nation focused on the activities of three courageous doctors in West Virginia who fought decades of apathy, tradition, and entrenched interests to lead the coal miners in a successful fight to win approval by the State legislature for a long-overdue black lung compensation bill.

Theirs was a noble effort. Today I propose that the Congress of the United States follow their leadership and consider this bill which would stimulate every State to compensate for these dust diseases in the mining industry and to provide compensation for those workers and their families who have suffered deaths and injuries prior to the enactment of this legislation and would have been entitled to compensation had this act been in effect.

The workmen's compensation system in this country is basically a series of independent State programs of private insurance administered by the States under State laws. Each system is separate from other disability programs, such as social security, and can be viewed as an independent unit.

This program is a major source of support for the families of about 14,000 persons who are killed at work each year and for a large number of the 2.2 million who are injured. In 1967, some \$2.2 billion of benefits was paid under workmen's compensation programs, one-third for medical costs and two-thirds for cash payments.

Despite the size of the program, some workers in the mining industry may not be covered because their employers elected not to come under the State's workmen's compensation law—23 States have elective rather than compulsory laws—or because their employers are exempt from the law as a result of an exemption for small firms. Even where the employment is covered, the workers may not be protected because of a restrictive definition or interpretation of what constitutes an occupational disease or because of inadequate time limit provisions for filing occupational disease claims.

The standard specified in most State laws for cash benefits is 66⅔ percent of the worker's own average weekly wage. However, because of statutory monetary maximums in these laws, only six States today actually equal or exceed this standard. In 1940, by contrast, 37 States met this standard.

PURPOSE OF THE BILL

The purpose of this bill is to stimulate and encourage the States to conduct an inventory of the serious inadequacies of their present laws relating to compensation for employees in the mining industry who are disabled by work-related accidents or diseases, and to amend such laws so that these employees and their dependents will not suffer substantial economic hardship.

To assist the States in improving their administration, they are authorized to apply for grants up to 75 percent of any additional administrative costs they incur as a result of cooperating in this program.

If the States within a certain period do not have or extend the coverage of their workmen's compensation laws as prescribed in the proposed act, the act would apply the procedures of the Longshoremen's and Harbor Workers' Compensation Act generally to uncovered employees of employers engaged in the mining industry. Further, if within the same period the States do not have or increase the benefits of their workmen's compensation laws for such workers to the level of the benefits of the Longshoremen's and Harbor Workers' Compensation Act, employers engaged in the mining industry must secure insurance providing benefits not less than that of the Longshoremen's and Harbor Workers' Compensation Act.

Since this bill is applicable to the entire mining industry, the insurance costs would be applied uniformly throughout the country and thus would eliminate unfair competition among the various States.

PROVISIONS OF THE BILL

TITLE I—GRANTS FOR ADMINISTRATION

Over a period of 5 years the Secretary is authorized to make grants to the States for the additional cost of improving the administration of their workmen's compensation laws relating to the mining industry. Grants may be made for additional costs of administration during the fiscal year immediately preceding enactment and in subsequent years.

Thus, to determine the additional costs which will be financed under this title, the Secretary will use as a base, upon which to make the determination, the costs to the State during the second fiscal year prior to enactment of the act. Before payment of the grant may be made, the State law, as administered, must also meet certain specified reporting, expenditure, and reimbursement requirements.

TITLE II—EXTENSION OF LONGSHOREMEN'S AND HARBOR WORKERS' COMPENSATION ACT TO EMPLOYEES IN THE MINING INDUSTRY NOT COVERED BY STATE WORKMEN'S COMPENSATION LAW

Two years from the end of the calendar year in which the proposal is passed all employees of employers engaged in the mining industry, if such employees are not covered by State workmen's compensation laws, will have extended to them the provisions of the Longshoremen's and Harbor Workers' Compensation Act, as amended. This title will also extend specific coverage to employees in

the mining industry who suffer death or disability from pneumoconiosis.

The administration of this title will be under the procedures of the Longshoremen's and Harbor Workers' Compensation Act in the same manner as the administration of extensions of that act to other classes of employees, such as those of defense base contractors. It will thus be necessary for employers subject to this title to secure insurance as required by such act.

TITLE III—MINIMUM COMPENSATION BENEFITS FOR EMPLOYEES COVERED BY STATE LAWS OBLIGATIONS OF EMPLOYERS TO SECURE

Two years from the end of the calendar year in which the bill is passed, employers engaged in the mining industry will be required to secure compensation for their employees covered by State workmen's compensation laws at least equal to the benefits of the Longshoremen's and Harbor Workers' Compensation Act, as amended. The employer may satisfy his obligation either by purchasing insurance or by qualifying as a self-insurer. Certain terms of the insurance policy are specified.

CLAIMS PROCEDURE

In those States where the level of compensation benefits is less than that prescribed by the proposed Act and where an agreement has been made with the Secretary, the person claiming benefits under the State law may concurrently file a claim with the State agency for an order to bring total compensation to the level as herein proposed. Where there is no such agreement, the claim may be filed with the Secretary. The State determination will be final except as to benefits. In cases where uninsured employers within the time period specified by the Secretary or his designee fail to pay compensation due, the Secretary will make payments from the Employees' Benefit Fund established under section 305 of the Act. The Secretary would be subrogated to all rights of the person receiving such payment. Appeals from awards in excess of State levels shall be processed in accordance with section 21 of the Longshoremen's and Harbor Workers' Compensation Act.

AGREEMENT WITH STATES

The Secretary of Labor may enter into agreements with the States to utilize their services and employees in processing claims subject to his jurisdiction, and to recompense the States for the services performed.

EMPLOYEES' BENEFIT FUND

In order to provide a fund out of which the Secretary of Labor may pay compensation to employees of employers who fail to secure payment of compensation at the level of the Longshoremen's and Harbor Workers' Compensation Act, as required by title III, the proposal establishes an employees' benefit fund in the Treasury of the United States. The manner of establishing the fund and for paying benefits from the fund is specified in the proposal. The fund would be primarily financed by amounts recovered by the Secretary from defaulting employers. Other sources of revenue, including appropriations from general revenues, are also authorized in order to

give the fund initial revenues and at other times when additional funds are necessary.

CRIMINAL PENALTIES

Employers failing to secure payment of compensation will be subject to a fine of not more than \$1,000 or by imprisonment for not more than 1 year, or both. Employers who dispose of property with the intent of avoiding payment of compensation to an injured employee are subject to a similar penalty. Any person who willfully makes false statements for the purpose of obtaining or defeating any benefit shall likewise be subject to fine or imprisonment or both.

TITLE IV—ADMINISTRATIVE PROVISIONS

RULES AND REGULATIONS—SUBPENA POWERS

The Secretary is authorized to issue necessary rules and regulations to carry out the provisions of this act. The Secretary is also authorized to issue subpoenas, administer oaths, and compel the attendance of witnesses and production of books, and the district courts of the United States are given jurisdiction to enforce the orders of the Secretary under this section.

PRESUMPTION OF INJURY

Provides for a rebuttable presumption that the claim comes within the act if the worker was employed for 5 years or more in the mining industry.

PRESIDENT'S MESSAGE ON NUTRITION

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, in addressing the 1968 Republican National Convention as permanent convention chairman on August 6, 1968, I made a number of prophecies as to what the election of a Republican administration would mean to America.

One of my shortest predictions contained just five words—"And nobody will go hungry."

Mr. Speaker, House Republicans are elated that President Nixon has moved swiftly and surely to make good that prediction during his first hundred days in office. In testimonial to that Presidential action born of compassion and determination to solve a shameful national problem, House Republicans today are placing in the CONGRESSIONAL RECORD a statement regarding President Nixon's national nutrition program.

I join with my colleagues in calling special attention to the President's program of nutrition for a healthy America because I believe the problem of hunger and malnutrition to be second to none in this land. I also take great pride in the fact that a commitment to free this Nation from hunger and malnutrition has been implanted in the heart of America by a Republican President.

No program coming before Congress in this or any other year can be more important than the Nixon administration's proposals for properly meeting the nutrition needs of low-income Americans.

I urge the Congress to go on record—

as the Nixon administration already has done—in support of a new national goal, an end to both hunger and malnutrition in America. This is one of the most meaningful contributions Congress could make to raising the level of life in our country.

Mr. STEIGER of Wisconsin. Mr. Speaker, President Nixon's legislative and administrative recommendations to end hunger and malnutrition constitute a truly comprehensive approach to this pervasive problem.

The food stamp and food distribution programs are in need of an extensive overhaul, because quite simply those who are malnourished and hungry often do not receive the food. Substantial numbers of poverty-stricken families cannot even afford the cost of food stamps. Present commodity distribution programs result in severely limited quantities and varieties of food reaching those who most urgently need them. Hundreds of counties still do not have any kind of food supplement program. Hundreds of others administer the programs they have in such a manner as to exclude large numbers of malnourished individuals.

The reforms President Nixon suggests will bring a measure of effectiveness to the antihunger programs that they have lacked in the past. The President has responded to the challenge of hunger and malnutrition in America in an imaginative and responsible manner. The Congress can certainly do the same.

Mr. McCLOREY. Mr. Speaker, more than a year ago, the President's Science Advisory Committee reported on the world food problem. The report opened with a quotation from the Bible. As I recall, it began:

And lo a black horse; and he that sat on him had a pair of balances in his hand.

Mr. Speaker, I am pleased to join my colleagues today who have presented a statement expressing support for President Nixon's proposal to get to the root of the problem of hunger. There is not a person within the sound of my voice who can—in conscience—reject this proposal embodied in the message of May 6, 1969, knowing that the specter of hunger haunts this land and that malnutrition weighs down the "pair of balances" by which the true progress of our Nation is determined.

Part of the President's proposal involves revision of the food stamp program. This well-intentioned plan has failed to meet the needs of hungry Americans despite the availability of surplus foods and the bargain services which our coordinated food stamp program can provide.

President Nixon seeks to correct these deficiencies by: First, providing poor families with enough food stamps to purchase a nutritionally complete diet, and, second, by providing food stamps without cost to the very poor and permitting others to purchase stamps at no more than 30 percent of their income. The President's plan is also aimed at coordinating the food stamp program with public welfare and directing the Secretary of Agriculture to work closely with county and local officials.

Many other changes have been recommended by the President, some of which

may need legislative support, and others which can be accomplished through administrative action.

To quote President Nixon:

More is at stake here than the health and well-being of 16 million American citizens. . . . Something very like the honor of American democracy is at issue. . . . America has come to the aid of one starving people after another. But the moment is at hand to put an end to hunger in America itself. For all time. . . . It is a moment to act with vigor; it is a moment to be recalled with pride.

Mr. Speaker, I pledge my unqualified support to the President's program to banish the fifth horseman—hunger—from the American scene. Constructive action by Congress, consistent with the recommendations in President Nixon's message, can hasten the day when this goal may be attained.

Mr. BURTON of Utah. Mr. Speaker, President Nixon's crusade against hunger has started, and in my opinion, it is more than mere rhetoric.

The President has found that we are still operating under programs which were started decades ago—noneffective programs that meant promise in the thirties, but not the seventies.

Mr. Nixon has stated:

That hunger and malnutrition should persist in a land such as ours is embarrassing and intolerable.

No one would disagree with that. Why should we—the richest and most progressive nation in the world—be in such a position?

True, we in Utah do not have the multitude of problems faced by Los Angeles, Chicago, New York, or here in Washington, D.C. But we are knowledgeable about the problems of hunger and economic deprivation as outlined in Mr. Nixon's message.

The root causes of hunger in our Nation must be examined and then dealt with comprehensively by all the agencies of government involved. If this requires legislation, then it should have the support of every Member of Congress.

As we all know, the Hunger Commission, established last year, did not receive Executive support. We now have that Executive support under President Nixon. His statement on hunger, announced on May 6, hits at the core of hunger problems in every State of the Union. I invite my colleagues to support his proposals and bring an end to what we all know exists—hunger in America.

Moreover, the President's message is proof of the administration's recognition of the hunger problem in America and its determination to deal vigorously with it, and to ascertain why our Federal food programs are not reaching millions of impoverished Americans.

Mr. WYMAN. Mr. Speaker, I rise to join in expressing approval of the President's national nutrition program, a program which will take great steps toward alleviating the disgraceful problem of hunger which plagues too many of the American people today.

By his action in this area, President Nixon has greatly complemented his progressive and action minded administration. By carrying the involvement of

the Federal Government beyond the stages of recognition and into a specific and comprehensive proposal, he has bolstered the faith of the American people in our commitment to meet this problem and deal with it squarely. Surely his response to this continuing dilemma will provide the leadership necessary to involve those outside of Government as well, recognizing as he has that participation by the private sector of our economy is of great importance if the battle against gross inequality is to be won.

I share the hope of other Members of this body that Congress will give its undivided support to the President's proposal, and that the ills of economic deprivation will soon be a thing of the past for all segments of our society.

Mr. DON H. CLAUSEN. Mr. Speaker, I should like to take this opportunity to join with my colleagues in commending President Nixon on his plan to combat hunger which he presented to Congress on May 6.

The President has clearly outlined a program of action, a program that is not just an idea, but a practical plan for combating the very serious problem of hunger in this country. I concur with the President's statement that it is inconceivable that, in a country with the riches of America, there should be those who do not have food to put on their table.

On July 29, 1966, a House task force on agriculture reported, and I quote:

Unless the United States remains able to meet its own food needs without the fear of scarcity, our Government will never be in a position to provide even token assistance to the hungry nations of the world.

So, Mr. Speaker, we not only must assume the commitment to our own people, we have the responsibility of setting an example for the entire world. And, in "Famine, 1975," the authors predict that by 1975, the United States, even with its huge productive capacity, will be unable to produce enough food to stave off famine in the underdeveloped nations of the world, unless drastic measures are taken to meet this crisis.

I would remind you that communism has advanced only in areas where the people are hungry. As evidence of this, we need only recall the peasants of Cuba and the masses of China. We must remember that the minds and hearts of men can be most effectively won for freedom only after the pangs of hunger in their stomachs has been stilled.

How, then, are we to be able to supply the food to stave off the famine of the world, if in fact we cannot provide the necessary nutrition for our own countrymen?

To me, the answer can be found in two key words—"production" and "technological genius" that has put three men in orbit around the moon. Technology must be combined with our great productive genius in the agricultural field. We can no longer be satisfied with restricting our present level of production of agricultural products, but we can and must expand as we look to the future.

We also must make this genius available to the underdeveloped nations of the world. What is really needed are

"flying farmers"—men and women with the knowledge and bilingual capabilities who can go into hungry corners of the world to work with and to assist those people in increasing their food productivity.

In the final analysis, in my judgment, those countries that produce and/or control the world's food supply, will direct the destiny of man.

Mr. Nixon has set in motion a program that is well thought out, dynamic, and practical, and goes to the heart of the problem here at home. Also, we can and must push forward at our earliest opportunity with a viable, multinational program that has as its goal the monumental task of eliminating starvation worldwide, and gives the people of the underdeveloped nations the food resources and productive capability of filling the empty stomachs of their people.

I sincerely believe we have the technological and productive capacity and ability to turn our agricultural production efforts into a major advantage in our arsenal of "nonmilitary weapons" that will ultimately win the cold war and promote the cause of peace with freedom in every section of the globe.

At this point, I would like to insert a copy of a speech I made at a statewide 4-H convention at the University of California at Davis on August 22, 1967, with the thought that it might hold some interest for my colleagues:

REMARKS OF CONGRESSMAN DON H. CLAUSEN TO THE 4-H CONVENTION AT UNIVERSITY OF CALIFORNIA, DAVIS, AUGUST 22, 1967

No doubt you are wondering what a Congressman from Washington could possibly have to say at a 4-H Convention? First, let me say, as a statement of my qualifications to speak to you, that I was born and raised on a farm and that I am a product of the 4-H system. In Humboldt and Del Norte Counties, where I have spent the better part of my life, and where I have served in both business and public service, I have literally grown up with the farmer and his problems. My first elective office was to that of President of the Ferndale 4-H Club in Humboldt County.

Many of the concepts and principles on which my philosophy of government and life are based, were forged on my Father's dairy farm and in the rural atmosphere of Humboldt. And as a former County Supervisor in Del Norte County, I became intimately familiar with every phase of agriculture from beginning to end—or, you might say—from manure to marketing and that, I think, covers quite a broad spectrum.

This experience has been invaluable to me in Washington. As a Congressman representing the First Congressional District of California, it has been my great privilege to represent one of California's and, indeed, one of America's truly great agricultural areas. In Congress, I have worked closely with the agencies concerned, in an attempt to develop plentiful supplies of low-price agricultural water for our North Coastal counties. In addition, I have worked consistently to correct inequitable quotas on imports of foreign beef, poultry, dairy products, sugar, wines, lamb, wool and lumber. Mainly, however, I have devoted my efforts toward strengthening agricultural production in America which I have many times described as "The Backbone of Our Nation."

But, enough about me. What I really want to talk about today is agriculture and what I believe its role will be in the future—not only in California and throughout the Nation—but throughout the world.

In case you don't know it, many non-Californians are quite confused as to exactly what we do out here in the "Golden State". Many think our economy is based on making movies, or entertaining tourists, or in defense contracts. In fact many "out-of-staters" are, frankly, quite surprised to learn that our major industry in California is agriculture. For those of you who have not traveled far beyond our borders, I can tell you that, back East, we do not have an agriculture image here in California. But, what are the facts?

California agriculture, over the years, has set a record of productivity that is the envy of the world. This is so, mainly, because we have been able to operate units of sufficient size to make farm mechanization and farm technology feasible. We are proud of that record and we have every right to be proud. I regret to say, however, and I trust you will note this fact well—there is an effort underway at present to break up the very system which has made California's agricultural output the best in the world. I refer to the attempt by some misguided social planners in Washington to impose acreage limitations in large areas of California where Congress never intended them to be. To this end, a federal suit has been filed in the U.S. District Court in San Diego to impose acreage limitations in the vast 500,000 acre Imperial Irrigation District. And similar actions are reported to be in the making in the one-million-acre area of the Kings River and in the 350,000 Kern River basin.

If successful, these court actions would have the effect of destroying some of the world's most productive farms by breaking up our highly efficient and highly successful units into small, subsistence size farms. Such "land reform myths", in light of progress made and the tremendous challenge of the future, just don't make sense! This type of thinking, moreover, represents a dangerous trend in American agriculture which we have seen developing for some years.

Agriculture is still the major industry in California, in spite of the tremendous decrease in American farms in the past 10 years. In fact, it appears obvious to me that soon we will need to develop a term to replace agriculture, such as "Urbiculture", for instance. Your own organization is, perhaps, the best example of this trend.

Of the 40,268 young people now enrolled in 4-H projects in California, only 12,547 actually live on farms—less than a third! As a matter of fact, more are listed as "urban" than "suburban". This means, quite simply, that the majority of you who are engaged in 4-H projects, actually live in towns and cities. I hasten to add, that this in no way is detrimental to 4-H; it merely points up the fact that there has, indeed, been a vast shift in our geographical distribution in America. In contrast to this, nearly 75% of those involved with 4-H work lived on farms when I was a youth. So, we see vividly what is happening to the farm picture in general in this country.

What does all this mean—this apparent "phasing out" of the American farmer and our capacity to produce agricultural products? This brings us to the "nitty gritty" of the problem in terms of your future, America's role in that future, and which way the world is going to go in the next 15 years.

As you well know, the world has many problems today. We bounce from one crisis to another—each seemingly threatening to "blow the lid off" any hope for peace we ever expected or dreamed of. And, like people in crisis, we have a problem of being "too close to the forest to see the trees"—as we say in the Redwood Empire. What I mean is, that we have become so accustomed to viewing everything with alarm—such as Vietnam and the riots—that we have completely overlooked an impending crisis more critical than

Vietnam and more imminent than the dangerous threat of nuclear holocaust.

I submit to you today that, of all the world's problems, the awesome prospects of a world population explosion and the potential it holds for the year 1980, is, by far, the most critical.

What is at stake, quite frankly, is the fact that by 1980, the world is going to have five times more mouths to feed than it does now in 1967. With present world food problems and the curtailments which have predominated American agriculture in recent years—I think for a moment what this means. In terms of escalating hunger, I see the world developing in three significant stages. The first is critical shortages of food in certain underdeveloped countries beginning in 1968. Unless this food crisis can be quickly met and resolved, the next stage will be widespread famine in about 1975. And, if we are not able to stem the initial stages, there will follow large scale hunger throughout the world accompanied by acute malnutrition and starvation of such magnitude as to stagger the imagination.

At this point, I want to say that I do not tell you this to frighten you but to "spur you on" to greater heights in 4-H work. What I am telling you is the best judgment of experts in the field of population growth and world food resources. Two such experts, are William and Paul Paddock who have written an excellent and authoritative book entitled "Famine 1975", which I commend to your reading. Last year, the Congress made extensive studies on the potentials of world hunger. The House Committee on Agriculture made its findings known in a 704-page report which they called "World War on Hunger—1966". From that title, I need not tell you what their specific findings were.

In view of these facts, what has been done to meet the awesome challenge that lies ahead? The President, several years ago, appeared concerned when he talked about "Food for Peace". In fact, he even appointed an Assistant Secretary of State for Food-for-Peace. Unfortunately, however, this man retired seven months ago and no successor has ever been named. In addition, the Administration has failed to make public its 1966 report on "Food-for-Peace", which it was supposed to do last April. This is tragic because President Eisenhower's "Food for Peace" program has been one of our most successful, in the field of foreign affairs.

The next logical question which arises, is, can we meet this challenge, based on our present capability and efforts in this regard? On July 29th, a House Task Force on Agriculture reported (and I quote): "... Unless the United States remains able to meet its own food needs without fear of scarcity, our Government will never be in a position to provide even token assistance to the hungry nations of the world." And, in "Famine 1975", the authors predict that by 1975, the United States, even with its huge productive capacity, will be unable to produce enough food to stave off famine in the underdeveloped nations.

At the present time, the underdeveloped nations of the world are capable of producing only about 650 million tons of food each year. To meet the population increase of those already born, these underdeveloped nations are going to require, by 1980, an additional 400 million tons each year—or more than half of what they are now capable of producing. To meet these minimum tonnage and nutritional requirements would require a capital investment of \$80 billion. That, in statistical terms, is the "long and short" of the problem.

Must America, however, in the face of such evidence try to pretend the problem doesn't exist? Should we, because of these findings, give up? When I think of a starving world pleading at America's doorstep for food to

survive—my mind conjures up all of the challenges we have had to face in the past. The answer, my friends, is no—we must not give up in the face of this crisis and, indeed, we cannot unless we are prepared to fail victim to it ourselves. If you share that feeling with me, let us, then, examine ways to overcome it.

As farm-oriented people, you know that food cannot be grown or produced over night. Crops take time and, like any other industry, agriculture has to be "geared up" before mass production can be realized. We tried this in WW II when our farm industry was operating at peak capacity and, I would remind you, we encountered serious problems. To meet the needs of the 1940's we had to revert to food rationing and food substitutes on a National scale.

Today, although we have made great strides in food production techniques, we nevertheless have fewer farms and fewer farmers, and the potential food demand of the 1970's makes the need of WW II seem like "chicken feed". The question then, is, "where is the food going to come from to feed five times more people?" In search of that answer, it is first necessary to examine the nature of the problem.

In some respects, the picture is not all black. Population growth need not continue to explode indefinitely even though those who will be 35 in the year 2000 are already born. Advancements of biomedical science have made family planning feasible and both the United States and the United Nations have made significant progress in the field of birth control. Decreasing the birth rate of the world is not the answer, nor the solution to this problem, alone, but it is a vital adjunct.

Quite honestly, I have long felt the need to completely overhaul our agricultural policies—it's time we "took the bit out of the mouth" of American agricultural production.

In the field of foreign assistance alone, we would be much better off to cut loose American agriculture and send our grain surpluses to hungry countries of the world rather than propping up some corrupt governments with U.S. funds—look what this would do to help our balance-of-payments problem.

All this money would be paid to American farmers—the dollars would remain in this country to re-circulate for the benefit of everyone.

We could then establish a phase-out of subsidies in this country and offset this unrealistic funding by permitting increased production.

As I've said many times, American agricultural genius and the food it produces can be the most effective weapon in our arsenal as we seek ways and means of beating the Communists in the Cold War.

The most critical aspect of this problem is the fact that a livable world cannot long exist where two-thirds don't get enough to eat while the remaining third is overfed. It goes without saying, I think, that the future of all mankind is now being ground out in India. If man fails to solve this problem, all the world will live like India, where, today, people die in the streets from starvation.

From what we have said, thus far, it is obvious that the United States just is not capable of feeding the world. The key is helping them produce their own food, concentrating first on the underdeveloped countries. To this end, we can furnish assistance but with a lesser emphasis on dollars. If our foreign aid programs of the past have taught us anything at all, it is that people can't eat money. Together—helping them produce their own food coupled with technical assistance from us—we can rise to the challenge with some assurance of minimizing its devastating effects. That, realistically, is the best we can hope for, but it is a goal.

In spite of the Administration's neglect in facing the reality of tomorrow, there are

some concerned Members of Congress who are aware of the problem. Last month, for example, I had the pleasure of cosponsoring a bill in the House calling for establishment of a "World Food Study and Coordinating Commission". This group of experts—the best minds we can find in this field—would examine every facet of an impending world food shortage and develop concrete plans to meet it, along the lines I have mentioned.

I have deliberately left for last, why it is so important that America rise to meet this challenge. If you remember anything I say here today—remember this: "Whoever Controls the World's Food Supply Will Direct the Destiny of Man!"

For more than 20 years, man has been forced to accept a very inadequate substitute for peace. "Cold War" has been that substitute while man desperately ponders how to achieve true peace. During that period, we, in this country, have had some widely varying views on just where we "lost peace" and how to regain it. The fact that we have yet to find the answer is indicative of the means we have employed to achieve peace and, tragically, we are now "paying the price" in Vietnam. Some have said that the "Cold War" is a battle to see whether Communism or Democracy can win the "hearts and minds of people everywhere". The "Cold War" in actuality is ideological warfare between free nations and the Communist states.

In the first instance, I would remind you that Communism has advanced only (and I stress only) in areas where people are truly hungry. As evidence of this, we need only recall the peasants of Cuba or the masses of China.

In the second instance, I submit that the "minds and hearts of men" can most effectively be won for freedom only after the pangs of hunger in his stomach have been stilled. The security that man seeks, begins with such basic needs as security from hunger and freedom from want. A hungry man cares very little about political idealism and the more hungry he becomes—the less he cares. Hitler proved this simple doctrine in "selling" Nazism to a hungry Germany after WW I and Communism has exploited this problem wherever they could. To me, it is inconceivable that we have failed to recognize this basic human factor and to employ it in the struggle against Communism.

In the final analysis, in my judgment, the country that can respond by 1980—not with promises but with food—for the general uplift of mankind everywhere, will truly win the hearts and minds of the people of the world. If America is that country and meets that challenge, Communism will fade like a "leaf in the Fall" and be exposed as the farce that it is. And that experience, in my view, will negate any need for guns and bombs being used to halt aggression.

This, then, is the challenge we face. No—on second thought, this is the challenge you face. Each of you here today, is in an extremely unique position, to make a meaningful and previously undreamed of, contribution to American agriculture and to world peace. As you emerge from 4-H projects into the world of "human projects", I challenge you—based on what you have heard today—to "think big." As we enter the 1970's (and that's only three years away), we can no longer afford to think in terms of food supply and demand as we have previously known them. The fact of the matter is, the supply is low, the source is limited—and the demand defies our present capabilities.

What I am saying, really, is that in the future, you cannot be satisfied with just being a good farmer—or home economist—or agricultural specialist—or farm management analyst. To extend the genius of American Agriculture to a hungry world, you must be willing and able to go out into that world

and communicate with the hungry and those who can do something about that hunger.

This requires us to tap another promise of the future—America's aviation genius. If we are to do the job for which we are being called—we must literally "Put Wings on American Agriculture." In a word—what we really need are "Flying Farmers", men and women with a bilingual capability who can go into the hungry corners of the world to work and talk with the people. This is the kind of an America I think we are capable of becoming.

It is true that we have our problems. Trying to do what's right in the face of insurmountable odds—always creates problems and that has been America's plight for too long. But make no mistake about it—America is a great country and great countries produce great people. Contrary to popular opinion in some circles, America has great faith in you—the youth of our Nation. This is a big order and a great challenge but I know you have what it takes to do the job that lies ahead.

In the long run, America has never "dropped the ball" and, so long as our freedoms remain intact, America will meet the challenge and grow greater than ever before. You the 4-H Clubber, can contribute to this worthy goal today by "thinking big" about tomorrow and then setting your course to make the "best of America even better."

Mr. BROYHILL of North Carolina. Mr. Speaker, in recent months, we have been startled out of the complacent belief that the American people enjoy a universal high standard of health. Now that although we have obtained for a broad segment of our society a very high standard, we can see deep problem areas and we must move ahead to correct this situation.

We in Congress, I believe, should start by exploring legislation to expand the national health survey to cover each of the 50 States so that we will have a better understanding of the nature and extent of such hunger and malnutrition as exists in the country. It is disturbing that the U.S. Public Health Service can tell us in some detail about the health of much of the rest of the world, but is unable to provide a very full picture about our own Nation. I hope we will correct this situation in the very near future.

As we consider the various programs now operated by the Federal Government, we should give serious attention to the role which private industry, particularly food processing, can play. We must find new ways to develop the means that will contribute to balanced diets and good nutrition in the country. Protein-enriched food, for instance, is clearly needed as much as the vitamin-enriched bread and milk we now have.

The President's message has indicated some of the areas in which action is needed. But if malnutrition and hunger are to be removed from the American scene, all Americans must be involved, and we in Congress must start by taking positive action on those proposals which have been put before us by the President. We must act, not because of America's honor or some other abstract concept, but because the health and well-being of our people require that we respond meaningfully and effectively to the problem.

Mrs. MAY. Mr. Speaker, I am happy to join in commending the President for his bold and comprehensive proposal for a program to combat the problems of

hunger and malnutrition wherever they exist in this country.

President Nixon and his administration, with this proposal, have moved confidently forward to assume leadership in what must be a concerted effort—both public and private—to assure every man, woman and child in the United States of the opportunity to obtain adequate food and nutrition.

As a member of that small coalition of Representatives here in the House who 1 year ago called for a Presidential commission to make an emergency evaluation of the problem of hunger and to recommend remedial action, and who expressed our earnest desire to "press impatiently and urgently on every front available to us to alleviate this problem immediately and eliminate it quickly," I am highly pleased and gratified that the President has recognized the urgent necessity of a direct frontal attack with a force and battle plan adequate to do a thorough and effective job.

Hunger in this food-rich nation is indeed "embarrassing and intolerable," in the words of our President. But it is an exceedingly complex problem, he also pointed out, not at all susceptible to fast or easy solutions, and his program is not one that can be achieved with the wave of a magic wand. It will require time, energy and effort.

The issue of malnutrition and hunger in the United States has reached deeply into the social consciousness of the more fortunate and affluent of the American people. Weekly, or monthly, food expenditures are a matter of no small concern to the great majority of our families. But authenticated stories of real hunger in this land of plenty have carried heavy shock value.

It is less important in the national scale of values that food, for the family costs less than 1 day of work from a 5-day workweek; that no other similar-size population group in all history has obtained their food with so small a fraction of their total production effort; or even that our overall national affluence has reached the present high level. More important, to most of us, is that hunger—and hidden hunger—should exist among our fellow citizens, and show in the faces and bodies of children. The great majority of the American people are willing and eager to participate in a national effort to eradicate hunger and malnutrition from this country and have welcomed the President's recommendations to achieve that objective.

A factor of major importance in the President's national nutrition program is his recognition that the efforts of Government alone are insufficient. In seeking the involvement of the private sector through mobilization of the agricultural industries, the President has reaffirmed the need for creative Government-industry partnership in important areas of national concern.

President Nixon's hunger proposal is more than just a program recommendation. It is evidence of a commitment by this new administration to meet the problems of our Nation head on, to grapple with them face to face, and to deal with them through direct, effective action.

Our President has provided the leadership—now it is up to us to give him the support he needs to carry his plans through to fruition and success. It is my sincere and deep hope that my colleagues here in Congress and the American people will join together behind the administration to provide that needed support freely and in a spirit of national cooperation.

Mr. HOSMER. Mr. Speaker, last week the President sent to Congress his proposal for a comprehensive program to combat the problem of hunger that exists in this country. I join our President in being concerned over the widespread hunger and malnutrition that exists in so many families. In our land of plenty and scientific know-how, it is hard to believe hunger and malnutrition could stalk so many of our people. Mr. Nixon has outlined his ideas for coping with the difficult task of reaching these people. We must endeavor to find out whether the principal cause of inadequate diets is poverty or ignorance. We must do everything within our power to improve our Government food programs. Our advertising industry must develop educational advertising and packaging campaigns to publicize the importance of good food habits. Whether or not we agree on the number of hungry persons in our land there is no doubt we must improve our food programs for the needy. We have a number of programs already operating but Congress must make an effort to improve and implement these programs. Mr. Nixon's program offers a redirection of our efforts. The efforts of the Government alone is not sufficient. We must seek the involvement of the private sector of our land through mobilization of our agricultural industries and advertising media. Our effort should be bipartisan and should involve all citizens of this country interested in making realistic the hope that in our land of affluence no one is hungry. I commend our President for his leadership and foresight in trying to get to the root of this problem.

Mr. ERLBORN. Mr. Speaker, our consciences stirred by revelations that hunger and malnutrition are realities in the United States, this House last year called for the creation of a National Commission on Hunger. This House action followed on the heels of intensive hearings by the Education and Labor Committee during which the testimony we heard was often conflicting and the documents presented were frequently not as objective as they should have been, hence, the recommendation for a comprehensive study to determine the scope and extent of the problem, and thus the remedy.

The glaring disclosure of the hearings was testimony by the then Secretary of Agriculture that, in spite of the fact that the Federal Government had been spending over \$950 million a year since 1964 on food programs, he said:

The reason there have not been programs in some places has not been the lack of funds where direct distribution is concerned. It has been a lack of machinery.

Although our proposal for a Hunger Commission did not come to fruition, a Select Committee on Nutrition and

Human Needs was created in the Senate and a national nutritional survey was embarked upon by the Public Health Service. More to the point, I believe our proposal for a Commission on Hunger laid the groundwork for the study President Nixon's Council on Urban Affairs instituted on coming into office in January and the resulting machinery the President has started moving to make our food programs work, to make the funds for these programs do the job intended.

The national nutrition program announced last week by the President means action, not empty promise. I support the President in his commitment, and I believe Congress will, also.

Mr. HOGAN. Mr. Speaker, our President has demonstrated again last week that his first 100 days in office have been utilized as the catalyst for a broad legislative and executive program which will extend throughout his years in the White House.

The President's proposal for a comprehensive program to combat the problem of hunger wherever it exists in this country reflects the extensive research and analysis which have gone into its formulation in the past 3 months. Although any program of this type will require months of additional work to resolve the details of efficient administration, it is most beneficial that the President has recognized the urgency of this problem by laying the groundwork so soon in his administration.

While we applaud the President's early response, we must, however, recognize the fact that action on this problem is long overdue. This country has for many years harkened to the cries of famine and starvation in other lands and has replied with massive food assistance from our own agricultural surpluses. But while we heeded the summons abroad, it appeared that we could not even hear the call of our own plight.

Many of my distinguished colleagues in both Houses of Congress have investigated this problem in detail. With their findings before us, we can justify no recourse but to take the opportunity which the President's proposals afford us and establish a viable means of eradicating the dire conditions which exist in some parts of our country. The time for examination has past. The time for action—immediate action—by the legislative branch as well as the executive branch of Government has come.

I wholeheartedly urge that we listen and hear the domestic cries where, in the past, we have not heard but have ignored.

Mr. KUYKENDALL. Mr. Speaker, despite our incredible standard of living, which is the highest in the history of the world, it is a shameful fact that there are children in the United States who go to bed hungry, and that there are Americans who suffer from malnutrition.

The President has given us a goal—to put an end to hunger in America. He has recommended various legislative and executive steps to accomplish this most worthy endeavor, and we should lose no time on our end of things in helping him accomplish it.

It is estimated that it will cost \$2.5 billion a year. This is a mammoth sum, not to be bandied about lightly. But really, is there any better place it could go?

If there were suddenly discovered a tribe of starving people in South America, a boat would already be on the way. If malnutrition walked the land in Canada, our Federal dollars would flow to our northern neighbor. If the war in Vietnam were ended tomorrow morning, our relief trucks would be feeding the Vietnamese people tomorrow afternoon.

Can we do less for our own?

Mr. PETTIS. Mr. Speaker, hunger? Malnutrition? Surely these are problems of underdeveloped countries. At least this was the assumption until recent years. To Americans, whose standard of living is a wonder for the rest of the world, it is not only distressing to learn that millions of their countrymen suffer from malnutrition—it is embarrassing.

Recognition of the situation is but the first step in conquering a problem, and I applaud President Nixon's proposals to end hunger and malnutrition in our land by offering a plan of action.

The President's proposals are many faceted—the result of a 3-month study by the Urban Affairs Council. This comprehensive program calls for involvement of the private sector of our economy together with internal reorganization of Government programs to make more effective use of our resources.

Certainly this great Nation which has come to the aid of starving people all over the world must now take the necessary action proposed by our President to make these United States a land of plenty for all Americans.

I am proud to support President Nixon's national nutrition program.

Mr. POLLOCK. Mr. Speaker, hunger—that faceless, formless enemy—has plagued mankind since its beginnings.

But here—in America—it had been our proud boast that we had beaten this enemy at home and were fighting it elsewhere. We were the breadbasket, feeding the hungry of other lands from our rich stores.

Now we must face the unhappy fact that this enemy has not been beaten here at home. We have our own hungry, our malnourished, our rickets-ridden, our belly-swollen, leading less-than-productive lives or falling early victim to disease.

But now we have the opportunity to strike at the roots of this problem of hunger. President Nixon has proposed a program of action, not of words, toward conquering this scourge. I pledge my full support to the President's program.

Mr. VANDER JAGT. Mr. Speaker, the time for action has come. Hunger and its related problems should no longer be permitted to exist in the midst of our unparalleled wealth. On May 6 the President sent to Congress his proposal for a comprehensive program to combat the problem of hunger in America. This great step forward has conveyed a feeling of action on Capitol Hill, a feeling that at long last an administration is willing to act and commit itself to end-

ing once and for all the disgrace of hunger in America. I urge that Congress act positively as President Nixon expressed in his May 6 proposal:

I ask this of a Congress that has already splendidly demonstrated its own disposition to act. It is a moment to act with vigor; it is a moment to be recalled with pride.

Mr. RUPPE. Mr. Speaker, I would like to add my voice to those who praise the President's bold efforts to mount an all-out campaign against hunger and malnutrition. During the 90th Congress, I was among the original sponsors of legislation to seek an open-ended authorization for the food stamp program. Bipartisan efforts in the 90th Congress to create a Commission to learn more of this critical problem were not sanctioned by the previous administration. However, we were successful in focusing attention on the breadth and seriousness of hunger in our American society.

Now President Nixon has put the full weight of his office behind the effort to eradicate this menace. Executive support should now lead to the establishment of the Hunger Commission and a better program for the distribution of food stamps. The President has clearly demonstrated his concern by making the hunger campaign one of the initial elements of his administration. Never before has any administration clearly acknowledged the problem of hunger or sought actively to eliminate it.

Mr. Speaker, I feel that there can be no right more basic than the right to have enough to eat in a land that produces a surplus of food. I wish to commend the President for his initiative and for the direction of his policy to rid the Nation of hunger once and for all time.

Mrs. REID of Illinois. Mr. Speaker, I am happy to join my colleagues in expressing support for President Nixon's goal of eliminating hunger and malnutrition in America.

Sometimes we Americans forget how truly fortunate we are. With only 6 percent of the world's population this country has set a standard of agricultural production without equal anywhere on the globe. Nevertheless, many Americans today find themselves incapable for one reason or another of providing adequate and nutritional food for themselves and their families. While the solution to this problem is not to be found in any instant program expected to eradicate overnight the blight of malnutrition and insufficient diet, it is clear that we must pursue an effective and well-thought-out course of action. In this regard, President Nixon's proposals merit serious consideration and I applaud his initiative.

I am particularly gratified that our President has included as a key portion of his program the necessity of private sector involvement. This program should be particularly well suited to a creative Government-industry partnership of the kind the President has advocated in other important areas of national concern. With the help of Congress, President Nixon can inaugurate this drive to end hunger in America with sound, reasoned solutions to the problem.

Mr. WINN. Mr. Speaker, hunger can-

not be tolerated in the most affluent society in the history of man.

President Nixon and Congress are about to establish a program which will put an end to hunger in America.

The President's message, which follows guidelines recommended by congressional leaders, includes these major changes in the food-stamp program:

First, allotments of stamps to furnish a minimum adequate diet for all families;

Second, free food stamps for families at the very bottom of the income scale;

Third, a limit on the cost of stamps to other families at 30 percent of income; and

Fourth, authority for the operation of food stamps along with distribution of surplus foods simultaneously in localities where this is requested by local officials.

These measures are a step in the right direction toward the goal of eliminating the consequences of poverty and deprivation.

We cannot stop here.

Certainly, the virtues taught in the Judeo-Christian ethic should help guide us. A hungry man cannot work effectively. A nation of hungry people cannot work effectively either.

Mr. QUIE. Mr. Speaker, the President's nutrition program is a multipronged attack on hunger and malnutrition in this country. I trust Congress will soon approve the legislation necessary to implement it completely and that the Executive will move quickly to implement those portions which need no new authority.

Having authored the amendment to the 1967 OEO amendment which established the emergency food and health service program, I am pleased that the President has found the service "invaluable" and is recommending expansion of it. The community action agencies have proven that they are in a better position to find people needing emergency food and health care than other governmental agencies. An expansion of this program should go a long way toward eliminating hunger from that segment of society which has suffered in silence.

I support the President's proposal to have direct distribution of food programs in the same county with stamp programs. While the Department of Agriculture contends that the usual drop off in the number of persons participating in a supplementary food program when a county converts from a direct distribution program to a food stamp program results because ineligible persons accepted the surplus foods in the direct distribution program, I doubt that this is the case. The administrative procedures in the food stamp program should be simplified so that they do not scare off persons who are stymied by bureaucratic mazes. Providing both programs concurrently in a county will give eligible persons a broader spectrum from which to obtain required food elements.

It is also encouraging that the President's nutrition proposals portend a revision of the total welfare system. If his welfare reform is as comprehensive as his nutrition program, it should meet

the needs of deserving citizens very adequately.

Mr. BEALL of Maryland. Mr. Speaker, the President's national nutrition program is the basic first step toward the national goal of a poverty-free nation. Certainly this plateau will not be easy to reach and may never come within our grasp. However, the recognition of the widespread deprivation of food for many in our land, and the implementation of a comprehensive program to combat it, is a giant stride forward.

As the Representative from a district which includes areas of Appalachia, I can testify to the need that exists. It is a deep need, of much wider scope than many of us like to admit. But now at last, we are going after it on a scale that will produce results.

The result will not only be more persons with full stomachs. Our efforts on this front will show up in the classroom where the hungry child before did not have the strength or motivation to concentrate on educational materials. It will be demonstrated, I predict, by an eventual lessening in the number of young men rejected for military service for physical reasons. It will, most probably, be reflected in a diminishing number of children born with mental deficiency caused by nutritional imbalance in the diet of the mother. Those trained in medicine and nutrition could go on and on as to the physiological effects that we can expect, I am sure.

And we, Mr. Speaker, can be proud that we have the opportunity to serve in Congress which will be the first to make an all out attack on this most fundamental of all problems. When we visit our districts now and are confronted with conditions of hunger, we can tell our people that thanks to the initiative taken by our President, vigorous action is being taken so that hunger does not continue to be a problem in our rich and bountiful land.

Mr. ZWACH. Mr. Speaker, I would like to associate myself with the remarks of my distinguished colleagues in regard to the President's program to end malnutrition of millions of Americans. I believe that for the first time, very practical, solid measures are recommended to implement and to carry out this vital program.

The President's plan would extend the present food stamp program to provide more poor families with enough food stamps to enable them to have a nutritionally complete diet. More importantly, a flexible program would be implemented in the remaining 440 counties which do not yet have either the direct distribution or the food stamp program.

In addition to making these recommendations, the President's plan has also emphasized that it takes more than just making these programs available, and has made the necessary administrative changes which will coordinate all Federal food programs so that more needy people will have greater access to these programs.

We as a Nation should be embarrassed that poverty still exists in many areas, and it is time that we set priorities and meet these priorities with positive action.

The additional funds that have been requested can be furnished by an evaluation of priorities and reasoned judgment to make these funds available.

Food alone will not solve the complex problem of poverty but I am sure no one will deny that this program is a step in the right direction.

Mr. TAFT. Mr. Speaker, I have from the outset questioned the effectiveness and operation of the food stamp program in meeting the nutritional needs of those Americans needing such help. The Nixon administration's early review of the problem of hunger and the alarming conclusions drawn indicate that my doubts were well founded. It was better than nothing, but was doing the least for those who needed help the most.

Therefore, I strongly welcome the President's new approach to the problem and the meaningful steps he has already taken. We in Congress should rapidly implement them with necessary financial support and needed changes in operational authorization.

Mr. KLEPPE. Mr. Speaker, I strongly endorse President Nixon's program to eliminate the specter of hunger, wherever it may exist in this country. American agriculture produces an abundance of food—enough not only to meet the nutritional needs of our own people, but also enough to share with our friends in other lands. Certainly at this time in this country there can be no justification for the continued existence of hunger. Obviously our past efforts to provide food for the needy have not been completely successful. Now, for the first time, a comprehensive program to meet the problem of hunger has been put forward by President Nixon.

Mr. BROTZMAN. Mr. Speaker, I agree with President Nixon's statement that the persistence of hunger and malnutrition in America is intolerable. A nation that has come to the aid of one starving nation after another cannot continue to accept this contradiction in its midst.

I applaud the initiative of the President in calling for a unified and determined program to weed out the pockets of malnutrition scattered across our land.

The President's proposal for establishment of food assistance programs by 1970 in the 440 counties without any food stamp distribution will greatly accelerate previous commitments to this program.

At the same time the emphasis on balanced diet in the new programs will end one of the most serious criticisms of the program to date.

Mr. Speaker, the President's plans for better coordination of the food distribution effort and for tapping the expertise of the private sector through a White House Conference on Food Distribution Problems are positive steps toward ending the blight of hunger in America. But the most hopeful sign, I feel, is the priority given this entire program in the administration's domestic program. I am encouraged by such leadership and applaud the President for it.

Mr. CONABLE. Mr. Speaker, all of us have been disturbed by the reports of malnutrition and hunger in our own country which have come to public atten-

tion in the recent past. Americans are accustomed to hearing of these problems in other nations and acting vigorously to alleviate them. Certainly we must respond with the same compassion and energy to these conditions in our own country.

President Nixon has summoned the Nation to meet the needs of those Americans who are not receiving an adequate diet. Typically he has called upon the private sector as well as the Government to join in efforts to eliminate hunger; wisely, he has recognized that the problem is more than a matter of money and food, but also one of education, distribution, and cooperation.

The direct distribution program has the capacity to make large quantities of basic goods available economically and efficiently, and I am pleased that the President proposes to expand these efforts to areas where the need is evident. The special aid he proposes to prevent malnutrition among pregnant women and infants is highly commendable. Concentrated administration of the food programs in a single agency is also desirable to make the best use of our food resources.

Creation by the President early in his administration of an Urban Affairs Council to coordinate planning and direction of domestic programs was a sound decision, and I believe the food program devised to meet this basic national problem testifies to the valuable role being fulfilled by the Urban Affairs Council.

Mr. McDADE. Mr. Speaker, for more than a year I have worked diligently pursuant to my deep concern over the problem of hunger in America. In that time, through the work of my Committee on Appropriations, we have taken substantial steps toward alleviating the problem of hunger among our schoolchildren in the District of Columbia.

Now there has come a step from the White House that all of us must applaud vigorously. I refer, of course, to President Nixon's statement on hunger in his message to Congress on May 6 of this year.

I vigorously concur with the President's request to add a billion dollars to our fight against hunger in America. Added to the \$1.5 billion already requested, this \$2.5 billion represents a wise, prudent, and very humane expenditure of our national resources. I am certain all of my colleagues will applaud the President for his message, and will support it vigorously when it comes before the Congress in legislative form.

Mr. HARVEY. Mr. Speaker, I think it is pretty clear that President Nixon and this administration, with the cooperation and help of Congress, intends to wage a real fight against the hunger and malnutrition which exists in the most bountiful and, yes, compassionate, country in the world.

On May 6, the President announced his special message and the action that was to be taken. He spelled out a major five-point program which included family food assistance programs; special supplemental food program; administration of food programs; private sector involvement; and interagency efforts.

The President also said it well when he stated:

More is at stake here than the health and well-being of 16 million American citizens who will be aided by these programs and the current Child Food Assistance Programs. Something very like the honor of American democracy is at issue.

I applaud the President's vigorous program. It is of particular significance that this is one of the major domestic programs that he has presented in the early days of his administration.

Mr. CAMP. Mr. Speaker, few, if any of us have ever experienced the gnawing pain of hunger that many Americans feel each and every day of their lives.

National attention has been focused on the plight of our poverty stricken and the severe effects of malnutrition, especially among the young.

The President has proposed actions to combat malnutrition in America, and in doing so has made a major commitment to meet the nutrition needs of every American. His proposals deserve our fullest and unqualified support.

When he took office, the President found that our food and nutrition programs were not doing the job. He did not seek to place the blame on anyone—he sought answers to why the programs were unworkable. He asked us for a new legislative approach to more effectively use this country's resources—both private and Government. The President proposes a great crusade to banish hunger from our land and deliver on commitments made decades ago.

In President Nixon's words:

The moment is at hand to put an end to hunger in America itself. For all time. It is a moment to act with vigor.

I urge my colleagues to devote their immediate attention to respond in a manner similar to the President. Let us work together with the hope that America—the land of plenty—will no longer have many who have so little. In a land as bountiful as ours, we should not have anyone feeling the gnawing pangs of hunger.

Mr. FISH. Mr. Speaker, I rise to join my colleagues in discussion of President Nixon's attack on hunger and the tragic results of hunger in our Nation. The program to combat hunger as outlined by President Nixon combines both wisdom and heart—the wisdom to promulgate a program that will cut at the root of hunger, the heart to know that such a program is long overdue in our country.

President Nixon well understands that one of the basic drawbacks to the food stamp program as it existed in the past, is that the very needy could not participate, as they had no money with which to purchase stamps. Yet, any county could elect either the stamp program, or the surplus commodity program. They could not elect both. President Nixon's proposal that food stamps be provided at no cost to those in the very lowest income brackets will adequately surmount this problem.

Mr. Speaker, although I only touch on this one aspect of the President's proposed program, the same combination of understanding, and sympathy runs throughout it. I believe such a solid na-

tional attack on hunger in the United States is long overdue. That this new approach is needed one realizes when it is indicated over 440 counties have no food assistance programs of any sort at the present time. I believe President Nixon's program will fill the need, and meet the crisis problem of malnutrition in the United States.

Mr. BROOMFIELD. Mr. Speaker, I wish to join with my colleagues today in endorsing the President's message to Congress on hunger in America. He has called for an expansion and improvement of Federal food assistance programs and for the development of comprehensive data on which future improvements can be based.

The President's nutrition program can play a key role in attacking the problems of the disadvantaged. I see our long-range goal as enabling the children of today to have the sense of responsibility and the capability to care for the children of tomorrow. We cannot expect to achieve a society which all have the opportunity to develop and flourish if we cannot achieve a society in which all have the opportunity to survive. If we want to see each child of today grow up to be a responsible, educated, contributing member of our society tomorrow, we have to take steps to provide his mind and body with the food they need to grow and develop normally and adequately.

The most advanced nation in the world, a nation which pays its farmers not to produce, certainly has the resources and the technology to do this. And I would like to applaud in particular the President's plans to give special attention to the needs of pregnant women and mothers of infants, to study the relation of malnutrition and mental retardation, and to educate families about good nutrition.

Last year I cosponsored legislation to establish a National Commission on Hunger. The Commission would have identified the problem of hunger and malnutrition in detail and recommended improvements in Federal programs to meet it. This legislation was passed by the House, but not by the Senate. I commend the President for assuming the leadership role in accomplishing these objectives.

Mr. DELLENBACK. Mr. Speaker, hunger in America is often virtually invisible. We rarely see the physical deformities that can result from sheer starvation; yet malnutrition can leave marks that are just as deadly. Even though the effects are not always clearly visible, it is an acknowledged fact that hunger and malnutrition have far-reaching consequences for their victims in our country. As the National Nutrition Survey pointed out, "hidden hunger" in America often irreversibly cripples the physical and mental development of its victims. The survey also reveals:

No one seems to be more vulnerable to this insidious . . . hidden hunger than the child under six years.

Tragically it is too late to help many Americans whose developments have already been irreparably damaged. The individual who has been anemic through-

out his school years, always lacking the energy to learn, has been harmed beyond the possibility of complete cure. But President Nixon's proposals offer an opportunity to revise the trend for millions of children who are potential victims of hidden hunger. The President's plans to improve the food stamp, direct distribution, and special package programs would set up immediate means to alleviate malnutrition. The establishment of a Food and Nutrition Service and the encouragement of private assistance would make it possible for programs to be extended, strengthened, and supplemented by long-range solutions.

I urge my colleagues to act immediately on the President's proposals so that we may help those children for whom there is still time. In the recent past, Congress has demonstrated a concern about malnutrition that went beyond partisan considerations. I am convinced that continuing this nonpartisanship will strengthen our efforts to combat the tragic hidden hunger in our Nation.

GENERAL LEAVE

Mr. GERALD R. FORD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my 1-minute speech today, the President's message on nutrition.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

INDIANA DUNES NATIONAL LAKESHORE

(Mr. LANDGREBE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LANDGREBE. Mr. Speaker, inserted in the RECORD of May 19 was a statement by the Honorable ABNER J. MIKVA of Chicago, Ill., who availed himself of this means for attacking my bill H.R. 11084, which was introduced with the intention of restoring some sanity to the matter of providing for a Federal park in North Porter County. Mr. MIKVA's surprise by my proposal is no greater than mine at his reckless statements of yesterday. For the record, I should like to make the following comments in response to Mr. MIKVA's statement, which I find to be loaded with misleading statements and glaring untruths.

H.R. 11084 does in fact specifically define the boundaries for a national park in Porter and La Porte Counties in Indiana. While Mr. MIKVA contends the boundaries of countless other national parks, national seashores, and national recreational areas have been defined by reference to a public map or drawing, I wish to point out that those areas that he refers to specifically such as Spruce Knob, Bighorn Canyon, et cetera, are all Federal parks established in undeveloped and, in many cases, completely unpopulated areas of our country. I beg to remind the gentleman from Illinois that there is no comparison to highly popu-

lated Porter County, where in 1966 the Honorable Paul Douglas, then senior Senator from Illinois, with the political power available to him by virtue of his seniority, and with the cooperation of a Democratic administration and Democratic controlled House and Senate, was able to impose upon the good people of Porter and La Porte Counties the seven-segmented, noncontiguous monstrosity called the Indiana Dunes National Lakeshore, defining its boundaries only by reference to a public map or drawing.

Yes, H.R. 11084 would reduce the overall land area in comparison to the Douglas bill, and it is my intention to do just that. H.R. 11084 exempts the heavily developed areas of Beverly Shores, Tremont, and Baileytown, which have hundreds of homes, small businesses, streets, roads, and so forth. Not only would confiscation of those homes and businesses result in substantial hardship to the present occupants, but would result in permanent loss of local tax revenue so badly needed to provide education, transportation, protection, and other services of vital importance in a fast-growing community.

Mr. MIKVA makes reference to the 8,721-acre area in the proposed Indiana Dunes National Lakeshore. But the fact is that the 2,100-acre Indiana Dunes State Park is always erroneously included in the total land area by the proponents of the original Douglas bill. This is completely misleading to the general public and extremely offensive to Hoosiers who still believe in States' rights and who are proud of the fine park that has been operated in the dunes area by the State of Indiana for many years. Indiana, to the best of my knowledge, has no intention of giving up the Dunes State Park under any circumstances.

The land area encompassed in my bill when added to the Indiana Dunes State Park will provide for a total of about 7 square miles of recreation and conservation areas and preserve those areas in north Porter County which still remain in their natural state. It is my sincere opinion that the Federal park as defined in my bill plus the Indiana Dunes State Park will provide adequate and reasonable recreational facilities as well as retention of areas of educational and conservation value.

Mr. MIKVA states further:

If it is true that the present boundaries of the park include private homes—which I do not know of my own knowledge * * *

Yet he has told me personally that he enjoys a summer home just east of the area encompassed by the Douglas bill. He, therefore, must be familiar with the many homes in the area that will be destroyed should the Douglas park remain in its present form.

The Chicago South Shore Railroad is not building a marshalling yard on land supposedly set aside for park purposes nor has anyone proposed a jetport in that specific area. Mr. MIKVA's statement, "I know that some people still think longingly of building a harbor facility on Dunes land," must be a figment of his imagination and further evidence of the "big lie" aimed at the destruction of

hundreds of homes and millions of dollars worth of private property under the guise of conservation and recreation. I personally do not minimize the importance of conservation or recreation. However, in America today, food, shelter, and gainful employment are still of primary importance and must be balanced against the 765 million acres of land already under the ownership and control of the Federal Government.

Also, Mr. MIKVA makes reference to the need for recreational facilities for the millions of persons within a 2-hour drive of the dunes. I wish to remind the gentleman from Illinois that within a 2-hour drive of his own congressional district in Chicago, there are 15 State parks located in Illinois, five in Michigan, 10 in Wisconsin, and four in Indiana, in addition to the many parks and forest preserves provided by the city of Chicago itself. If, however, the gentleman wishes to become involved even further in the Federal park issue, perhaps he could consider establishing a Federal park between 55th Street and Garfield Avenue in Chicago. Such a park would be even more convenient to the people that he is elected to serve than the Indiana Dunes Area. This idea is no more ridiculous than destroying hundreds of homes and consuming large developed areas in northern Indiana for a Federal park.

In conclusion, I find that the arguments put forth by the gentleman from the Second District of Illinois regarding my bill to be equally as invalid and misleading as those of his political mentor, the former Illinois Senator Paul Douglas.

If Congressman MIKVA would agree, I would respectfully suggest that hereafter he address his time and energies to the problems of the Second District of Illinois and I, in turn, will confine my interests to those of the Second District of Indiana, which it is my privilege and honor to represent in the U.S. House of Representatives.

NATIONAL NUTRITION PROGRAM

(Mr. BROWN of Michigan asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BROWN of Michigan. Mr. Speaker, the new national nutrition program honors an oft repeated American commitment. Mr. Nixon has put first things first for hunger is the most pernicious of the facts of poverty.

Severe protein deficiency in pregnancy and the early years of life can cause irreversible brain damage, condemning its victim to a lifetime of dependency.

Hunger in later years saps the will to learn and thus the ability to earn.

The medical toll of malnutrition in terms of lowered resistance and diseases is measured in lost pay, industrial accidents, and listlessness.

Clearly, the inroads of hunger impair, if not frustrate, other programs, both public and private, to help the poor help themselves, yet we have pathetically little precise knowledge of how and why.

The President has directed intensive

research to determine with scientific accuracy the relationship between malnutrition and human development. This action, long overdue, offers at least the hope that we may at last be on the road to discovery of one of the root causes of poverty.

TRADE RESTRICTIONS

(Mr. ASHLEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ASHLEY. Mr. Speaker, the time has come for new initiatives to spur East-West trade by reducing export restrictions on trade between the United States and the Soviet Union and the other Communist nations of Eastern Europe.

Mr. Speaker, the Export Control Act, which expires on June 30 unless extended by the Congress, was enacted in 1949 as a temporary measure as a necessary weapon in the evolving cold war. Western Europe, still economically weak from the ravages of the Second World War, appeared to the Congress then to be in realistic danger of attack from the monolithic Sino-Soviet bloc under the leadership of Stalin; and it was further believed, comparing our industrial might with both Eastern and Western Europe at that time, that goods withheld from the Soviets by means of controls on American commodities could not be elsewhere obtained.

Now, 20 years later, these underlying premises have drastically changed. From the standpoint of our national security and the conduct of foreign affairs, which of course remain paramount in our consideration of export controls, as well as from the vantage point of domestic economic considerations, the time has come for Congress to assess realistically the changes that have taken place and to reshape our export controls so that they are in accordance with and responsive to policies being pursued by the United States today.

Responding to the aggressive, monolithic Communist structure which confronted the free world in 1949-50, two separate administrative agencies were established to impose restrictions on free world trade with Eastern Europe. One was our own Office of Export Control and the other was the combined CoCom apparatus by which Western Europe, Japan and the United States sought cooperatively to withhold certain goods and commodities from the Communist bloc countries.

One of the controlling facts before us is that these two mechanisms, both designed to restrict trade with the Communist nations, have never been closely coordinated. In mid-1968, for example, there were some 1,300 export control commodity classifications unilaterally administered by the Office of Export Control of the Department of Commerce but not controlled by CoCom.

Of these 1,300 commodity classifications, each of which requires the issuance of a validated license for each shipment by an individual U.S. exporter, it is estimated that 1,100 represent goods

which cannot be unilaterally controlled by the United States because they are freely available from other sources, including CoCom nations. And of the remaining 200, many are not of a military or strategic character.

I think it can be accurately stated that the reason for the disparity in the administration of our Export Control Act and the multilateral CoCom arrangement is that the United States has taken a very different view of East-West trade than Japan and the countries of Western Europe have taken.

The United States has demonstrated an almost compulsive tendency to regard the denial of trade with Communist nations as a primary instrument or weapon of the cold war, whether trade be in strategic or nonstrategic goods. The countries of Western Europe and Japan, on the other hand, have sought through CoCom to prevent strategic exports to Communist bloc nations but they have regarded trade in nonstrategic goods and commodities to be not only in their commercial interest but also a means of reducing East-West tensions.

Ironically, Mr. Speaker, this lack of alignment between the policies of the United States and our trading allies has hurt our country economically far more than it has the Communist nations, and instead of improving the political relationship between the United States and the Communist world, it has resulted in tensions between the United States and our CoCom partners while political relationships have been building between Western Europe plus Japan and the Communist countries of Eastern Europe.

If there is any question about this, we need only consider the fact that the trade of Eastern Europe with the non-Communist world in 1967 was almost \$14 billion, of which Western Europe and Japan accounted for almost \$9 billion. The United States is virtually a nonparticipant in this trade. While we account for about 16 percent of world exports, we have only about three-tenths of 1 percent of the exports to Eastern Europe. It is worth mentioning, too, that East-West trade has more than doubled during the past 10 years and has grown faster than trade either within the Eastern European bloc or among the Western countries themselves. Over the past decade, world trade has been growing at about 8 percent a year, while East-West trade has been growing at about 12 percent. But because of the frozen trade policy pursued by the United States, we have forfeited any advantage from this increased commerce, and in so doing have given other trading nations a most unique and enviable competitive position.

Mr. Speaker, the bill that I am introducing today is predicated upon the same essential findings as the Export Control Act of 1949; namely, that the availability of certain materials at home and abroad varies so that the quantity and makeup of U.S. exports and their distribution among importing countries may affect the welfare of the domestic economy and may have an important bearing upon fulfillment of the foreign policy of the United States; and that the unre-

stricted export of materials without regard to whether they have significant military applicability may adversely affect the national security of the United States.

However, Mr. Speaker, I want to be clear about the changes that are incorporated in my bill. Most important is the additional finding that expanded trade in peaceful goods and technology with all countries with which we have diplomatic or trading relations can further the sound growth and stability of the U.S. economy as well as further its national security and foreign policy objectives. Let me emphasize that I am talking about trade in peaceful goods. The United States and CoCom nations would continue to maintain lists of products of direct military relevance which we all agree should not be sold or transferred to Eastern Europe. These include direct military items, items in the atomic energy field, and a list of non-military items which are considered to be closely related to the military capabilities of the Soviet Union and the other Communist nations of Eastern Europe. These items are embargoed and are not sold at all, or if sold, are sold only after full consultation with the members of CoCom. This would continue to be the situation.

Briefly stated, the basis for this new finding is no more than a return to the historic and traditional policy of the United States to engage in world commerce with nations with whom we are not at war. Our Nation has many obligations but none is more important than our responsibility to the cause of peace. This cause, as we know from our history, can be promoted by contacts—including trade—with nations with whom we have very real ideological differences. It is equally clear that inflexibility and refusal to communicate and explore contacts can only foster deeper antagonisms and bring us closer to war.

There logically follows from this a new, additional congressional declaration that it is the policy of the United States to encourage trade in peaceful goods and technology with all countries with which we have diplomatic or trading relations, except those countries with which such trade has been determined by the President to be against the national interest. There has been an entirely unwarranted stigma attached to legitimate trade with Eastern Europe which has inhibited many firms from actively pursuing trade opportunities which would cumulatively serve our national security, foreign policy, and economic welfare. It is time to remove what may be even so much as a hint or trace of any such stigma.

American exporters should feel free to trade in peaceful goods with any nation other than those for which an embargo has been instituted. Such embargoes should be established only in an emergency for the most compelling reasons of national interest, and subject to review by the Congress which has the authority "to regulate commerce with foreign nations" under article I of the Constitution.

To effectuate the policies set forth, the President is authorized to prescribe rules

and regulations requiring that express permission and authority be sought and obtained to export articles, materials, or supplies, including technical data, or any other information, from the United States, its territories and possessions, to any Communist nation if the President determines that such exported item is capable of a significant military application which would prove detrimental to the national security and welfare of the United States. It is further provided that the export of a particular item shall not be denied unless there is substantial evidence that the particular exportation is likely to be used for military purposes.

The grant of this authority would enable the President to remove from the commodity control list administered by the Department of Commerce the hundreds of classifications which are unrelated to any significant military application which would prove detrimental to our national security. Denials of validated licenses would be based on evidence of an item's likely military use, not speculation or conjecture.

Finally, the bill establishes the requirement that the Government agencies and their officials responsible for implementing export controls more fully inform exporters about any considerations which may cause prospective license requests to be denied or to be the subject of lengthy examination, that these officials advise of any circumstances arising during the Government's consideration of an export license application which are cause for denial or for further examination, and that these officials inform the exporter of the reasons for a denial of an export license request.

This provision is meant to better enable U.S. exporters to coordinate their business activities with our export control policies and procedures. I have already mentioned the stigma attached to trading with Eastern Europe. It is not the only factor inhibiting an aggressive marketing campaign in that area by U.S. firms. Many businessmen believe, either correctly or incorrectly, that a sales trip through Eastern Europe might come to naught because their subsequent license applications would be denied or so delayed so as to make such sales efforts fruitless. The framework should be established to insure that there is no lack of information available here which might diminish the incentive to seek trade opportunities.

The businessman who does decide to pursue Eastern European opportunities and who obtains sales orders which lead him to request export licenses should be informed of circumstances making for delay or probable denial, so that he can better communicate with his prospective customer and make better choices in allocating his marketing resources. And in view of the fact that there are a variety of bases for denial, often arising out of the specific circumstances of the case, the exporter should not be deterred from further effort in this area because he does not know how general or special and specific is the ground for the denial.

In sum, within the framework of na-

tional security, the American exporter should be afforded, to the greatest extent possible, information which will minimize uncertainty about the Eastern European market.

Mr. Speaker, it has been many years since a positive step has been taken in our posture toward Eastern Europe. Extension of the Export Control Act with the proposed amendments offers a distinct opportunity to advance our foreign policy and strengthen our economy while we maintain national security.

THE HONORABLE JOHN M. COYNE

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. FEIGHAN. Mr. Speaker, Brooklyn, Ohio, has had an outstanding civil servant as their mayor for the last 22 years. His name is John M. Coyne.

The Cleveland Plain Dealer recently printed an article about Mayor Coyne. The story of this unusual man is of interest to all concerned Americans because his example of fine civic leadership is one that should be emulated.

Mayor Coyne has guided Brooklyn in the right direction. His positive leadership in all areas is noteworthy. I believe that it is appropriate that I include this informative article in the RECORD for the benefit of my colleagues. It follows:

BROOKLYN MAYOR KEEPS IN PERPETUAL MOTION

Dear Everett Dirksen: If people who sniff at naming the marigold the national flower and rock'n'roll recording magnates ever cause you to decide to retire from the U.S. Senate, you might drop off in Brooklyn, O., on your way home to Illinois to pay respects to a man who says you're the only politician he would go 25 miles just to see. He thinks you are fantastic.

He also is a politician. The mayor of Brooklyn, in fact. The first time he ever voted, he voted for himself. He has not been without a public office for 30 years.

What makes his feelings for you a bit unusual is that he's a Democrat. In fact, he was a delegate to their last national convention.

John M. Coyne was in his office in Brooklyn City Hall, perpetual motion in one man's museum.

There on the wall were Bobby, Lyndon, G. Mennen Williams, Hubert, Walter Reuther and even Dick Nixon. All with John Coyne.

On the desk and bookcase and window sill were Buddhas, ceramic cowboy boots, a pair of fighting cocks made out of feathers. Gifts from small boys or distinguished foreign visitors. You never know when one might come back unexpectedly.

Never at rest among his dust catchers, Coyne is always either getting up or sitting down. He takes down the autographed picture of Bobby Baker from the corner where he keeps him just for kicks. He puts up his picture of Tony Celebrezze framed with a pre-depression oversized dollar bill. He dashes out to another office for a statistic or a scrapbook.

Fifteen years ago, Coyne was a 118-pound weakling with an ulcer. He quit smoking and became a full-time mayor, and his stomach settled down.

Coyne got into politics because something was wrong in the community, he decided. His parents' home burned to the ground because Brooklyn had inadequate fire equipment.

Years later, when Cleveland sought an income tax, Coyne was the only suburban mayor to support it. He remembered the times Cleveland fire equipment had helped Brooklyn.

Coyne was first elected mayor 22 years ago. Before that he was treasurer for two years and clerk-auditor for six years.

"I don't know about retiring," he said. "I look at some of my friends who have retired from public office and they're not happy. This job is like a personal electric train. It's a fascinating business."

Coyne sees his job as "taxes and services." "Keep the taxes down and the services up."

Because industry pays more than 75% of Brooklyn's tax dollar, services are good. The city is one of the few in the county that picks up all garbage and rubbish. The school district plans to build its own vocational school. Most other districts have had to combine for this service.

"We need good schools more than the school needs the city," Coyne said. "I really care about what happens to them." So he favors all the industry Brooklyn can get.

Coyne is known around the county for the tight rein he holds on his council and city employees.

"Nine times out of 10, the guy making a fuss in council wants to be mayor," he said. "We don't have that here. I don't think people like fighting in their city administration any more than they like domestic fights. At least that's not our tradition in Brooklyn."

Coyne is a member of the study commission that is looking at new ways to run the county government. He personally thinks the county government is in pretty good shape now except for a low budget.

He is intrigued with the idea of an elected executive who could be called a mayor. He thinks the mayor of Cuyahoga County might prove impressive to federal money holders.

A countywide airport commission or water commission is out, he thinks, because Cleveland would not give up control of anything that makes money.

JUSTICE WILLIAM DOUGLAS AND THE CENTER FOR THE STUDY OF DEMOCRATIC INSTITUTIONS

(Mr. RARICK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RARICK. Mr. Speaker, high in the hills overlooking the Pacific Ocean at Santa Barbara, Calif., is located the Center for the Study of Democratic Institutions.

This controversial enterprise has among its more recent projects the promotion of U.S. recognition of Red China as well as a seat for her in the United Nations and rewriting the U.S. Constitution.

The center over the past 8 years has been the eager recipient of some \$177,000 advanced by the Albert Parvin Foundation whose manager is Justice William O. Douglas of the Supreme Court. But then Justice Douglas is also identified as the chairman of the board of the center.

While Justice Douglas is salaried for his labors at the tax-free foundation, the reports indicate that he only receives fees and expenses from the center, which are recorded as \$500 per day plus expenses.

Other notable fellows connected with the center are Robert M. Hutchins, Stringfellow Barr, Linus Pauling, Bishop James A. Pike, John R. Feeley, Rexford

Guy Tugwell, and Harry Ashmore, the center's executive vice president.

Are we expected to believe that Justice Douglas' association and remuneration from these institutions carries no influence on his judicial opinions? As shocking as the very questionable financial arrangements are, how could any person, especially a judge, remain moderate and open-minded when saturated with such one-sided philosophy and narrow intellectual contacts?

What is good behavior in a Supreme Court Justice? This perversion of our judicial system cries for congressional action. We must reform our Federal judiciary so that Americans can regain confidence in "equal justice under law"—the motto inscribed over the building housing our Supreme Court.

Mr. Speaker several articles on this subject follow:

[From the Washington Post, May 19, 1969]

MORE TROUBLE IN PARADISE

(By Nicholas von Hoffman)

SANTA BARBARA, CALIF.—The Union Oil Company continues to soil paradise. The natives hear reports that the wells still aren't repaired although the volume of refoiling liquid has lessened. They report that when the wind blows from the wrong direction, the sticky stuff returns to smear their beaches again.

Even when the wind isn't bringing in more, they say so much oil has soaked into the sands that your feet are black after a short walk on the shore. A few days ago 150 seal pups, half the baby seal population, were found dead on San Miguel Island. Santa Barbara probably hates all politicians.

But not all that's slippery and slick around here is the black goo spoiling one of the world's most moving combinations of sea and mountain. There's another sticky situation. High up in the hills overlooking the ocean is the intellectual lamasery called the Center for the Study of Democratic Institutions.

The Center's president is Robert M. Hutchins, its board chairman, Supreme Court Justice William O. Douglas. It has many famous and highly regarded fellows, writers, philosophers, social and physical scientists: Stringfellow Barr, Linus Pauling, Bishop James Pike, John R. Feeley and Rexford Guy Tugwell, who is working on the 35th draft of his new constitution for the United States.

Every day when Dr. Hutchins rings a bell, these men and their guests meet to discuss the problems of mind and man. Their words are carefully taped, edited and printed in pamphlet or book form for us to read and be guided by.

Two hundred and forty-two of these tapes are available for \$7.50 each. One is called *The Ocean and Common Heritage*, which the Center might consider offering gratis to the Union Oil Co. or the Secretary of the Interior.

Justice Douglas is the manager of the Albert Parvin Foundation, which has given the Center \$177,000 over the past eight years. Harry Ashmore, the Center's executive vice president, is a director of the Parvin Foundation. Carol Agger Fortas, Abe's wife, is the Parvin Foundation's lawyer. Ashmore says that while Douglas received no compensation as the Center's Board Chairman, he gets fees and expenses for lectures and consultations, as is the case with members of Congress. The ordinary honorarium, as it's called in these circles, is \$500 a day plus expenses.

This information isn't new. It was developed by the Los Angeles Times, which has been digging into the Douglas-Parvin relationship for a long time. It hasn't received wide play in the East, perhaps because the liberal editors there are reluctant to bring

out such questions about men they admire and who are in many respects admirable.

Ashmore certainly is. He was the editor of the *Arkansas Gazette* during the bad days of Little Rock, the man whose newspaper fought the segregationists. After being the editor of the *Encyclopedia Britannica*, he came here and in the course of his work went to Hanoi, bringing back a version of the war which put him forehead to forehead against the Johnson Administration.

For all the good things that he and his circle of friends have done, what they are doing now at the lamasery may raise some eyebrows. If it were discovered that H. L. Hunt was paying Justice Byron R. White to run a foundation that had Sen. John Tower on the payroll, you can bet your sweet bippy there would be a big noise.

"Bill gets \$12,000 a year from the Parvin Foundation. It's a Caesar's wife case, somewhat different from Abe's," says Ashmore. "Bill keeps the whole foundation's business in his hat. Bill's the entire staff. He didn't want to take expense money. He took it that way so it could be reported as income. I can't imagine he could net more than \$5000 or \$6000 on it."

"Douglas is a slightly unconventional fellow by Supreme Court standards, but to blow this up like the Fortas matter is to compare apples and oranges. There has never been any secret about it, and you have to remember he has alimony to pay. He bats around the country lecturing in order to get along. I suppose any lawyer of equal status would probably be making \$250,000 a year in private practice."

Ashmore feels pretty much the same way about members of Congress even when they get their stipends from an organization whose board chairman is a Supreme Court Justice: "They work from morning to night. There's no lolling around the beach. In the case of Congress, this sort of thing goes back as far as I can remember. I've known a hell of a lot of them in the past 30 years. They've had to supplement their incomes by going on a sort of Chataqua circuit. This seems to me the most innocuous way of doing it."

Members of Congress are paid \$42,500 a year; Supreme Court justices get 60 grand. By the standards the fellow citizens must live by, these are gigantic salaries, and yet apparently they're not enough. They seem to feel they must scavenge the countryside for more dough while explaining to us self-sacrificing they are to endure the penury that public life imposes on them.

Even leaving aside the question of undue influence, which might border on the unconstitutional in the case of the judge sitting on top of an organization hiring members of Congress, there is still the question of when do these guys get time to do their proper work? If the Parvin Foundation is a bonafide operation, how can Douglas handle it, and also be the head of the Center and still run around making speeches for money while reserving his best attention for judging?

But what gives with the Parvin Foundation? You call Albert Parvin's office in Los Angeles and you're given the run-around by a girl on the phone who says she is alone there and doesn't know where her boss is, and isn't going to know where her boss will be, and he's the only one who can talk about the Foundation. Ashmore, on the other hand, argues that, "It's all a private crusade of the Los Angeles Times. They've whacked time after time."

"Parvin's constantly being shaken down by the Internal Revenue Service. I've never seen anybody who's been gone over as often, but nobody's ever charged him with anything. The allegation was made by the IRS that Parvin was using the Foundation's funds to his own benefit, but that wasn't

proven. He's one of those wheeler-dealer types."

Maybe you have to be a wheeler-dealer to get rich. Another contributor to the Center's work is Bernard J. Cornfeld, who put up the money for a conference in Geneva, Switzerland, where people and their wives were flown over, all expenses paid, to discuss world peace. Cornfeld is an international stock market and mutual fund operator who, like Parvin, has had his troubles with the Securities and Exchange Commission.

Ashmore contends that the Center is not the place to look for abuses of tax-exempt foundations, that the real scandals are elsewhere. He may have something there. Some miles south of the lamasery in Santa Monica you will find the J. Paul Getty Museum. Some \$10 million worth of classical art has been taken off the tax roll by the museum, whose board of directors consists of four members of the Getty family, Getty's lawyer and a Getty Oil Company employee. The collection is sequestered on Getty's baronial estate. There, behind walls and "no trespassing" signs, guarded by dogs, this public exhibition may be viewed between the hours of 2 and 4 p.m. on Wednesdays and Saturdays by appointment only. A maximum of 24 appointments are granted on each day.

This sort of thing backs up Ashmore. But it doesn't satisfy doubts about the way people in Government are behaving. There is now a great calling for real tax reform, including the use of foundations as tax shelters, but how are members of Congress going to act if they are beneficiaries of the system? What are they going to do about the clubby arrangements of you-sit-on-my-board-and-I'll-sit-on-yours? To ask the question is to answer it.

[From Human Events, May 24, 1969]

AS RESULT OF FORTAS REVELATIONS: WILL LOOK INTO DOUGLAS' AFFAIRS COME NEXT?

(By Alice Widener)

While the Justice Department and Congress are looking into Associate Justice Abe Fortas' allegedly questionable activities from the moral and ethical point of view, why don't they look into those of Justice William O. Douglas, specifically, his connection with and fund-raising for the tax-exempt Fund for the Republic and its Center for the Study of Democratic Institutions at Santa Barbara, Calif.?

The May 1969 issue of the *Center Magazine* lists Justice Douglas as chairman of the Fund for the Republic. As chairman and fund-raiser for the Fund, what subsidies or fees or travel expenses does Justice Douglas receive? Moreover, is Justice Douglas the Center's supreme voice? In matters involving issues before the Supreme Court, do the Center's "occasional papers" and "discussions" (all of which are printed and widely distributed) form the basis of Justice Douglas' decisions on the bench? Or does he formulate issues for the Center that involve eventual judicial decision and sort of shepherd them on up through a tortuous path to the High Court?

All this is of much greater import to the American people than it might seem. For example, important cases involving student subversion probably will be brought before the Supreme Court before we see the end of violence on campus.

In a May 1969 press release by the Center, Robert M. Hutchins, director of the Fund for the Republic, president of the Center, and close associate of Justice Douglas, declares that no matter how bad things get on campus the police should not be called in. "They cannot be trusted," declares Hutchins, "and an invitation to them to enter in the name of 'law and order' is evidence that the university has given up trying to become a center for independent thought and criti-

cism, for such a center can live only by discussion."

How much discussion can take place during a race riot and arson, such as occurred at City College in New York City recently? What does Hutchins mean by saying the police cannot be trusted? Trusted by whom for what? And how can Justice Douglas remain chairman of a Fund and "consultant" to a Center in company with a fellow executive who believes the police cannot be trusted to maintain law and order?

How much money does Justice Douglas receive as "consultant" to the Center? Is he paid on a per diem or annual basis? Does anyone know? What is the connection, if any, between his having been a director of the Parvin Fund in Las Vegas and his being chairman of the Fund for the Republic? Is there any interlock between the Las Vegas gambling enterprise and the Santa Barbara tax-exempt funds?

Recently, Americans were shocked by black militant James Forman's demand to churches for \$500 million "reparations" to blacks for their "exploitation." But we ain't seen nothin' yet. John R. Feeley—permanent "Fellow" of Chairman Douglas' Funded Center—proposes in a May 1969 press release issued by the Center that universities "issue a full and general confession, plus a self-imposed and large-scale penance, plus an irrevocable promise of radical reform, plus guarantees thereof" and declares the penance might be "a refund to all students of all expenses, say, for five years of their lives of the 15 or so given over so far to their miseducation."

Obviously, it isn't only Justice Fortas' finances and ethical conduct that ought to be investigated. Justice William O. Douglas' activities ought to be, too, because his extracurricular association with the Fund for the Republic and Center for the Study of Democratic Institutions appears to be much more serious and has far graver implications.

[From "Strike From Space" by Phyllis Schlafly and Chester Ward]

THE OFF-CENTER STUDY

An indispensable factor in creating the climate is to have a "foundation"—a rich, free-flowing gusher of tax-free money to finance books and publications, sponsor prestige meetings, and discreetly subsidize those in education, communications, religion, and even Government, who will spread the gravediggers' message. The perfect answer turned out to be the Center for the Study of Democratic Institutions. It soon began to play the same role in promoting U.S. unilateral disarmament that the notorious Institute of Pacific Relations played in the 1940s in persuading the U.S. State Department to assist the Communists to take over China.

The Center, a wealthy offshoot of the Ford Foundation with lineage through the malodorous Fund for the Republic, defines itself as an "intellectual community." The Honorary Chairman is Paul G. Hoffman, who has made a life career of losing other people's money: at Studebaker, as U.S. foreign aid czar, and now with the UN Special Fund. The Chairman of the Board is William O. Douglas, Supreme Court Justice who advocates recognition of Red China but non-recognition of God in our public life and public schools. The President is Robert M. Hutchins who, when asked by an official State legislative investigating committee how much he knew about Communism, replied under oath: "I am not instructed on the subject." In 1964 Hutchins wrote: "My candidate for President is Norman Thomas. I voted for him in 1932 and I'd like to do it again."

The Center's own list of Directors, Consultants, Staff Members, Participants in Publications, or Recipients of Grants, shows how far-reaching are the tentacles of this

foundation in education and communications. This list includes Professor Linus Pauling; Henry Luce of *Time*, *Life* and *Fortune*; Reinhold Niebuhr of Union Theological Seminary; George Gallup of the Gallup Poll and Elmo Roper of the Roper Poll; Harvey Wheeler and the late Eugene Burdick, co-authors of *Fail-Safe*; Eleanor Garst, co-founder of Women Strike for Peace; Barry Bingham, editor of the *Louisville Courier-Journal*; Cyrus Eaton, moneybags of the Pugwash Conferences; Erich Fromm, friend of SANE; Justice William J. Brennan, Jr. of the Supreme Court; Arthur Larson, chairman of the discredited National Council of Civil Responsibility, a hypocritical front which claimed to be impartial and available for tax-deductible gifts, although it was secretly subsidized by the Democratic National Committee; nuclear strategist Henry A. Kissinger; Hans Bethe, Pugwash and participant in another gravedigger conference called "Scientists on Survival"; Stanley Kramer, director of the movie *On the Beach*; Mike Wallace and the late Edward R. Murrow of television; James Reston of the *New York Times*; Adam Yarmolinsky, the man who had the strangest background and the most sensitive job in the Pentagon; Walter Reuther; and Hubert Humphrey. The President's Report in 1962 listed Robert S. McNamara as one of the 54 Founding Members who "contribute \$1,000 or more each year."

The senior gravedigger on the staff of the Center for the Study of Democratic Institutions is Walter Millis, author of numerous books and pamphlets urging the dismantling of American military strength. In his pamphlet *Permanent Peace* published by the Center, Millis says:

"If the price of avoiding all-out thermonuclear war should prove to be acquiescence in the 'Communist domination of the world,' or any other of the unpleasant imaginings against which we cling, futilely, to the war system to preserve us, it seems probable that the price will be paid." (emphasis added)

The Vice President of the Center is the same W. H. "Ping" Ferry who, at the Democratic Party's Western States Conference in Seattle on August 6, 1962 made an attack on FBI Director J. Edgar Hoover so outrageous that Attorney General Robert Kennedy immediately apologized to Mr. Hoover for the insult. On January 13, 1960, the Santa Barbara News-Press printed a long letter to the editor by Ferry urging the U.S. to junk all its weapons "of whatever kind," and "accept as a possibility" that "this country would be taken over by the Reds" as well as Western European countries. Though such a future is a "desperate and repellent vision," Ferry nevertheless finds it "thinkable" and urges unilateral disarmament upon us as "an alternative to our present policy."

Is the Center influential? Justice William O. Douglas boasted that more than 2,000,000 copies of its pamphlets and reports are now in circulation; and that "the faculty and students of hundreds of educational institutions—ranging from large universities to high schools—are using the publications as reference material and classroom texts."

[From the Washington Post, May 20, 1969]

LAS VEGAS TIES ARE SEVERED BY DOUGLAS' FOUNDATION

(By Robert L. Jackson)

The Albert Parvin Foundation, the charitable organization of which Supreme Court Justice William O. Douglas is the only paid officer, has severed virtually all its ties with Las Vegas gambling interests, it was learned yesterday.

Harvey Silbert, secretary of the Los Angeles based Foundation, said it sold its remaining 21,791 shares in the Parvin-Dohrmann Co. in early March. The firm owns three Las Vegas casinos.

Silbert said a mortgage on the Flamingo Hotel and gambling casino, from which the Foundation has derived income, also has been paid off within the last few months.

Douglas first came under criticism in Congress three years ago after the Los Angeles Times revealed he was being paid \$12,000 a year by the Foundation, which drew substantial income from the gambling industry.

This arrangement with the Parvin Foundation was recalled by newspapers and Congressmen during the recent controversy that forced another member of the high court—Abe Fortas—to resign last week.

Spokesmen for the Foundation had said all along that they knew of no appreciable change in the organization's assets. However, Silbert, in discussing the stock sales yesterday, said the Foundation's board—which includes Douglas as president—decided to dispose of its Parvin-Dohrmann stock "because we thought it was a good price at the time."

The Foundation sold its shares through a New York brokerage house for \$1,999,324, or more than four times the value assigned to the stock on its 1967 Internal Revenue Service return. The selling price was \$91.75 a share.

ANNIVERSARY OF CUBA'S INDEPENDENCE

The SPEAKER pro tempore (Mr. HANNA). Under previous order of the House the gentleman from Florida (Mr. FASCELL) is recognized for 60 minutes.

Mr. FASCELL. Mr. Speaker, 65 years ago today, on May 20, 1904, a great moment came to pass in the history of the Cuban people:

The flag of the sovereign Republic of Cuba was unfurled in Havana, marking the success of one of the longest, most costly in human terms, and tragic struggles for liberty in the Americas.

On that memorable day, Spain's colonial empire in the Western Hemisphere reached its end.

And the history of the free Cuban Republic began.

Like the records of much of mankind's progress through time, that history has been filled with different, at times contradictory, passions and emotions—joy and tragedy, hope and despair, exhilaration and disillusionment.

Yet at all times, the history of the Cuban people has been characterized by a certain air, a certain style: It has been, above all, the history of a people who passionately love life and freedom, who delight in a song, beauty and excitement; who work hard and achieve much; but who also know how to enjoy the fruits of their labor.

Unfortunately, their moment of freedom was short. History, which has a habit of repeating itself, came the full circle. Tyranny once again reestablished its sway over the beautiful island of Cuba and its people.

In Fidel Castro, the Cuban people came to experience the embodiment of all the dictators, demagogues, petty ideologists and other assorted tyrants who have had their moment on the Latin American political scene—and then, in the words of William Shakespeare, "were heard of no more."

Propped up and supported by his shadowy masters in the Kremlin, thinly disguised in the garb of a self-pro-

claimed "liberator," Castro has occupied the center of the stage in Cuba for nearly a decade—talking, haranguing, oppressing, squelching the people's initiative, stamping out freedom.

In many respects, therefore, this is a sad day—because Cuba's present condition is tragic.

But it is also a day to honor and celebrate—for the cause of freedom continues alive, dwelling in the heart of every true Cuban, be it in Havana, Miami, Fla., or in some distant part of the world.

We must recognize this fact as we commemorate the anniversary of Cuba's independence.

And because of that factor, the day will come when the political and spiritual heirs of such great Cuban patriots as Maximo Gomez, Antonio Maceo, and Jose Marti will once again feel at home in Havana and in every hamlet and town across the length and the breadth of the island of Cuba.

Thousands of Cubans, in and out of Cuba, are longing and working for that day. Here in Washington today are Jose R. Julia, president of the Cuban Crusade for Relief and Rehabilitation and other representatives who join in this commemoration and pledge undying zeal for the restoration of liberty to Cuba.

To those of us who share their love of freedom and liberty, the course before us is clear:

We must continue to do all in our power to hasten the day when the legitimate aspirations of the Cuban people—for freedom, justice, and a better life—will be realized.

The United States of America has supported that goal. I am confident that under the new administration of President Richard Nixon we will continue to work with freedom-loving Cubans, and all the sons of liberty in our hemisphere, for the achievement of the goal of Cuban liberation.

Mr. Speaker, in closing I want to read the following communication from Joseph R. Julia, president of the Cuban Crusade:

CUBAN INDEPENDENCE DAY, 1969—CRUSADE
1969-70 MESSAGE HONORING PRESIDENT
THEODORE ROOSEVELT'S MEMORY

His Excellency, President Richard M. Nixon
and administration, Hon. Speaker John
McCormack, Congressman Dante B. Fascell,
and Members of the House and Senate.

May 20th Anniversary of the liberation of Cuba, gained through the payment of American and Cuban blood, spilt purchasing freedom and liberty to live as free men under God is the very symbol of American hemispheric brotherhood. For the first time in United States history, its citizens volunteered offering their lives to defend the birthright of every north or south American, it being, life, spiritual and material, liberty, and the pursuit of happiness unhampered by any colonial system of oppression.

Today, more than ever, Americans and Latin-Americans have an urgent call to heed, the distant cry of the Spanish-War American and Cuban dead to remember the first victory won by Hemispheric brethren fighting as one to win freedom for all. May 20th, Cuban-American or Latin-American Solidarity Day is the Anniversary of the very first day of Hemispheric Brotherhood.

We honor today, the late Theodore Roosevelt, President of the United States, leader of the American Rough Riders, who aided their Cuban brothers win their liberty and who once stated, "Speak softly, but carry a big stick". This message should be remembered and heeded by all of our hemispheric peoples, especially Americans on this date. We should extend charity to all wherever possible, but *always* be prepared to defend yourself and way of life at all times against aggressors.

JOSEPH R. JULIA,
President.

HOUSE OF REPRESENTATIVES, May 20, 1969.

Mr. McCormack. Mr. Speaker, to the Cuban people freedom and independence came the hard way, and after suffering under the oppressive Spanish colonial government more than 400 years. Even after they had attained full freedom in 1902 by the withdrawal of the U.S. military authorities and the establishment of the Cuban Republic, the people of Cuba did not enjoy their freedom in peace, because political disturbances and the resulting rise of dictatorial regimes made a mockery of freedom.

This large island with an area of 44,000 square miles, rich in natural resources and fertile soil, was part of the overseas Spanish empire from its discovery by Columbus in 1492 until 1898. During that time the Cuban people worked hard and were exploited by their overlords. At times they rebelled against their rulers, but were not successful in their fight until they were aided by the intervention of the United States in 1898. When the short Spanish-American War ended by the Treaty of Paris in December 1898, Spain agreed to relinquish Cuba to the United States "in trust for its inhabitants." From January of 1899 until May 1902 Cuba was governed by U.S. military rule, though most of the offices were filled by Cubans. After this brief period of tutelage and training, on May 20, 1902, the U.S. authorities granted full and unconditional freedom to the Cubans. That day marked the Cuban Independence Day and became a memorable date in its history.

After that historic event Cubans became masters of their national destiny, and their government became a member of the community of free and sovereign states. They made good use of the riches of their island homeland and lived in prosperity. But they have not always lived in peace. Political disturbances have been frequent there, and often these have given rise to dictatorial regimes. And the freedom for which the Cuban people fought and which eventually they won, became a casualty under such regimes. That was true for certain periods before the last war, and has been true since the end of that war, especially since the establishment of Fidel Castro's Communist regime in 1959.

In today's Cuba Castro's dictatorial regime is the master of Cuba's destiny, but some 8,000,000 Cubans do not enjoy the freedom which is their inalienable right. Today they are almost as cruelly treated and exploited by Castro's tyrannical government as were their ancestors by the colonial rulers of Spain. They are prisoners in their island homes, and at present they are unable to better their political

lot. But on the observance of Cuban Independence Day, let us all hope that soon a way will be found to free these unfortunate Cubans from Fidel Castro's tyranny.

Mr. PEPPER. Mr. Speaker, it is sad and tragic that Cuban people in exile are forced to observe the 67th anniversary of Cuban Independence Day today removed from the native land they love and cherish. I am reminded of the verses:

Yo soy un hombre sincero
de donde crece la palma,
y antes de morirme quiero
echar mis versos del alma.

Cultivo una rosa blanca
en julio como en enero,
para el amigo sincero
que me da su mano franca.

Y para el cruel, que me arranca
el corazón con que vivo,
cardo ni ortiga cultivo;
cultivo la rosa blanca.

The Cuban patriot understands well the meaning and longing of these verses for its author, Jose Marti, was as revered in Cuba's struggle for independence as was George Washington in this country.

Marti, called the Apostle of Cuban Independence, still commands the widespread devotion of the Cuban people, who consider him the greatest hero of their independence movement.

The Cuban Revolution of 1895 began with the Grito of Baire—a town near Santiago in eastern Cuba—on February 24. Maceo from the Dominican Republic, and Marti and Gomez from the United States, set sail for Cuba with recruits gathered in the United States, Mexico, Central America, and the Caribbean islands. Gomez and Marti landed on the Cuban coast on April 11, 1895, and began a march to Santiago to unite the revolutionists. On May 19, en route to Santiago, the group was attacked by a Spanish patrol, and Marti was killed in the skirmish. Of Marti's death, a Cuban historian wrote, "Jose Marti died, but a people was born." The loss of the beloved leader fused the people of Cuba into an adamant struggle for their freedom. The revolution had been his creation, and he remained the first among many martyrs and heroes of revolutionary Cuba.

It is regrettable that there is today the need for further struggle and a call for more heroes to challenge the Communist dictatorship that has been entrenched for a full 10 years just off our southern shores.

We, as Americans, must pledge and dedicate ourselves to the task of working with the Cuban patriots in exile to achieve the liberation of our island neighbor.

Mr. BUCHANAN. Mr. Speaker, 67 years ago today a new feeling of hope and encouragement spread through Cuba as that nation convened its first all-Cuban congress and proclaimed itself a republic.

Today that feeling of encouragement is gone, but for many there remains hope that they will overcome the yoke of Communist domination which suppresses their individualism.

As we rejoiced in their success 67 years ago, so we join in the sorrow today that

they are unable to express that freedom for which they fought so long.

But we must marvel at the strength and determination of the majority of the Cuban population who continue to strive to return liberty to their nation.

There have been many, who, fearing death because they disagree with the present government, have fled to the United States.

Twice a year in Birmingham, on Law Day and Thanksgiving, naturalization ceremonies are conducted in the United States District Court. In nearly all of these sessions, former Cuban citizens disavow their homelands to embrace U.S. citizenship. The story behind these changes is evident in their expressions as they verbally renounce allegiance to their native lands.

For, many fled their homeland—a country which they dearly loved but one in which they could no longer live because of the suppression of freedom. Each has a story to tell of his happiness in at last finding liberty, but each also carries the sadness of friends and family left behind to live in oppression.

There are many thousands more, however, who remain in Cuba to take what action they can to restore the hope their nation held in 1902 as the first republic's flag was raised.

The Cuban Government, under Fidel Castro, cannot deny that its citizens are unhappy. Last year incidences of sabotage against the Castro regime rose to 28,000 according to official Cuban Government reports. And so far this year, the rate is known to be even higher.

Cuba's population is increasing at a tremendous rate and is expected to reach 8.35 million by next year and 18 million by the year 2000.

Although it is a rapidly growing country, it faces many economic problems—difficulties which have led to the rationing of almost everything from shoes to gasoline and cigarettes.

But Premier Castro has been quoted as saying:

With technology and science it is possible to produce enough so that a large population can receive everything it needs.

He made no mention of the freedom of expression and political belief that his countrymen need and for which they have so long striven.

Their struggle has been a continuous one. In recent years it has taken tantamount strength on the part of non-Communist Cubans to merely survive. But, the spirit of independence which the nation revelled in in 1902 persists in the hearts of many and urges them forward today to recapture their now lost liberty.

It is fitting today that we pay tribute to the thousands of Cubans who fought several bloody wars to overthrow the domination of a foreign nation. The parallels to today's Cubans are evident, but this time they seek to eradicate domination by an internal power.

And so, although Cuba obtained its independence 67 years ago, its people are still fighting today to maintain that freedom. With their continuous courage it is my hope and belief that they will prevail.

Mr. MAILLIARD. Mr. Speaker, I want to join my distinguished colleague from Florida, the Honorable DANTE B. FASCELL, chairman of the Subcommittee on Inter-American Affairs, in commemorating Cuba's Independence Day.

Many of us, I am certain, greet this occasion with mixed emotions. While we rejoice with freedom-loving Cubans in honoring their country's long and successful struggle for liberty, we cannot ignore the tragic plight of their countrymen today.

What Maximo Gomez, Antonio Maceo, and Jose Marti fought for, what another generation of Cubans was able to wrestle from Spain, is no longer being enjoyed by the people of Cuba.

They are neither free, nor well-to-do, nor content with their present condition.

As much as Castro may try to deceive the world and the Cuban people themselves with his endless diatribes about the Communist paradise which he is attempting to fashion for Cuba, the facts of life in that country stand out for all to see.

Under Castro's regime, most of the people who possessed the skills and talents necessary to develop a nation have been decimated and driven from Cuba.

The average Cuban worker lives today in a condition of enforced labor and persistent want—rarely able to secure even ordinary articles of clothing and footwear for his family.

And the entire "socialist" experiment—and I use that word in quotes—survives on two key factors: the reign of terror instituted by Castro to do away with all political opposition; and the massive outpouring of Soviet aid which props up the faltering economy and enables it to stagger along.

We should not mistake these facts. No matter how much Castro may try to flaunt his "independence," he remains a stooge of the Kremlin, critically dependent on the Soviet Union for his very survival.

Similarly, his ruthless elimination of all opposition makes a lie of his claim to be the vanguard of a democratic, socially-oriented revolution in Cuba and elsewhere in Latin America.

All of us, I am certain, are aware of these facts.

We decry them—and we extend our profound sympathy to the people of Cuba who have been isolated from their brothers and friends in this hemisphere, and forced to suffer their present condition, by Castro's shenanigans.

Mr. Speaker, the spirit of liberty which sustained the Cuban people during the bitter decades of the 19th century while they struggled to shed the Spanish colonial yoke, will again sustain them in their hour of trial.

I am certain that all Cubans, wherever they may be for the present, cherish the dream of one day living again in a free and independent Cuba, ruled by a government responsive to the aspirations of the Cuban people.

I know that we, in the United States, will continue to do all we can to help them realize that dream.

GENERAL LEAVE TO EXTEND

Mr. MARSH. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on Congressman FASCELL's special order on Cuban independence.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Virginia?

There was no objection.

THE GENERAL FUND FOR THE OPERATIONS OF THE FEDERAL GOVERNMENT IS STILL IN DEFICIT AND NOT IN SURPLUS

The SPEAKER pro tempore. Under previous order of the House the gentleman from Virginia (Mr. MARSH) is recognized for 30 minutes.

Mr. MARSH. Mr. Speaker, the President is to be commended on the revised budget, particularly for the reductions it reflects; however, it still must be understood by the Congress and by the country that the general fund for the operations of the Federal Government is still in deficit and not in surplus based on present estimates.

True, the deficit has been reduced below the deficit in the proposed Johnson budget for fiscal year 1970, but it is still in deficit.

President Johnson's budget anticipated a surplus of estimated gross receipts collected by the Federal Government from all sources including social security trust funds—which are not available for expenditure for general operating costs of government—over all Federal payments including checks to social security beneficiaries—to be the sum of \$3.4 billion.

Some time ago, I pointed out to the House the serious misunderstanding occurring because of the new budget concept which was first adopted for fiscal year 1969. This system of showing Federal accounts is misleading, unless all those who consider Federal surpluses clearly recognize what the new budget concept includes in Federal receipts, trust fund receipts, particularly social security collections. The Congress cannot spend for the operation of Government over \$45 billion of expected receipts because these are social security funds collected in trust from employers and employees for future beneficiaries of the social security system. The new budget concept as applied to fiscal year 1970 budget merely states that the total number of dollars paid to the Federal Government from all sources will exceed total Federal payments for all purposes—including social security checks—by over \$5 billion under President Nixon's budget, and \$3.4 billion in the Johnson budget.

The surplus which many are applauding but some are criticizing is a surplus in trust funds, not in general revenues. The trust fund surplus is about \$10.2 billion over amounts paid to the Treasury and amounts to be paid to trust beneficiaries. The hard cold fact is there is a deficit in general fund revenues which go to the operation of Government and come from the following principal

sources—personal income tax, corporate income taxes, excise taxes, and miscellaneous collections. This deficit in general funds in the proposed Johnson budget is \$6.8 billion. In the budget revised by President Nixon, it is approximately \$5.5 billion. It is quite likely that this deficit will be financed in whole or in part by borrowing from the trust fund receipts. The fact these trust fund loans must be repaid demonstrates clearly we do not have a surplus in the true sense of the word.

In this connection, I am particularly grateful to Mr. Paul Wilson, assistant clerk and staff director of the Committee on Appropriations, for his assistance to me in pulling out of the original and revised budgets the key figures necessary to an understanding of the revenue and expenditure projections.

I should emphasize, however, that the remarks I make at this time represent my own observations and conclusions and do not reflect, necessarily, those of any other member of the committee, or of any member of its professional staff.

In the Johnson January budget for fiscal year 1970, using the so-called unified budget concept, the outgoing President projected a budget surplus of \$3.4 billion. The word projected is the right word to use here because like all budgets, it rests on a number of assumptions, and these assumptions include certain legislation on both the revenue and expenditure side.

The \$3.4 billion projected surplus is a net figure; that is, it is a combination of a projected surplus of about \$10.3 billion in the trust funds of the Government, offset by a projected deficit of about \$6.8 billion in Federal funds.

Trust fund receipts are projected at \$58.693 billion; trust fund expenditures are projected at \$48.431 billion; producing a projected surplus in trust funds of \$10.262 billion.

As to Federal funds, expenditures are projected at \$154.722 billion; receipts are projected at \$147.874 billion, with a resulting projected deficit in Federal funds of \$6.848 billion.

Thus deducting the \$6.848 billion deficit in Federal funds from the \$10.262 projected surplus in trust funds produces the projected unified budget surplus of \$3.414 billion in the Johnson budget.

President Nixon's review of President Johnson's budget did two things. It first went through an exercise of "correcting" certain of the estimates in the Johnson budget which the Nixon administration said were underestimated. On the expenditure side, those corrections amounted to an addition of \$1.6 billion in round figures, and involved principally interest on the debt, farm price supports and several other items.

From the expenditure side of the Johnson budget as thus corrected, the Nixon administration review and revisions proposed expenditure reductions of \$4 billion. Thus, the net reduction from the Johnson January figures is \$2.4 billion—increase of \$1.6 billion offset by \$4 billion of proposed cutbacks.

A significant item of the \$4 billion proposed cutbacks by Nixon is \$1 billion relating to social security trust funds.

President Johnson had included in his spending total for trust funds, \$1.6 billion of additional expenditures relating to his legislative proposal to increase social security benefits effective early next calendar year. In the Nixon budget review, this \$1.6 billion was skimmed back to \$600 million—thus the cut of \$1 billion.

Since the net cutback in proposed spending by President Nixon as compared to President Johnson's original spending estimate is \$2.4 billion, and since \$1 billion of that relates to the social security item just mentioned, \$1.4 billion relates to various Federal programs.

Proceeding with the arithmetic, first as to the trust funds:

First. The \$1 billion cutback on social security, being a reduction in proposed expenditures, would increase the projected surplus of \$10.3 billion to \$11.3 billion.

Second. The remaining net cutback of \$1.4 billion mentioned above would operate to reduce the Johnson budget deficit in the Federal funds by that amount—that is, from \$6.9 billion down to \$5.5 billion.

Third. Thus, combining the \$11.3 billion surplus projection for trust funds with the \$5.5 billion projected deficit in Federal funds gives the net surplus of \$5.8 billion projected by President Nixon in his April 15 budget release.

An important footnote to this is that the \$5.8 billion projected Nixon surplus is an interim, incomplete figure for the reason that, while President Nixon updated the Johnson spending budget, he did not update the Johnson revenue budget.

If he had updated, or when he does update, the revenue side of the Johnson budget, at least two main factors would have a bearing on the \$5.8 billion projected Nixon surplus:

First. President Johnson had included in his revenue assumptions \$1.7 billion of increased social security taxes that would be collected in fiscal year 1970 under the proposed legislation to increase social security benefits. Well, President Nixon has proposed that that proposition be cut back on the spending side by \$1 billion, but he did not propose any corresponding cut back in the \$1.7 billion revenue figure. Not to do so seems unrealistic; the two more or less hang together.

Second. The most important consideration in estimating Federal revenues is the performance of the economy. Probably, if either President were making a forecast today rather than last December as to the revenue outlook based on the economic outlook, he certainly would produce a revenue estimate different from the one that is in the January budget, and I believe most economists probably would say that the revenue estimate would be higher than what is in the Johnson budget.

In any event, a reestimate of revenues would have some effect on this \$5.8 billion-surplus projection—you cannot realistically update one side of the budget without updating the other side.

Third. The principal legislative assumption involved in the Johnson budget

revenue estimates was the assumption that Congress would extend the 10-percent surtax for all of fiscal year 1970. President Nixon has subsequently recommended that it be extended at the 10-percent rate only for the first 6 months of fiscal 1970, and at a 5-percent rate for the last 6 months of fiscal 1970. This would mean some revenue loss, but it probably would be either wholly or substantially offset if Congress adopts President Nixon's recommendation for repeal of the 7-percent investment tax credit.

There are some other big "ifs" in the Johnson budget as revised by President Nixon which, if not met, will send the above deficit figures soaring. The first "if" is extension of the surtax. If it is not extended at the rate of 10 percent, then add \$9-plus million to the deficit. Another "if" is the postage hike. If it is not enacted, add nearly \$600 million. Another "if" is the user fee revenues. If these transportation user fees are not enacted, add about \$400 million.

If these budget conditions are not met, instead of having a deficit of nearly \$5.5 billion, it could exceed \$15 billion.

This unreal, or at least unavailable, surplus contained in the new budget concept harbors a risk for the country, the Congress, and the administration as we face up to the hard realities ahead in this first session of the 91st Congress. This is the risk of misunderstanding what we can or cannot do.

If the country believes the Federal accounts are in surplus, when for the operation of Government they are in deficit, where will be the support for additional revenue measures such as the surtax extension on which the current budget is predicated? If it is believed there is a surplus, can we expect less demands on the Federal purse, or adequately explain expenditure controls if the Congress enacts them?

If the Congress believes there is a surplus, will there be more or less legislative restraint in authorizing and funding programs?

The reduction made by the administration in the budget, including approximately \$1 billion in proposed improvements in social security benefits, are modest, and, outside of defense, total \$2.9 billion. Already, however, the attack is being mounted on these reductions. Why, some are asking, should such reductions be made, in the face of great domestic needs, to obtain a surplus of \$5 plus billion? Why not reduce the surplus and thereby not achieve it at the expense of domestic programs?

The irony is there is no surplus, there never has been, there never will be—at least not in fiscal year 1970.

WHAT IS BEING DONE WITH OUR MONEY?

The SPEAKER pro tempore (Mr. HANNA). Under a previous order of the House, the gentleman from New York (Mr. PODELL) is recognized for 60 minutes.

Mr. PODELL. Mr. Speaker, during the decade of 1957 to 1966, America spent upward of \$520 billion on armaments

and space programs. Our entire society has been affected and partially militarized. Half our national budget now is spent on arms which increasingly are called into question in terms of actual performance. Repeated failures of military contractors to produce workable systems after years of time and billions spent is undermining faith of many Americans in our system. They question military performance, truth of their Government, viability and meaning of their institutions, and intrinsic worth of their own contributions.

We have been struck in recent months by a series of stunning revelations on useless weapons systems. Among these have been the TFX airplane, C-5A, Cheyenne helicopter, and main battle tank. Massive cost overruns have come to light which have run into billions. This is especially true of the TFX-F-111 and C-5A transport aircraft. No wonder Members of Congress are asking why we have allowed such expenditures and countenanced such failures. In a case involving the main battle tank, we are confronted with the Army's continuation of work on a project it knew was a failure in order to maintain a flow of appropriations. In the case of the Lockheed C5A, a high Pentagon civilian official acted in a highly questionable manner, in order to protect the stock market position of a major military contractor.

The list of faulty or canceled projects undertaken in the name of national defense is as sad as it is lengthy. Billions upon billions of dollars have been poured into one dead end endeavor after another. A list of their names is a catalog of frustration and national shame.

We tried to create a jet-powered seaplane, abandoning the attempt after it cost us in excess of \$400 million; \$1,100 million sailed down the drain marked "useless projects" before we canceled the atomic-powered bomber. Before the Snark missile was canceled, we spent \$677 million. We wasted \$679 million on the Navajo missile before heaving it onto the national junkpile. Of course, the B-70 is a classic. For a mere \$1 billion we received exactly one museum piece—perhaps the most expensive one in history. The Skybolt missile, masterpiece of inaccurate missilery, drained off \$440 million before it was aborted. An already obsolete Bomarc missile merited \$2 billion before its gravy train was derailed. Knowing the missile was unworkable for its basic purpose, the military still insisted on constructing more of them. Yet the little black box and how it grew provides us with perhaps the most damning evidence of the monster raging unchained across the Potomac from this Capitol. The little black box is otherwise known as Mark II, the avionics of the black box electronics of the F-111, including radar, navigating equipment, and computer. Mark I was not precise enough, so the Air Force gave the contractor to produce a new, advanced model to Autonetics Division of North American Rockwell Corp. Just 2 months after receiving the contract, the contractor asked for relaxation of agreed-upon standards. In March 1967, the first batch of finished products was found to be

costing \$357 million, almost three times original projected cost.

What choices confronted the Air Force? Strict enforcement of contract regulations to set an example throughout the defense procurement and production establishment was one. Weak-kneed kowtowing to the contractor, making a mockery out of the agreement and giving every contractor carte blanche to violate contracts with impunity was the other.

The decision was in favor of allowing the company to triple its cost at expense of the Nation. The black box, in fact, makes Topsy seem like a century plant. In June of 1966, cost of an estimated 800 of these units was \$610 million. In November 1968, costs for the same number had escalated, to borrow a term, to \$2,510 million.

Yet how are we to know of these overnight gems of growth? The Air Force began bunching together all F-111 costs, including avionics, to hide the Mark II cost spiral. Another method discovered of doctoring cost estimates is the tidy maneuver of omitting cost of auxiliaries for any piece of hardware. We delved into this world of many wonders on the C-5A, of blessed memory.

Perhaps it is a mistake to operate under the assumption that a contract, legally binding and solemnly covenanted, is enforceable and binding. Perhaps it is correct for chief procurement officers of a military service to act as if they were vice presidents in charge of profits and protection of the contractor involved. Maybe it is honorable for senior military officers to hide cost figures in memos to their superiors on cost of a project.

These are but a few highlights of a situation which is already insufferable. In light of projected major new military projects which would stretch out over many years and involve even greater expenditures, Congress must prevent further repetition. It must create an agency or method of scrutiny to act as a critical, revealing, scanning agent.

Some would argue against such action, citing already existing safeguards on Capitol Hill and in the executive branch of Government. Such procedures and agencies are either ineffective, unable or unwilling by their very makeup to play a guardian or watchdog role.

The second line of defense for Government and taxpayer has become just as weak for purposes of scrutiny and criticism of military expenditures. It was my understanding that our Bureau of the Budget was supposed to act as a devil's advocate, scrutinizing and criticizing all budget requests to keep all agencies of Government fiscally responsible. Such has not been the case as far as military matters are concerned. It is increasingly obvious that while the Bureau of the Budget painstakingly requires projected civilian expenditures to be fully explained, it does not treat Department of Defense fund requests similarly. No eloquent denials, explanations, excuses or hedging explains away the fact that the Pentagon and major military contractors have all but placed the U.S. Treasury on wheels, treating it as a private preserve, all to the detriment of crying social needs. No hand has been

raised to stop this headlong rush over the fiscal precipice.

We know the Bureau of the Budget consults with the Pentagon closely on all money matters, in a cozy family-style manner more conducive to polite questioning and acquiescence than to constructive criticism. A limited number of staff members are assigned to review Pentagon fund requests. Further, the Bureau of the Budget is a Presidential agency, responding to the Executive's wishes, rather than those of Congress.

The broad outlines emerge clearly. Fund requests are brought with minimal critical questioning from the Pentagon to appropriate committees on Capitol Hill. After secretive meetings and agreements within these committees, bills for military spending emerge and go to the House floor under a closed rule. They are then slammed through the House with a maximum of swiftness and a minimum of critical probing. This is how the lion's share of our annual Federal budget is being allocated and spent. Is it any wonder why our military and major military contractors feel free to perpetrate such atrocities upon America as the TFX, main battle tank and the C-5A? Should there be surprise over difficulties which beset the M-16 rifle? Is this not an explanation of the fiscal horror of the Cheyenne helicopter? Do not worse pitfalls lie ahead in the form of the ABM, if we allow such permissive procedures to continue? There is no agency which critically examines or holds the Pentagon and contractors responsible for mistakes.

Congress, which is supposed to act as critic, financial watchdog and guardian of the public interest, has allowed the many closed committees of the House and Senate to spend vast sums as they see fit. Members of Congress may not question past rulings or daily determinations.

So instead of mass transit, we have the TFX. Instead of low-cost housing, we got the main battle tank. Rather than air and water pollution funds, we have been given the C-5A. The only trouble is that none of them work, or are worth even a portion of money poured into them by agencies I have referred to. Blame responses as much in Congress as in the Pentagon. Furthermore, the greater the abdication by Congress of its overseeing function, the faster temptation grows to take advantage of the power vacuum left by our non-performance.

Those who question are taken to task by innuendo, direct attack, or other methods of assault on grounds we are unpatriotic or indifferent to defense of the Nation. How macabre. If questioning these military abortions is unpatriotic, then show me patriotism. Does it consist of blind obedience to orders and patriotic catchwords? Criticism of established policy is the hallmark of a society which places premiums upon people and their rights rather than on slogans and hardware.

It devolves upon Congress to rectify the situation by placing a permanent, unforgiving eye upon any major expenditure such as those already touched upon.

Congress must find a tool with which to exercise its overseeing function. We have it close at hand in the form of our General Accounting Office.

The GAO is an independent agency under the Comptroller General of the United States. In short, he is the chief accountant of the Nation. This is our potential tool and probe which Congress may utilize to obtain proper objective investigation and scrutiny of executive branch expenditures, especially military ones. Therefore, Congress should and can provide GAO with a specific legislative command to provide regular, annual scrutiny of Government contracts of all executive agencies, and report publicly to Congress and the public any violations of contract agreements, particularly in the area of date of delivery and cost increase.

In this manner, Congress would restore its own and the public's rightful access to knowledge of fraud and misuse of funds by those who now consistently hide such information from public view. This is money we are charged with responsibility for, and this measure would allow us to fulfill that responsibility, reclaiming our prerogative to do so in the process. Once this information is in such a manner reported to Congress and the Nation, it will be a matter of open record for both Congress and the public to debate and correct.

This is a reform in guise of a congressional tool, a means for acquiring knowledge now denied us. Arguments about patriotism and national security simply would not wash. There must be an end to abuse of trust, mispending of money, and self-defeating secrecy.

I am, therefore, submitting this day a bill that would effectively curb this intolerable situation, placing us in a position to insure that there will be no more C-5A's; insuring that highly placed civilians in the Pentagon will never again dare to protect a company's position in the stock market at expense of the American people. It will insure that the Pentagon will not be able to disappear behind locked doors on Capitol Hill, hiding another national disgrace like the main battle tank. It will allow us to see what is being done with national resources, so that never again will a group of uncommunicative elected officials be able to stand and say that in the name of God, mother, Bunker Hill, and apple pie, the people have no right to know. Our people do have the right to know, and they will exercise that right.

My measure would amend the Legislative Reorganization Act of 1946 to provide for annual reports to Congress by the Comptroller General concerning price increases in Government contracts and failures to meet Government contract completion dates.

The bill reads as follows, amending section 206 of part I of title II of the act (31 United States Code, section 60):

H.R. 11493

A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That (a) section 206 of part I of title II of the Legislative Reorganization Act of 1946 (31 U.S.C. § 60) is amended by—

(1) inserting "(a)" immediately following "Sec. 206.", and

(2) adding at the end thereof the following new subsection:

"(b) Within 90 days following the close of each fiscal year the Comptroller General shall submit to Congress a report on each contract of the United States in which the price was increased in such fiscal year to an amount in excess of 110 percent of the price estimated by the person contracting with the United States at the time the contract was signed or which was completed in such fiscal year at a date more than six months after the completion date estimated by the person contracting with the United States at the time the contract was signed. For purposes of his subsection, the term 'contract of the United States' means any contract executed by the United States (including contracts subject to chapter 137 or 139 of title 10 of the United States Code) for—

"(1) services, including research and development,

"(2) the construction, alteration, or repair of any public building or public work of the United States, or

"(3) the manufacture or furnishing of any materials, supplies, articles, or equipment, in which the price estimated by person contracting with the United States at the time the contract was signed was \$10,000 or more."

(b) The heading for such section 206 is amended by adding at the end thereof "; reports on Government contracts".

This, then, is the shape of the reform I introduce now. Let us remember that if we do not control this monster we have created, it will, in the end, destroy us.

SCANDAL AT SBA—VII

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, I am advised by the newspapers that Albert Fuentes, Special Assistant to the Administrator of the Small Business Administration, is on leave of absence without pay, at his own request. I assume that the leave without pay is being taken not as a gesture of his concern for the public purse, but simply because he is not entitled to any other kind of leave, not having worked long enough to have earned any leave.

In any event, this man is still employed by SBA, and the Administrator has taken no action to suspend him, despite my repeated requests that he do so, and despite growing evidence that he, indeed, is not worthy of the high trust that was placed in him. Indeed, Chairman PATMAN informs me that the SBA has gone to great lengths to conceal the results of its investigation into this affair, having lost contact with the Administrator for a mysterious period when he was "out of town" and could not be reached, until his subalterns turned over what they claim is the sole copy of their investigation to the Department of Justice, where it remains safely out of reach of this House and its committees.

I would be interested in studying the investigation into this case. Although both the SBA and the FBI say that they have completed their studies, neither the

FBI nor SBA investigators ever contacted me to ask for the material and information in my possession. That being so, one can only wonder how zealously the investigators carried out their tasks. One wonders, too, how closely the Civil Service Commission investigated Mr. Fuentes, and what, if anything, they found.

Whatever has been found is now sealed in the safes of the Department of Justice, whence it may never emerge. Fuentes, conveniently, is in San Antonio conducting a campaign against those who have dared reveal their mistrust in him, and their fears that he has done wrong, and acted contrary to the public interest.

Fuentes has filed—or rather mailed in—several affidavits regarding his conduct. Even assuming these affidavits to be wholly true, and assuming that the case is what Fuentes himself says it is, he is still subject to serious questioning, and I believe that enough evidence exists out of his own mouth that he should be dismissed, forthwith.

Mr. Speaker, tomorrow I shall examine the case from Mr. Fuentes' side, and show the reasons for my concern and belief that he has violated the public trust, even conceding him every benefit of the doubt.

TRIBUTE TO A DEDICATED PUBLIC SERVANT

(Mr. ASPINALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ASPINALL. Mr. Speaker, I take great pleasure in this moment from my regular congressional duties to pay tribute to a fellow Coloradan, who has gained a monumental reputation among the people of Colorado for his perceptive ability, willingness to serve, and his sound commonsense approach to his administrative responsibilities.

I have had great pleasure in serving with Mr. Hamil while a member of the Colorado General Assembly and have maintained throughout these years a most harmonious working relationship with him in whatever capacity he has accepted to dedicate his time, energy, and ability.

At this point, I include the editorial in the RECORD:

A HOMECOMING: WHAT LIES AHEAD FOR REA?

For many new Nixon appointees, the adjustment to life in the Washington Establishment has been decidedly painful. Not so for David A. Hamil, administrator of the Rural Electrification Administration.

Hamil's return, in fact, was a homecoming of sorts. He had been REA administrator under the Eisenhower Administration between 1956 and 1961. The faces of many of his aides were familiar. When he sat down at his desk, it was with the smooth grace of an accomplished horseman (which he is) easing himself into the saddle of Old Paint, the faithful ranch horse he used to ride regularly but hasn't seen in years.

The new REA administrator arrived in Washington with mixed emotions. On the one hand, he was eager to get to work tackling new problems facing REA—for example, the growing accumulation of rural electric and rural telephone system loan applications—but on the other, he found Washington, the city, more problem-ridden than it had been during his earlier tenure ("you see whole

busloads of people and not one smiling") and the creaky Federal bureaucracy somewhat stifling to a Colorado rancher used to getting things done promptly in a congenial Big Sky Country "can-do" atmosphere.

A genial, friendly man with a Westerner's natural story-telling ability, David Hamil is an expert both at the legislative and public relations infighting, which has marked the relationship between the REA and private investor-owned electrical companies over the years, and the tough task of placating members of his constituency—the rural electric cooperatives—when the latter complain that the Federal Government is not doing enough to protect their interests.

Since its establishment in 1935 by Franklin D. Roosevelt as an emergency relief program to alleviate widespread unemployment and rejuvenate depressed rural areas, the REA has spent considerable amounts of its institutional energy fending off charges by the commercial power industry and other that it is a classic example of a bureaucratic agency which was set up for one specific purpose, but which continues to endure by developing new reasons for its existence long after its original goals have been met.

In recent years, commercial power companies and electrical cooperatives getting low-cost REA loans have been at each other's throats over the issue of territorial invasion of certain regions in the area of power generation and transmission, as opposed to power distribution. From the power companies' point of view, in short, the rap against the REA over the years is that the REA, using its advantage of Government subsidization, has steadily encroached on the prerogatives of the free enterprise power industry, to the latter's disadvantage.

A spokesman for the Edison Electric Institute, the national trade association of investor-owned electric light and power companies serving about 80 percent of the Nation's electric customers, summed up the EEI position this way during congressional testimony last year:

"Our position is that the distribution cooperatives should continue strong and healthy, and that they should be granted subsidies where needed," he said. "We believe firmly, however, that there is no need for authorizing monies to be loaned by the Rural Electrification Administration for generation and transmission purposes when the distribution cooperatives can obtain their power supply at reasonable rates from existing sources of supply."

And a Wisconsin power company official, testifying against "rural electric bank" bills, said: "The original concept of REA has been badly warped by decisions of its administrators in recent years. The original purpose, to distribute power into rural areas, would be officially scrapped . . . and the new concept of a totally integrated power system would be given the blessings of the Congress."

Representatives of rural electric cooperatives, however, see the matter quite differently.

One testified that the commercial power companies have been "high-handed and monopolistic," had launched a "shameful propaganda campaign" against his cooperative and were trying to "harass and spend" the cooperatives into "submission."

The battle continues, and the man in the middle these days is David Hamil, who must constantly remain aware of his obligations both to the forces of economy in the White House and on Capitol Hill and to the needs of his rural constituents.

"Just during the period between June 1956, when I left this job, and the present," Hamil said, "there's been a tremendous change in the electric utility business. It's bigger and more complex than ever. The increase in capacity of transmission lines has been dramatic . . . voltage has doubled . . .

it's the same ball game, but it's being played before a larger crowd in a bigger park."

"The way we see it is that both the REA and the commercial companies are needed to meet the demand. The REA cooperatives have developed into a part of the utility business that is on the scene to stay as long as the service is needed. Territorial integrity can't be handled only one way, and that has to be by legislation within the states."

When he got to Washington, Hamil said, he found a "flood" of rural electrical and telephone system loan applications on his desk.

The electric loan, backlog reached \$386 million in February, and continued to rise. By March, REA was holding 226 applications—all but 10 from its rural distribution systems—for a total of more than \$416 million in loans. And by the end of March, the figure totaled \$436 million.

Addressing cooperative members, Hamil said: "During the period ahead, we ask your continued cooperation in holding cash requisitions to as low a figure as possible and in increasing your cushion of credit."

The Rural Electrification Act of 1936 requires that "no loan shall be approved unless the administrator certified in his judgment that it was reasonably well secured" (opponents in the past have attacked loan grants for specific projects on this ground alone). Congress later fixed the interest rate on REA loans at two percent per annum and the maximum repayment period at 35 years.

To many hard-headed businessmen, the two percent loan provision rates in the same class with the penny newspaper, the 35-cent steak dinner, the nickel cigar and the \$12,000 house. To them, it is offensive on principle in an era of high-interest loans and highly damaging to them as free enterprise competitors.

Among the problems facing Hamil is the present campaign by rural cooperative leaders to establish a nongovernmental financing agency that will provide an estimated \$4.25 billion over 15 years for expansion of co-op electric systems.

During the past 34 years, the co-ops, now numbering about 1,000, have gotten their financing almost entirely from Government loans. Congressional loan authority has averaged about \$350 million during each of the past few years. But as of March, the REA loans available were far less than the backlog of requests.

Last January, co-op leaders recommended creation of a private credit institution to be held by co-ops and to provide funds to members.

As is the case now, all loan applications would come through the Washington REA office, and REA would determine the best way of handling applications.

When the proposal was first made, Hamil said: "I will need a little time to study it . . . it will be necessary to check with important committees of Congress which provide funds for REA programs, and the Bureau of the Budget will also have something to say about the proposal."

Hamil said, however: "I'm in 100 percent agreement that there should be a means of bringing outside credit into the rural electrification program in addition to that provided by Congress."

Since his college days, Hamil has been a rancher engaged in the cattle-feeding business in Logan County, Colo., and he and a brother, Donald, also raise sugar beets, alfalfa and corn.

"I miss the ranch," he said, "and I don't mind a bit when REA business takes me out that way and I can spare a few hours to check on things at home."

He first became active in the rural electrification program in 1939 when he helped organize part of the Highline Electric Association of Holyoke, Colo.

"People today don't realize the thrill thousands of rural residents got back in those days when they first got electricity," he said. "Electricity and a phone meant the whole world to a farmer whose nearest neighbor was four or five miles away. It's hard to remember that a lot of today's suburban areas were quite rural 25 years ago."

Under House Agricultural Committee consideration this session was a bill (H.R. 7) to create a telephone bank which would make intermediate, four percent loans to rural telephone systems. The loans would be intended to serve rural telephone systems capable of paying a higher rate than the two percent required under the existing REA loan program, but not capable of paying higher rates in the private money market. As amended in committee, the bill would bar applicants from receiving two percent loans if their net worth amounted to 20 percent of assets.

REA Administrator Hamil said: "The Administration rejects the ridiculous claim we hear so often that the job of rural electrification is done. Nothing could be further from the truth."

"How can the job be done in rural America when the record shows that the input of power into our systems is doubling every seven to 10 years and that new consumers are coming on our lines at the rate of better than 150,000 a year?"

Unlike many other, Hamil sees the rural-to-urban population trend reversing itself in the not too distant future.

"There's just no other solution to the problems of city overcrowding," he said with a faraway Big Sky Colorado glint in his eye. "Rural areas will be where the opportunities are in years to come."

DEPARTMENT OF AGRICULTURE APPROPRIATIONS

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, the Members of this Chamber will soon be called upon to vote on the fiscal 1970 appropriations for the Department of Agriculture. Before this matter is before us for a vote, I wish to raise an issue which reflects on the ability of the Department of Agriculture to expend those sums in accord with Federal law.

Title VI of the Civil Rights Act of 1964 prohibits the use of Federal funds in programs that discriminate on the basis of race, color, or national origin. I am distressed to report that the Department of Agriculture is a flagrant violator of that law. As Attorney General John Mitchell recently wrote in a letter to Secretary of Agriculture Hardin:

Patterns of violations of Title VI and the Department of Agriculture's implementing regulations persist, . . . and despite the evidence of these widespread violations of law . . . I am not aware of any meaningful action which has been taken to correct this situation.

In 1965, the U.S. Commission on Civil Rights released a shocking report entitled "Equal Opportunity in Farm Programs." Its review of the Cooperative Extension Service, Farmers Home Administration, Soil Conservation Service, and Agricultural Stabilization Service showed widespread discrimination in

employment and discriminatory program administration.

Unfortunately, the situation is little changed today. A staff report on the U.S. Commission on Civil Rights hearings in Montgomery, Ala., last year includes the statement that—"the Extension Service and Farmers Home Administration have been important in increasing the incomes and economic well-being of farmers throughout the Nation." In Alabama and the Blackbelt they have been instrumental in assisting and financing the transition from cotton to other agricultural enterprises. Their services however, have not benefited the black poor of the 16-county hearing area. In short, the Commission found that "Testimony at the hearing in Montgomery showed conditions described in the 1965 report are substantially unchanged in 1968."

Among the Commission's findings are the following:

First. The Cooperative Extension Service renders assistance on a racially segregated basis with whites serving whites and Negroes serving Negroes.

Second. In 12 Alabama counties studied by the Commission last year, there were 46 white extension workers and only 26 Negro extension workers to serve a rural population of potential recipients of more than 72,000 blacks and 27,000 whites. Thus each Negro agent had a potential caseload almost five times as great as each white worker.

Third. Widespread discrimination in 4-H club programs persists. For example, white agents who work with 4-H club youths are assigned to white schools in Alabama while Negro agents are assigned to Negro schools. Local program administrators argue that instead of desegregating the 4-H clubs they are waiting for the schools to become desegregated. Some States have desegregated these clubs since 1965, however.

Fourth. There is a great disparity in the programs to which Negro and white 4-H club youths have access. For example, in Alabama, white youths tended to be enrolled in programs such as tractor use, raising of beef cattle, and so forth, while black youth were enrolled in such projects as field crops and poultry.

Fifth. The Farmers Home Administration gives Negroes in the same economic status as whites smaller loans. In a 16-county area of Alabama, whites in 1966 and 1967 constituted 24 percent of the borrowers but received 57 percent of the funds; blacks, who constituted 76 percent of the borrowers, received only 43 percent of the funds.

Sixth. Loans by FHA to Negroes are for different purposes than loans to whites; 64 percent of the money loaned to Negroes in the 16-county hearing area in 1966 and 1967 was for subsistence or marginal development. Most of the money loaned to whites was for rural housing and farm ownership loans which are rarely available to blacks.

In addition, findings of the 1965 study covering the Soil Conservation Service and the Agricultural Stabilization and Conservation Service Committee in the South revealed widespread discrimina-

tion. The SCS provided less service to Negroes. No Negro had ever been appointed to a State ASCS committee in the South and Negroes were not employed in Federal or county ASCS positions in the South. While not specifically covered in the 1968 staff report, these conditions have improved only slightly.

The Civil Rights Commission has prepared yet another report which also documents the serious failures of the Department of Agriculture to provide equal opportunity. This report, the "Mechanism for Implementing and Enforcing Title VI of the Civil Rights Act of 1964," was transmitted to the Department of Agriculture and the Attorney General in October 1968. It finds that the Department's title VI operation is severely understaffed and suffers from a lack of clear cut authority to command agency performance. It scores failure to collect the racial data which precludes meaningful evaluation of the effect of USDA programs on minority group recipients. It documents the lack of civil rights training for program staff charged with implementing the civil rights aspects of the programs. In addition, it makes a series of specific recommendations designed to correct some of the deficiencies in the administration of agriculture programs. Unfortunately, most of the recommendations of this report have not yet been implemented. Further, it is my understanding that additional funds requested by the previous administration for the civil rights enforcement program have now been stricken from the Department of Agriculture budget request.

Attorney General Mitchell, who has chief responsibility for coordinating the title VI enforcement efforts of the Federal agencies, in an April 16, 1969, letter to Secretary Hardin outlined some of the flagrant violations of law perpetuated at Agriculture and made a series of specific recommendations for substantial change in the USDA procedures.

The Attorney General's recommendations include the following:

First. Replacement of the present Office for Civil Rights in the USDA with a centralized Equal Opportunity Office, directly responsible to the Secretary, with authority like that of the Office for Civil Rights at HEW and the Assistant Secretary for Equal Opportunity at HUD. The new organization's proposed functions are spelled out in the Attorney General's letter and are sufficiently comprehensive so as to affect a major change in the Department's ability to achieve equal opportunity should the recommendation be implemented.

Second. Improved functioning of the Equal Opportunity Office. The recommendations specifically note the need to (a) clear up long-standing refusals to file adequate program assurances, including refusals of the State of Louisiana to submit an acceptable plan for desegregating its extension service; (b) increase the use of complaint investigations and compliance reviews made by the Office of Inspector General; and (c) provide a more uniform and comprehensive compliance review procedure for all program areas supervised by the Equal Opportunity Office.

Third. Assignment of full-time equal opportunity personnel to program areas and provision of training programs specifically related to types of assistance provided by the Department so as to increase delivery of services to eligible minority group beneficiaries.

Fourth. Establishment of a comprehensive racial data collection system to provide a factual basis for follow-up efforts aimed at improving minority group participation.

The Attorney General prefaced these recommendations to Secretary Hardin with the comment:

In my view it is imperative that your Department develop and implement an effective program to assure compliance with the requirements of law that federally assisted programs be conducted on a basis which provides for equal opportunity to all; and that it commit its time and adequate resources to accomplish that end.

Mr. Speaker, I could not agree more with the statement of the Attorney General. Because this matter is vital to the integrity of the entire Federal civil rights program and critically affects the lives of so many of our citizens, I have written to Secretary Hardin asking what steps he has taken or is planning to take to implement the recommendations of the Attorney General and the Civil Rights Commission.

Hunger and rural poverty need not exist in America today. The exclusion of millions of the Nation's rural Negroes from full and equal participation in the programs administered by the Department of Agriculture has severely crippled their ability to improve the basic conditions of their lives. If USDA programs are not to be administered as required by law so as to provide equal participation for all, the Congress should evaluate whether continued support for the programs is justified.

Mr. Speaker, in order to inform my colleagues more fully as to the seriousness of the issue at hand, I include my letter of May 19 to Secretary Hardin at this point in the Record. I also include the Attorney General's letter of April 16, as well as the two reports to which I have referred in my remarks. The first report is a staff report of the U.S. Commission on Civil Rights on farm programs and was released in July, 1968. The second report, the mechanism for implementing and enforcing title VI of the Civil Rights Act of 1964, has been withheld from the Congress and the public until recently. I urge all Members to study these documents which reveal the extent to which Federal law is being subverted by the USDA:

DEMOCRATIC STUDY GROUP,
U.S. HOUSE OF REPRESENTATIVES,
Washington, D.C., May 19, 1969.

HON. CLIFFORD M. HARDIN,
Secretary of Agriculture,
Washington, D.C.

DEAR MR. SECRETARY: Several reports prepared by the U.S. Commission on Civil Rights documenting the failures of your Department to enforce laws against discrimination in federal programs have recently come to my attention. In addition, I have reviewed Attorney General Mitchell's letter of April 16, 1969, to you commenting on the seriousness of the situation and recommending several

specific steps to improve civil rights enforcement in the programs of your Department.

I find the materials included in the Civil Rights Commission report of its hearings in Montgomery, Alabama last year and the report entitled *The Mechanism for Implementing and Enforcing Title VI of the Civil Rights Act of 1964* extremely shocking. I am further concerned by reports that additional sums requested for the USDA Title VI implementation program by the previous Administration have now been stricken from the budget requests. In addition, I understand that several authorized positions on the USDA staff for civil rights program monitoring remain unfilled.

The above facts coupled with the Attorney General's conclusion in his April 16 letter that "Despite the evidence of widespread violations of law disclosed by your Department's investigations, I am not aware of any meaningful action which has been taken to correct the situation," raise serious questions as to the ability and willingness of the USDA to conduct its programs in compliance with federal law.

Therefore, I ask that you advise me at your earliest convenience—and in any event before the Agriculture Appropriations bill reaches the House floor—of the steps you have taken or are planning to take to implement the suggestions of the Attorney General and the U.S. Commission on Civil Rights.

Sincerely,

DON EDWARDS,
Chairman,
Task Force on Civil Rights.

APRIL 16, 1969.

HON. CLIFFORD M. HARDIN,
Secretary of Agriculture,
Washington, D.C.

DEAR SECRETARY HARDIN: By letter of October 8, 1968, the United States Commission on Civil Rights forwarded to your Department its report on a study of the Department of Agriculture's implementation of Title VI of the Civil Rights Act of 1964 which prohibits discrimination in Federally assisted programs. In connection with our responsibilities under Executive Order 11247 (1965), assigned the Attorney General the function of coordinating the Title VI enforcement programs of all Federal agencies, we received and have reviewed the report of the Commission based on that study.

Before commenting upon the specific recommendations made by the Commission, however, I want to express our concern as to the adequacy and effectiveness of the past efforts of the Department of Agriculture to achieve equal opportunity in its programs.

The underlying objective of Title VI is to assure that all persons are given a fair and equal opportunity to participate in, and receive the benefits from Federally aided programs. Viewed in terms of the programs receiving assistance from the Department of Agriculture, this objective coincides with the priorities which we understand you have established for your Department that are directed at alleviating hunger and malnutrition among the rural poor and other deprived members of our society.

Title VI took effect on July 2, 1964. Since that time, as pointed out in your predecessor's letter of January 17, 1969, to Mr. Gluckstein, the Department of Agriculture had made some progress in eliminating discrimination in programs receiving financial assistance from the Department. Yet patterns of violations of Title VI and of the Department of Agriculture's implementing regulations persist. For example, audits of six state cooperative extension services conducted by the Office of the Inspector General of your Department revealed substantial and widespread noncompliance with civil rights

requirements in each of these states (see Report p. 37). An earlier publication of the Commission, *Cycle to Nowhere* (1968), states (p. 22) that in Alabama and elsewhere in the South the practice of assigning extension workers on the basis of race is widespread. Since there are proportionally fewer Negro extension agents, that practice means that Negro farmers do not receive a fair and adequate share of the services provided. Thus, even apart from being a flagrant violation of law, this practice denies Negroes the opportunity to improve their farming methods and economic status. The evidence available to this Department suggests that the conditions found by your investigations are widespread and continuing.

Despite the evidence of these widespread violations of law disclosed by your Department's investigations, I am not aware of any meaningful action which has been taken to correct the situation. The failure of state extension services to achieve their full potential with respect to serving members of minority groups could aggravate such problems as migration from rural to urban areas and the inability of families to provide adequate diets. Conversely, meaningful enforcement of Title VI in regard to the cooperative extension services and other programs of your Department could contribute to your effort to alleviate hunger and rural poverty.

In my view it is imperative that your Department develop and implement an effective program to assure compliance with the requirements of law that Federally assisted programs be conducted on a basis which provides for equal opportunity to all; and that it commit its time and adequate resources to accomplish that end.

The recommendations for substantial change which I set forth below reflect our concern over the lack of adequate progress to date.

1. ORGANIZATION OF TITLE VI ENFORCEMENT

Our experience with the Title VI compliance operations of other Federal agencies tends to support the view of the Civil Rights Commission that the present office for Civil Rights in the Department of Agriculture be replaced by a centralized Equal Opportunity Office, directly responsible to the Secretary, with authority like that of the Office for Civil Rights at HEW (see 32 Fed. Reg. 15190) and the Assistant Secretary for Equal Opportunity at HUD. The new organization would have responsibility for implementation and enforcement of Title VI, including the authority to initiate all compliance reviews and complaint investigations, and to secure compliance where the reviews indicate lack of compliance. It would also be given authority to conduct negotiations; make settlements; initiate compliance proceedings; refer cases to the Department of Justice for suit where necessary; and work with constituent program agencies at Agriculture in translating equal opportunity requirements into program delivery terms. The director of this Office would need direct and continuing contact with and support from the Secretary, as well as authority commensurate with these responsibilities vis a vis the program administrators. In addition to a substantial staff which should be assigned directly to the new Office, it may be desirable to assign one or more full-time equal opportunity personnel to each of the major Agriculture programs affected by Title VI (FES; C and MS; FHA; and ASCS).

We would also agree with the desirability of combining in this Office all equal opportunity responsibilities, including those derived from Departmental regulations, from Executive Order 11246 with respect to contract compliance, and those concerning the programs directly administered by your Department.

2. FUNCTIONING OF THE EQUAL OPPORTUNITY OFFICE

The Commission's report highlights several specific areas where improvement in the effectiveness of the equal opportunity office's functioning might be sought. Of particular interest to us among these findings were those related to (a) clearing up long-standing situations of refusals to file adequate assurances, including the refusals of the State of Louisiana to submit an acceptable plan for its extension service (see page 16 of the Report); (b) increasing the use made by the equal opportunity office of complaint investigations and compliance reviews conducted by the Office of Inspection General, particularly their three-phased audit of the overall civil rights enforcement operation, and their special audit of the activities of six of the State Cooperation Extension Services (see pages 19 and 34-37); and (c) providing a more uniform and comprehensive compliance review procedure for all program areas, supervised by the equal opportunity office (see pages 26-33.)

3. PROGRAM IMPACT

The strengthening of the equal opportunity office would be the necessary first step towards improving the Title VI compliance capability of the Department of Agriculture. In addition, we think it important that your Department adopt methods for making certain that equal opportunity requirements are effectively translated into increased delivery of services to eligible minority group beneficiaries who presently may not be receiving their fair and intended share of Department of Agriculture assistance. Assigning full-time equal opportunity personnel so that continuing day to day liaison with program personnel can be maintained, and organizing a training program specifically designed to relate to the types of assistance provided by your Department, are two methods mentioned in the Commission's Report for moving towards this objective which we support.

4. RACIAL DATA COLLECTION

We agree with the Commission that there is a need for establishing a comprehensive racial data collection system that would provide a meaningful factual foundation upon which follow-up efforts aimed at improving minority group participation can be based. We believe this to be an essential part of any effort aimed at making the equal opportunity requirements of Title VI meaningful in program terms.

Although a Committee on Program Review and Evaluation has been created in your Department, I understand that this Committee has not considered its mandate broad enough to implement a uniform agency-wide policy for data collection and evaluation in terms of minority group participation. The providing of such authority, either as part of the function of a reconstructed equal opportunity office, or as a responsibility to be shared between that office and the regular program, planning and budgeting staff, would be one available method for initiating the data collection and evaluation function at your Department.

I hope that these comments, in conjunction with the more detailed findings and recommendations of the Commission's Report, will be of some assistance to you.

If you feel that it would be useful, the Attorney General's Special Assistant for Title VI would be available at your convenience to discuss the Commission's Report and our comments with your representative, and perhaps also a representative from the Civil Rights Commission.

I will be looking forward to your response.

Sincerely,

JOHN MITCHELL,
Attorney General.

U.S. COMMISSION ON CIVIL RIGHTS: STAFF
REPORT
FARM PROGRAMS

The Cooperative Extension Service and the Farmers Home Administration, together with the Agricultural Stabilization and Conservation Service (ASCS) and the Soil Conservation Service, are the major technical and financial assistance agencies of the Department of Agriculture. This briefing paper deals with the Cooperative Extension Service and the Farmers Home Administration. The Soil Conservation Service was not treated at the Montgomery hearing and the ASCS is the subject of a separate report by the Alabama State Advisory Committee to the Commission on Civil Rights, copies of which have been distributed.

The Extension Service and the Farmers Home Administration have been important in increasing the incomes and economic well-being of farmers throughout the nation. In Alabama and the Blackbelt they have been instrumental in assisting and financing the transition from cotton to other agricultural enterprises. Their services, however, have not benefited the black poor of the 16 county hearing area.

The Commission on Civil Rights in 1965 studied the Extension Service and the Farmers Home Administration in its report, "Equal Opportunity in Farm Programs". The testimony at the hearing in Montgomery showed that the conditions described in the 1965 report are substantially unchanged in 1968.

Cooperative Extension Service

The Commission investigated the Alabama Cooperative Extension Service to determine whether black farmers are receiving its benefits and whether the Service is effective in improving the farming practices and home life of black farmers and rural residents.

The Cooperative Extension Service, a joint Federal-State program of the Department of Agriculture, supplies current information about improvements in farming and home-making practices to farmers and rural families, helping them identify their problems and assisting in devising solutions. At the Commission's hearing, testimony indicated that (1) the Alabama Cooperative Extension Service is not meeting the needs of black people—particularly those who are poor with only a few acres to farm; (2) the services it provides are racially segregated and unequal in violation of Title VI of the Civil Rights Act of 1964, and (3) the Extension Service discriminates in employment against black people.

Failure of Program To Reach Low-Income People

The work of the Cooperative Extension Service is carried out by the State Extension Services of the land-grant colleges in each State through a system of more than 11,000 farm and home agents in almost every county of the United States. These agents, acting as joint representatives of the Department of Agriculture and the land-grant colleges, work with local people on how to apply knowledge and information developed at the colleges to improve their farm, home, and community life. Linking the agents to the colleges are subject matter specialists who keep the agents informed on new agricultural advances and conduct demonstrations on how this knowledge should be applied.¹

¹ Extension work is financed from Federal, State, county and local sources. Primarily the funds are used to employ the county agents and specialists who conduct the educational programs of the Extension Service. In fiscal year 1967, the breakdown of funds for Alabama was as follows: Federal: \$2,555,740 (41.4%); State: \$2,579,270 (42.0%) and County: \$1,035,694 (16.6%). Hearings of the Subcommittee on Agriculture of the House Committee on Appropriations "Department

In addition, the Extension Service organizes 4-H clubs and home economics clubs. The 4-H clubs, usually organized in public schools, enroll young people in projects which provide information and demonstrations on such subjects as farming and career exploration. The home economics clubs provide women with information and demonstrations on such subjects as food preparation, family budgeting and money management, health and sanitation.

The Extension Service programs, however, are not reaching many poor people. No special plan to reach low income people has been devised in Alabama. Dr. Fred R. Robertson, the State Extension Service Director, said that there are some demonstration programs but that they are inadequate because they are "vastly under-funded." The failure to reach low-income people particularly affects black people, who in the 16 county hearing area constitute 66 percent of the rural population and over 87 percent of the rural poor. Common responses to Commission investigators by black farmers and women were that they had never seen or had rarely seen Extension agents.

A reason for the Extension Service's failure to reach low income black farmers was suggested by Calvin Orsborn, black owner of a cotton gin in Selma and business manager of the predominantly black Southwest Alabama Farmers Cooperative Association (SWAFCA). Mr. Orsborn told the Commission that the inability of many poor black farmers to follow recommended farming practices stems from their lack of resources to finance the necessary costs.

(We) can determine how many pounds or tons of fertilizer a man needs or what variety of seeds he needs and all this. And how much insecticide he needs on his crop. That is all well and good, to tell this man this. But now, if this man cannot follow recommended practices, if he doesn't have the finances and . . . the means to get finances to follow recommended practices, you are telling him (something that) does no good.

I think Extension realizes this, and if they are short staffed, then why bother with these little people who can't follow recommended practices anyway? . . . you're spinning your wheels really, so Extension has to concentrate on people who can follow recommended practices so their program will be successful. . . .

Mrs. Clara Walker, a farmer in Dallas County and an administrative assistant in SWAFCA, testified that many members "did not even know what a soil test was, they hadn't heard about it."

The Department of Agriculture has programs under the Farmers Home Administration which provide loan funds to farmers to follow recommended practices. But, as the hearing testimony on the Farmers Home Administration indicated, the loan programs of the Farmers Home Administration have little impact on the poorest black farmers. SWAFCA has attempted to remedy this by lending money to its members so that they can put into practice the recommendations of SWAFCA's field representatives and horticulturists.

Discriminatory and Unequal Service to Negro Farmers

Even when black farmers receive services, they generally are not equal to those received by white farmers. The inequality stems from the fact that (1) nearly all visits by white agents are to white farmers and nearly all visits by black agents are to black farmers, (2) black agents have a much heavier caseload than white agents, since there are many more white than black agents serving a population which is predominantly Negro,

of Agriculture and Related Agencies Appropriations for 1968," 90th Cong., 1st Sess., Pt. II, p. 431.

and (3) white agents have received better inservice training than Negro agents and have been able to specialize, while Negro agents remain generalists.

(a) *Racially segregated services.*—Historically the Extension Service in Southern States was segregated. Black agents were trained at segregated agricultural schools, occupied separate offices and worked only with black farmers, families and youth. Title VI of the Civil Rights Act of 1964 prohibited racial discrimination in programs receiving Federal financial assistance, and the Department of Agriculture in implementing regulations specifically prohibited "discrimination in making available or in the manner of making available instructions, demonstrations, information, and publications offered by or through the Cooperative Extension Service." Nevertheless, the Commission in its 1965 report, "Equal Opportunity in Farm Programs" made the following finding:

Responsibility for work with Negro rural residents, in counties where Negro staff are employed, is assigned almost without exception to the Negro staff and the caseloads of Negro workers are so high as not to permit adequate service.

In 1968, the conditions disclosed at the hearing showed that there has been little change in blackbelt Alabama since the Commission made its finding three years earlier.²

Staff members in their investigation analyzed activities reports of agents in 12 Alabama Black Belt counties. These reports show services rendered to rural persons by race in two months (April and October) of 1967. It was found that 91 percent of the office and field visits made by white extension personnel were made to whites. At the same time, 97 percent of visits to black farmers, rural families and 4-H youths were made by black agents. Dr. Robertson, the State Extension Service Director, testified that the Extension Service is "supposed to work by the demonstration method, and through volunteer leadership." Service has "always been on a freedom of choice basis" and "this perhaps is due to custom and tradition and longevity that you would have a natural inclination by many Negro farmers and homemakers to request services from people of their own race." The Extension Service, however, was racially segregated as a dual system until 1965 and there is no evidence to suggest that any procedures for a meaningful choice have been instituted since that time. "Freedom of choice", moreover, cannot explain why black agents are assigned to work with 4-H youth only in black schools and white agents only in white schools. Dr. Robertson testified that

² In its 1965 Report "Equal Opportunity in Farm Programs" the Commission recommended that the President direct the Secretary of Agriculture to end discriminatory practices in the Department. In a report on "Progress of Cooperative Extension Service in Meeting Adverse Findings of the Report 'Equal Opportunity in Farm Programs'", the Department's statement on segregated service is as follows:

Subject matter assignments are made with increasing frequency on the basis of agents working in their areas of specialty without regard to race. However, with regard to 4-H and Home Economics activities, progress is particularly needed to ensure that no assignments are made on the basis of the race of the agent or the clientele. Since consolidation of white and Negro county offices, and the assignment of staff members on a program or subject matter basis, efforts have been made to increase the amount of time Negro agents spend in assisting white clientele, and the amount of time white agents spend in assisting Negroes. (Letter of May 23, 1968, from Secretary Freeman to Rev. Abernathy in response to requests made by the Poor People's March, Attachment D.)

instead of desegregating the 4-H clubs he was waiting for the schools—now, fourteen years after *Brown v. Board of Education*, virtually segregated, with roughly 1.7 percent out of the Negro children in the 16 county area attending all-Negro schools—to become integrated:

You have to make a choice as an administrator. What you can do to serve the most good—now, I had the choice to pull out all the 4-H clubs from the schools and go to a community basis and say, these are going to be open to 4-H Club meetings and no discrimination—or, in other words, just let the chips fall where they may.

And the other alternative was to remain in the schools, and as the schools become integrated, the clubs would become integrated. I chose the latter.

... Now the State of Mississippi did [the former], and I think they have perhaps a fourth as many 4-H Club members. So it is a value judgment as an administrator, which course to take.

(b) *Disparity between case loads of white and Negro agents.*—In the twelve counties studied, there were 46 white extension agents and only 26 Negro extension agents to serve a rural population of potential recipients of more than 72,000 Negroes and 27,000 whites. In view of the degree of segregation in services, each Negro agent had a potential workload almost five times that of each white agent. In Greene County, for example, there was a single Negro male agent for more than 2,400 Negro farm operators and young men of 4-H club age—potential recipients of extension services—while there were two white male agents for only approximately 400 white farm operators and young men of 4-H club age. In Hale County there was a single Negro female agent for nearly 3,100 Negro women and girls of home economics club and 4-H club age but there were two white female agents for only 1,100 white women and girls of home economics club and 4-H club age. Thus if a black person was served at all, it was by a Negro agent who was overworked; the white person was served by a white agent who had the time to spend on his problems.

(c) *Better inservice training and greater specialization.*—Black and white agents, most of whom have been graduated from segregated land grant colleges, may have been equally well trained at the time of graduation. Over the years, however, black agents have been left out of the information meetings, seminars and training institutes attended by their white peers, and their land-grant institutions have received less appropriations for agricultural research than white agricultural schools and therefore have been less able to serve them well. Furthermore, counties generally hired only one black agent and two or more white agents. The whites were able to concentrate on specialties, such as 4-H work, livestock and agricultural enterprises. The black agent, on the other hand, served a much larger population and had to be a generalist. As a result the black agents, knowing less than the white agents, have provided less satisfactory service to the farmers they serve.

The gap in training between white and Negro agents was confirmed by the State Extension Service Director. Asked whether there would be problems if Negro agents were told that in the future they should go out and serve white people and white agents were told to serve Negroes, Dr. Robertson said it would be difficult to select which agents should serve those of another race and that if a Negro were sent out "you might run into trouble on some of the technical information in relation to beef cattle or some of the other highly technical subjects."

(d) *Underenrollment of black youth in 4-H Club projects aimed at furthering social and economic opportunity.*—Among the aims of 4-H projects are giving young people knowledge of scientific agriculture and home eco-

nomics, exploring career opportunities and continuing needed education. These aims, however, are more fully realized for white youth than for black youth. For example, in Alabama white youth tended to be enrolled in such projects as tractor use, raising of beef cattle, personal development, career exploration and home management while black youth tended to be enrolled in such projects as field crops and poultry. This difference in project emphasis is explained in part by the fact that, following "custom," the Extension Services assigns black agents to service the Negro schools. The black agents usually do not specialize in the subject areas involved because historically Negroes have been limited to traditional agricultural activities and restricted in their opportunities.

3. Discrimination Against Negroes in Extension Service Employment

The testimony also disclosed that black people are excluded from significant positions in the Service. Although twelve of the counties in the hearing area were predominantly Negro, the State Director, Mr. Robertson, who appoints persons to the positions of County Extension Chairman and associate chairman, testified that no black people held these positions because no local governing board—all of which are controlled by white persons—had ever recommended a black person.³ He gave the following explanation:

"... as you know, we work on a cooperative basis, about 42 percent of our budget comes from Federal and about 58 [percent] from the State and county. And over the years we have, and we still think this is a basically sound idea, to stay with the power structure in order to keep the lines of communication and the rent coming in."⁴

Asked whether he would affirmatively suggest to a local governing board that it recommend a Negro county chairman, Dr. Robertson replied:

"I don't think this would be a good administrative move, frankly. I don't do it because he is a Negro but I have a lot of compassion and feeling for his effectiveness and his future."

"I think you have to recognize the fact to be a county chairman there is a great deal more than just being a representative of the county. You have to maintain contact with the technical field, with the land grant universities and with the business community. And the county people and so forth."

Negro extension workers in the Alabama State Extension office at Auburn are given titles different from whites although they do the same work. For example, in 4-H work the black agents are known as 4-H Club Specialists and their white counterparts are known as 4-H Club Leaders. In home economics work, two black workers are known as District Home Agents while their four white counterparts are known as Associate District Extension Chairmen. In work with farmers, the two black agents are known as District Farm Agents while their four white counterparts are known as District Extension Chairmen. Of the 112 employees, only eight—all transferred from Tuskegee Institute in order to comply with the Civil Rights Act of 1964—are black. Black extension workers, regardless of experience, are subordinated to white extension workers.

The Commission's hearing and investigation also disclosed that the Department of Agriculture has not dealt satisfactorily with the matter of eliminating segregated offices.

³ Of the approximately 1,385 county chairmen in the 16 Southern States, none are Negro.

⁴ The county contribution to Extension work in Alabama averages only about 16 percent of the total Alabama Extension Service budget.

In Montgomery, a Commission staff member observed that the black agent and his secretary occupy an office in the Post Office building isolated from the area where all of the white agents and their secretaries have their offices. Another incident was described in testimony at the hearing.

When the Sumter County Extension Office was directed to desegregate in 1965, the black employees were moved from another building into the same building as the white employees, but their offices were located in another section of the building. The Chairmen of the Sumter County Extension Service, B. B. Williamson, Jr., testified that in 1967 he was ordered by the Department of Agriculture to desegregate his office. This was accomplished by moving the black secretary into what had been the storage room and moving the supplies into the office used by the two white secretaries. The white supervisor of the home demonstration agents shared her office with a white subordinate, while the subordinate black demonstration agent was placed in an office by herself. The two white farm agents also shared an office, while the black agent had an office to himself.

This practice of office segregation not only violates the prohibition of the 1964 Civil Rights Act against discrimination in federally assisted programs, but it facilitates choices by whites to seek service from whites and blacks from blacks. Sumter County had one of the highest rates of segregated service in any of the counties investigated by the Commission—95 percent of white agents' time and visits were with whites and 98 percent of black agents' time and visits were with blacks.

Farmers Home Administration

The Farmers Home Administration was established in 1938 to help small tenant farmers get out of debt, acquire family size farms, and build decent homes and communities. The financial and technical assistance provided by FHA over the years has been an important factor in maintaining the family farm as a significant part of American agriculture.

The Commission discovered, however, that in the 16-county Black Belt region of Alabama FHA programs have had only a negligible effect on black rural poverty and that white farmers and rural residents, who represent only 38 percent of the rural population in the 16 counties, receive by far the greater share of FHA resources. Testimony at the Commission's hearing also showed that the loan practices of FHA tend to perpetuate rather than alleviate the economic dependency of black farmers and rural residents by providing them primarily with marginal subsistence loans rather than growth and development loans.

The Commission learned that for Negro farmers agriculture is little changed from the 1930's. They continue to plant only a few acres of cotton and some feed corn. They plow and cultivate with mules and sow, fertilize and spread insecticides and weed poisons by hand. They mortgage their crops before the planting season to their landlords and to the furnishing merchants⁵ for rent, seed, fertilizer, poisons and rations or cash for subsistence, for which they are charged six to eight percent interest on the principal and outstanding indebtedness. At the end of the harvest they have nothing and often owe more than they have taken in. Approximately two-thirds of the black farmers in the 16 county area of rural Alabama investigated by the Commission farm less than fifty acres. Economic progress has been made in Southern agriculture, but today black farmers are not significant in the farm econ-

⁵ A "furnishing merchant" makes advances of goods to farmers in return for a mortgage on the farmer's crop.

omy of the Black Belt except as a source of economic exploitation by white landowners, furnishing merchants and others.

Unequal Participation in FHA Programs

Contrary to the original intent of Congress in establishing the Farmers Home Administration, poor black farmers in Alabama have benefitted little from FHA programs.

Much of the capital required to finance the shift from row crops, such as cotton, to diversified farming has been provided by FHA at favorable interest rates. In addition, FHA County Supervisors have been active in encouraging many farmers to diversify and have provided the necessary technical assistance to make the transition a successful one. "But this assistance has mainly benefitted white farmers.

Today only 32 percent of white-operated farms in Alabama are still classed as cotton farms; 78 percent of Negro-operated farms are so classified. Robert C. Bamberg, State FHA Director, explaining the role of FHA in financing the shift from cotton to diversified agriculture, stated that "I expect that we financed 75 percent of the dairymen in Alabama. . . ." Dairying was a \$50 million farm business in Alabama in 1967, but of the State's 1,400 commercial dairy farms only 65 were operated by Negro dairymen. The Farmers Home Administration has helped many farmers with only small acreage to enter the poultry business, which is Alabama's number one source of farm income for 1967. But of the State's 5,900 commercial poultry farms only 32 are operated by blacks. FHA has been the single most important source of financing for livestock operations of all sizes, but less than 4 percent of the black operated farms were considered livestock farms while nearly one-fifth of the white operated farms were livestock operations.

FHA Loan Programs

Generally individual farmers and rural residents obtain five types of loans from the Farmers Home Administration—operating loans, farm ownership loans, rural housing loans, emergency or disaster loans and economic opportunity loans. The loans are made on favorable terms at low interest rates. FHA closely supervises the loans by placing funds in supervised accounts, devising a farm-home plan with the borrower, and furnishing him with technical assistance from FHA experts in farm management, home construction, livestock management and other farming practices. This active supervision of high risk loans reduces the rate of failures and affords the borrower the benefit of FHA management experience.

The testimony of Charles Griffin, a black farmer who farmed all his life on the plantation of J. H. Hain in Dallas County and who was evicted two years ago, suggests what FHA could mean to poor black farmers. He and 11 other black tenant farmers, after great effort, secured economic opportunity loans from FHA which they used to purchase some acreage. He testified what his first year of farm ownership meant to him.

"When I was on the Hain place, I was just blind, didn't know nothing but work, make it and give it to him, but now if I make anything I know which way it went, I know what I made and know what it bought

* The Commission's 1965 Report "Equal Opportunity in Farm Programs" noted:

"A borrower is not left to decide for himself what kind of loan he will request and receive. The FHA staff plays a vital role in helping him decide the uses to which FHA funds will be put. . . . When a farmer comes in to apply for a loan, the FHA county supervisor often takes the initiative, and recommends the acquisition of additional land, enlarged allotments, off-farm employment, soil conservation assistance, and the use of extension specialists or other educational resources to improve the economic position of the farmer." at p. 72.

and everything. That's a lot better; just 25 or 30 years too late. I hope it ain't though. I hope I have some more years to live and get some enjoyment out of it."

Black farmers however, are not participating in proportion to their numbers in FHA loan programs. White farmers and rural residents received the majority of FHA loan funds in the 16 county area and a proportion of funds far greater than the proportion of the population which they represent. Whites in 1966 and 1967 constituted 24 percent of the borrowers but received 57 percent of the funds; blacks, who constituted 76 percent of the borrowers, received 43 percent of the funds.

In the 16 county area, during 1966 and 1967, applications for loans and loans to black farmers were concentrated in the operating and opportunity loan programs. Of a total of 1,875 FHA loans made to Negroes in this area, 1,565 were operating or economic opportunity loans. Operating loans consist of advances for the purchase of feed, seed, and fertilizers. Although these funds can be used to purchase machinery or livestock, very few of the operating loans made to Negroes were approved for these purposes. Economic opportunity loans are made to increase the income-producing capacity of rural residents.*

In dollar amounts, FHA loaned \$3,034,960 to Negroes in all FHA programs in 1966 and 1967; of this amount \$1,958,840 was in the operating and economic opportunity loan programs. This means that 64 percent of the money loaned to Negro farmers went for subsistence or marginal development purposes rather than for growth and capital improvements. Most of the money loaned to whites was concentrated in rural housing and farm ownership loans, and thus were for growth and development.

NUMBER AND TOTAL AMOUNT OF FHA LOANS, 16 ALABAMA BLACK BELT COUNTIES, FISCAL YEARS 1966 AND 1967

	White		Black	
	Num-ber	Amount	Num-ber	Amount
Operating.....	306	\$1,208,220	1,226	\$1,493,700
Farmownership.....	71	950,832	53	359,380
Rural housing.....	184	1,730,300	155	664,590
Economic opportunity.....	26	43,840	339	465,140
Emergency.....	9	41,660	102	52,150
Total.....	616	3,974,852	1,875	3,034,960

The size of a loan, in part, is related to the ability of the borrower to repay the loan and those borrowers with larger operations, proportionately more of whom are white, are more likely to be able to repay larger loans. As State FHA Director Bamberg explained, "some people have more resources to borrow more money than others. . . . It goes back to this, in many cases our nigger [sic] population has small acreage. . . . Well, there is a tremendous difference [between] what we would loan to a man who has 170 acres and one who had 2 or 12."*

* Thus, the situation is substantially unchanged since the Commission, in its 1965 report "Equal Opportunity in Farm Programs", surveyed 13 Southern Counties (two of which were Wilcox and Greene Counties in Alabama) and found that 33 percent of the borrowers were white and received 66 percent of the funds.

* The maximum limit on economic opportunity loans is \$3,500 per borrower. The average economic opportunity loan to Negroes in the 16 county area was \$1,506 (the average economic opportunity loan to whites was \$1,712).

* Mr. Bamberg—the person responsible for administering Farmers Home Administration programs in Alabama—also operates a 4,000

The Commission heard testimony that to borrow money, a farmer needs security, a history of crop production and some means of repaying the loan. Many of the black farmers were unable to meet these conditions.

Calvin Orsborn, business manager of the Southwest Alabama Farmers Cooperative Association, a predominantly black farmers cooperative, testified:

"A large segment of our people don't either have one of these basic requirements. . . . most of these fellows have worked 30 or 40 years in a plantation type setup. All of the production that they made, everything that they did for 30 or 40 years, the credit did not go to him, the credit went to the plantation, which means when this fellow is put off of this place or when he decides to move he has no history. He can show no basic method of repaying this loan and he has no security nine times out of ten."

One result is that black farmers must seek credit from furnishing merchants who have done business with them for many years instead of going to banks or the Farmers Home Administration. L. R. Haigler, a white furnishing merchant who does business in Lowndes County, was asked why black farmers came to him rather than to banks for financing, despite the fact that his interest rates were higher. He answered:

"Well, just been doing business with us so long. I reckon that would be the answer. We have been in business down there—my father did this business and my grandfather did it. So I just imagine that's the reason. . . . The banks don't—wouldn't go out on a limb like I would, naturally, because they don't know too much the history of these people like we do, see."

Rural Housing Loans

The Commission heard testimony that the need for housing for blacks in rural areas of Alabama is "grave." More than 90 percent of the rural housing occupied by blacks is substandard. Farm tenant evictions continue to create many homeless black people in the 16-county area.

In 1966, FHA made rural housing loans to 64 whites and 63 blacks in the 16 counties; blacks received less than half the money loaned to whites. In 1967, the Farmers Home Administration made 212 rural housing loans in the 16 counties. Whites received 120 of the loans which totaled \$1,141,140. Blacks received loans totaling \$440,460.

Reverend Daniel Harrell, who directs a self-help housing project in Wilcox County, testified that even if FHA loaned all its rural housing money to blacks it would not help those who need help the most:

"Now through Self-Help housing we can reach only a certain group of people. Because they have to have the ability to repay the loan. And a lot of people in Wilcox County are not making over \$500 a year. . . . these people are left out."

Reverend William Branch of Greene County told the Commission how the black

acre farm in Perry County. He rents on a share basis to about 25 black farm families, advances them seed, fertilizer, cash for rations and charges six percent interest on balances through September 1 of each year. As State Director of the Farmers Home Administration he is responsible for administering loan programs that provide funds for purposes similar to those for which he lends money to his tenants and for which the Government charges five percent interest. Asked whether this practice was inconsistent with his responsibility for administering programs designed to lift tenant farmers out of the debt cycle Mr. Bamberg stated that he runs his office by the rules and his farm to make the most money for his family. He also volunteered to the Commission: "The 'human kingdom' is just like the 'animal kingdom'. The strong take it away from the weak, and the smart take it away from the strong."

community drew on its own meager resources to house evicted tenant families after they were turned down by FHA:

"Many of them went to the FHA there in the county to try to secure some help in building these houses. But, due to the small acreage or the small lots, and due to having no income whatsoever, they were not approved, their loan was not approved."

"And we have spent many, many nights calling people together who already have land. We couldn't buy land from the whites, and calling these people together who had land and we had to sit down and sometimes had to reflect on the Scripture saying, 'When the Master came,' we said, 'When I was outdoors you took me in, when I was naked you gave me clothes.' And we used that statement, and we have converted a lot of people who owned land to be willing to permit those people to either live on their land free of charge, until they can do better, or sell them a portion of that land."

Discrimination by FHA Committees

All loans made by the Farmers Home Administration are first approved by a local committee in each county composed of three persons representative of the rural population eligible for FHA assistance. Negro witnesses stated their belief that racially discriminatory attitudes on FHA County Committees may be a factor in refusing loans to black applicants.

Reverend Daniel Harrell, who has assisted a number of evicted tenant families in purchasing land on which to build, testified that:

"I think FHA is okay, but I am kind of questioning FHA's committee. I do know of a case down in Coy, where Mr. Le Croy (the county supervisor) and I sat down in his office. I took into him 14 applications, we discussed them and he knowing most of the people because he has been in the county for maybe 15 or 16 years, maybe more than that. He and I came to the conclusion that nine of these said persons would pass. However, out of the whole group after the committee meeting, out of the total group of 14 persons, only one passed. And so I kind of question the committee a little bit."

The Farmers Home Administration has directed that at least one black person be placed on each local committee. Although this directive has been followed, in no county in which black rural residents predominate has more than one black person been named to the local committee.

Supervised Credit

Testimony was heard that the supervised credit policy of FHA when applied to self-help cooperatives conflicts with efforts to establish initiative and self-reliance in the members. William Harrison, president of the largest black cooperative in Alabama, the Southwest Alabama Farmers Cooperative Association (SWAFCA), told the Commission that "the whole idea behind SWAFCA is to create some kind of economic basis by which people will be able to think for themselves." Supervised credit by FHA, according to Mr. Harrison, "would simply destroy the whole philosophy behind the co-op . . . that individuals will learn and do for themselves. As I view the restrictions, it simply means that FHA will have a co-op in Southwest Alabama, rather than a board of directors running the co-op . . ."

Mr. Calvin Orsborn, business manager of SWAFCA, stated:

"Under ordinary circumstance, I wouldn't hesitate one minute to take this loan. But SWAFCA, being as controversial as it is, being a whipping boy for politicians, having all of the difficulties that it does have, there is a possibility that this loan, would be carried to the letter."

The proposed loan restrictions included such requirements as FHA participation in all meetings of the board of directors, weekly and monthly reports on specific accounts, a ban on demonstration plot farming and loans by SWAFCA to members, all sales on a 30-day cash basis to members, and a number of others relating to reserve accounts and security. The State Director of FHA is authorized to require additional security or to release security as well as to make other important decisions within his discretion to determine "that such action will not be to the financial detriment of the FHA."¹⁰

Mr. Bamberg, State FHA Director, who is responsible for administering the FHA loan to SWAFCA, testified that supervised credit "is one of the successes of the Farmers Home Administration." He added:

"Of course you can see this, it takes less supervision with certain intelligent people than others. You have got that, it doesn't take as much with some people as it does with another one."

Mr. Bamberg did not think SWAFCA's chances for success were great. He said:

"The chairman here [Dr. Hannah] knows the ingredients that is necessary for a successful co-op, and if they haven't the ingredients, I see no reason. All I can say is that that we, that are employed in FHA are dedicated to try and make it a successful venture if and when the funds are funded."

Mr. Bamberg's position on the requirement of supervised credit and the total involvement of FHA in all management decisions of the board of directors is shared by FHA officials in the Department of Agriculture. Thus FHA, which is not reaching many poor black farmers with its programs, also is imposing restrictions which probably will inhibit aid to black farmers who seize the initiative and join together to help themselves.

RESOLUTION BY VIRGINIA JAYCEES

(Mr. MARSH asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. MARSH. Mr. Speaker, the U.S. Jaycees share the concern of many citizens, including the President, on the need to strengthen public support of the American position in Vietnam in order to achieve an honorable conclusion of that war. Evidence of this Jaycee concern is manifested in a recent resolution that was adopted by the Virginia Jaycees, which is set out below.

It is interesting to note that during World War II, the Jaycees similarly went on public record in support of extending the draft, which support, many feel, was crucial to the success of the extension effort.

I call to the attention of my colleagues this resolution of the Virginia Jaycees, and point out that the resolution follows with only slight modification the proclamation issued by the U.S. Jaycee president, Wendell E. Smith, who met with President Nixon on Monday to give him the Jaycee proclamation:

RESOLUTION

The following is a resolution the Virginia Jaycees adopted in support of President Nixon's recent peace proposal:

¹⁰ FHA Instruction 451.3, Sheet 1, Pt. III, U.S. Department of Agriculture, Farmers Home Administration (5-25-65).

"A proclamation in support of President Richard M. Nixon's peace proposal.

"Whereas, the Jaycees stand at full support of the efforts of President Nixon in his quest for an honorable and positive peace in the country of South Vietnam, and,

"Whereas, we support the more than one-half million Americans in South Vietnam and salute and pay tribute to those 35,000 men who gallantly and unselfishly sacrificed their lives in this quest for peace, and

"Whereas, we seek nothing for America but rather a climate for a self-determination of the proposals of South Vietnam, and

"Whereas we believe that now is the time to indicate to the other side that they should not plan on the resolve of the United States to crumble from within, be it, therefore, resolved that we, the United States Jaycees, seek the individual support of every organization, every American, to provide a positive unity behind the President of the United States of America in his efforts to effect a lasting world peace."

As evidence that this expression is national in spirit, although individual resolutions may differ in phraseology, Mr. Speaker, I include a press release dealing with the meeting with the President of United States Jaycees executives on yesterday, as follows:

U.S. JAYCEES FAVOR WORLD PEACE PROPOSAL

WASHINGTON, D.C., May 19.—President Richard M. Nixon learned today at a White House conference that the United States Jaycees firmly support his proposal for world peace through self-determination for all mankind. The Jaycees feel that only through a strong display of national unity can the goal be achieved.

During the meeting, U.S. Jaycees president Wendell E. Smith pledged the support of the 300,000-member Jaycee organization in spearheading a move to unite the American people. Smith was joined at the conference by Richard Headlee, a past national president of The U.S. Jaycees.

Jaycee Chapters throughout the country are working to have Memorial Day also observed as a Day of National Unity in support of the President's position on Vietnam as enunciated in his address to the nation on May 15. The program was organized and initiated by the Jaycees immediately following the speech.

"We would like the world to see and hear what support a vast majority of Americans, young and old, give to the principles laid down by President Nixon," Smith said.

"We firmly believe that a strong show of unified support for the administration's efforts toward world peace will definitely aid in future negotiations," stated the 35-year-old Jaycee leader.

"Toward this goal," added Smith, "Jaycee chapters in 6,400 communities across the country will conduct special Memorial Day observances in our effort to bring about a renaissance of positive public support toward our country's commitment to world peace."

Plans also include a national "Lights for Peace" project, whereby drivers will be encouraged to drive during the entire Memorial Day weekend with their headlights on to symbolize peace. All citizens will also be asked to light up the exterior lights of their homes for the full weekend of May 30-31.

Endorsement telegrams from local Jaycee chapters began arriving today at the White House. In the past three days, seventeen states have passed resolutions and are mobilizing unit drives.

The official Jaycee proclamation presented to President Nixon by Smith stated:

"Whereas, The United States Jaycees stand in complete support of the efforts of President Richard M. Nixon in the quest for honorable and positive peace in the country

of South Viet Nam as well as the rest of the world, and

"Whereas, we enthusiastically support the more than one-half million Americans in South Viet Nam and proudly salute and pay tribute to those 35,000 Americans who have gallantly and unselfishly sacrificed their lives in this quest for peace, and

"Whereas, we believe that the National Liberation Front and the North Vietnamese government should unquestionably understand the resolve of the people of the United States, not to crumble from within but to stand firmly and resolutely in support of our President in the quest for honorable peace and the right of self-determination in South Viet Nam;

"Therefore, be it resolved, that we, The United States Jaycees, encourage and solicit the support of every organization and every American in providing complete and positive unity in support of the President of the United States of America in his efforts to effect a lasting world peace and pledge to him our continued support for his endeavors in our behalf as Americans."

Some eighty-seven civic and service organizations have been contacted by the U.S. Jaycees and encouraged to adopt similar resolutions and forward them to the President.

Several times in the past, the Jaycees have endorsed national policies of the President of the United States. In 1940, the organization was the first group to give full endorsement to the peacetime draft. In 1965, the Jaycees adopted a resolution supporting the nation's Viet Nam involvement in defense of freedom throughout the free world.

FEDERAL CONTROL OF EDUCATION

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous material.)

Mr. SAYLOR. Mr. Speaker, the superintendent of education for the State of California, Dr. Max Rafferty, writes a syndicated column which appears in most newspapers in the country. In one of his recent articles, Dr. Rafferty drew attention to the real aims and purposes of the National Education Association, being complete federalization of the American education system.

In the official indoctrinating manual called *Profiles of Excellence: Recommended Criteria for Evaluating the Quality of a Local School System*, NEA advises that a school district is superior if its lunch program is educational as well as nutritious, but inferior if it refuses to provide payroll checkoffs for National Education Association dues; it is good if its teachers are all certified by the State, but is not so good if it uses merit pay to reward good teaching; and it is commendable if the system spends at least twice as much per pupil as it did 10 years ago, but not among the superior school systems if it does not take advantage of all Federal-aid programs.

As Dr. Rafferty has indicated, anyone familiar with the power and influence of the NEA is aware of the "futility of questioning such an establishment bible as this." However, it is a sad and ironic tragedy as well as an indictment against the NEA and its practices, that increasing numbers of our young people today, after 12 years of schooling for which they receive a high school diploma, are

unable to obtain a job because they do not know the fundamentals of mathematics, or how to read an instruction and understand its meaning, or even write a letter which is coherent.

I agree thoroughly with Dr. Rafferty in his statement that our school districts have a fetish for raising tax money and then spending it on the most glamorous, most attractive programs, but none of them having much to do with the basics of education.

I include, as a part of my remarks, the article by Dr. Rafferty:

[From the Johnstown (Pa.) Tribune-Democrat, Apr. 28, 1969]

GOOD SCHOOLS DEFINED

(By Dr. Max Rafferty)

You didn't know, I'll wager, that a school system is good (a) if its lunch program is educational as well as nutritious, (b) if its teachers are all certificated by the state and (c) if it spends at least twice as much per pupil as it did 10 years ago.

Contrariwise, I doubt your awareness that a school system is automatically no good (a) if it uses merit pay to reward good teaching, (b) if it refuses to provide payroll checkoffs for National Education Association dues and (c) if it doesn't take advantage of federal aid programs.

See? I told you you'd be surprised. You question my criteria? I'm sorry. You simply cannot do that. They aren't my criteria at all, you see; they're the National Education Association's criteria.

I was, in fact, citing examples from an official NEA manual called "Profiles of Excellence: Recommended Criteria for Evaluating the Quality of a Local School System." There are 124 of these criteria, and presumably any school district lucky enough or sufficiently diligent to meet all 124 would qualify forthwith for education's Hall of Fame, with its superintendent a clinch for either canonization or apotheosis.

If by any chance you happen to be an educator, you're aware of the futility of questioning such an establishment bible as this. It would be unthinkable.

However, to be purely hypothetical, here's what you might be saying if you did dare to disagree with the NEA's definition of what makes a school system good.

"A school district is superior not because it's big enough to provide all necessary educational services within its boundaries, as NEA avers, but because the educational services it does supply turn out graduates who are cultured, learned and good citizens."

"And despite 'Profiles of Excellence,' school system is not necessarily inferior just because it refuses to grab all the federal money in sight. It's inferior only if its pupils do not read and spell and calculate up to their own innate potentials."

I guess I'm a little bothered about a rating system for schools which refuses to concern itself with the only reason for a school's existence: the systematic imparting of organized and disciplined subject matter to its pupils in such a way as to insure their maximum mastery of the essentials of human knowledge.

This isn't so tough an outcome to measure, incidentally. In California, statewide annual tests in the "Three Rs" are required by law and have been conscientiously administered by every public school since 1962. We know precisely which are our best school systems, and we are even now conducting research to find out exactly how they get that way.

Certainly America's schools need more money. Equally certainly, money alone will not make children learned. Beautifully kept

school grounds are nice. Good teacher salary schedules should be the goal of every school system. Adequately staffed guidance and counseling services are highly desirable.

But confound it! A school can have all these advantages and at least 121 more, and it can still turn out graduates who can't tell the difference between Andrew Jackson and Andrew Johnson or between the Wars of the Roses and the Flowering of New England.

The trouble with so many school districts is their penchant for first raising tax money and then funneling it into umpteen glittering, seductive channels, all glamorous, all attractive, but none of them having much to do with education in depth.

Remember this: If your school system's philosophy includes such concepts as abolishing report cards, using the look-say Egyptian-hieroglyphic approach to reading, abandoning history and geography in favor of the mishmash known as "social studies," then it won't make much difference how much money it uses to water its educational wastelands.

PRESIDENT NIXON'S PROGRAM TO COMBAT THE PROBLEM OF HUNGER IN AMERICA

(Mr. CONTE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONTE. Mr. Speaker, I would like to take this opportunity to join my distinguished colleague, the gentleman from Maryland (Mr. MORTON), in expressing support for President Nixon's program to combat the problem of hunger in America.

The elimination of hunger in America must be given high priority. There is simply no justification for hunger in any nation, let alone one whose agricultural system produces more food than it can consume.

The President has given the necessary high priority to this problem by adding over \$1 billion to family food assistance programs, strengthening special supplemental food programs, and streamlining administration of these and related programs.

The existence of hunger in the United States is distressing. It is regrettable that it has taken so long to publicly acknowledge it. On the other hand, recognition of the problem is encouraging because it represents a first step from which we must, and we will, move forward.

There has been much publicity in the last few months about hunger in America. I remember watching the highly acclaimed CBS special on hunger not too long ago. What I saw was amazing. I doubt that anyone who saw that show will soon forget those vivid scenes.

The problem of hunger is, as President Nixon has said, an "exceedingly complex" one. To those who would falter because of its complexity, I would merely point out the implications of their inaction.

We are all aware of the rising tensions in every segment of our society. There is no easy answer to this unrest just as there is no easy answer to each of the factors responsible for it. This does not

mean that we should close our eyes and ignore it.

On the contrary, the need to work toward solving these problems is greater now than it has ever been in the past. Hunger is certainly one of the great problems facing us today. We have a moral obligation to eliminate it. We also have a social obligation to eliminate it because it is such an important factor contributing to domestic unrest.

For all these reasons, I am pleased with the President's forthright initiative. I look forward to working with my colleagues in Congress in this fight against hunger in America.

Thank you, Mr. Speaker.

LOW INTEREST RATE ON SERIES E AND H BONDS

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, my concern with the low interest rate paid by the Government to the purchasers of series E and H bonds has been previously noted. I had been encouraged, however, by the Treasury Department's expressions of realization that the holders of savings bonds should receive a more realistic interest rate than the $4\frac{1}{4}$ percent that is presently paid. In the past several months Treasury has indicated that it is working on the matter and that it expected to request some legislative relief from the $4\frac{1}{4}$ percent interest ceiling, but it has not yet taken any decisive steps in that direction.

The large purchasers of Government obligations are earning as much as $6\frac{1}{2}$ percent on their investments. Most savings bonds, however, are bought under regular payroll plans by our lower and middle income citizens. That they should receive a more equitable rate of interest is beyond argument. I realize that the savings bonds interest problems must be considered in the whole context of the Government's financial needs and the actions that are necessary to stem inflation. The plain fact is, however, that the purchasers of savings bonds are being hit twice, both by the low return on the bonds, and the eroding effect of inflation.

A very realistic appraisal of the situation was made in a recent editorial in the South Dade News Leader of Homestead, Fla. I commend its May 5, 1969, lead editorial to all Members and am pleased to insert it in the Record:

INFLATION IS GNAWING AT U.S. SAVINGS BONDS

Suppose the deal were put as follows:

Deposit your money with us, let us use it for 10 years and at the end of that time we'll give you back something less, maybe a lot less, than 100 per cent of what you deposited.

Takers, obviously, would be hard to find and no financial organization interested in attracting loose money would think of offering such disadvantageous terms. Neither would the U.S. Treasury. But it is, in effect, the deal investors in U.S. savings bonds are receiving.

The government is not, of course, deliberately defrauding citizens. The villain is

inflation, currently chewing into the dollar's real value at a 4.7 per cent annual rate. It doesn't take an expert in economics to recognize that at this rate, savings bonds, at 4.25 per cent for series "E" and "H," are obviously losing ground in the inflationary spiral.

And to the Treasury's increasing concern, savers—millions of Americans currently holding some \$52 million in bonds—are becoming increasingly aware of the situation. For the first quarter of this year, more savings bonds were cashed in than sold—a net overflow of \$61 million in January, \$13 million in February and a record \$78 million in March. Should redemptions continue to exceed sales, the Treasury could find itself in a real payments pinch after June 30, when the annual budgetary doldrums set in.

One way out would be to raise the interest rate, set by Congress, to something like the return the small investor can expect from private institutions, currently around 5 per cent from savings and loan associations and mutual savings banks. The administration is reported considering such a move.

But it would be only partial and temporary at best. Congress already has raised the interest rate five times since 1941, when the original "E" bonds returned 2.9 per cent. The latest boost, from 4.15 to 4.25 per cent, came as recently as last June.

Curbing inflation is the only satisfactory solution. Until the erosion of the dollar's real value is brought under control, the government will continue to offer a poor deal to millions of its citizens. Neither they nor the government can afford it.

PRESIDENT'S PROPOSALS TO COMBAT HUNGER

(Mr. MORTON asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. MORTON. Mr. Speaker, I am joined in this statement by Representatives JOHN B. ANDERSON, of Illinois; WILLIAM H. AYRES, of Ohio; MARK ANDREWS, of North Dakota; J. GLENN BEALL, Jr., of Maryland; DONALD G. BROTZMAN, of Colorado; GARRY BROWN, of Michigan; JAMES T. BROYHILL, of North Carolina; JOHN BUCHANAN, of Alabama; LAURENCE J. BURTON, of Utah; DANIEL E. BUTTON, of New York; JOHN N. HAPPY CAMP, of Oklahoma; DON H. CLAUSEN, of California; BARBER B. CONABLE, Jr., of New York; SILVIO O. CONTE, of Massachusetts; WILLIAM O. COWGER, of Kentucky; WILLIAM C. CRAMER, of Florida.

JOHN R. DELLENBACK, of Oregon; FLORANCE P. DWYER, of New Jersey; JOHN N. ERLBORN, of Illinois; MARVIN L. ESCH, of Michigan; PAUL FINDLEY, of Illinois; HAMILTON FISH, Jr., of New York; GERALD R. FORD, of Michigan; JAMES R. GROVER, of New York; SEYMOUR HALPERN, of New York; JAMES HARVEY, of Michigan; LAWRENCE J. HOGAN, of Maryland; CRAIG HOSMER, of California; THOMAS S. KLEPPE, of North Dakota; DAN KUYKENDALL, of Tennessee; ROBERT MCCLORY, of Illinois; PAUL N. MCCLOSKEY, Jr., of California.

Also Representatives CATHERINE MAY, of Washington; ROBERT H. MICHEL, of Illinois; JOSEPH M. MCDADE, of Pennsylvania; MARTIN B. MCKNEALLY, of New York; CLARK MACGREGOR, of Minnesota; WILEY MAYNE, of Iowa; CLARENCE E. MILLER, of Ohio; WILLIAM E. MINSHALL, of Ohio; JERRY L. PETTIS, of California;

HOWARD W. POLLOCK, of Alaska; ALBERT H. QUIE, of Minnesota; CHARLOTTE T. REID, of Illinois; JOHN J. RHODES, of Arizona; HOWARD W. ROBISON, of New York; PHILIP E. RUPPE, of Michigan; HERMAN T. SCHNEEBELI, of Pennsylvania; FRED SCHWENGL, of Iowa; GARNER E. SHRIVER, of Kansas; J. WILLIAM STANTON, of Ohio; WILLIAM A. STEIGER, of Wisconsin; ROBERT TAFT, Jr., of Ohio; BURT L. TALCOTT, of California; GUY VANDER JAGT, of Michigan; WILLIAM C. WAMPLER, of Virginia; LOWELL P. WEICKER, Jr., of Connecticut; G. WILLIAM WHITEHURST, of Virginia; LARRY WINN, Jr., of Kansas; WENDELL WYATT, of Oregon; JOHN W. WYDLER, of New York; LOUIS C. WYMAN, of New Hampshire; JOHN M. ZWACH, of Minnesota; FRANK HORTON, of New York.

The President's national nutrition program, submitted to the Congress on May 6, exemplifies the new approach to the Presidency. Born of the first 100 days, blending compassion and pragmatism, in the Nixon style, the new food programs mean action, not empty promise.

On taking office, the President found our food and nutrition programs were not doing the job. He sought not scapegoats, but answers. He offered not promise, but action to meet the needs of several million forgotten Americans.

He found stopgap programs for the thirties had become permanent institutions. So he directed that solutions for the seventies be devised.

He found legislative oversight and contradiction. So he asks a new approach to make more effective use of resources.

He found an administrative morass. So he directed internal reorganization.

He found funding inadequate to meet the promise. So he asks a greater commitment consistent with the new priorities.

He found the efforts of Government alone insufficient. So he seeks the involvement of the private sector through mobilization of the agriculture industries.

The President proposes a great crusade to banish hunger from our land and deliver on commitments made decades ago. The Congress should support him gratefully and with pride, for it is here in our Capitol that the groundwork for Mr. Nixon's new food proposals was laid.

In 1967, hunger was no longer a problem in America—at least officially. Free distribution of surplus commodities was being phased out. Replacing the program was the "food stamp system," designed to teach even the poorest the virtues of saving; for under this program, unlike commodity distribution, no food was free.

In 1967, the tragic conditions existing in some areas of this country were forcefully brought to the attention of the Congress by civil rights groups. So dire was the story that Senator STENNIS introduced legislation to provide medical and nutritional support for any citizen found to be suffering from hunger or severe malnutrition. While never enacted as such, this concept was implemented through the Office of Economic Opportunity under amendments to the act offered in the House by Representative QUIE.

Just a year ago, in rare bipartisan concord, Members of this House called for the creation of a Presidential commission to evaluate the problem of hunger and recommend remedial action. On May 8, 1968, in a statement issued jointly by Representatives AYRES, FOLEY, GOODELL, GREEN, MAY, MICHEL, MORTON, PERKINS, QUIE, SMITH OF IOWA, SULLIVAN, TEAGUE OF CALIFORNIA, and UDALL, we called for an emergency study as the basis for a report to be filed on January 1, 1969. We said:

We have formed this coalition of Congressmen to press impatiently and urgently on every front available to us to alleviate this problem immediately, and eliminate it quickly. . . . We pledge ourselves to do all in our power to eliminate these conditions without delay.

Hearings were held; increased authorizations were passed. Limited expansion of funding and administrative improvement literally were wrung from a reluctant executive branch. This progress was the result of an all too unusual display of congressional initiative.

Without Executive support, the Hunger Commission measure failed. Thereupon, a bipartisan bloc in the Senate pushed through the creation of a select committee which has ably carried forward a program designed to place the facts before America.

President Nixon has delivered the action we sought less than a year ago. In 100 days, the great resources of the Federal Government have been mobilized in a comprehensive action program to accomplish the objectives we sought.

Those who lead our Government today know hunger is but one face of poverty. They seek the elimination of the root causes of economic deprivation.

This commitment—and greater understanding of the nature of this complex and interrelated contradiction in our lives—makes realistic the hope that someday no one will be left behind in America's great surge of affluence.

Let none doubt that history will judge the President's actions a monument to his philosophy of the Presidential institution, and a milestone on the march to realization of the American dream.

PAY TV

(Mr. O'HARA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. O'HARA. Mr. Speaker, I am today introducing a bill which is designed to protect American television viewers from the threat of a financial whirlpool—pay television—which could result in many American families running up bills of \$20, \$30, and \$40 a month to watch television.

Unless Congress acts quickly, there is a real danger that some of the television programs which we have enjoyed without charge will soon cost \$1, \$2, and \$3 each. Those of us who watch college and professional football games on weekend afternoons may have to pay for this entertainment.

Unless pay television is stopped, those television viewers who touch the edge of

the whirlpool by paying for a few television programs, may find themselves drawn into pay television completely, leaving free television showing vacuous soap opera reruns. This will put a heavy burden on low-income groups, especially the elderly who have limited incomes and who rely heavily on free television for their entertainment.

For this reason, I am introducing a bill which will prohibit the Federal Communications Commission from authorizing pay television stations. The Commission decided last December that it will begin granting licenses for pay television stations after June 12. That decision is being appealed to the U.S. Court of Appeals in Washington. While the appellate court could rule against pay television, prompt action by Congress would be decisive.

I appeal to the Members of Congress to examine closely the threat of pay television. Just one example of one professional football game amply demonstrates the potential economic impact of pay television.

This year, NBC paid \$2.5 million to professional football to carry the Super Bowl Game which was seen on 20.4 million television sets. But NBC and the other networks would be easily outbid if the 20.4 million TV set owners paid \$1 each for the game, bringing in \$20.4 million for the pay television network.

With far greater revenue potential than the commercial networks, the pay television network could easily obtain the television contracts for the majority of college and professional sports and the better TV "specials."

The Commission, in its decision last December, did prohibit pay TV from showing any sports events which have been shown for the previous 2 years. However, it is possible under the Commission's decision for the professional football leagues, for example, to take a financial loss by refusing their games to be shown on television for 2 years. After the 2 years, the pro football leagues could sell their television rights to the highest bidder, which could easily be pay TV.

The 2-year loss then could be quickly recouped in succeeding years by selling the television rights at higher prices.

There is no question that pay television programs would be shown at prime-time viewing, making a deep impact at the same time that the commercial networks obtain their greatest advertising revenues. By showing their best fare at prime time, the pay television stations could gradually draw away the free-TV audiences, leaving the commercial networks with smaller and smaller audiences and less and less advertising dollars to pay for programs now seen free.

The Federal Communications Commission was obviously motivated by a deep concern for greater program diversification on television when it approved the pay television system. However, I believe that pay television will reduce diversification by cornering the best programs on a single station, while free TV deteriorates to programming insignificance. It is certainly hoped that the FCC selects another means to obtain program diversification.

Pay television is certainly one case where the end does not justify the means. If the means—pay television—is allowed to go unchecked, there is still no guarantee that television viewers would have greater diversification. There is only the distinct possibility that we will be paying for the same programs which we are now watching free of charge.

DR. WILLIAM P. TOLLEY HITS THE NAIL RIGHT ON THE HEAD WITH REFERENCE TO TURMOIL ON OUR CAMPUSES

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, a few weeks ago Dr. William P. Tolley, the distinguished chancellor of Syracuse University, spoke at the university's annual athletic awards dinner. In discussing the turmoil on our campuses, I believe Chancellor Tolley hit the nail right on the head. His remarks, which were both timely and perceptive, should be read by every student, college administrator, faculty member, and every legislator in the country.

They follow herewith:

REMARKS BY CHANCELLOR WILLIAM P. TOLLEY

At a recent meeting in Williamsburg the president of Sheffield University, Dr. H. N. Robson, reminded us that man is a member of the animal kingdom and of all the members of that kingdom he is the most aggressive. He went on to say that this human animal is, of course, most aggressive when it is young. "If you are troubled about student unrest," he said, "perhaps we should give more attention to the primary biological problem." He stopped at this point, but I think each one of us in thinking about it for a moment begins to see the problem in different terms.

Primitive man spent much of his time, as other animals do, in the search for food. He had to struggle to live. Nature showed him no mercy. Neither did his enemies. If he survived it was because he was aggressive.

As a member of the animal kingdom man has not changed. The aggressive impulses that are a part of his nature are as strong as ever and in many parts of the world as necessary as ever. Here in America, however, and in a considerable part of the civilized world children no longer have to forage for food. They don't have to hunt or fish in order to eat. They don't even have to work on a farm.

What does civilization do to this aggressive animal? It keeps him confined in a school. It puts such pressure on the importance of schooling that he is branded a failure if he doesn't continue until he gets a college degree.

What happens to his aggressive impulses? Remember they are as powerful as ever and are going to be expressed in one way or another. Moreover, they are not expressed in the classroom. To me this is the most cogent argument I can think of for a universal program of intramural and intercollegiate athletics in which every student participates and every student works out of his system some of the aggressive impulses he now directs against the university and the other institutions of society.

Ralph Keyes, assistant to the publisher of Newsday, in speaking about student disruption remarked that students came to Antioch College at Yellow Springs, Ohio with a very high protest level. When they get there they

find very little to protest against. As a consequence last year they almost hung the barber.

In proposing an expansion of our intra-mural and intercollegiate program, I am not suggesting that this is the only answer. I think we will always have protests and, of course, as a university we flourish when we are a place of dissent and dialogue. With the exception of the playing field, however, the university is totally unprepared for violence and it has been singularly inept in dealing with it.

The truth is that violence will stop on the campuses of our colleges just as soon as students learn that they are no longer protected by *in loco parentis* and that a jail sentence awaits them whenever they break the law. The problem of campus disruption cannot be solved by presidents alone. It can be solved only when the moderate students and the moderates on the faculty agree that rules must be enforced and that all who are guilty will be punished. Administrators have been trapped between arrogant adolescents on the one hand and incredibly naive professors on the other. The professors still plead for amnesty regardless of the offense. Students are not fools. So long as no one is punished why shouldn't the fun and games continue?

What the faculty doesn't appear to recognize is that they are the group who have the most to lose. What is threatened is their academic tenure and their academic freedom. What is at stake is the autonomy of the university—the very idea of the university. There are faculty members at the University of Chicago who understand this. I understand there are a few now at Columbia and Cornell. Our hope is that the members of the faculty will wake up before the battle for autonomy of the university is lost. The public has been warning us now for some time. If we don't learn to govern ourselves they will do it for us. We have no time to lose in doing it for ourselves.

Having gotten this out of my system, I should like to get back to the field of athletics. In doing so let me ask four questions: The first, What is the place of discipline in American education? Second, How important is performance as distinguished from potential? Third, What is the relationship of the individual to the larger units of society? And fourth, Does participation in athletics contribute to the search for courage, endurance, honesty, and self-respect?

Let us turn to the first question. What is the place of discipline in American education? We are free men. We are committed to freedom of speech, freedom of the press, freedom of religion, and freedom of the mind. Is there a place for discipline? The answer is to be found in the science laboratory where a universe under law requires hard work, patience and accuracy. It is only the disciplined mind that is equipped to observe, analyze, reflect, and put back together again. The life of the scientist is the life of strict discipline. Only by long and arduous training does anyone contribute to the advancement of science.

Again on the playing field there is no instant knowledge, no instant leadership and influence, no short cuts to success and power. Skill comes only after endless hours of running, push ups, drill and practice. Poise comes with experience. Self-control is the product of effort, leadership is not given, it is earned.

The New Testament reminds us that, "Strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it." (Matthew VII, v. 14). In a day of affluence and ease to learn this by personal experience is of priceless value.

Our second question is, How important is performance as distinguished from potential? For the moment, American society is preoccupied with the problem of undevel-

oped potential. This is the great problem of both our schools and our colleges. Nature is lavish in its distribution of talents—but poor schools leave talents undeveloped and students seriously disadvantaged.

I agree that this is the current problem in our slums and backward areas. I do not share the feeling that it is our only problem. In education there must always be an emphasis on performance as well as potential. If I were an admissions officer a boy's performance in the high school classroom would tell me far more than his scores in College Boards.

What counts most in life is motivation. This is what makes the difference. Desire, competitive spirit, a willingness to pay the price, habits of work, the refusal to quit, these are the qualities we should look for.

Only performance counts in the classroom. Only performance counts on the playing field. Only performance counts in life after graduation. This is the lesson we must all learn. The earlier it is learned, the better it will be for the learner.

On balance I think our coaches teach this lesson even more effectively than do the other members of the faculty. The New Testament reminds us that, "I am the true vine, and my Father is the vinedresser. Every branch of mine that bears no fruit, he takes away, and every branch that does bear fruit he prunes, that it may bear more fruit." (John XV, v. 1, 2). Every week the coach judges every boy that plays. Every week he takes away the branch that bears no fruit, prunes the one that does so that it will bear more fruit. He may not realize it, but this hard nosed doctrine comes straight from the Good Book.

My third question is, "What is the relationship of the individual to the larger units of society? In dealing with the current generation of students one cannot help but be impressed by the extent to which they are wrapped up in themselves. Perhaps this has always been true. One has to go back a long way in time, however, to find such a high percentage of egocentric students leaders. What they regard as important appears to be all that counts. They have answers but no questions, voices but no ears. They know more than their teachers, more than the administrators and much more than the trustees.

Fortunately they are brought back to earth on the playing field if nowhere else. The classroom teaches discipline and the place of performance quite as well as the playing field. Nothing, however, teaches teamwork and the importance of the team like athletics. The subordination of the individual to the team is an experience I wish all students could have. The boy who listens and learns, the boy who obeys instructions, who learns to block and tackle as well as run, who gives his best effort in any position to which he is assigned and who hangs in there every day and every week regardless to how much he plays on Saturday, this is the boy who finds out what life is all about.

In the closing years of the twentieth century scientific advance is more and more the result of team effort. Again, every social and economic advance requires cooperative action. It is becoming a day when even the most gifted must function as a member of a team. I am grateful that this all important lesson is taught so well on the playing field.

And finally, Do sports contribute to the search for courage, endurance, honesty and self-respect? Education that is complete must take into account the needs of the whole man. The molding of character, the contagion of ideals, the teaching of values often takes place outside of the classroom but this does not make it any the less important. It comes from the force of example, from the personal influence of those whom

students respect, and from direct personal involvement.

Here again the science laboratory could be cited, for accuracy, truthfulness, and honesty are requirements without excuse or exception. But the playing field teaches these qualities too, and in addition teaches courage, endurance and self-respect.

The lessons of obedience, of loyalty, of courage—all three are learned as well as the value of a total response. To do what you thought couldn't be done, to give that last extra effort that makes so great a difference, to endure without whining or complaint, to practice until perfect, to make the key block that lets your teammate score—these are experiences I wish everyone could have. For each of us there is a desert to travel, a star to discover, and a being within ourselves to bring to life. The boy who gives all that he has, not only brings to life the highest being within him, but gives hope for all humans striving. And as he learns the meaning of honesty and self-respect he is rewarded with pride and dignity and honor.

CENTER FOR THE STUDY OF DEMOCRATIC INSTITUTIONS

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, today I spoke on the association of Justice William O. Douglas as being the chairman of the board of the Center for the Study of Democratic Institutions.

So that our colleagues will know the nature of this center with which the Justice is so deeply committed, I include the following documents: Church League of America's "Special Report" of October 1965; "Guide to Tumult in America," February 9, 1968; and "Funded Disruption" of January 12, 1968.

The above-mentioned material follows: [From the Special Report, Church League of America, October 1965]

CENTER FOR THE STUDY OF DEMOCRATIC INSTITUTIONS

FUND FOR THE REPUBLIC

The Fund for the Republic was authorized was incorporated with a Board of Directors in October 1951, and a sum of a million dollars was appropriated for it at the time. The Fund was incorporated with a Board of Directors in December 1952. In February 1953, the Ford Foundation appropriated \$14,000,000 for the Fund. At that time, the Fund assumed a completely independent status.¹

Since it was founded, the Fund has sponsored a number of projects. One of these projects was the distribution of 110 copies of a film which portrayed a television interview between atomic scientist, Dr. J. Robert Oppenheimer and Edward R. Murrow, of the Columbia Broadcasting System,² after the former had been found to be a security risk on June 29, 1954.³ The interview was a clear attempt to show Oppenheimer to be a victim of character assassination due to anti-Communist hysteria.⁴

In a speech which he made on July 21, 1955, Congressman B. Carroll Reece of Tennessee stated: "Ignored entirely in this Ed Murrow propaganda film were the details of the charges against Oppenheimer, including his own admission that he had lied repeatedly to security officers of the Manhattan District and the FBI regarding his contacts with the Soviet espionage agent, Haakon

Footnotes at end of article.

Chevalier, as well as other vital security matters."⁵

Dr. Oppenheimer has had a record of affiliation with Communist front organizations, such as the American Committee for Democracy and Intellectual Freedom, American Friends of the Chinese People, and the Independent Citizens Committee of the Arts, Sciences and Professions. In 1953, Oppenheimer himself stated that he was not a Communist, but had probably belonged to every Communist front association on the West Coast and signed many petitions in which Communists were interested. He made periodic contributions through Communist Party functionaries to the Communist Party in the San Francisco area in amounts aggregating not less than \$500 nor more than \$1,000 a year during a period of approximately four years ending in April 1942.⁶

Another project of the Fund was the financing of wide-scale mail distribution of a special issue of the "Bulletin of Atomic Scientists", which was published by an outfit having as chairman of its board of sponsors none other than J. Robert Oppenheimer. This special issue was devoted entirely to the twin objectives of defending Oppenheimer and attacking the security program.⁷

An action by the Fund for the Republic which has aroused much controversy was the \$5,000 award which it made to the Plymouth Quaker Meeting of Plymouth Meeting, a village near Philadelphia, Pennsylvania, for its alleged retention of Mrs. Mary Knowles as librarian of the William Jeans Memorial Library, which was owned and operated by the Plymouth Monthly Meeting.

On May 8, 1953, Mr. Herbert Philbrick appeared before the Senate Internal Security Subcommittee and swore that Mary Knowles was a member of the Communist Party, "in fact a member of my own pro-group underground cell." Philbrick also identified Mary Knowles as the secretary to Harrison Harley, director of the Samuel Adams School for Social Studies, which was placed on the Attorney General's list as subversive and Communist.⁸

On May 21, 1953, Mary Knowles appeared before the Senate Internal Security Subcommittee, and when asked if she was a member of the Communist Party now, she dived behind the Fifth Amendment and refused to answer that question. Following her plea of the Fifth Amendment, she subsequently submitted her resignation as branch librarian to the trustees of the Norwood, Massachusetts, library. Mrs. Knowles then took a similar position with the William Jeans Memorial Library, a library of the Plymouth Monthly Meeting of Friends, a Quaker group at Plymouth Meeting, Pennsylvania. The actual employment of Mrs. Knowles was done by the Library Committee of Plymouth Meeting.⁹

When Mrs. Knowles went to Plymouth Meeting, veterans organizations and others asked her to take a loyalty oath. She refused. Thereafter, the Plymouth Township School Board, the governing authorities of Plymouth and Whitmarsh Townships, and the Conshohocken Community Chest, withdrew financial support of the library. The Plymouth Township School Board forbade teachers to take children to the library, and three members of the Library Committee itself resigned.¹⁰

Resolutions were passed by local chapters of the American Legion and the DAR, calling for the dismissal of Mrs. Knowles. Some of the Quakers of the community, who disapproved of the hiring of Mary Knowles, got up a petition for the purpose of having Mrs. Knowles discharged. This petition was voted down in a maneuver, although it appears that a majority favored the petition.¹¹ In fact, 61 of the 108 members of the Plymouth Meeting signed a petition for her removal, and only 28

of the 108 are known to have approved her hiring.¹²

Robert Maynard Hutchins, the president of the Fund for the Republic, announced a special \$5,000 award to the Quaker Monthly Meeting, "for courageous and effective defense of Democratic principles, in refusing to fire Mrs. Knowles." He said that "the award was being made because the Fund for the Republic hopes that the example that was set in this case will be followed elsewhere in America—particularly when our libraries, which seem to be a special target of self-appointed censors and amateur loyalty experts, are involved."¹³

Actually, it was not the Quaker Monthly Meeting that hired Mrs. Knowles, and that refused to get rid of her; it was the Library Committee. The employment of Mrs. Knowles by the Library group continued to meet with overwhelming opposition, not only by the members of the Plymouth Quaker Meeting, but also by the vast majority of the residents of the community.¹⁴

Another activity in the Fund for the Republic's propaganda field is the free and unsolicited distribution of books to judges and college presidents throughout the U.S. One of these books is "Grand Inquest", by Telford Taylor, of which the Fund distributed 450 copies to Federal judges.¹⁵ According to Congressman B. Carroll Reece of Tennessee, Taylor "has a red flag on his file at the Civil Service Commission with the warning unresolved question of loyalty."¹⁶

The Fund for the Republic distributed 35,000 copies of a book entitled "The Fifth Amendment Today" by Erwin N. Griswold, primarily to judges and lawyers.¹⁷ In its May 31, 1955, report, the Fund listed Griswold as one of its directors.¹⁸ This book has been described as "a thinly-disguised propaganda argument that any witness is entitled to invoke the Fifth Amendment without having any inference drawn of possible hidden guilt."¹⁹

The Fund for the Republic distributed 25,000 copies of a Harper's magazine article by Richard H. Rovere entitled "The Kept Witnesses", to business executives and labor officials.²⁰ This article, as its name implies, castigates the use of former Communists as witnesses in loyalty-security proceedings.²¹ The Fund also distributed 25,000 copies of "Faceless Informers and Our Schools", a pamphlet by Lawrence Martin, to State School Board associations.²² This pamphlet has been described as "a scare-movie piece intended to show that teachers are too intimidated to teach properly; and other items of similar ilk."²³

In November 1954, the Association of the Bar of the City of New York Fund, Inc., received \$100,000 from the Fund for the Republic for "a study and report by the Special Committee on the Federal Loyalty-Security program."²⁴ The Fund for the Republic intimated that this report would be unbiased and objective. However, its liaison man with this Special Committee turned out to be Walter Millis. In a televised debate on September 11, 1955, Millis stated that it was not the procedures of the loyalty-security program to which he objected; it was the entire program.²⁵

The May 31, 1955 report of the Fund for the Republic stated that an advisory committee headed by Adam Yarmolinsky would be set up to obtain records of individual cases involving the loyalty-security program.²⁶ The study, when completed, was used by leftists to attack the program.²⁷

The Fund for the Republic distributed copies of a "See It Now" television program on book censorship in California to Southern California civic groups.²⁸ This program was an attempt to discredit a Mrs. Ann Smart of Marin County, California, for conducting a campaign to eliminate certain nauseatingly

lewd and pornographic books, and others that were little sort of seditious, from the libraries of her community.²⁹

In May 1955, the Fund for the Republic made a \$150,000 grant to the American Friends Service Committee for "a two-year program of support in legal cases to strengthen the right to freedom of conscience."³⁰ It turned out that part of this grant was used in behalf of 28 individuals who were on trial in New York State. The "freedom of conscience"—the "conscientious non-conformism" for which they were on trial—was non-conformism in refusing to obey the civil defense laws of the State of New York—specifically, in refusing to obey police orders to go into an air raid shelter during a practice air raid in New York City on June 15, 1955. The leader of the group of 28 was Dorothy Day, editor of the Catholic Worker, a left-wing periodical which is not a publication of the Catholic Church.³¹

In June 1953, the Fund for the Republic appropriated \$300,000 for "an account of Communist influence in major segments of U.S. Society."³² This project was divided into a number of sub-projects. One of these, entitled "History of the Communist Party in the United States (1919-1945)", was headed by Theodore Draper.³³ Draper began his career some years ago as a reporter for the Daily Worker and from there, after years of service, was graduated to the more erudite New Masses.³⁴ On his payroll was Earl Browder, former American Communist leader.³⁵ Browder had been expelled from the U.S. Communist Party, but is still considered sympathetic to its aims.³⁶

Robert M. Hutchins, president of the Fund for the Republic, stated that he would hire a Communist "for a job he was qualified to do—provided I was in a position to see that he did it." He admitted that the Fund had hired as a temporary press officer, a man who had previously pleaded the Fifth Amendment when questioned by the Senate Internal Security Subcommittee about Communist Party membership. Hutchins alleged that the man, Amos Landman, had "left the (Communist) Party in 1939." Landman was hired by the Fund on July 28, 1955, three weeks after his appearance before the subcommittee, and served until November 1, 1955.³⁷

When asked if the hiring of Landman was "an affront to the American people," Hutchins replied: "Not at all. The Fifth Amendment is part of the Bill of Rights."³⁸

Another study of Communism by the Fund for the Republic was inaugurated in June 1953, when \$64,500 was appropriated for "a study of the Communist Record, including a bibliography digest, and microfilms." The chairman of this project was Arthur E. Sutherland, Professor of Law at Harvard University.³⁹ One of the results of this project was "a digest of the principal judicial and administrative hearings in which the Communist Party has been involved, together with a full bibliography."⁴⁰ However, Frederick Woltman, staff writer for the Scripps Howard newspapers, in his column for October 28, 1955, stated that the work was so ineptly done as to omit a vast collection and assortment of some of the most effective and illuminating books in existence on the anti-Communist side. He quoted Phillip Taft, of the Economics Department at Brown University, as having told Professor Sutherland: "You deserve a vote of thanks from the Communist Party."⁴¹

Some of the individuals who have been connected with the Fund for the Republic have records of affiliations. The May 31, 1955 Report of the Fund for the Republic listed Professor Robert E. Cushman as a consultant to the Fund.⁴² In 1934 Cushman was a contributing editor to the subversive periodical "New Theatre" which was the official organ of the League of Workers Theatres, a Com-

Footnotes at end of article.

munist project. According to the testimony of Walter S. Steele before the Special Committee on Un-American Activities in 1938, Cushman was identified as a member of the Advisory Committee of the Moscow University Summer School.⁴³

Professor Cushman sponsored a reunion dance under the auspices of the new Theatre League on April 18, 1941. This organization has been cited as a Communist front by the Special Committee on Un-American Activities and by the California Committee on Un-American Activities. In 1949, he was listed as a sponsor of the Scientific and Cultural Conference for World Peace, which was held in New York City under the auspices of the National Council of the Arts, Sciences, and Professions. Both organizations were labeled as subversive by the HCUA in 1951.⁴⁴

According to the Report of the Fund for the Republic, dated May 31, 1955, Walter Gellhorn of the Columbia University School of Law was given a fellowship or grant by the Fund for the Republic for "research assistance in preparing the 1956 Edward Douglass White lectures."⁴⁵ On Dec. 23, 1952, Gellhorn was identified as a member of the Communist Party by Louis F. Budenz, before the Select Committee to Investigate Tax-Exempt Foundations and Comparable Organizations.⁴⁶

In December 1954, the Fund for the Republic appropriated \$75,000 for "awards for outstanding original drama and documentary scripts on civil liberties themes."⁴⁷ According to an announcement which appeared in *Variety*, September 14, 1955, Julien Bryan was selected by the Fund as a script contest judge.⁴⁸

In 1933, Bryan was listed as an endorser of the National Committee of the Friends of the Soviet Union, which was a forerunner of the National Council of American-Soviet Friendship, Inc. In 1936, Bryan gave an illustrated lecture at Washington High School in New York, under the auspices of "Soviet Russia Today", which has been cited as a Communist-controlled publication.⁴⁹

That same year, the Washington Times editorially criticized the production of "Communist approved films" by the March of Time. The pictures were said to have been photographed in Russia by Julien Bryan, a professional lecturer on Soviet Russia, and a member of the National Committee of the Friends of the Soviet Union in 1933. He was an executive director of the International Film Foundation, Inc., which promoted film plays on Russia, and was listed as a "guide or tour conductor to the Soviet Union."⁵⁰ Julien Bryan was listed as a lecturer on behalf of the periodical *New Masses*, which has been officially cited as a "Communist periodical" by the U.S. Attorney General.⁵¹

In September 1954, the Fund for the Republic appropriated \$150,000 for a project entitled "Fear in Education", which was to be a study of attitudes of college and high school teachers. One of the members of the Advisory Committee which was set up on this project was Helen M. Lynd, Professor of Social Philosophy at Sarah Lawrence College.⁵² Helen Lynd has been affiliated with nine organizations that were cited as subversive.⁵³

The report of the Fund, dated May 31, 1955, stated that, in order to investigate problems concerning housing for minority groups, especially Negroes, the Fund had established a Commission of Race and Housing. Two of the members of this Commission were Gordon W. Allport, Professor of Psychology at Harvard University, and Charles S. Johnson, President of Fisk University.⁵⁴ Both of these men have been affiliated with subversive organizations.⁵⁵

Robert Maynard Hutchins, who became the President of the Fund for the Republic on

June 1, 1954,⁵⁶ had been named as a member of the Commission for Academic Freedom of the National Council of the Arts, Sciences and Professions in the September 13, 1948, issue (page 6) of the Communist newspaper, *Daily Worker*. He was listed as a sponsor of a conference held by the National Council of the Arts, Sciences, and Professions, October 9-10, 1948, in the leaflet "To Safeguard These Rights . . .", which was published by the Bureau on Academic Freedom of the National Council of the Arts, Sciences and Professions. The National Council of the Arts, Sciences, and Professions was cited as a Communist-front organization by the Committee on Un-American Activities in House Report No. 1954, April 26, 1950.⁵⁷

On April 21, 1949, Dr. Hutchins, testifying before the Broyles Commission, stated that it was not yet established that it was subversive to be a Communist.⁵⁸ He was reported in the *Daily Worker* for June 25, 1951, page 2, as one of those who opposed the Supreme Court decision affirming the conviction of the 11 Communist leaders in New York Federal Court on October 14, 1949.⁵⁹

In the May 31, 1955, Report of the Fund for the Republic, Hutchins made the following statement: "A political party in this country has been identified with the 'enemy'. Those associated with this party have therefore come under suspicion as an imminent danger to the state . . . The treatment accorded suspected persons in Congressional investigations and administrative hearings has not always been that contemplated by the Sixth Amendment. A kind of continuous propaganda and social pressure has been kept up that has tended to suppress conscientious non-conformity. Political advantage has accrued from claiming that others were indifferent to the threat of Communism."⁶⁰

In September 1954, the Fund for the Republic appropriated \$100,000 for a study of blacklisting in the motion picture, radio, and television industries.⁶¹ It was announced that this report would be published early in 1956.⁶² When the report came out, hundreds of pages of it were filled with material that was supposed to show how people in various fields of entertainment and people and organizations outside the entertainment field have, in effect, conspired to have people fired from their jobs because of Communist or Communist-front affiliations.⁶³

Hearings were held by the HCUA regarding the so-called blacklisting report. Commenting on the report, Francis E. Walter, Chairman of the HCUA, stated: "The facts revealed at the hearings have established that there is not and never has been in the entertainment industry any practice of depriving people of employment because of 'political affiliations or beliefs', but that a number of people who have been identified as hard-core members of the Communist conspiracy have been refused access to mass media of communications."

"This fact was established, not only by the examination in public session of John Cogley, who conducted the bogus investigation for the Fund for the Republic, but also by the testimony of the ablest leaders of nationwide anti-Communist organizations, including the American Legion and the Veterans of Foreign Wars. These leaders roundly condemned the Fund for the Republic report as a fraud and a tool for use by the Communists in preventing the immunization of Communist agents from the entertainment circles of this Nation."⁶⁴

The "Report on Blacklisting" by the Fund for the Republic was written by John Cogley and Michael Harrington. During the HCUA's 1956 investigation of the Fund's report, Harrington was identified as a member of the Young Socialist League, the apparent youth arm of the Marxist Independent Socialist

League. Harrington has also been listed as National Chairman of the Young Socialist League as of Dec. 1956.⁶⁵

Some of the other activities of the Fund for the Republic were a project involving the study of "extremist groups" and grants to such organizations as the Catholic Interracial Council of Chicago, the National Council of Churches, the Southern Regional Council, the NAACP Legal Defense and Education Fund, and the Anti-Defamation League of B'nai B'rith, as well as grants to various church bodies for work in "racial and cultural relations."⁶⁶ The Fund's "Bulletin" for June 1956 stated that almost one-third of the effort of the Fund had gone into "questions of race relations."

Among the organizations that have been concerned about the activities of the Fund for the Republic was the American Legion. On September 12, 1955, Seaborn P. Collins, the National commander of the American Legion, called on Legionnaires to "avoid any identification with activities sponsored by the Fund for the Republic." Collins stated: "I am issuing this alert to our membership because it appears that the Fund for the Republic, headed by Dr. Robert Maynard Hutchins, is threatening and may succeed in crippling the national security." He said he hoped "that American Legion elements at the State and local levels will have no truck with Fund for the Republic enterprises. If American Legion posts and departments (State organizations) are offered financial aid by the Hutchins group, to carry out the group's programs, I sincerely hope they will decline."⁶⁷

On November 17, 1955, J. Addington Wagner, who had succeeded Seaborn P. Collins as National Commander of the American Legion declared that "The American Legion formally charges that by its action under its current direction, the Fund for the Republic renders comfort to the enemies of America" and that the American Legion is "convinced that the Fund is doing evil work." He also stated that the Legion "believes that the Bureau of Internal Revenue should study the activities of the Fund, and determine whether it qualifies for tax-exempt status."⁶⁸

In its National Convention in Los Angeles, September 3-6, 1956, the American Legion commended the HCUA for its hearings on the Fund for the Republic urged Congress to appropriate sufficient funds for continuing the hearings, and recommended that the tax exemption status of the Fund be revoked.⁶⁹

Senator Joe McCarthy called on President Eisenhower to assume personal leadership in the fight against the destruction of the government security program, which he said was being gravely threatened. McCarthy mentioned, particularly, the Fund for the Republic. He said that the method used by the Fund in "evaluating" the security program was to compile alleged employee grievances collected from the attorneys of the people involved (with no information whatsoever on the government side of the story), and publicize these to prove that the security program is a political witch-hunt.⁷⁰

On November 18, 1955, Senator McCarthy said that he would demand, as soon as Congress convened, a thorough investigation of why the Fund for the Republic was granted the privilege of tax immunity. He stated: "It is unthinkable that the Fund for the Republic—along with other left-wing organizations propagating a soft view of Communism and a hard view of Congressional investigations of subversion—should be exempted from paying taxes on the grounds of educational work."⁷¹

As of 1956, the largest single grant ever awarded by the Fund for the Republic, a sum of \$445,000, was given to the Southern Regional Council, Inc.⁷² On March 8, 1957, speaking before the State of Louisiana Leg-

islative Committee on Segregation, Manning Johnson identified the Southern Regional Council as a "Southern Red front." He revealed that the Council was formed by James E. Jackson, a Southern organizer of the Communist Party.⁷³

In expressing a personal view on March 7, 1957, Meyer Kestnbaum, a Director of the Fund for the Republic, said that the U.S. "should make clear that Red China, under suitable conditions, can look forward to recognition and admittance to the United Nations." He said that he didn't think that there was any hope that the Nationalist leader, Chiang Kai-shek, would ever lead China again, and that "we are going to have to deal with the people who actually run China."⁷⁴

In a report put out by the Fund for the Republic, it was asserted that corporations and other organizations and institutions were a threat to American freedom in this country. The report suggested that a more powerful government was the answer to the threat.⁷⁵

In a speech before the American Friends Service Committee on October 11, 1958, Hallock Hoffman, secretary of the Fund for the Republic, suggested that the U.S. buy the islands of Matsu and Quemoy from the Nationalist Chinese and give them to "the Communist Chinese people." He said that the U.S. could use the money it was spending to maintain the 7th Fleet off the Chinese Coast to buy the islands. "Nobody would lose, everybody would win and we would even save money", he said. He called his suggestion "a fanciful illustration of creative ways to handle big problems."⁷⁶

On page 13 of the December 1957 issue of *The Saturday Review*, there appeared an advertisement entitled "Subversion in Dallas." This insertion was published by the American Traditions project, a "popular education" program of the Fund for the Republic, Inc. This article commented about objections to a picture drawn by artist Ben Shahn, which was included in a traveling exhibition entitled "Sports in Art." Prior to the scheduled showing of the collection at the Dallas (Texas) Museum of Fine Arts on March 25, 1956, the Dallas Patriotic Society demanded that the Dallas Art Association eliminate Shahn's picture and three others "on the ground that the artists who painted them were reported to have 'Communist or Communist-front records.'"

The trustees of the Dallas Art Association rejected the demand of the Dallas Patriotic Society. The Fund for the Republic's article commented that "the right to see was not impaired in Dallas" and declared that "the stand of the trustees of the Dallas Art Association is an example of the countless ways in which Americans are strengthening the tradition of fair play in their daily lives . . ."⁷⁷

According to the Fund's "Three-Year Report" dated May 31, 1956, page 62, Michael Harrington was employed as a journalist in connection with their American Traditions Project. According to the *Daily Worker* of May 24, 1957, page 4, Harrington was listed as National Chairman of the Young Socialist League.⁷⁸

After an article attacking the FBI appeared in the October 14, 1958 issue of *The Nation*, the Fund for the Republic requested permission to place in commercial airplanes several hundred copies of this article.⁷⁹

On March 26, 1958, Congressman Francis E. Walter, chairman of the HCUA, sent a letter to the Secretary of the Treasury questioning the tax-exempt status of the Fund for the Republic. This letter was based on a staff study by the HCUA, which stated in part that "while some projects of the Fund appear to

be objectively presented, the majority of its operations are based on biased investigations and result in findings which not only fail to present both sides of a given question, but, even further, actually conceal facts necessary for an honest understanding of the subject matter."⁸⁰

The HCUA report demonstrated that the Fund "engaged in propaganda and attempted to influence legislation in violation of Section 501(c)(3) of the Internal Revenue Code." Based upon HCUA findings, an investigation of the Fund was instituted by the Internal Revenue Service (IRS) of the Department of the Treasury. At the conclusion of the investigation, IRS agents "recommended that the Fund . . . be denied tax-exempt status" in violation of the aforementioned statute. After the Treasury Department had taken no action in the matter, the HCUA, on September 1, 1959, adopted a resolution urgently requesting the Secretary of the Treasury "to make public the facts developed as a result of the investigation of the Fund . . . as well as the findings and conclusions of the Department of the Treasury on the Fund . . ."⁸¹

Several days prior to the HCUA's action, the 41st National Convention of the American Legion passed a resolution urging the Secretary of the Treasury "to withdraw the tax exemption status" of this foundation.⁸²

The Center for the Study of Democratic Institutions was established by the Board of Directors of the Fund for the Republic and began operations in Santa Barbara, California, on September 15, 1959. The main headquarters of the Fund was moved from 60 East 42nd Street, New York City, to 2056 Eucalyptus Road, in Santa Barbara, California.⁸³ A pamphlet published by the Center for the Study of Democratic Institutions, stated that, although the Fund for the Republic maintained small offices in New York, Chicago, and Berkeley, its main program was now that of the Center, and that most of the members of the staff now lived in Santa Barbara.⁸⁴

This pamphlet also contains a list of various publications of the Center for the Study of Democratic Institutions. Among these publications is a book entitled "The Tradition of Freedom" which is advertised as "selections, edited by Milton Mayer, from the writings that shaped the concepts of freedom and justice in America."⁸⁵ According to the *Syracuse Post-Standard*, February 17, 1947, Milton Mayer told his audience: "We must haul down the American flag. And if I wanted to be vulgar and shocking I would go even farther and say haul it down, stomp on it, and spit on it."⁸⁶

In March 1960, a study entitled "The Churches and the Public", which had been conducted by the Center for the Study of Democratic Institutions, was published. It stated that American churches have a responsibility to speak out on political, social and moral issues, but should avoid using coercion to impose their sectarian views on the community.⁸⁷

A pamphlet produced by the Center for the Study of Democratic Institutions, entitled "A Community of Fear", contains (on page 34) the following statement: "There is rather clearly a military elite emerging in the United States which is dedicated to a position of perpetual hostility toward the Soviet Union and which wields enormous political as well as military power . . . Indeed, the military elite is clearly in a position to assume political command over the U.S. striking forces if there are serious signs of 'weakness' in U.S. foreign relations."⁸⁸

In February 1961, the Center for the Study of Democratic Institutions produced two pamphlets, the titles of which were "A World Without War", and "Permanent Peace", both of which were written by Walter Mills. In "A World Without War", Mills declares: "Many of the anti-Communist measures

taken in the name of 'internal security' during the 'McCarthy era' were really in the nature of tribal rites. If one can discern a purpose in them it was to cement the old social bonds, to organize the group, to re-establish common values in face of the anomie (sic) and atomization of the technological age."⁸⁹

In the introduction to "Permanent Peace", Mills states that "if the price of avoiding all-out thermonuclear war should prove to be acquiescence in the 'Communist domination of the world' or any other of the unpleasant imaginings against which we cling, futilely, to the war system to preserve us, it seems probable that the price will be paid." He also alleged that a notion such as that of "Communist domination of the world" is an elusive notion "inapplicable to the actual power relations which concern us."⁹⁰

On June 1, 1961, a dinner was given for Supreme Court Justice Hugo Black by the Fund for the Republic, Inc. Guest speakers at this dinner were Reinhold Niebuhr, vice-president emeritus of Union Theological Seminary, and Robert M. Hutchins, president of the Center for the Study of Democratic Institutions. Dr. Hutchins concluded his talk by saying: "We must revive and reconstruct the political community of the United States because the task before us is nothing less than the organization of the world political community."⁹¹

In January 1962, the Center for the Study of Democratic Institutions issued a bulletin entitled "Caught on the Horn of Plenty", which was written by W. H. Ferry, Vice-President of the Fund for the Republic, Inc. In this bulletin, Ferry claimed that "the individualism of the eighteenth and nineteenth centuries is a casualty of technology, as are old theories of private property. Government must intervene more and more in the nation's industrial life."⁹² He also alleged that "we shall have to find means, public or private of paying people to do no work."⁹³

On August 6, 1962, Mr. Ferry spoke at a Democratic conference in Seattle. In his speech, he accused J. Edgar Hoover of creating a false picture of Communism's strength, branding the picture "sententious poppycock." He termed Hoover's warnings of Communist subversion "a mischief-making tapestry of legend and illusion, if there ever was one" and referred to Hoover as "our official spy-swatter" and "the indubitable mandarin of anti-communism in the United States."⁹⁴ In this connection, it is interesting to note that in a television interview on May 4, 1958, which was subsidized by the Fund for the Republic as a contribution to "survival and freedom", Cyrus Eaton declared that there were no Communists in the United States "to speak of, except in the mind of those on the payroll of the FBI." Cyrus Eaton, Cleveland industrialist, is a friend of Khrushchev and a winner of the Lenin Peace Prize.⁹⁵

Reliable sources have stated that Scott Buchanan, staff consultant for the Center of Democratic Institutions, has visited Pughwash, Cyrus Eaton's mansion in Nova Scotia, to be entertained by Eaton as a house guest and intellectual companion.⁹⁶

In President Robert M. Hutchins' report on the Fund for the Republic and Center for the Study of Democratic Institutions, dated March 31, 1962, is found the following statement:

"In September 1961, the Center was host to five Soviet scientists, following their participation in the twelve-nation Conference on Science and World Affairs at Stowe, Vermont. The Santa Barbara meeting was arranged by Harrison Brown and Amron Katz of RAND corporation. For two days the possibilities and problems of disarmament and scientific cooperation were discussed, mainly

on the basis of papers prepared by Mr. Brown and by Walter Mills, of the staff of the Center . . .⁹⁷

In May 1963, a pamphlet entitled "The Elite and the Electorate" was published by the Center for the Study of Democratic Institutions. The pamphlet urged that the President be given expanded powers and that Congress be stripped of its authority to thwart him under the constitutional checks-and-balances system.⁹⁸

In a conference held at the University of Chicago Law School in January 1963, Robert M. Hutchins, President of the Fund for the Republic, Inc., contended that federal aid to education was inevitable and that no concern for religious belief should interfere with this "overriding public interest."⁹⁹

Paul Jacobs, trade union expert for the Center for the Study of Democratic Institutions, was a defense witness in a libel suit for former Washington State Representative John Goldmark. In his testimony, Jacobs stated that a Communist workers school which he and Mrs. Goldmark attended "was more of an adult education center in a way."¹⁰⁰

In May 1964, a conference was held under the auspices of the Center for the Study of Democratic Institutions at the Johnson Foundation Conference Center in Wing-spread, Wisconsin. At this conference, influential voices were raised in favor of a world government. Typical of these was that of Professor Hans J. Morgenthau of the University of Chicago, who stated, "Let's face the issue squarely. Nuclear weapons have made the nation-state obsolete—as obsolete as the steam engine made feudalism."¹⁰¹ It was, in fact, generally agreed by the participants in the conference that "absolute national sovereignty is out of step with the times" and that "there is a need for widened public international authority."¹⁰²

Three individuals from Communist countries participated in the conference. They were Dr. Marian Dobrosielski, Counselor of the Polish Embassy, Washington, D.C.; Georgi Kornienko, Minister Counselor of the Soviet Embassy, Washington, D.C.; and Josip Presburger, Counselor of the Yugoslav Embassy, Washington, D.C.¹⁰³

An employee of the Center for the Study of Democratic Institutions (Fund for the Republic) has been whipping up opposition to U.S. efforts to halt Communist aggression in Vietnam. Robert Scheer, who performed similar work on behalf of Castrophiles before and during the Cuban missile crisis, was scheduled to give a talk in Berkeley, California, on June 5, 1964, under sponsorship of the Women for Peace organization. On May 14, 1964, Scheer delivered the introduction to a University of California showing of a Communist film on Vietnam which was seized in New York by Federal authorities. He has also announced plans for a book on Vietnam.¹⁰⁴

A former executive committee member of the University of California Fair Play for Cuba Committee, Scheer paid an unauthorized visit to Cuba in 1960. Along with Ken Cloke, University of California student and son of two identified Communists, Scheer was one of the speakers at an antiblockade rally at the University of California during the Cuban missile threat. With Maurice Zeitlin, a former University of California student and an ardent Castroite, Scheer has written a book entitled "Cuba: Tragedy in our Hemisphere". Its thesis is that "a little U.S. love and understanding would have prevented Castro's growing up to be a Communist bad boy."¹⁰⁵

An article in TOCSIN, June 8, 1964, stated that Scheer now headed a group called the Opposition, which had recently launched a left-wing institution called the San Francisco New School.¹⁰⁶

At a dinner which was given in Los Angeles on July 25, 1964, by the Center for the

Study of Democratic Institutions, Associate Supreme Court Justice William O. Douglas was a speaker. In his speech, he alleged that "the psychology of fear and apprehension produces the radical right . . ."¹⁰⁷

On February 18, 1964, a radio (KPFA, Berkeley, Cal.) broadcast featuring Chicago law professor Harry Kalven, Jr., explored the theory that sit-ins could be legally justified under the First Amendment. The program, which had been produced by Florence Mischel at the Center for the Study of Democratic Institutions, was scheduled to be re-broadcast August 31, 1964.¹⁰⁸

Commenting on this theory, Ben Levine, columnist for the Worker, stated, on June 21, 1964, "such an argument could, given the right circumstances, put a people's revolution under the protection of the First Amendment."¹⁰⁹

A conference entitled the International Convocation to Examine the Requirements of Peace, which was sponsored by the Center for the Study of Democratic Institutions, was held in New York City on February 18-20, 1965. The purpose of the meeting was to scrutinize Pacem in Terris (Peace on Earth), an encyclical of Pope John XXIII. At this convocation, addresses were given by Vice-President Hubert Humphrey, U.N. Secretary General U Thant, Chief Justice Earl Warren, Mayor Willy Brandt of West Berlin, historian Arnold Toynbee, and scientists Linus Pauling. Individuals from the Soviet Union and from Soviet bloc countries were among those attending the convocation.¹¹⁰

Among those invited to take part in panel debates were James Farmer of CORE; Dagmar Wilson, Women Strike for Peace founder, who was under indictment for contempt of Congress; James G. Patton, president of the National Farmers Union; H. Stuart Hughes, Harvard professor and "peace" candidate for Congress; Norman Cousins of SANE; Bayard Rustin, executive-secretary of the War Resisters League and organizer of the 1963 March on Washington; and A. J. Muste of the pacifist Fellowship of Reconciliation.¹¹¹

According to the Worker, the Center for the Study of Democratic Institutions invited Gus Hall, Communist Party boss "and others prominent in the American Left" in connection with this conference.¹¹²

A campaign to mobilize the American clergy in support of the peace movement will be sponsored by the Fellowship of Reconciliation, a radical pacifist organization, in cooperation with the Center for the Study of Democratic Institutions. On August 29, 1965, Frank H. Kelly, a vice-president of the Center, announced that the campaign would include more than 100 conferences in various cities to discuss the moral and technological implications of the requirements of world peace.¹¹³

An advertising leaflet announcing these conferences indicated that they would take place in 1965, 1966, and 1967. The theme of the conference is to be "Peace on Earth: Moral and Technological Implications." The leaflet also stated that a gift of \$100,000 for the convocations would be presented to the Fellowship of Reconciliation upon the contingency of its providing funds to match this amount.¹¹⁴

A bulletin of the Fellowship of Reconciliation announced that the program had been made possible "through the generosity of Irving F. Laucks, Santa Barbara, California."¹¹⁵ An advertising leaflet announcing the "International Convocation on the Pacem in Terris," which was held in New York City, February 18-20, 1965, listed Irving F. Laucks as a consultant to the Center for the Study of Democratic Institutions.¹¹⁶

An editorial in the Chicago Tribune, commenting on the program which is to be sponsored by the Fellowship of Reconciliation and the Center for the Study of Democratic Institutions, made the following statement:

"Any seminars promoted by these outfits will certainly preach the wickedness of the United States and the nobility of the Viet Cong and North Vietnamese Communists. The Hutchins group has already distributed a screed entitled 'How the United States Got Involved in Viet Nam,' which says that American anti-communism is just plain fascism and no more respectable than communism itself."¹¹⁷

GUIDE TO TUMULT IN AMERICA: A REVIEW OF "STUDENTS AND SOCIETY"
(By Alice Widener)

(NOTE.—A report by the Fund for the Republic's Center for the Study of Democratic Institutions on its three day conference "Students and Society" held at the Center, Santa Barbara, California, late in August 1967.)

Are you worried about the violence, tumult, immorality and revolutionary activism on the American campus?

Are you at a loss to understand and explain the link between revolutionary activity on campus and in city streets as demonstrated in riots, illegal civil disobedience, defiance of our laws and disaffection from our way of life?

Do you feel in need of documentation to support your arguments against these activities? Do you want to have black-on-white proof that your concern is well based?

If so, you need look no further for substantiation of your worst fears than the 64-page document "Students and Society" issued December 1967 by the Fund for the Republic's Center for the Study of Democratic Institutions at Santa Barbara, California. The report carries the major part of discussions that took place at the Center during its three-day conference late last August on "Students and Society." In a foreword to the document, W. H. Ferry, vice president of the Center, says that the discussions might have been called "The Worried Citizen's Guide to Tumult on the Campus."

That would be a most accurate title. But Mr. Ferry's concept of the worried citizen is far different from that of most Americans. The "mood" of the Funded conference, he says, was "hammering discontent." The participants, he explains, "look on the United States and find it abounding in hopeless contradictions, hypocrisy, and wrongdoing. They see no benevolence in the works of the nation outside its borders, only a new imperialism that takes vicious and irrational form in Vietnam and shows itself everywhere else only as the selfish exploitation of human beings."

That is quite an indictment. Our declared enemies could not say worse.

Year after year, it seems the mood of conferences financed and sponsored by the Center at Santa Barbara in hot summertime grows uglier and uglier, more and more threatening. It bodes ill for our country.

It was in August 1965, according to an article by Paul White in the *Houston Post*, that Julian Bond, Simon Casady, Stokely Carmichael and a host of militants assembled "at the facilities of the Center for the Study of Democratic Institutions" to found the National Conference for New Politics which, in September 1967, held a Communist-Black Power dominated conference in Chicago that made nationwide headlines for its revolutionary radicalism and disgracefully undemocratic procedures.

It was on August 24, 1967, that Tom O'Brien, staff writer for the *Santa Barbara News-Press*, reported under the headline "University Destruction" that "A master plan of how best to destroy the American university system as it is today seemed to be the goal as a conference of militant student leaders and ex-students opened yesterday at the Center for the Study of Democratic Institutions here. The participants were de-

scribed by the Center as all having been prominent in demonstrations and movements within their own colleges and universities."

Mr. O'Brien further reported, "Devereaux Kennedy, student body president at Washington University, St. Louis, Mo., called for outright revolution and the overthrow of the United States Government. He advocated terrorism on such a scale that it would 'demoralize and castrate America.'"

Now in February 1968, we have not yet witnessed the full workings of the master plan. But most of its strategy and tactics can be found in the Center's report on the conference "Students and Society." The Center publishes its documents, described as "occasional papers," with disclaimers of responsibility for the contents. Yet the foreword by W. H. Ferry to the December 1967 report states:

"Themes of the meeting and arrangements for it were the responsibility of four Junior Fellows of the Center, who had spent the summer in residence: Frederick Richman; Jeffrey Elman; Stephen Saltonstall; and Daniel Sisson.

"This is an edited record of the proceedings. It also contains extracts from papers presented by the Junior Fellows that sought to expose the main issues.

"After nine hours of discussion restricted to the young members of the conference, the Center's Senior Fellows—in attendance throughout—joined the conversation for a half-day.

"The unedited transcript, including formal papers, runs to some 75,000 words. This publication contains approximately two-thirds that number. The effort has been to leave substance, tone, and style unimpaired."

Mr. Ferry concludes his foreword with the following acknowledgement: "The conference on Students and Society was made possible by a generous contribution from S. Herbert Meller of New York City." Inquiry at the Fund for the Republic's offices in New York City elicited the information that Mr. Meller is an investment banker with offices at One Chase Manhattan Plaza.

The official Center list of student conference participants, including Junior Fellows identified with an asterisk, is as follows: Jeffrey Alexander, Harvard *Crimson*, Harvard University.

Anthony Andalman, Editor, *The Worrier*, University High School, Los Angeles.

Frank Bardacke, University of California, Berkeley.

John Blood, Student Body President, Indiana University.

Ewart F. Brown, Student Body President, Howard University.

Kristin G. Cleage, Wayne State University.

* Jeffrey Elman, Harvard University.

Michael Goldfield, Radical Education Project, Ann Arbor, Michigan.

Michael Higgins, Claremont College.

Devereaux Kennedy, Student Body President, Washington University.

Sheila Langdon, Marlboro College.

Michael Lerner, Executive Committee, Free Speech Movement, University of California, Berkeley.

Bruce Levine, Editor, *Thought*, Valley Stream High School, New York.

Peter Lyman, Student Body President, Stanford University.

Ray Mungo, Boston University.

Robert Pardun, Secretary for Internal Education, Students for a Democratic Society, Chicago, Illinois.

Mary Quinn, Mount Mercy College.

* Frederick Richman, New York University.

* Stephen Saltonstall, Yale University.

David Seeley, University of California, Santa Barbara.

* Daniel Sisson, Claremont College.

Stanley Wise, Executive Secretary, Student Nonviolent Coordinating Committee, Atlanta, Georgia.

The "Junior Fellows" also are listed as orga-

nizers of the conference. The Center Senior Fellows who took part in the final discussion were: Robert M. Hutchins; Stringfellow Barr; Scott Buchanan; John R. Seeley; James A. Pike (formerly Bishop Pike); Rexford G. Tugwell; Harvey Wheeler, Hallock Hoffman; W. H. Ferry; and John Wilkinson.

FIRST SESSION

The first session of "Students and Society" opened with presentation of a paper "The Disenfranchised Majority" by Junior Fellow Frederick Richman. He states that "the generation gap" today is such that society ought to adapt itself to youth who are "largely disenfranchised in terms of traditional political power" yet desirous of "social control" over the conditions affecting their lives. "Students today," he writes, "tend to dismiss all people over 30, including the older radicals from the 1930's."

The last part of his statement is not true. Many radical students of today are hand-in-hand with such older members of the Communist Party, U.S.A. as Herbert Aptheker, Arnold Johnson, Claude Lightfoot and Richard Criley. The latter three played key roles in the National Conference for New Politics meeting in Chicago last September.

What Richman wants is the politicalization of the university. "The reform I propose," he writes, "is that the university become a political institution." He wants "political activism" to become "the central educational experience."

Robert M. Hutchins, president of the Center, asked Richman several challenging questions, among which was "How do you keep from growing old?"

Richman replied, "The main contention in my paper is that youth is now in a position to exert considerable power. . . . The police action against the teenyboppers on Sunset Strip in Los Angeles was as significant as the student strikes at Berkeley. Both incidents reflect a society that oppresses its youth. . . . However, if we are going to achieve a revolution consciously carried forth by American youth, that youth will have to be organized as youth and given a new position in America. . . ."

Michael Lerner, of the Free Speech Movement at Berkeley, said it would be "very dangerous" for students to gain more control over the university without their struggling for control "as part of a larger struggle of people from the ghetto and abroad for control over their institutions." Lerner said he doesn't want to help focus the growing energy of students "into the main stream" of society. He said he doesn't want students' alienation from society to be transformed "into alignment with a lousy, corrupt society." He called for permanent forms of alienation even "after the revolution," and said the student power struggle must be "part of the struggle going on in the ghetto and Vietnam and in Latin America" and that student radicals should try to "bring people to that awareness."

Devereaux Kennedy said that if student power at universities were exerted only for "reformists' reforms" then it could be a reactionary force; he wants student power to demand "revolutionary reforms" that can't be met within the logic of the existing American system.

Jeffrey Elman of Harvard University said students should have the ability "to determine how the university is going to be run."

Daniel Sisson of Claremont College said the real problem is how to "activate" the students.

Michael Lerner declared, "National liberation struggles have become the order of the day."

John Blood, Peter Lyman, and Frank Bardacke have other ideas, arguing for less directly political and perhaps more educational activism in the universities. Devereaux Kennedy argued that politics are implicit "in the way the university is structured. You

can't change, for instance, the fact that Boards of Regents or Boards of Trustees run the universities and that they are all businessmen. As far as I am concerned they have no business at all to do with the universities. . . ."

The discussion bogged down for a while into argument over whether students should revolutionize the university first, or join in the movement to revolutionize all society in general.

Michael Goldfield of the Students for a Democratic Society's Radical Education Project charged that at the University of Chicago things are "tied up to the Daley political machine in the city, to the college structure in Chicago, to the corporate structure, and particularly to the military."

After more debate, Ewart Brown of Howard University said, "I think we agree that the revolution is necessary and that you don't conduct a revolution by attacking the strongest enemy first. You take care of your business at home first, and then you move abroad. Thus, we must make the university the home of the revolution. . . ."

Stanley Wise of Snick said "Youth must view themselves as *being* the government and not as petitioning the government." He defined youth as "anything from twelve up." He then defined present day education as "counter-revolutionary." He charged that educational institutions today are training individuals "in an art called criminology" whose object is to prevent poor people from getting the food and clothing they need.

Stephen Saltonstall called on students to be "the instruments of change." The kind of change he wants is a "strategy of disruption," which he elucidated in a paper presented at the third conference session. After discussion by Cleage, Higgins and Lyman, Robert Pardun of Students for a Democratic Society said, "It is important to understand, if we are going to consider ourselves revolutionaries in any sense of the word, that revolution is never made out of empathy for other people. Revolution comes out of your guts. . . ."

Devereaux Kennedy attacked the whole idea of the "corporate structure" of the university and alleged it is undemocratic. He said that students can, if they work hard enough "get women in their rooms and get control of the regulations over their conduct. . . ."

SECOND SESSION

A paper presented by Jeffrey Elman of Harvard University was discussed at the second session of the Students and Society conference at the Fund for the Republic's Center at Santa Barbara. "The university today is sick," declared Elman. He charged that the position of students is one of "second-class citizenship." He praised past events at Berkeley and said, "Many other campuses are responding positively to the Berkeley example." He too demanded "sole control" by students over their behavior, and he pooched the university administration's past claim at Berkeley that it acts *in loco parentis*. Students, said Elman, should determine "their own social code."

There was discussion of elite and non-elite universities, of big and small ones, and general agreement that all are undemocratic. Devereaux Kennedy said that David Seeley of the University of California at Santa Barbara and other students had been using the word "revolution" loosely and mumbling it under their breath. "I'm going to say loudly and explicitly what I mean by revolution," said Kennedy. "What I mean by revolution is overthrowing the American government and American imperialism and installing some sort of decentralized power in this country."

The student body president of Washington University at St. Louis, Devereaux Kennedy, went on to say, "I'll tell you the steps that I think will be needed. First of all,

starting up fifty Vietnams in Third World countries. This is going to come about by black rebellions in our cities joined by some white people. People in universities can do a number of things to help it. They have access to money and they can give these people guns, which I think they should do. They can engage in acts of terrorism and sabotage outside the ghetto. Negro people have trouble getting out because they cordoned those areas off, but white activists can go outside, and they can blow things up and I think they should.

"But that's just a minor part of it. The major thing student activists can do while all this is going on—I mean completely demoralizing and castrating America—is to give people a vision of something other than what they have now. They can give them a vision of people living as whole men, not as engineers for Monsanto or McDonnell Aircraft. . . . They can show people what America is capable of if it ends imperialism and installs a different kind of system, where, for example, people only have to work two hours a day and might spend twenty years in and out of the universities learning a few things. . . ."

At this point in the published report on the conference "Students and Society" held at the Center at Santa Barbara, last summer, there is no evidence in the text that any Senior Fellow interrupted Devereaux Kennedy's remarks, or interposed any objection. Nor are there any appended remarks or comments by Senior Fellows at the end of the text on the Second Session. What Devereaux Kennedy said is presented without even a whisper of demurrer by allegedly more mature intellectuals.

The Fund for the Republic's Center for the Study of Democratic Institutions enjoys tax exemption granted by our Federal government. Under the existing Federal terms for tax-exemption, can Devereaux Kennedy's remarks be legitimately regarded as "educational"? Were the plottings of Mafia hoods at the notorious Appalachia meeting in New York any more inimical to our society?

In commenting on Kennedy's outburst, Frank Bardacke talked about "the life of the mind" at universities and said its present function is to teach students how to behave in large organizations. He said, "I think the immediate goal of the student movement on the university campus is to teach people how to misbehave in large organizations, how to misbehave creatively. . . . It's no accident that recruits for the New Left always come from the best students on the campus, the ones who are really interested in getting an education. I would like to hear less talk about revolution and more thought about what at the moment we can actually achieve." Bardacke charged that New Left impatience for immediate results led to defections from their group by students who became hippies. "Sure, you want revolution," he agreed, "sure, you want to change this country fundamentally—absolutely agreed. You have to have that long-range goal, but you also have to think about what actually can be achieved in our own lifetimes. . . ."

Devereaux Kennedy objected that Bardacke's statements about the New Left were inaccurate. He said that Students for a Democratic Society (SDS) started out with three or four thousand members and now has 30,000. He said that when they found out they couldn't stop the Vietnam War and take care of other social problems, they got a thing called the Radical Education Project and the New Left Notes, "which are probably the most sophisticated sociology coming out of the United States today." He said the New Left had not become hippie, that it had become "revolutionary," and that there is now more revolutionary talk and action in SDS than when it was founded in 1962.

Stanley Wise of SNICK said he didn't think revolution would come in our country for at least 75 to 100 years. "I think I'll see controlled, very sophisticated guerrilla activity before I die," he said, "and I will possibly see sophisticated sabotage before I die. But I don't think I'll see revolution."

He advocated "positive non-violent activity, if for no other reason than that it can disrupt the life-line institutions in this country." He announced, "The process has begun."

Jeffrey Alexander of Harvard said that a good way to accomplish students' objectives "is to try to organize a boycott of classes, which is about the only way to bring a university to a halt. And it's the one thing students can do."

There was more talk in the second session of the conference on "Students and Society" at the Center for the Study of Democratic Institutions, talk about who would furnish plans for a new society "once the country is on its knees," and also talk about constructive and destructive revolutionary and social programs. In conclusion, there was present a paper by Michael Lerner which called for student power through students' joining in "radical struggles" and using their intellectual training "as their major weapon in the struggle."

THIRD SESSION

At the outset of the third conference session, Stephen Saltonstall, a Yale student, presented a paper entitled "Toward a Strategy of Disruption." His remarks were so inflammatory that some of them found their way into the press which quoted them in shocked dismay; but few editors expected, one would suspect, that a tax-exempt, allegedly respectable organization would later publish Saltonstall's remarks for widespread distribution.

Saltonstall's thesis is that "students are capable of sabotaging the society with disruption." He says, "Our contemporaries in the ghettos are way ahead of us. They have demonstrated that a small, concentrated minority group can significantly disrupt American society. . . . The universities, populated by a large, exploited, powerless mass, are the middle-class-ghettos. With a little effort, they too can be made to explode."

Stephen Saltonstall went on to say students could "immobilize the R.O.T.C. on the campuses"; could stop defense research from being carried out at universities. "The introduction of a small quantity of LSD in only five or six government department coffee-urns might be a highly effective tactic."

It might be so effective as to be murderous! The Commissioner of Narcotics Control in New York City and also the medical authorities say that if a person suffering from a heart condition, or diabetes, or any one of several other diseases, were to take LSD unknowingly, the effect might be exceedingly harmful and even fatal.

How can any responsible source be a party to publishing such wicked tripe as Stephen Saltonstall's blabbering and then subsidize its distribution to students, educational, church and civic groups? How could any organization pretending to be interested in democracy publish without denunciation such a criminal suggestion as Saltonstall's? Authorities in the Justice Department say there are strict Federal laws against tampering with government property; a government coffee-urn or drinking fountain is protected from willful contamination by those laws. Supreme Court Justice William O. Douglas is an official consultant to the Center for the Study of Democratic Institutions which published Saltonstall's LSD suggestion in the Center's document "Students and Society." Does Justice Douglas believe that suggestions for possibly murderous tampering with government property comes under the heading of free speech and is protected by the First Amendment?

There is no limit, it seems to young Salton-

stall's creative imagination for malicious disruption. Nor does it seem, is there any limit to the kind of malice against our nation that the Fund for the Republic's Center at Santa Barbara will give voice to, claiming it belongs under the decent heading of "intellectual dialogue." For example: Stephen Saltonstall suggests that students "overuse the bureaucracy" of the university through making appointments "by the score" with assistants to deans and registrars "just for the hell of it." He suggests that "an inordinate number of library books can be checked out" to disrupt the university. He suggests "IBM cards can be bent so they will be rejected by computers."

To disrupt the economy, Saltonstall suggests that "small bits of sabotage by individuals—the sending of business reply cards through the mails, or overpaying one's phone bill by a penny—would have a decided cumulative effect."

In a final burst of destructiveness, Saltonstall writes the following exhortation which is put into print by the Center at Santa Barbara: "We have the power to bring the American Juggernaut to a halt. Let us paralyze the university; let us ball up the economy. One day soon, Congressmen and Presidents may petition us not we them. Let us therefore disrupt. We have nothing to lose."

In the discussion following presentation of Saltonstall's strategy, several conferees brought up the question of what students would do with power once they achieved it. David Seeley and Devereaux Kennedy were concerned with parietal hours at the university. Seeley objected that due to university regulations "you can't make love when you want—you've got to wait." Kennedy said students should inform university authorities "I ought to have my own say over when I have whom in my dorm."

During the Third Session, Michael Goldfield of the SDS Radical Education Project related in detail how radical anti-draft activity was plotted and carried out at the University of Chicago. What Goldfield said should be studied by every responsible patriotic school and university administrator in our nation for his tale is an extremely concise and clear exposition of revolutionary technique:

"When the decision was made at Chicago that class ranks would be turned in to the draft board, a group of people in the local SDS decided that the undergraduates in the university would be really up tight about the draft. This is a gut issue. So we picked this issue and went to the administration and demanded that ranking be ended."

Goldfield describes how the SDS agitators went "through channels" to the university administration merely as a way of "educating" the student body. Then he describes how the agitators drew up and circulated a petition, got signatures of faculty and students "just dealing with that one issue," and then organized a meeting of the petitioners. "At that point," relates Goldfield, "people demanded that if the administration didn't come through in the next two weeks they would take over the administration building." Goldfield went on to explain, "If you keep as your central demand that students have a right to control everything involving them, that this demand isn't negotiable and you'll disrupt until they give in, then you have a certain amount of leverage. What's important however small the issue you start with, is to keep everything centered on the question of control. That's the way you educate people as to how the university works and to how power reacts to demands which are central to the vested interests in the university. If you are dealing with a very reactionary institution, you have to plan your dealings with it very strategically."

At the end of the Center's edited report on the third session of the conference "Students and Society," there are four brief com-

ments by Senior Fellows of the Center. Among them is one by Hallock Hoffman who was its Secretary and Treasurer for many years and is now listed as chairman of the board of the tax-exempt Pacifica Foundation which subsidizes the very controversial radio station WBAI in San Francisco and New York. (The radical Students for a Democratic Society announced this month that its New York City regional group will be given a 15-minute weekly program by WBAI-FM on Wednesday evenings at seven o'clock. This is not surprising in view of Senior Fellow Hallock Hoffman's comments on Junior Fellow Stephen Saltonstall's paper and the ensuing discussion that took place at the Center last August.) Mr. Hoffman said:

"You have to make some reasonable connection between the means you have chosen and the ends you seek. Suppose you and a variety of other oppressed [sic] minorities succeed in causing coercion and sabotage against property of the kind you describe. Don't you have to show how this will forward your interest in stopping the war or bringing about a more just, more humane society?"

Mr. Hoffman's acceptance of Mr. Stephen Saltonstall of Yale and Mr. Jeffrey Alexander of Harvard as members of an "oppressed minority" has to be seen in print to be believed. What adult sycophancy for juvenile intellectual delinquency!

FOURTH SESSION

A paper entitled "The Dialogue: Youth and Society" was presented by Daniel Sisson of Claremont College as opener for the fourth session of the Center conference at Santa Barbara. Its tenor may be judged by this Sissonism: "Youth everywhere are rejecting the institutions that have dominated their lives, while the adults are demanding ever more loudly that they had better 'come around.' Simply taking one example—the adults' attitude toward drugs—it is not implausible to estimate that by 1980, 85 per cent of the young will be felons while the other 15 per cent will be Fascists, trained to keep them under control."

Sisson is against violence and for "dialogue." He wants peaceful dialogue to lay the groundwork for peaceful revolution. He was a "soft" socialist among the hard-nosed activists at the Center conference.

An accurate summary of the differences in revolutionary opinion among the Junior Fellows and "student" participants in the Center conference of last August appears in the foreword by W. H. Ferry. He writes:

"Two divisions appear early in the proceedings, never to be reconciled. The first is between the radicals—those prescribing a clean sweep of corrupt American institutions and their replacement by others formed on democratic and compassionate lines—and the reformists—those believing that all needed improvements, however imperative, can be made from within society's present structures."

There is nothing at all new in this difference of opinion, which is as old as socialism itself, as old as the split early in our century between the Second and Third International, as old as the split between the Mensheviks and Bolsheviks, as old as the split between Kerensky and Lenin, as old as the split between Norman Thomas and the Communist Party, U.S.A.

Only the split isn't a lasting or effective or irrevocable one, because the fundamental objective of the Leftists is the same—the destruction of capitalism and the middle class—and whenever it is expedient for them to do so, the reformist socialists and the revolutionary socialists join forces. Historically, the reformists and violent revolutionaries have worked together toward one goal; it is only when they approach its final achievement that reformists and revolutionaries disagree on how to deliver the death blow. At that moment, the reformists shrink

away from use of unlimited violence. But it is too late for them to oppose the violent revolutionaries, so the reformists are thrust aside or liquidated and the merciless "gut fighters" take over.

In reply to Daniel Sisson's paper, Michael Lerner of the Berkeley Free Speech Movement said:

"Nobody here with any sort of sanity is claiming that the revolution that will change this country is a student revolution. What we are claiming is that students have a role to play in that revolution. . . . Nobody is saying that the students themselves or the radical parts of the student body are going to make a revolution, but they can add something to a revolution of oppressed people in this country, which is part of the revolution of people over the world."

Devereaux Kennedy said: "What we have to do, first of all, is to define what we think the enemy is. There's no doubt in my mind about the enemy. It's monopoly capitalism and imperialism. . . ."

That monopoly capitalism and imperialism are "the enemy" is what Karl Marx, Lenin, Stalin, Khrushchev, Kossygin, Mao Tse Tung, Fidel Castro, Gus Hall and every other Communist has said. Communism is the theory that capitalism is by nature monopolistic and that the most advanced stage of capitalism is imperialism.

Devereaux Kennedy explained:

"When I talk about revolution, that's what I mean. I'm not talking about eliminating dialogue; I'm saying that you have to place your dialogue within this context of events. I see this process coming a lot quicker than our friend from SNCC see it. I don't think it's going to take seventy-five years. I think you are going to see chaos in the United States and in the world within our lifetime, in the next twenty-five years."

The discussion of the fourth session of the Students and Society conference at the Center for the Study of Democratic Institutions last August is followed in the Center's report by a paper on the student press by Raymond Mungo of Boston University. He accuses the American press of perpetuating myths—"The Great Myth, the Camelot legend of America," and secondary myths, "such as God, the Flag, family, the Pot Menace, the Unpunctured Hymen, the Value of the American Dollar, and the Importance of an Ordered Life." Mungo says that "working with an established framework of student newspaper and radio stations. . . the radical on campus has more power than in an SDS office or student-government sham post." He calls for assumption of "international responsibilities" by the student press and radio "far beyond merely relating to the war in Vietnam" and he says the student media must be prepared to send its representatives around the world to produce an international journalism that is "removed from ties with the American economic system. Students must come to view their relationship with what is happening in Cuba, in China, in North Vietnam, and in the fascist and racist-by-policy states—South Africa, Greece, Spain. The effective way to overcome their national consciousness and loyalties is to replace it with an international one. . . ."

A footnote to the Mungo paper states that the author was unable, at the last moment, to take part in the conference at Santa Barbara.

FIFTH SESSION

After hours of listening to the Junior Fellows and their age-and-ideological brothers, the Senior Fellows of the Center for the Study of Democratic Institutions got their chance to speak up at the fifth and final session of the conference "Students and Society." The first to take the floor was President Robert M. Hutchins. His main criticism of the students' moral and intellectual position was, "I didn't hear anyone give an intelligible idea of what he thought the uni-

versity ought to be, or what he thought education was. One of the things I expected to learn from the conference was what kind of university, what kind of education, you wanted."

Mr. Hutchins certainly seems to know what kind of university and what kind of education he himself doesn't want. "During the years that I have lived in California," he said, "nobody has said anything about the University of California in its behalf except that it has a great deal of money, a great deal of acreage, a great many students, a lot of Nobel Prize winners, and sometimes some good football players."

Mr. Hutchins went on:

"The question about your rhetorical position and your strategy runs something like this. A real crime has been committed against the younger generation and that is that it can't get educated. And this is something that you know something about. You don't know any more about monopoly capitalism or the war in Vietnam than your elders, but you do know something about the difficulties of getting educated in the United States. If I were seeking to bring the university to a halt, I would try to bring it to a halt on educational grounds. . . . If you change the university you change society."

In his commentary, President Hutchins said not a single word in defense or praise of our country, its economic system, its way of life. He let stand uncorrected every libel against the American people and their government.

So did Stringfellow Barr. His concern was that the students didn't express what they would like to have happen to their minds. "I was a little shocked at this excitement about power without any clear idea that I was able to apprehend of your purpose in getting power," he said. "We have been treated to a pretty heavy dose in the last few years of the uses of power; and I get the impression from the White House and the military that early in the Vietnamese engagement, for instance, we were going to give the world an example of how power can conclusively solve problems. . . ."

Scott Buchanan said the students were talking about power "in ways that make me want to spank you. . . . The only purpose that I can see that you connect to this power, and which might make it substantial, is a form of socialism, a very primitive form of socialism. All your Marxian talk about it is superficial and comes to one sharp point—and that is that you are very sure that the people who now have the power that you are going to take will not give it up unless you hit them over the head. This is a Marxian theme that has shifted a good deal in the last few years. It seems to me that you ought to revise some of your thoughts accordingly."

Mr. Buchanan continued, "The thing that makes me weep, almost literally, is the impression I get that you, as a generation, have never had any good teaching." Mr. Buchanan's main concern was with the quality of teaching, which he wants to see regenerated. "This is what's missing; and you have confirmed this loss beyond all my expectations here this week."

John R. Seeley, Dean and Director of Program at the Center, put forth what he described as "liberal" objections to what the students advocated because they had not described "a going model of how it might be when all tyrannies are finally relegated to the dustbin of history." He said, "What can I recommend? Not that you abate your revolutionary fervor or extend your revolutionary timetable. Not even that this revolution be carried forward in the spirit of the original Free Speech Movement. . . ."

Praising the original movement, Mr. Seeley described it as "a strange mix of near hippyism, good humor, and standard high-mindedness and revolutionary fervor." Evi-

dently, he is enamored of the hippies. He asked Junior Fellows and fellow conferees, "Should you turn so lightly away from an alternative way? One that could also bring down the managed, exploitative, imperialist society by withdrawal of what it depends upon: brains, bodies, and the willingness to manipulate things and people?" Mr. Seeley said it is not yet clear that the radicals can attract greater numbers to their cause than the hippies can, and he suggested to the radicals "that at least, while the warring armies march and countermarch, lay waste the world they cannot otherwise save, they reserve a special place (like the medieval monasteries) for the hippies—a special place not just geographic but honorific."

James Pike, formerly Bishop Pike, said not a single word of reproach concerning the conferees' remarks. His only point was how does one keep a continuity of values between that which is to come and that which most people would agree ought to come "and at the same time get things the way they ought to be?"

Rexford Tugwell said "I have some news for my younger colleagues here—there isn't going to be any revolution. I don't think any of you really expect that there will be one. There will be a kind of revolution, but it won't be one you are talking about." He said he had seen many changes in his lifetime and that American history would change "even more fundamentally" in the next two decades. He said Americans will get mastery of the technology "that at the moment seems to have got the best of us" and that, "One of you may become President of the United States some day, and then, I assure you, you will take a very different view of revolution."

Mr. Tugwell's statement provoked an outburst from the next speaker, Senior Fellow Harvey Wheeler, co-author of the novel "Fall-Safe." "I think it is inexcusable for us to berate these students in this way. We have almost with one voice expected them somehow to produce some kind of idea of a university and put it into practice. . . . This avuncular stance is not the proper one for us to take in this kind of meeting." Mr. Wheeler called for "enclaves of radicalism" inside the university and said, "The most that you can do in the short years of passage is to provide some kind of cauldron that can be kept burning."

Hallock Hoffman, former Secretary and Treasurer of the Center and present board chairman of the Pacifica Foundation said, "I wish to dissociate myself from the general weight of the comments of my colleagues. My response to you is one of excitement, enjoyment, and enthusiasm about the way you are challenging everything." He went on to make a strong plea for young people to be "CO's," conscientious objectors to military service.

W. H. Ferry said, "I agree with everybody." He advised the radical students to "get out of the ghettos and into the suburbs. There's no Negro problem but there is an enormous white problem." He said that in the suburbs, which are full of the middle class, the students "might be able to do a good deal more than you can in ghettos or other places where things are already popping like hell."

Senior Fellow John R. Seeley called for re-examination of a proposal he made several years ago—a suggestion that "we try to institute a university in which activism—at every level that people are willing to commit themselves to—will be a requirement and a core of the university apart from its own self-government." He said he further suggested that all education be organized around that activism in terms of a form that would release "the full moral force and full energy of students at the same time that they were acquiring an education relevant to what they were doing."

Mr. Seeley's advocacy of activism is paradoxical for a self-professed Center Senior Fel-

low admirer of the hippies. His remarks are illustrative of the dangerous intellectual confusion, plain muddleheadedness, and utter nonsense of what passes for "intellectual dialogue" at the Center for the Study of Democratic Institutions.

If it were not that the Center is subsidizing and giving logistic support to violent radicals with whom some Senior Fellows are afraid to go along but are willing to promote and foist upon the American people, the Fund for the Republic's Center for the Study of Democratic Institutions would not be worth an iota of serious attention. But the Center—in August 1965 and August 1967—was a womb for monstrous activism such as that which took place at the National Conference for New Politics meeting in Chicago last Labor Day weekend, and the demonstration at the Pentagon last October.

Evidently, what goes on at Center conferences in August does indeed furnish worried American citizens with exactly what W. H. Ferry, vice president of the Center, says it does—a "guide to tumult" in America, on and off campus.

[From U.S.A. magazine]

FUNDED DISRUPTION

(By Alice Widener)

NEW YORK CITY, January 12, 1968.—Each dollar of income received by a tax-exempt foundation is a dollar that did not furnish revenue to the U.S. Government. All money received by foundations is granted exemption from taxation by the U.S. Treasury, meaning by grace of all Americans. Is it to our national interest, I should like to ask, for the Treasury to grant tax-exemption to the Fund for the Republic?

The Fund subsidizes a think-tank, The Center for the Study of Democratic Institutions, at Santa Barbara, California. Currently, it is distributing widely a document, "Students and Society" which is a report on a student conference held at the Center last summer. In the report is a paper presented to the conference by student Stephen Saltonstall of Yale University, who entitled his work "Toward a Strategy of Disruption." What Mr. Saltonstall wishes to disrupt is our society and he calls for small, disciplined groups of student "shock troops" to achieve his aims. In print, at U.S. taxpayers' surfeance, the Fund for the Republic's Center permits Stephen Saltonstall to call for the "intimidation and humiliation" of public figures such as Vice President Humphrey and Defense Secretary McNamara.

What has "intimidation" to do with democratic procedures and institutions? Intimidation is the weapon of autocracy or tyranny. Mr. Saltonstall calls on students to harry university professors and researchers "at their homes." Is invasion of privacy a part of "democratic" procedure? Stephen Saltonstall also suggests—in *Funded black-on-white*, believe it or not—"The introduction of a small quantity of LSD in only five or six government department coffeurns might be a highly effective tactic."

It could be a lethal one. State and federal narcotics control officials have informed me that a dose of LSD administered in coffee to a person suffering from an undetected physical ailment, such as a heart condition or diabetes, could be extremely harmful physically and perhaps fatal. From state and federal legal authorities, I learned that tampering with government property—such as a coffee urn or drinking fountain—is illegal.

How does it further the general welfare or "democratic institutions" for the Fund for the Republic to subsidize Saltonstall's suggestions for illegal student activity in a strategy of disruption?

A foreword to "Students and Society" by W. H. Ferry, vice president of the Fund's Center, states, "This is an edited record of the conference proceedings. Therefore Sal-

tonstall's suggestions were printed with malice aforethought." Mr. Ferry also states, "The conference on Students and Society was made possible by a generous contribution from S. Herbert Meller of New York City." Mr. Meller is an investment banker with Meller & Co., One Chase Manhattan Plaza.

He and the Fund for the Republic helped finance the following printed statement in "Students and Society" by Devereaux Kennedy, student body president, Washington University: "I'm going to say loudly and clearly what I mean by revolution. What I mean by revolution is overthrowing the American government and American imperialism and installing some sort of decentralized power in this country." As steps to accomplish his purpose, Devereaux Kennedy proposes "starting up fifty Vietnams in Third World countries . . . acts of terrorism and sabotage outside the ghetto . . . I mean completely demoralizing and castrating America . . ."

Mr. W. H. Ferry says "the mood" of Students and Society is "hammering discontent, combined with impatience for action." The Fund for the Republic and Mr. Meller are subsidizing that mood. It bodes ill for all of us.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. RANDALL, for Wednesday, May 12 and Thursday, May 22, on account of official business—to address graduating classes at commencement.

Mr. McCLOSKEY (at the request of Mr. GERALD R. FORD), for the week of May 19, on account of official business.

Mr. WIGGINS (at the request of Mr. GERALD R. FORD), for May 20 through June 3, on account of official business.

Mr. RALLSBACK (at the request of Mr. GERALD R. FORD), for the week of May 19, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. LIPSCOMB (at the request of Mr. BEALL of Maryland), for 30 minutes, on May 21, to revise and extend his remarks and include extraneous matter.

Mr. POBELL for 60 minutes, today, to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. MARSH) and to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 10 minutes, today.
Mr. CORMAN, for 60 minutes, on June 10.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. EDMONDSON in three instances and to include extraneous matter.

Mr. SAYLOR and to include extraneous matter.

Mr. MADDEN and to include an editorial.
(The following Members (at the request of Mr. BEALL of Maryland) and to include extraneous matter):

Mr. MINSHALL in three instances.

Mrs. HECKLER of Massachusetts in three instances.

Mr. SCHWENGEL in two instances.

Mr. FINDLEY.

Mr. DERWINSKI in two instances.

Mr. ROUDEBUSH.

Mr. MATHIAS.

Mr. KLEPPE.

Mr. ZWACH.

Mr. WYMAN in two instances.

Mr. WINN.

Mr. MICHEL.

Mr. WOLD in two instances.

Mr. CONABLE.

Mr. MILLER of Ohio in two instances.

Mr. CHAMBERLAIN.

Mr. PRICE of Texas.

Mr. CARTER.

Mr. BOB WILSON.

Mr. ESCH.

Mr. COLLINS in two instances.

Mr. ANDERSON of Illinois in two instances.

Mr. HORTON in two instances.

Mr. LIPSCOMB in three instances.

Mr. BROOMFIELD.

(The following Members (at the request of Mr. MARSH) and to include extraneous matter:)

Mr. GONZALEZ in two instances.

Mr. RARICK in four instances.

Mr. WOLFF in three instances.

Mr. VANIK in two instances.

Mr. FRASER in two instances.

Mr. MATSUNAGA.

Mr. BOLAND.

Mr. MARSH in two instances.

Mr. BOLLING.

Mr. CORMAN.

Mr. LONG of Maryland in two instances.

Mr. BURTON of California in two instances.

Mrs. GRIFFITHS.

Mr. BIAGGI.

Mr. HAGAN in four instances.

Mr. OLSEN in two instances.

Mr. O'HARA in two instances.

Mr. BINGHAM in two instances.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 6269. An act to provide for the striking of medals in commemoration of the 300th anniversary of the founding of South Carolina.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to an enrolled Joint Resolution of the Senate of the following title:

S.J. Res. 104. Joint resolution to authorize the President to reappoint as Chairman of the Joint Chiefs of Staff, for an additional term of 1 year, the officer serving in that position on April 1, 1969.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 6269. An act to provide for the striking of medals in commemoration of the 300th anniversary of the founding of South Carolina.

ADJOURNMENT

Mr. MARSH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 2 minutes p.m.), the House adjourned until tomorrow, Wednesday, May 21, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

787. A communication from the President of the United States, transmitting proposed amendments to the requests for appropriations transmitted in the budget for the fiscal year 1970 (H. Doc. No. 91-117); to the Committee on Appropriations and ordered to be printed.

788. A letter from the Comptroller General of the United States, transmitting a report on the activities of the Center for Cultural and Technical Interchange Between East and West, Department of State; to the Committee on Government Operations.

789. A letter from the Assistant Secretary of the Interior, transmitting a copy of a proposed concession contract providing for the operation of facilities and services for the public at the North Beach development (Malaquite Beach), Padre Island National Seashore, Tex., for a term of approximately 20 years, pursuant to the provisions of the act of July 31, 1953 (67 Stat. 271), as amended; to the Committee on Interior and Insular Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DAWSON: Committee on Government Operations. H.R. 10791. A bill to amend the budget and Accounting Act, 1921, to direct the Comptroller General to establish information and data processing systems, and for other purposes (Rep. No. 91-258). Referred to the Committee of the Whole House on the State of the Union.

Mr. YOUNG: Committee on Rules. House Resolution 413. Resolution for consideration of H.R. 11271, a bill to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes (Rep. No. 91-259). Referred to the House Calendar.

Mr. COLMER: Committee on Rules. House Resolution 414. Resolution for consideration of H.R. 11400, a bill making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes (Rep. No. 91-260). Referred to the House Calendar.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 8261. A bill to amend the Federal Aviation Act of 1958, as amended, and for other purposes; with amendment (Rep. No. 91-261). Referred to the Committee of the Whole House on the State of the Union.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 11102. A bill to amend the provisions of the Public Health Service Act relating to the construction and modernization of hospitals and other medical

facilities by providing separate authorizations of appropriations for new construction and for modernization of facilities, authorizing Federal guarantees of loans for such construction and modernization and Federal payment of part of the interest thereon, authorizing grants for modernization of emergency rooms of general hospitals, and extending and making other improvements in the program authorized by these provisions; with amendment (Rep. No. 91-262). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BOW:

H.R. 11440. A bill to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a high-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. BOLAND:

H.R. 11441. A bill to amend title 39, United States Code, to exclude from the U.S. mails as a special category of nonmailable matter certain obscene material sold or offered for sale to minors, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BURTON of California:

H.R. 11442. A bill to amend the act, entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 11443. A bill to amend the Immigration and Nationality Act to provide for the expeditious naturalization of certain former alien employees of the United States who have been admitted to the United States for permanent residence; to the Committee on the Judiciary.

H.R. 11444. A bill to provide for improved employee-management relations in the postal service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BURTON of Utah:

H.R. 11445. A bill to amend the Federal Aviation Act of 1958 in order to establish certain requirements with respect to air traffic controllers; to the Committee on Interstate and Foreign Commerce.

By Mr. CAHILL:

H.R. 11446. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. CLEVELAND:

H.R. 11447. A bill to amend title 28, United States Code, to limit the appellate jurisdiction of the Supreme Court in certain cases relating to the apportionment of population among districts from which Members of Congress are elected; to the Committee on the Judiciary.

By Mr. CORBETT:

H.R. 11448. A bill to amend the Public Health Service Act to provide for the making of guaranteed loans for the modernization of hospitals and other health facilities and otherwise to facilitate the modernization and improvement of hospitals and other health facilities; to the Committee on Interstate and Foreign Commerce.

By Mr. EDWARDS of California:

H.R. 11449. A bill to establish fee programs for entrance to, and use of, areas administered for outdoor recreation and related purposes by the Secretary of the Interior and the Secretary of Agriculture, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 11450. A bill to amend section 3006A of title 18, United States Code, relating to representation of defendants who are financially unable to obtain an adequate defense in criminal cases in the courts of the United States; to the Committee on the Judiciary.

H.R. 11451. A bill to provide that disabled individuals entitled to disability insurance benefits under section 223 of the Social Security Act or to child's or widow's insurance benefits on the basis of disability under section 202 of such act, and individuals in the corresponding categories under the Railroad Retirement Act of 1937, shall be eligible for health insurance benefits under title XVIII of the Social Security Act without regard to their age; to the Committee on Ways and Means.

By Mr. GETTYS:

H.R. 11452. A bill to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a high-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. GIAIMO:

H.R. 11453. A bill to amend the Legislative Reorganization Act of 1946 to provide for the inclusion of certain cost estimates of certain measures reported by the standing committees of the House of Representatives; to the Committee on Rules.

By Mrs. GRIFFITHS:

H.R. 11454. A bill to establish a national policy and program with respect to wild predatory mammals, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. HALPERN:

H.R. 11455. A bill to amend the Civil Service Act of January 16, 1883, to eliminate the provisions of section 9 thereof concerning two or more members of a family in the competitive civil service; to the Committee on Post Office and Civil Service.

H.R. 11456. A bill to modify the regulatory requirement that the son or daughter of an employee of the postal field service may be appointed to summer employment in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 11457. A bill to amend the Social Security Act to increase OASDI benefits and raise the earnings base, with subsequent adjustments as the cost of living rises, to increase widows' and widowers' benefits, and to liberalize eligibility for disability benefits; to make disabled beneficiaries eligible for medicare without regard to age, to finance the medical insurance program entirely from general revenues, and to cover prescription drugs; and to provide for a study of child health care; to the Committee on Ways and Means.

H.R. 11458. A bill to amend title II of the Social Security Act to provide that an individual may qualify for disability insurance benefits and the disability freeze if he has enough quarters of coverage to be fully insured for old-age benefit purposes, regardless of when such quarters were earned; to the Committee on Ways and Means.

H.R. 11459. A bill to amend title II of the Social Security Act to eliminate the reduction in disability insurance benefits which is presently required in the case of an individual receiving workmen's compensation benefits; to the Committee on Ways and Means.

By Mr. HANLEY:

H.R. 11460. A bill to aid the U.S. Postal Establishment in providing for the accumulation, analysis, and dissemination of reliable and meaningful financial, statistical, and accounting information in regard to all third-class mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 11461. A bill to amend title II of the Social Security Act so as to liberalize the

conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. PERKINS:

H.R. 11462. A bill to amend title XVIII of the Social Security Act to include drugs requiring a doctor's prescription among the medical expenses with respect to which payment may be made under the voluntary program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

H.R. 11463. A bill to amend title XVIII of the Social Security Act to eliminate the requirement that extended-care services follow hospitalization in order to qualify for payment thereunder; to the Committee on Ways and Means.

By Mr. PURCELL:

H.R. 11464. A bill to amend the Internal Revenue Code of 1954 to encourage higher education, and particularly the private funding thereof, by authorizing a deduction from gross income of reasonable amounts contributed to a qualified higher education fund established by the taxpayer for the purpose of funding the higher education of his dependents; to the Committee on Ways and Means.

By Mr. RARICK:

H.R. 11465. A bill to amend title 39, United States Code, to provide for the mailing of mail matter by relatives to members of the Armed Forces overseas at no cost to such relatives; to the Committee on Post Office and Civil Service.

H.R. 11466. A bill to amend the Internal Revenue Code of 1954 to exempt wages of certain seasonal employees from withholding; to the Committee on Ways and Means.

By Mr. SCOTT:

H.R. 11467. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. TAFT:

H.R. 11468. A bill to amend title 13, United States Code, to increase the penalties for wrongful disclosure of information by employees of the Bureau of the Census; to the Committee on Post Office and Civil Service.

By Mr. VANIK (for himself, Mr. ANDERSON of California, Mr. ADDABBO, Mr. ANNUNZIO, Mr. BRADENAS, Mr. CLAY, Mr. COHELAN, Mr. DIGGS, Mr. FLOOD, Mr. HALPERN, Mrs. HANSEN of Washington, Mr. HECHLER of West Virginia, Mr. MATSUNAGA, Mr. OLSEN, and Mr. SCHEUER):

H.R. 11469. A bill to amend title II of the Social Security Act to provide a 15-percent across-the-board increase in monthly benefits, with subsequent cost-of-living increases in such benefits and a minimum primary benefit of \$80; to the Committee on Ways and Means.

By Mr. WOLFF (for himself, Mr. YATES, Mr. VANIK, Mr. ANDERSON of California, Mr. CHAPPELL, Mr. PRYOR of Arkansas, Mr. ASHLEY, Mr. HAMILTON, Mr. ASHBROOK, Mr. HAGAN, Mr. EDWARDS of California, Mr. MARSH, Mr. CLARK, Mr. SMITH of Iowa, Mrs. HECKLER of Massachusetts, and Mr. FULTON of Pennsylvania):

H.R. 11470. A bill to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam; to the Committee on Ways and Means.

By Mr. ADAMS (for himself, Mr. Diggs, Mr. FRASER, Mr. JACOBS, and Mr. KYROS):

H.R. 11471. A bill to establish, in the House of Representatives, the office of Delegate from the District of Columbia, to amend the District of Columbia Election Act, and for other

purposes; to the Committee on the District of Columbia.

By Mr. ASHLEY (for himself and Mr. REES):

H.R. 11472. A bill to amend the Export Control Act of 1949; to the Committee on Banking and Currency.

By Mr. BELL of California:

H.R. 11473. A bill to promote the advancement of biological research in aging through a comprehensive and intensive 5-year program for the systematic study of the basic origins of the aging process in human beings; to the Committee on Education and Labor.

By Mr. BUTTON:

H.R. 11474. A bill to reclassify certain key positions in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CLEVELAND (for himself, Mr. REES, Mr. ADAMS, Mr. ANDERSON of Illinois, Mr. BIESTER, Mr. BRADENAS, Mr. BROCK, Mr. CONABLE, Mr. FRASER, Mr. GIBBONS, Mr. HAMILTON, Mr. HATHAWAY, Mr. HOWARD, Mr. HUNGATE, Mr. JACOBS, Mr. LOWENSTEIN, Mr. MACGREGOR, Mr. MORTON, Mr. MOSS, Mr. REUSS, Mr. RUMSFELD, Mr. SCHWENGLER, Mr. STEIGER of Wisconsin, Mr. TAFT, and Mr. BOB WILSON):

H.R. 11475. A bill to improve the operation of the legislative branch of the Federal Government, and for other purposes; to the Committee on Rules.

By Mr. DANIELS of New Jersey:

H.R. 11476. A bill to encourage the States to improve their workmen's compensation laws to assure adequate coverage and benefits to employees injured in the mining industry, and for other purposes; to the Committee on Education and Labor.

By Mr. DINGELL:

H.R. 11477. A bill to amend the act of August 1, 1958, to authorize restrictions and prohibitions on the use of insecticides, herbicides, fungicides, and pesticides which pollute the navigable waters of the United States; to the Committee on Merchant Marine and Fisheries.

By Mrs. DWYER:

H.R. 11478. A bill to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. EDWARDS of California:

H.R. 11479. A bill to establish the Inter-agency Committee on Spanish-American Affairs, and for other purposes; to the Committee on Foreign Affairs.

By Mr. EVANS of Colorado:

H.R. 11480. A bill providing for Federal railroad safety; to the Committee on Interstate and Foreign Commerce.

By Mrs. HECKLER of Massachusetts:

H.R. 11481. A bill to provide for financial disclosure by members of the Federal judiciary; to the Committee on the Judiciary.

By Mr. LONG of Maryland:

H.R. 11482. A bill to amend title 5 of the United States Code to authorize certain agreements relating to withholding of State income taxes; to the Committee on Ways and Means.

By Mr. McFALL:

H.R. 11483. A bill to amend title II of the Social Security Act to provide that an individual may qualify for disability insurance benefits and the disability freeze if he has enough quarters of coverage to be fully insured for old-age benefit purposes, regardless of when such quarters were earned; to the Committee on Ways and Means.

By Mr. MATHIAS (for himself and Mr. DON H. CLAUSEN):

H.R. 11484. A bill to amend chapter 44 of title 18, United States Code, with respect to the sale or delivery of ammunition; to the Committee on the Judiciary.

By Mr. MILLER of Ohio:

H.R. 11485. A bill to amend the Communications Act of 1934 so as to prohibit the granting of authority to broadcast pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. MONTGOMERY:

H.R. 11486. A bill to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a higher-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. MOSS:

H.R. 11487. A bill to require the Federal Aviation Administrator to prescribe a minimum altitude of flight for aircraft in the airspace over Mount Vernon estate, the home of George Washington, in Fairfax County, Va.; to the Committee on Interstate and Foreign Commerce.

By Mr. O'HARA:

H.R. 11488. A bill to amend the Communications Act of 1934 to prohibit the granting of authority by the Federal Communications Commission for the broadcast of pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. OLSEN:

H.R. 11489. A bill to designate the Lincoln back-country wilderness "Helena National Forest," "Lewis and Clark National Forest," and "Lolo National Forest" in the State of Montana; to the Committee on Interior and Insular Affairs.

H.R. 11490. A bill to expedite the interstate planning and coordination of a continuous Lewis and Clark Trail Highway; to the Committee on Public Works.

By Mr. PATMAN:

H.R. 11491. A bill to provide for the withholding of Federal assistance from colleges and universities found to be negligent in maintaining order on their campuses; to the Committee on Education and Labor.

H.R. 11492. A bill to authorize the Secretary of Commerce to conduct research and development programs to increase knowledge of tornadoes, squall lines, and other severe local storms, to develop methods of detecting storms for prediction and advance warning, and to provide for the establishment of a National Severe Storms Service; to the Committee on Interstate and Foreign Commerce.

By Mr. PODELL:

H.R. 11493. A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates; to the Committee on Government Operations.

By Mr. QUILLEN:

H.R. 11494. A bill to amend title 38 of the United States Code so as to provide that monthly social security benefit payments and annuity and pension payments under the Railroad Retirement Act of 1937 shall not be included as income for the purpose of determining eligibility for a veteran's or widow's pension; to the Committee on Veterans' Affairs.

By Mr. RANDALL:

H.R. 11495. A bill to provide a 15-percent across-the-board increase in monthly benefits payable under title II of the Social Security Act; to fix minimum primary benefits at \$80 per month; and to require automatic adjustments in benefits to reflect cost-of-living increases; to the Committee on Ways and Means.

By Mr. SCHADEBERG:

H.R. 11496. A bill to amend the Federal Food, Drug, and Cosmetic Act to include a definition of food supplements, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. SIKES (for himself, Mr. FUQUA, Mr. BENNETT, Mr. HALEY, Mr. CHAP-

PELL, Mr. FASCELL, Mr. ROGERS of Florida, Mr. BURKE of Florida, Mr. PEPPER, Mr. CRAMER, Mr. FREY, and Mr. GIBBONS):

H.R. 11497. A bill to rename a pool of the Cross-Florida Barge Canal "Lake Oklawaha"; to the Committee on Public Works.

By Mr. BOB WILSON:

H.R. 11498. A bill to amend the act of August 27, 1954 (commonly known as the Fisherman's Protective Act), to strengthen the provisions therein relating to the protection of U.S. vessels on the high seas; to the Committee on Merchant Marine and Fisheries.

By Mr. BELL of California:

H.J. Res. 729. Joint resolution authorizing the President to proclaim annually the week including December 15 as "National Bill of Rights Week"; to the Committee on the Judiciary.

By Mr. ESHLEMAN:

H.J. Res. 730. Joint resolution proposing an amendment to the Constitution relating to the terms of office of Judges of the Supreme Court of the United States; to the Committee on the Judiciary.

By Mr. SATTERFIELD:

H.J. Res. 731. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. SCHADEBERG:

H.J. Res. 732. Joint resolution authorizing the President to proclaim the period September 15 through October 15 of each year as "Youth Activities Month"; to the Committee on the Judiciary.

By Mr. SPRINGER:

H.J. Res. 733. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. ADDABBO:

H. Con. Res. 268. Concurrent resolution expressing the sense of the Congress with respect to the production and distribution in interstate and foreign commerce of motion pictures and television programs which degrade or demean racial, religious, or ethnic groups; to the Committee on Interstate and Foreign Commerce.

By Mr. BIAGGI:

H. Con. Res. 269. Concurrent resolution creating a joint committee of Congress to investigate the production, distribution, and exhibition of movies that criticize or degrade ethnic, racial, or religious groups; to the Committee on Rules.

By Mr. CHAPPELL:

H. Con. Res. 270. Concurrent resolution, support of gerontology centers; to the Committee on Education and Labor.

By Mr. GIAIMO:

H. Con. Res. 271. Concurrent resolution, support of gerontology centers; to the Committee on Education and Labor.

By Mr. MILLER of California:

H. Con. Res. 272. Concurrent resolution expressing the sense of the Congress with respect to the production and distribution in interstate and foreign commerce of motion pictures and television programs which degrade or demean racial, religious, or ethnic groups; to the Committee on Interstate and Foreign Commerce.

By Mr. TAFT:

H. Con. Res. 273. Concurrent resolution, support of gerontology centers; to the Committee on Education and Labor.

By Mr. JOELSON:

H. Res. 416. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on Physical and Mental Health; to the Committee on Rules.

H. Res. 417. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Com-

mittee on Housing and Urban Development; to the Committee on Rules.

H. Res. 418. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on Consumer Protection; to the Committee on Rules.

By Mr. TAFT:

H. Res. 419. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on the Environment; to the Committee on Rules.

By Mr. WYMAN:

H. Res. 420. Resolution to amend rule XXII of the Rules of the House of Representatives; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURKE of Massachusetts:

H.R. 11499. A bill for the relief of Kyoungho Metardus Cynn, M.D.; to the Committee on the Judiciary.

By Mr. BURTON of California:

H.R. 11500. A bill for the relief of Mr. and Mrs. John F. Fuentes; to the Committee on the Judiciary.

By Mr. CHAPPELL:

H.R. 11501. A bill for the relief of Maria Luisa Gorostegui deDourron, M.D.; to the Committee on the Judiciary.

By Mr. DELANEY (by request):

H.R. 11502. A bill for the relief of Bruno and Sylvia Burruto; to the Committee on the Judiciary.

By Mr. DONOHUE:

H.R. 11503. A bill for the relief of Mr. Wylo Pleasant, doing business as Pleasant Western Lumber Co. (now known as Pleasant's Logging & Milling, Inc.); to the Committee on the Judiciary.

By Mr. FALLON:

H.R. 11504. A bill for the relief of Roberto Valenzuela; to the Committee on the Judiciary.

By Mr. VAN DEERLIN:

H.R. 11505. A bill for the relief of Herman Gibson; to the Committee on the Judiciary.
H.R. 11506. A bill for the relief of Gloria R. Harkness; to the Committee on the Judiciary.

H.R. 11507. A bill for the relief of Frank Lowe; to the Committee on the Judiciary.

By Mr. FRIEDEL:

H. Res. 415. Resolution authorizing the payment of a gratuity from the contingent fund of the House of Representatives on behalf of a deceased former employee of the House of Representatives; to the Committee on House Administration.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

115. By Mr. ROBISON: Petition of the Broome County Legislature, Binghamton, N.Y., memorializing opposition to the inclusion of local bonding in tax-preference regulation; to the Committee on Ways and Means.

116. Also, petition of the employees of Susquehanna Valley High School, Conklin, N.Y., relative to increasing the individual tax exemption from \$600 to \$1,200 per dependent; to the Committee on Ways and Means.

117. By the SPEAKER: Petition of Miss Betty Sue Crigger, Johnson City, Tenn., relative to redress of grievances; to the Committee on the Judiciary.

118. Also, petition of the City Council, Elizabeth, N.J., relative to the tax exemption on municipal bonds; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

UTILITY POLICY ON ADVANCE
DEPOSITS BY CUSTOMERS

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. METCALF. Mr. President, some utility companies have been criticized because of discriminatory policy with respect to advance deposit requirements. Deposits have been required of persons whose credit may be excellent, but who live in a poor neighborhood or are engaged in menial work. Deposits often are not required of persons in more expensive neighborhoods and engaged in more prestigious work, even though these persons may be poor risks financially. There is some evidence that the poor have been more prompt in payment of utility bills than the well to do, despite the burden of advance payments which, in some cases, were not refunded as they should have been after credit was established.

Last year I asked the Federal Power Commission, Federal Communications Commission, and National Association of Regulatory Utility Commissioners what policy obtained in the various States with respect to advance deposit requirements. I learned that, as so often is the case in utility matters, information on the subject was not readily available. However, I am pleased to report, it was the feeling at both the Federal Commissions and at NARUC that this information should be obtained.

Former NARUC Chairman James W. Karber appointed an Ad Hoc Committee on Customer Deposit Practices of Utilities. It sent a questionnaire to the chairmen of the regulatory commissions in the various States. The information received was analyzed, after which the NARUC executive committee approved draft model State commission rules governing establishment of credit for utility services.

Mr. President, I wish to commend NARUC for its efforts to remove discriminatory practices in this area. NARUC has welcomed comments on its draft model rules. I ask unanimous consent that they be printed in the RECORD.

NARUC's office, for those who wish to comment on the proposed rules, is at 3327 Interstate Commerce Commission Building, Box 684, Washington, D.C. 20044.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

MODEL STATE COMMISSION RULES GOVERNING
ESTABLISHMENT OF CREDIT FOR UTILITY
SERVICES

Section 1. *Declaration of public policy.*—The Public Service Commission of this State, hereinafter referred to as the "Commission", declares that it is in the public interest for each utility to fairly and indiscriminately administer a reasonable policy reflected by written regulations, in accord with these Rules, which will permit an applicant for service to establish, or an existing customer to re-establish, credit with the utility for

the use of its service. The Commission further declares that when it is necessary for an applicant or customer to make a cash deposit to establish or re-establish credit in accord with these Rules, the making of such deposit is in the public interest because it avoids, to the extent practicable, the creation of a burden arising from uncollectible bills which would have to be borne ultimately by the ratepayers. The Commission further declares that the essential ingredient in each utility's administration of deposit policy in accord with these Rules is its equitable and indiscriminate application to all applicants for service and customers throughout the service area without regard to the economic character of the area or any part thereof, and such deposit policy shall be predicated upon the credit rating of the individual over and above the collective credit reputation of the area in which he lives or does business.

Section 2. *Establishment of credit.*—(a) Each utility may require an applicant for service to satisfactorily establish credit which will be deemed established if:

(1) The applicant owns a significant interest in the premises to be served or other real estate within the territory served by the utility unless the applicant has an unsatisfactory credit rating; or

(2) The applicant demonstrates a satisfactory credit rating by appropriate means, including but not limited to, the production of credit cards, letters of reference, or the names of references which may be quickly and inexpensively contacted by the utility; or

(3) The applicant has been a customer of the utility for a similar type of service within a period of twenty-four consecutive months preceding the date of application and during the last twelve consecutive months of that prior service has not had more than two occasions in which a bill was not paid within thirty days after it became due; *provided*, that the periodic bill for such previous service was equal to at least fifty per centum of that estimated for the new service; and *provided further*, that the credit of the applicant is unimpaired; or

(4) The applicant furnishes a satisfactory guarantor to secure payment of bills for the service requested in a specified amount not to exceed the amount of the cash deposit prescribed in Section 4 of these Rules; or

(v) The applicant makes a cash deposit to secure payment of bills for service as prescribed in Section 4 of these Rules.

(b) The establishment of credit under the provisions of this Section, or the re-establishment of credit under the provisions of Section 3 of these Rules, shall not relieve the applicant for service or customer from compliance with the regulations of the utility as to advance payments and the prompt payment of bills, and shall not constitute a waiver or modification of the practices of the utility in regard to the discontinuance of service for the non-payment of bills due for service furnished.

Section 3. *Re-establishment of credit.*—(a) An applicant for service who previously has been a customer of the utility and whose service has been discontinued by the utility during the last twelve months of that prior service because of non-payment of bills, may be required to re-establish credit in accordance with Section 2 of these Rules; *except*, that an applicant for domestic service shall not be denied service for failure to pay such bills for other classes of service.

(b) A customer who fails to pay bills within thirty days after they become due and who further fails to pay such bills within five days after presentation of a discon-

tinuance of service notice for non-payment of bills (regardless of whether or not service was discontinued for such non-payment), may be required to pay such bills and re-establish his credit by depositing the amount prescribed in Section 4 of these Rules.

(c) A customer may be required to re-establish his credit in accordance with Section 2 of these Rules in case the conditions of service or basis on which credit was originally established have materially changed.

Section 4. *Deposit; amount; receipt; interest.*—No utility shall require a cash deposit to establish or re-establish credit in an amount in excess of two-twelfths of the estimated charge for the service for the ensuing twelve months. Each utility, prior to receiving a deposit, shall furnish a copy of these Rules to the applicant for service or customer from whom a deposit is required and such copy shall contain the name, address and telephone number of the Commission.

(b) Concurrently with receiving a cash deposit, the utility shall deliver to the applicant for service or customer, a receipt showing: (1) the date thereof; (2) the name of the applicant or customer and the address of the premises to be served or served; (3) the service to be furnished or furnished; and (4) the amount of the deposit and the rate of interest to be paid thereon. Each utility shall provide reasonable means to refund the deposit of a customer, when he is so entitled, if the original receipt cannot be produced.

(c) Each utility shall pay interest on a deposit at the rate of five per centum per annum, or at the rate equal to the average rate of interest paid by the utility for short term debt during the twelve months' period ending on the December 31 immediately preceding the date the deposit is made, whichever rate is higher. Interest on a deposit shall accrue annually and shall be annually credited to the customer by deducting such interest from the amount of the next bill for service following the anniversary date of the original deposit. A utility shall not be required to pay interest on a deposit held less than ninety days, and shall not be required to pay interest on a deposit for the period following three years after discontinuance of service, if during such three year period the utility has made a reasonable effort to refund the deposit. Thereafter, an unclaimed deposit, plus accrued interest, shall be credited to an appropriate account.

Section 5. *Refund of deposit.*—(a) Upon discontinuance of service, the utility shall promptly and automatically refund the customer's deposit plus accrued interest, or the balance, if any, in excess of the unpaid bills for service furnished by the utility. A transfer of service from one premises to another within the service area of the utility shall not be deemed a discontinuance within the meaning of these Rules.

(b) After the customer has paid bills for service for twelve consecutive months without having had more than two occasions in which a bill was not paid within thirty days after it became due, the utility shall promptly and automatically refund the deposit plus accrued interest. If the customer has had more than two such past due bills for such period, the utility shall thereafter review the account every twelve months and shall promptly and automatically refund the deposit plus accrued interest after the customer has not had more than two such past due bills during the twelve months prior to any review.

(c) The utility shall promptly return the deposit plus accrued interest at any time upon request, if the customer's credit has

been otherwise established in accordance with Section 2 of these Rules.

(d) At the option of the utility, a deposit plus accrued interest may be refunded, in whole or in part, at any time earlier than the times hereinabove prescribed in this Section.

Section 6. *Record of deposit.*—Each utility holding a cash deposit shall keep a record showing: (a) the name and current address of each depositor; (b) the amount and date of the deposit; and (c) each transaction concerning the deposit.

Section 7. *Appeal by applicant or customer.*—Each utility shall direct its personnel engaged in initial contact with an applicant for service or customer, seeking to establish or re-establish credit under the provisions of these Rules, to inform him, if he expresses dissatisfaction with the decision of such personnel, of his right to have the problem considered and acted upon by supervisory personnel of the utility. Each utility shall further direct such supervisory personnel to inform such an applicant or customer, who expresses dissatisfaction with the decision of such supervisory personnel, of his right to have the problem reviewed by an official of the Commission and shall furnish him the name of the Commission official to be contacted and his address and telephone number.

COMMISSIONER BENNETT SPEAKS FOR AMERICAN INDIANS

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. EDMONDSON. Mr. Speaker, one of the great American Indian leaders of this generation is Commissioner Robert L. Bennett of the Bureau of Indian Affairs. Commissioner Bennett has provided remarkable leadership in creating a partnership between the Indians and the Federal Government through the Bureau.

This leadership has been an expression of Commissioner Bennett's philosophy that the American Indian must move into society as a constructive and contributing force, while at the same time maintaining and cherishing his Indian heritage and the Indian tribal organizations.

The Bureau under Commissioner Bennett's leadership has placed special emphasis on the role of the young Indians. This emphasis reflects the Commissioner's understanding of the problems facing the Indian children and young adults, both on and off the reservations.

Mr. Speaker, Mr. Bennett summed up his philosophy quite well in a speech he made last fall to the National Congress of American Indians in Omaha, Nebr., and I would like to have this speech printed in the RECORD. I would especially like to call the attention of my colleagues to the final section of this speech, the section on "Indian Youth":

THE FUTURE AND THE FIRST AMERICANS

It is a pleasure for me as your Commissioner, friend, fellow Indian American, and member of NCAI to provide you with a report of my efforts during the past 29 months. By the way, 29 months is a new record for an Indian Commissioner, as the only other Indian Commissioner, Major Eli Parker, was allowed to serve only 26 months.

No Commissioner has received such wonderful support as you have given me. I want you to know that it is appreciated more than I can say. With this kind of support you have made my job easier, the burdens, cares and worries lighter, and the satisfaction from whatever progress has been made much greater.

Indeed, the past several months have been a time of several "firsts" for the First Americans.

For the first time in history—in this year 1968—a President of the United States sent to Congress a message dealing exclusively with American Indians and the social and economic problems confronting them.

For the first time in history, Indian tribal organizations have begun to take an active part in State and regional economic development planning, so that Indian lands will no longer be surrounded by that invisible barrier that separates reservation economies from growth opportunities with their neighboring communities.

For the first time, Indian people are being afforded a partnership with the Federal Government in Indian affairs.

For the first time, the President in his special message, and the Senate in the passage of S. Con. Res. 11 have taken affirmative action to bury the unilateral termination policies of the 1950's and instead offer new hope to the Indian people that they will be masters of their own fate.

For the first time, the education of Indian children has been given priority attention, not only in terms of dollars expended to quantify it but in terms of brainpower invested in giving it *quality*, from kindergarten to college. Hopefully there will never be another generation of Indians who suffer a kind of second-class citizenship because of their second-rate schooling.

Most important of all, for the first time in this century the Indian people have rediscovered themselves as a great people and have begun to reestablish cultural and historic identity. We are on the way once again to full command of our own future.

Now, I am providing you the first Commissioner's report to the Indian people. It is my fervent hope that this will set a precedent so that each and every Commissioner of Indian Affairs will come to you regularly and give an accounting of his administration. You are entitled to this.

Because you will have an opportunity to read this report at your leisure, I will not dwell upon it too much this afternoon. If you have any questions, comments, or criticisms, please feel free to write me. I want you to be fully informed and I hope satisfied that we are working together to achieve partnership in reality and in spirit. The spirit of true partnership is that spirit which makes us in the Bureau of Indian Affairs work in partnership with you because we want to and not because someone told us to.

Although we can develop the capability to meet your needs by providing opportunities for adequate food, clothing, and shelter, I feel that you will be satisfied only if you have a voice in the development of these opportunities. I promise you that as long as it is my honor to be your Commissioner, your voice will be heard.

I believe that our greatest progress has been in the changing role of the Bureau of Indian Affairs to meet the changing times. No part of my position gives me more difficulty or more pleasure than that of being your advocate in Government.

I am not unmindful of my obligations to the Federal Government as an executive officer, but I do find a lot of running room to advocate your interests and I use it. I am grateful that Secretary Stewart Udall has supported the Bureau in this role of advocate.

We cannot rest upon our record because we can never be satisfied as long as some of the people are without adequate opportunities to obtain food, clothing and shelter. We

can never rest as long as we are confronted with new ideas of concern.

For this reason in particular it is important that we spend time during this convention to analyze certain new issues in Indian affairs that will have a growing and lasting impact upon the ultimate destiny of the Indian people.

These three issues are: The rights of individual Indians under the Constitution of the United States; problems of Indians who are increasingly congregating in off-reservation communities; and, last but hardly least, the young among us.

Each of these issues is a reflection of the fact that the lives of Indians are becoming more and more enmeshed with society as a whole. It is a trend we cannot reverse; and therefore we must help ease the transition so we do not lose.

CIVIL RIGHTS

The civil rights of American Indians under the Constitution of the United States have been won slowly but not easily. Citizenship has been guaranteed only since 1924. Until the Civil Rights Act of 1964, voting rights of Indians under various State laws were frequently questioned. Job discrimination against Indians existed in many areas of heavy Indian population until equalization of employment opportunities for minorities was further protected by recent Federal law. Most recently, the Civil Rights Act of 1968 gives further protections to the Indian citizenry of this country.

Under the 1968 Act are several titles—II through VII, to be specific—pertaining directly to Indians. Title II, for example, provides redress through Federal courts against arbitrary and capricious treatment by tribal authorities in violation of Constitutional rights. Title IV of the Civil Rights Act relates to the assumption by States of criminal and civil jurisdiction over Indian country. It makes a significant change in Public Law 280, 83rd Congress, by requiring consent of the Indian tribe before assumption of jurisdiction by any State not now having such jurisdiction; and it further provides authority for the United States to accept a retrocession of jurisdiction from States which have previously acquired it.

It would appear that the intent of Congress, under this new Act, is to assure uniformity of justice to all Indians while providing the means for a healthy strengthening of tribal law enforcement authority. It calls for a new model code for the few remaining courts under BIA jurisdiction and for the training of judges in such courts. Such a model code, and such professional training could well be applicable to tribal courts.

We hope that you will join us to render a service to member tribes—and, conceivably, to other tribes, as well—by providing leadership to see that in time existing tribal laws will relate to the requirements of the new Civil Rights Act. This concept has taken a long time to be supported by law and we must take the opportunity to make it meaningful.

This organization can also help member tribes obtain fullest benefit from other new legislation: The Juvenile Delinquency Prevention and Control Act; and the Omnibus Crime Control and Safe Streets Act. Both of these laws provide funds for help in improving law enforcement services and in administering justice effectively. These laws qualify Indian tribes for direct participation.

The BIA is ready and willing to help you in this matter.

OFF-RESERVATION INDIANS

Another issue—one in which this organization and all tribes must move to find solutions—is the question of off-reservation Indians. Thousands of Indian people are moving away from reservation communities, sometimes to nearby towns, sometimes to cities some miles distant. Not all of the numbers who are now settling in such diverse

places as Rapid City, South Dakota; the Twin Cities of Minneapolis and St. Paul; Chicago, San Francisco; and Los Angeles are doing so through the BIA's Adult Vocational Training and Employment Assistance services.

The BIA's mission has not extended to Indians who leave the reservation, except to the extent that it provides short-term services for those on reservations who seek BIA help in relocating.

Neither does the BIA mission extend to Indians whose reservation lands are not under Federal trusteeship control. Large pockets of Indian population in northern New York and Maine, for example, are beyond BIA's purview. So are smaller groups scattered along the east coast from Massachusetts to Georgia, and groups in California that have been "terminated."

Indian organizations, therefore, are the hope of these groups. Through your structure and that of your tribes, you can help them to rally public attention to their cause and public aid to alleviate their pressing needs. Through State and local governments, the Federal Government disburses billions of dollars annually for such services as public schooling, health and welfare, development of community projects, and manpower training. The question is: Are the off-reservation Indians, and the Indians on reservations not under trusteeship, getting a fair share of their community's total Federal outlay?

You need also come to grips with the problems which develop in relationships between those of you who live in Indian communities, and those who live away. We are all of one blood, we all have the same basic goals, we are too few to have any political voice unless we are united.

Indians in far away communities are proud of their Indian heritage, have organized themselves because of their common interest, and seek a meaningful relationship with those of you who are in positions of tribal responsibility.

We need to sit down and start discussions that will open the way for understanding between resident and non-resident Indians. I am sure we will find that we have much in common and that most differences can be resolved. We cannot afford the luxury of disunity, so I suggest that the NCAI use its good offices to bring about useful meetings between those who live in Indian communities and those who are away.

INDIAN YOUTH

As the forces of change are at work all over the world—and since the reservation is no longer isolated from the rest of society because of T.V., radio, and all communication media, Indian youth is in turmoil over what they see and hear. This turmoil is good if it is founded in the realities of the issues of today. And, the reality of the young Indian people in Indian country is—that they must learn to live in two worlds so as not to become the victims of both. My concern is that Indian young people not become diverted in their quest for meaningful places in society by those elements who are attempting to tear apart the fiber of American lifeways and who see this period of change as a means to achieve leadership through anarchy. Indian young people should not use their youthful energies to burn themselves out in hate and destruction as some young people are doing, but rather they should use these energies in the agonizing search for social justice. They need to look forward with goals in mind—and not backward in anger. To look backward in anger would only perpetuate discontent, provide no basis for revival of Indian spirit, and use of energies which are needed to build a better future.

We need to appraise our relationship with Indian youth before we find ourselves in treacherous waters—before passion replaces reason—before slogans replace issues—before carrying of signs replaces carrying of pride and dignity. We owe them our best efforts

because we look to them for the fulfillment of our dreams. They are our prime resources of vitality and new ideas, and our greatest resource.

How do we establish communication between them and us? We need to create an environment for them to speak out with a sense of responsibility and not of futility. We need to provide a forum by which they can make their voices heard on public issues. We need to talk and listen to each other with mutual respect, and the desire for understanding—and we need to make them feel comfortable in this dialogue, but we do not need always to agree with them. We need to understand them. They want to talk to you—the Indian leaders—and not to others. The reason I know this is because many, many young people in the last few months have told me this.

We should seek to build and not to destroy—because in seeking to destroy we become our own victims. We need to think and communicate in realistic terms with sincerity as its basis. And, we need to face life in our times. We need to draw upon the past—but not to rest upon it. We need to keep Indian heritage a living thing—and keep it from becoming stagnant. And the only suggestion I could make on the theme for this conference is to have the word "Living" before Indian Heritage because a stagnant or a dead heritage is of no value. Indian youth are coming on us very strong. They are coming on us in large numbers—they are coming on us better educated—they are coming on us more sophisticated. Fifty percent of the general population of this country is approximately 28 years of age and under. These young people as they come on can be a positive force for good, or they can be a negative force for evil—this is our challenge. Indian culture does not provide a place for the young person because in the Indian culture you went from child to man or from child to woman. Wisdom was related to age, and silence among the young was a virtue. But because the minds of our young have been stimulated by education and new experiences, more than ever before they want to know "why?" and we need to answer. They possess everything to build healthy personalities. They have heredity in which they want to take pride—they come from an environment with which they know they must cope—but they know that they alone must accept responsibility for how they respond to the situations that they will be confronted with in daily life. They will have to accept their heredity, cope with their environment, and say to themselves, "Now what shall I do with myself?"

The rate of suicides among younger Indians is greater than the young people in society generally. The rate of suicides among older Indians is lesser than that of older people in society generally. Young Indian people need to find and know themselves. If they don't find themselves they will not be any good to themselves or to anyone else. It could be that we have not provided them with the sources of strength, we have not helped them to see life in proper perspective, and develop values around which to build their lives. We have not taken them into our confidence to give them the recognition they so desperately want. We have not provided them a means by which they can see that they will ever derive a sense of fulfillment. We must see to it that they get the opportunity to build our Indian heritage anew and help keep it *living and great*; so they can live wholesome lives in the image of man and God.

But, we must start now, because today is already too late for some, and tomorrow will be too late for others. You can do this. In my experience, living on the reservation, going to school, with Indian young people, and 35 years of work among you I've developed an unshakable faith and abiding confidence in Indian people. I know you can rise to this

challenge as you have risen to challenges in the past. I look to you for ideals, for goals and for inspiration. I am proud of the restraint and dignity that you have shown in this period of our history.

I am very optimistic for the Indian future because of the leadership that we have and is currently emerging among Indian people both young and adult. I am proud to be one of you.

ANTIBALLISTIC MISSILE SAFEGUARD SYSTEM

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. THURMOND. Mr. President, it is a pleasure for me to congratulate the WAGL radio station in Lancaster, S.C., for the fine editorial on the antiballistic missile Safeguard system which was broadcast on May 7, 1969. The editorial is an excellent example of a great public service to keep the radio audience in the Lancaster area well informed on a vital issue affecting our national security.

It is reassuring for a responsible news medium to accept its obligation to the people to explain difficult and complex critical issues. It is especially important for a responsible medium to take a position on these issues. I commend Mr. B. L. Phillips, Jr., president of WAGL, for his outstanding editorial in support of the ABM Safeguard system. It reflects a wise understanding of what is involved and clearly presents the urgent need for this defensive protection of our Nation's nuclear deterrent.

I ask unanimous consent that the editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

WAGL EDITORIAL

Very soon in the Congress of the United States, our Representatives and Senators will be voting on whether or not this nation should build and deploy the Safeguard System, which is President Nixon's version of the much discussed ABM . . . Anti Ballistic Missile System.

WAGL would, for the following reasons, cast a ye vote on this issue in favor of construction and deployment.

First, the Safeguard ABM System would give creditability to the United States' retaliatory position in that it would protect our minuteman missile sites which are designed to deal a devastating retaliatory blow to any country launching a first strike against us.

Secondly, the Safeguard ABM System would be an effective defense against an accidental launch of one or two missiles by any foreign country against the United States through either human or mechanical error.

And third, while the Safeguard ABM System is not designed to be, and therefore would not be, an effective defense of our cities against an all out attack by the Soviet Union, it would be an effective defense against any limited attack Red China may be capable of launching against the United States for the next few years.

WAGL feels that in the face of the knowledge that the Soviet Union has built their SS-9 missile which is capable of delivering a 25 megaton warhead on target, President Nixon's strategy of deploying the Safeguard

ABM missiles around our Minuteman sites is a sound one since the Soviet Union's intention of such a powerful weapon can only be to destroy our retaliatory missiles in their underground silos making us incapable of retaliation to any first strike they may deal. Their intention is clear since our military minds tell us that to completely destroy a major city, only a one to two megaton weapon is needed.

Further evidence that the Soviet Union is placing itself in a position of first strike capability is their own ABM System, which is deployed to protect not their missile sites, but their cities. This would indicate that when this ABM System is called on to defend, their missiles having been already launched in a first strike will not be there to defend . . . rather it will be their cities that will need defending against the United States' retaliatory wrath.

There are those who would oppose the Safeguard ABM System on the grounds that it would be further escalation of the arms race. However, we point out that Safeguard is entirely a defensive system and is in no way offensive. It could not be used to attack, only to defend, and at that only to defend our Minuteman missile sites, not our cities. Opponents also say that to build an ABM System may be to risk offending the Soviet Union. Please remember, however, that the Soviet Union thought lightly of offending the United States when they built their ABM System. Other opponents say that the costs of safeguard may exceed the estimated 5 to 7 billion dollars and that this expenditure would cause social welfare efforts to suffer financially. WAGL would remind these opponents that if we ever actually incur a first strike from the Soviet Union so many American lives will be lost as to make our social welfare problem look indeed small by comparison.

The United States has depended in the past for its deterrent ace in the hole, on the fact that the Soviet Union knew that if they launched a nuclear attack against us, we both could and would launch a nuclear attack right back on them. Now with the advent of the Soviet Union's 25 megaton SS-9 missile, our ability to return a nuclear attack to them has been greatly diminished, and therefore nullifying our deterrent ace in the hole, leaving this country defensively naked before the Soviet Union. Remember that the leaders of the Soviet Union have repeatedly threatened to quote "bury us". WAGL says, let us not for one moment turn our back on the Soviet Union, lest we by so doing permit them to carry out their threat.

The Safeguard ABM System is the soundest insurance for peace and against war that the United States can buy in 1969, for the 1970's. WAGL urges each and every citizen to write their Congressmen and Senators expressing support for the construction and deployment of President Nixon's Safeguard ABM System.

ABM—A SENSIBLE SAFEGUARD

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. ROUDEBUSH. Mr. Speaker, the VFW magazine of May 1969, published an excellent article on the ABM, written by the VFW's Commander in Chief Richard Homan. Mr. Homan's article, entitled "ABM—A Sensible Safeguard," presents a logical and reasonable case for going ahead with the Safeguard program.

Having once served the Veterans of

Foreign Wars of the United States as commander in chief, I know this organization. The VFW speaks for grass-roots America. It represents a vast cross section of our society. It includes men who have fought to preserve the security of this country, and they want to perpetuate it. I am impressed with the position taken by Mr. Homan and the VFW. The VFW feels that President Richard M. Nixon should be given the tools he needs to achieve peace through preparedness. Because of the timeliness and significance of the ABM issue, I include Mr. Homan's article in the RECORD:

ABM—A SENSIBLE SAFEGUARD

(By Richard Homan)

A vital issue facing America and one on which hinges the future security and perhaps survival of the United States is the Anti-Ballistic Missile (ABM) defense plan currently being debated.

While readers of the *V.F.W. Magazine* are familiar with the issues surrounding the Vietnam war, it is likely only a few are thoroughly cognizant of those involved in the ABM question.

In order to place ABM in perspective, it is necessary to review a few of the events leading up to the Safeguard Plan, which President Nixon recently enunciated.

Former President Johnson had chosen to proceed with the Sentinel ABM system, which envisioned the installation of ABM radar and missilery in such a way that the civilian population would be protected against an early Chinese Inter-Continental Ballistic Missile (ICBM) threat.

Under this system, incoming enemy missiles would be detected by radar. Defensive missiles would then intercept and explode them before they reached heavily populated areas of the United States.

Moreover, the Johnson Sentinel system could easily have been expanded into a heavier defense of American cities against Soviet missiles.

President Nixon's Safeguard Plan has modified Sentinel by emphasizing defense of missile sites, rather than major population centers, to guarantee nuclear retaliation against any nation that would mount a first nuclear strike against the United States.

President Nixon's plan also involves a carefully phased deployment, as he said in announcing it:

"Each phase of the deployment will be reviewed to insure that we are doing as much as necessary but no more than that required by the threat existing at that time."

"Moreover, we will take maximum advantage of the information gathered from the initial deployment in designing later phases of the program."

The V.F.W., therefore, is supporting President Nixon's Safeguard Plan because:

1. It is defensive and designed to protect the nation's capability to retaliate.
2. Deployment of an American ABM system strengthens this country's bargaining position in any disarmament negotiations with the Soviets.
3. Deterrence of a strike against this country is essential. As Secretary of Defense Laird said, "we must be in a position to convince them (Soviets) that a first strike would always involve unacceptable risks."
4. A hermetically-sealed defense is not needed to defend missile sites, compared with major population centers.
5. Defense of strategic forces is the best protection of populations because it will make an aggressor think twice before launching an attack.
6. China's irrational behavior indicates the possibility of dealing a first blow. By the middle of the 1970s China may have two dozen missiles.

I agree with the wisdom of reducing expenditures on defensive missile systems if

they have to be built at the expense of quality offensive systems which offer the primary deterrent to nuclear warfare. It seems fair to assume that any given offensive missile would have a better chance of hitting its target than a defensive missile would have to head it off.

In considering ABM defenses for the United States, more is involved than our own defense posture. We also must consider the security of our allies and friends, and we must consider what the Soviet Union and Red China are doing about their ABM defenses. Thus far, neither the Soviet Union nor Red China, nor any other Communist government has shown compassion for the weak and the meek. They have, on numerous occasions, shown their disdain for disorganized groups and their respect for boldness based on unity and strength. Thus, in recent years, the Soviet Union has shown a willingness to negotiate on certain aspects of nuclear weaponry.

Americans must face the fact that until an arms agreement can be made with the Soviet Union, both nations will continue to live with the possibility, albeit remote, of a nuclear war.

Some students of Soviet power and policy believe that relationships between the Soviet Union and the United States may have reached the threshold of improvement rather than further deterioration. This is because the Soviet Union has built a strong industrial base which Soviet leaders would not like to see destroyed. In addition, there is the spectre of Red China's hordes moving across the Soviet Union's boundaries to claim territories which have shifted ownership throughout the centuries. Soviet leaders also face numerous and complex problems among their satellites, some of which would like to become independent of the Mother Russia complex.

So, it may be that the Soviet government does want to negotiate some sort of a nuclear peace with the United States. If so, Soviet leaders are hard bargainers. We know this from experience after experience following World War II.

Not only can President Nixon offer better protection to the United States by offering another counter to ballistic missile aggression; but also, he can bargain for the United States and allies from a position of strength rather than weakness.

Soviet leaders evidently believe in an ABM system of defense. They have built ABM defenses around Moscow and it is highly likely that they are continuing to refine and improve the systems which they have built. Obviously, Soviet leaders regard ABM defense as added protection in a nuclear war.

The United States' construction of an ABM defense should encourage respect from Soviet military and political leaders and it should encourage their cooperation for realistic discussions on nuclear arms control.

Because of this and because the Veterans of Foreign Wars has always believed that the United States' security should be second to none, I commended President Nixon on the wisdom of his decision in a letter which appears on this page.

I urge our membership to reach out to all Americans in support of President Nixon's decision for the modified ABM defense plan called Safeguard.

As Commander-in-Chief, I urge our national, state and local leaders to follow the ABM discussions closely. Let us remember that the President has not placed our national feet in concrete on this matter. He has left room to make changes as conditions change. His decision on Safeguard was made in the context of today's conditions. It is not irrevocable. Should the situation change, the President has reserved the option to modify the entire Safeguard program, or eliminate it if it is not needed. Surely it cannot be said that this program will escalate the arms race, for the Soviets know, as well as we, that the entire system has no offensive

capability. The ABM decision deserves the support of all Americans. Let us hope that it will be the first of many decisions and efforts by President Nixon to reach a sane and peaceful world for us, and our children and grandchildren.

COMMANDER IN CHIEF'S LETTER TO THE PRESIDENT

Writing in behalf of the 1,450,000 members of the Veterans of Foreign Wars of the United States, I wish to congratulate you on your recent anti-ballistic missile (ABM) decision to proceed with this program in such a manner that you minimize the incentive for an escalation of the arms race.

Specifically, Mr. President, I commend your proposal for a modified Sentinel plan which is designed to protect certain of our land-based launching sites. This decision should make it plain to friend and potential foe that our government is determined to deter nuclear war, and that the best deterrent is a protective shield for our long-range missiles ashore and the vastness of the ocean depths for our Polaris-type missiles afloat.

Based on the technical knowledge now available to the public, it would seem patently impossible to prevent mass destruction to both sides in a massive exchange of nuclear-tipped missiles. Should the radars, ours or those of a nuclear opponent, become saturated by sheer numbers, the ballistic missile defenses—ours or those of a nuclear opponent—would probably become as futile and outdated as the Maginot Line of World War II.

I further commend you on your course of 'determination and restraint' in this highly complicated type of warfare. You have reserved the option to curtail or re-orient this program to reflect the results of international negotiations and technical developments.

In search for improved missile defense systems, it may be that you will run across some sort of a system which would make it possible to intercept the opponents' missiles on their way up rather than on their way down. Further, should you find a way to destroy them on their way up, any atomic explosions and contaminated fallout from anti-ballistic missiles would occur near the aggressor's launching sites and far away from U.S. shores.

Regardless of what the future brings, I know you are proceeding with a strong and urgent research program, and I am indeed hopeful that our talented teams of scientists and engineers will find some technological breakthrough which will minimize the danger and security risks to the United States' populated areas against any and all types of missile systems.

In summary, Mr. President, you have chosen the course on the ABM which tells both Red China and the Soviet Union that we are determined to remain up-to-date and push ahead in our research, and you have left open the pathways of negotiation should either the Soviet Union or Red China, or both, care to join us.

You have our support.

YEAR OF THE STUDENT—ADDRESS BY DR. WILLIAM WOOD, PRESIDENT, UNIVERSITY OF ALASKA

HON. TED STEVENS

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. STEVENS. Mr. President, on May 19, 1969, I had the pleasure of attend-

ing the commencement exercises at the University of Alaska. Dr. William Wood, the president of the university, delivered an excellent address which is pertinent to our society today. I commend his remarks to the Senate and ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YEAR OF THE STUDENT

Class of 1969, world-wide the months and days preceding this ceremonial occasion have been identified and tagged as the year of the student. The student as "revolutionary" has been analyzed, interpreted, praised, damned and publicized until the paying public is heartily sick of the subject. Thousands of pictures, millions of words, horrible facts and horrible lies, nonsense from the far left, equally nonsense from the far right, have created an ugly, at times obscene, image of youth in this year of the student.

One hesitates to add more words to the drive lest he increase the distortion. Youth is not ugly, not obscene, yet the calculated provocative acts and words of the few are increasingly so viewed by the many.

The disorders in some streets and on some campuses are real. There is violence. In our heart we may not believe, yet our ears hear and our eyes see militant against the system, against the Establishment (whatever it is at the moment said to be by the militant) man against man, student against faculty, against police, student against student. The confrontations are real. They happen on issues relevant as well as on issues meaningless. There are burnings and lootings. There are wastelands of confusion and chaos around the globe.

Class of 1969, from 65 degrees North all of us this year have been privileged to take the cool view. For one I am deeply appreciative of your own constructive and responsible efforts to keep this oasis well-tended and productive as you seek with your vigorous young faculty new and improved ways to enhance the quality of learning and living.

Yet yours is the legacy of the Year of the Student. In our midst, perhaps in this audience, certainly in this community and in this State, are some entirely convinced of the non-existence of virtue of any sort in Youth. A student is bad, ergo all students are bad. With this attitude of distrust you must now contend, just as you must contend with the disorders of our time, and more particularly with the root causes of these disorders.

There is so little choice before you, before any of us. Together we shall still militant disorder or perish. Unless we are intelligent enough to recognize the root causes of disorder in our complex mixture of preindustrial, industrial, and post-industrial ways of living, there is little hope of confronting them successfully.

A "better way" for the subsistence man has for generations challenged the strongest effort of industrial man to produce in quantity goods and services desired by all, but not wisely distributed nor always wisely used. The amazing technology of production now brings within reach the means to eliminate ignorance and poverty and hunger and disease in near totality.

Especially in Alaska, not confounded by masses of people, but blessed with abundance of resources and the availability of the productive wonders of automation, the old dream of industrial man even now seems within our grasp. We can and shall eradicate illiteracy, unemployment, inadequate housing, and other hazards to health and well-being.

And then? What are the goals of the affluent, the post-industrial man? This enigma, also, you must confront. With this, too, you must contend. The outmoded philosophy of the radical right holds no answer. No matter how loud its proponents shout, it will not suffice for post-industrial time. The radical left have no clearly stated philosophy of their own and readily admit the fact. The proponents have no power to construct; they can only destruct. Affluence provides merely an outlet in violence, or in aimless avoidance of reality, for their frustrations and insecurities.

Youthful idealists proclaiming themselves the honest ones angrily denounce hypocrisy that so obviously exists on the other side of the generation gulch. The contention is neither self-perceptive nor honest. Can the weathered side of the shingle be blamed for not abating the storms that as yet have not touched the protected side? Can one without a philosophy in all honesty attack another for not living up to his own?

Beyond affluence, what? I see no final answer in protest as protest, in the use of violence to protest the use of violence by others, in indifference for the victim while exuding compassion for the criminal.

I see no final answer coming from the greatest concentration of power the world has known, that of the electronic communications media. If the input at one end of the tube specializes in disorder, the output at the other end will tend to disorder and ultimately destroy both the individual and the family.

If the family fails, can the schools be far behind? If the church is confused in purpose, can the community long survive?

Let us remind ourselves, as well as the media, that ideas and constructive happenings and persons merit publicizing, too. These are the heart of the enterprise that is higher education, the magnificent enterprise of freedom without which there is little hope for future man, affluent or not.

In this Year of the Student higher education, in part through its own inadequacies but only in part, has been shoved down in priority, vilified, slurred by insinuation and innuendo, the 91% tarred by association with the 9% in this nation as in other nations, and sadly, for we know better, by some even in Alaska.

Class of 1969, in the mirror of tomorrow the future facing you, is you facing the future. Meet the issues frankly and responsibly as you have done this year with me and with all your associates on campus, your colleagues, the faculty and staff.

Together you have not indulged excesses on the far right nor the far left but have involved yourselves intelligently along the path between the extremes where effort toward improvement in quality is most effective.

Let us remember the heart-warming occasions, the memorable moments we have shared at 65 degrees North during this Year of the Student: the splendid success of the delegation to Juneau, the exceptional academic achievements of Cynthia who never attended a high school, the stirring accomplishments of Milo as player and person, Barbara again winning All American, the successful steering of an evaluation of academic programs and instruction through the University Assembly, the acquisition of the Big Dome. Old fashioned? A bit corny? This is Dillsville for the modern media. A pot party around Wood's hole would attract more coverage.

Class of 1969, I am proud of you, of your mature outlook, your resistance to panic, your independence, your honesty with yourselves as well as with others, your non-conformity to the far-out lures of the times.

Best of luck to each of you. You will be missed on campus and welcome everywhere.

ANDERSON PRAISES AQUANAUTS

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. ANDERSON of Illinois. Mr. Speaker, I wish to join with all Americans in expressing pride in the Apollo 10 mission and in wishing the astronauts a successful mission and a safe return. At the same time, I wish to bring to the attention of my colleagues and the American public the success of another mission which has received very little publicity of public attention yet has made an immeasurable contribution to science and mankind.

I am referring to Project Tektite, a 60-day underwater mission conducted by four American aquanauts off St. John Island in the Virgin Islands. Project Tektite is the longest underwater exploration to date and the aquanauts and their supporting crew deserve our highest praise and commendation. The four aquanauts are: Mr. John F. Van Derwalker of Washington, D.C.; Mr. Conrad Mahnken of Brainbridge Island, Wash.; Dr. Edward Clifton of Los Altos, Calif.; and Mr. Richard Waller of Oxon Hill, Md. Last week the aquanauts were presented with Distinguished Service Awards by Vice President AGNEW in his capacity as Chairman of both the Space Council and the Marine Resources Council. They were also honored on Capitol Hill in an appearance before the Oceanography Subcommittee of the Merchant Marine and Fisheries Committee. I wish to associate myself with the remarks made by my colleagues at that session.

The success of the mission is a real tribute to American ingenuity and the cooperative efforts of the public and private sectors. The underwater habitat was designed and built by General Electric and the project was jointly conducted by the Department of the Interior, the Office of Naval Research, and NASA along with the participation of the Coast Guard.

The purpose of the mission was twofold: First, to study man's behavioral and biomedical response to a situation of isolation and duration; and second, to conduct oceanographic research work. The results of the first study will make a significant contribution both to future space and underwater missions. And the work done on the marine life and environment will certainly further our efforts in the field of oceanography.

Two weeks ago I appeared before the Oceanography Subcommittee and expressed my interest in the creation of an independent executive agency to oversee our national ocean program. I think the concern expressed by the aquanauts that this type of work be continued speaks directly to the need for a national program for the oceans and the organizational means for its implementation. In the words of one of the aquanauts:

If we are to reap the wealth of the continental shelf, this type of work should be furthered.

Mr. Speaker, as we approach the international decade of ocean exploration, I am most concerned that America is ade-

quately equipped and oriented to make a substantial contribution to this endeavor. Contrary to popular myth, the wealth of the oceans is not ours for the asking; its extraction and full utilization will depend on a national commitment and a positive program. Or, to rephrase that myth, the wealth of the oceans is ours for the acting.

I include in the RECORD, as part of my remarks, two interesting and informative articles describing the goals and accomplishments of Project Tektite:

[From the New York Times, Apr. 20, 1969]
TEKTITE PROJECT POINTS THE WAY TOWARD
EVENTUAL CONTROL OF THE OCEAN DEEPS
BY MAN

(By Richard D. Lyons)

CHARLOTTE AMALIE, St. Thomas, V.I., April 19—Can man who evolved from the sea to dominate the land reverse the process by returning to the oceans and asserting his control over their depths?

In long-range thinking the answer would seem to be yes, with man's return to the sea not taking nearly so long as his evolution to land.

Yet it is highly doubtful that, in the short run, the answer can be so positive, although the scientific, economic and military rewards might be substantial.

Man is reaching these conclusions about the outlook for living and working in the ocean as a result of increasing exploration. The latest major effort concluded this week as four Project Tektite aquanauts emerged after spending 60 days on the ocean bottom, a record, off the nearby island of St. John.

That project and the Navy's Sealab 3 experiments are concerned with the question of living and working on the continental shelf.

Living in the ocean basins, those areas below 3,300 feet that cover more than half the ocean, appear to be beyond expectation for generations to come.

The immediate hope is to exploit the continental shelves vast plateaus that range downward in depth to 600 feet and cover 10 million square miles of ocean floor, an area three times as large as the United States.

THRIVING MARINE LIFE

The waters between sea level and the shelves thrive with animal and vegetable life that could be used to enrich the diets of a world that is half hungry.

Mineral and petroleum resources of immense value also remain to be exploited, and will not be until the economic return more than balances the huge investments needed to develop these reserves.

Militarily, these areas could also be used as hiding places for nuclear missile emplacements or underwater tracking stations to monitor the movements of hostile submarines.

But at today's prices the cost of such undertakings would be staggering. One Federal oceanographic commission reported earlier this year that mounting a civilian program would cost about \$1-billion a year for the next decade. Then the price would double.

DEEP DIVING IS COSTLY

"The seas are vast, complex, subtle and often hostile to men and his works," said the Commission on Marine Sciences, Engineering and Resources. "They will not yield their secrets in a decade or a generation."

Almost no amount of money will buy, at the present time, rapid advances in underwater technology.

Many small submarines capable of deep diving are being constructed at great cost. But these are mainly reconnaissance craft.

For commercial exploitation of the shelves, there would be a need for systems that would allow aquanauts to live under water for many

months, as well as range outside their living quarters to work on the sea floor.

Officials of the Federal Government and private oceanographic concerns have talked optimistically of routinely working at depths of down to 1,000 feet. Yet the three main ingredients of such an ambitious program are far from being perfected.

BREATHING SYSTEM NEEDED

These are a simple yet effective breathing system for deep dives; a dependable habitat, and a rapid resupply system.

None have been achieved, and it will probably be years before these three major problems are solved.

The Navy's ambitious \$10-million Sealab project, on which hopes had been pinned for rapid advances in deep diving systems, had been stalled by the mysterious death of an aquanaut two months ago and repeated problems with the underwater capsule in which he and eight other marine explorers were to have lived at a depth of 600 feet off the California coast.

The Sealab 3 project was originally scheduled to start six months ago, but technical problems are likely to add up to a delay of at least a year.

The infant state of the undersea art and the problems with Sealab appear to have chilled, at least temporarily, the Navy's emerging interests in underwater research and development.

The Office of Naval Research was the managing agency for the Tektite project. While the project was largely successful, although limited in scope, the Navy went out of its way to hold down publicity about it, possibly because of the earlier problem with Sealab 3.

The Department of the Interior, the National Aeronautics and Space Administration and the General Electric Company were partners with the Navy in the Tektite project.

BRIEF CONGRATULATIONS

Officials of these organizations were seen to seethe with anger when the Navy abruptly canceled several news conferences about Tektite, prevented reporters from conducting previously agreed-upon interviews with the aquanauts while they were under water, ordered photographers away from the site several times, denied newsmen access to telephones at a base camp set up on the shore, and eventually declared the camp off limits to the press.

Public relations officials with the space agency and to beat the drums for Tektite and harvest some publicity for the project and their organizations, but the Navy obviously did not.

Even President Nixon's congratulatory telegram to the aquanauts on the completion of their stay under water, at a depth of 42 feet, contained only 22 words, short shrift for a project he termed "a milestone in human achievement."

Tektite was hardly that, although it doubled the record for underwater living time. The program, which cost \$2.5-million, was designed mainly to determine if men could live and perform meaningful work for an extended period at a relatively shallow depth. It did prove just that.

With the exception of the specialty designed living quarters, called a habitat, most of the equipment was composed of items previously in use.

Tektite also proved the value of the so-called nitrogen saturation diving technique, a method that is far simpler and more economical than the helium saturation system employed in deep diving projects. The two saturation methods employ mixtures of the respective gases under pressure, plus oxygen to sustain the aquanauts' life support system.

HELIUM GAS EXPENSIVE

Before the aquanaut enter their undersea environment, their bodies are saturated with one of these gases to counteract the extreme

pressures of the water on their bodies in the deeps.

The cost of the gas in the helium system is about \$5,000 a week for the Sealab 3 project. Pure oxygen itself cannot be used because under pressure it can produce convulsions in the diver.

At 600 feet the water presses in on the human body at a pressure of more than 18 times that of the sea-level atmosphere.

Helium systems also require the designing of electrical equipment, and complicate communications because of the so-called "Donald Duck effect." The human voice, when a helium-oxygen mixture is breathed, becomes distorted and squeaky. Therefore, nitrogen saturation is a simpler method.

Until Tektite it had been feared that physiological problems might arise through the breathing of massive amounts of nitrogen for many weeks. These fears proved unfounded.

FINDS VALUE PROVED

Dr. James W. Miller, the Navy's chief scientist on Tektite, said that the program had proved the value of the nitrogen system and urged a follow-on underwater program that would test nitrogen saturation diving at depths of 75 to 100 feet.

But beyond those depths, nitrogen narcosis affects the aquanaut. Under this condition, the massive amounts of nitrogen in the body cause a feeling of inebriation, giddiness and inattentiveness that could be disastrous under water.

Tektite's chief aquanaut, Richard A. Waller, an oceanographer, said that the program's most serious mistake had been not making use of "closed-circuit" breathing apparatus that employ supercooled gases. These systems are being built by the General Electric Company for the Navy and some of them are secret.

The closed-circuit systems not only provide the aquanauts with oxygen but also freeze his expended carbon-dioxide and retain it in the system.

Mr. Waller's point was that improved breathing systems would extend the range and flexibility of marine scientists exploring the continental shelves. Advanced closed-circuit systems such as the Navy's Mark 10 could allow underwater excursions of up to eight hours, compared with the one hour allowed by scuba gear.

Mr. Waller pointed out that the Tektite aquanauts were equipped with scuba gear originally developed a generation ago by Jacques-Yves Cousteau, the French underwater explorer.

In a congratulatory message to the Tektite aquanauts, Secretary of the Interior Walter J. Hickel foresaw the day of underwater resort areas and even cities. Such ambitious dreams, however, are far from being just around the corner.

After 36 hours at a depth of 42 feet, for example, 20 hours of decompression are needed to rid the body's tissues of the excess of nitrogen that could cause the bends.

This led Mr. Waller to comment that he did not think even underwater resorts would be practical "because commuting would be a real problem if you have to work for a livelihood."

[From the Washington (D.C.) Post, Apr. 19, 1969]

AQUANAUTS SAY 60-DAY SEA STAY BECAME EASIER AFTER EXPERIENCE

(By Thomas O'Toole)

The four aquanauts who spent a record 60 days on the Virgin Islands ocean floor said yesterday that the longer they stayed down the better they could perform underwater work.

Their underwater stay went so smoothly, said Team Leader Richard Waller, 34, of Oxon Hill, Md., that they had more trouble with their support personnel on the surface

than with any equipment in their underwater habitat or with sea life they encountered outside the habitat.

The thing that bothered the aquanauts most, Waller said at a news briefing held on the island of St. Thomas, was the eavesdropping of surface-watchers on their off-duty conversations.

"We felt the best way to show our displeasure," said Waller, "was to turn off the microphones inside the habitat for two hours every day."

Waller, Conrad Mahnken, John Van der Walker and H. Edward Clifton, all marine scientists with the Interior Department, spent a record 434 hours outside their twin-tower structure, which was anchored in 50 feet of water in Great Lameshur Bay near the island of St. John.

The more they got used to living in their undersea habitat, the more daring the aquanauts became in their time outside the habitat.

During their first two weeks underwater, they spent 35 to 40 hours each week outside the habitat, never moving farther than 300 feet from the well-lit cabin.

But by the end of their stay, the four were averaging 70 hours a week in the water and were swimming out of sight of the habitat, as far away as 3000 feet.

The aquanauts also spent much of the time during their last weeks swimming at night, when the men watching their movements from the surface found it hard to see them.

Fully a third of the total time they spent swimming outside their habitat was at night.

In the entire time (they "spashed-up" last Tuesday) the four men were on the ocean floor, the most serious threat to their health was a transient ear infection, which struck all four men for brief periods, but never all four at once.

Outside the habitat, the only danger came when a five-foot moray eel swam into their shark cage on the habitat's front porch and refused to leave. The aquanauts were faced with only one choice: one of them swam into the cage and killed the dangerous eel with a knife.

While all four reported spotting barracuda near them in the water, none ever saw a shark.

One of the questions the Tektite experiment set out to answer was whether it is better to have men dive into the water to work or to have them live in the water while they work.

One official of the Office of Naval Research said he felt Tektite answered that question fairly clearly, while Waller himself said he was convinced "more can be done by men living on the bottom."

A combined venture of the Navy, the Interior Department, the Coast Guard, the National Aeronautics and Space Administration and General Electric, Tektite cost an estimated \$2.5 million—\$500,000 of which was spent on the undersea living quarters.

NATIONAL COLLECTION OF FINE ARTS

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in the Washington Star of May 4, 1969; also an article dated May 2, 1969.

I wish to add my own personal tribute to Dr. Scott, who has been the heart and

soul of the National Collection of Fine Arts. David W. Scott is an extraordinary person. He is modest, quiet, almost retiring, but nevertheless has a will of iron in the cause to which he has devoted, and is devoting, his talents—bringing the world of art to play a meaningful role in our world. He is an expert's expert, as well as a layman's expert. He has an understanding for those qualities of art which make it grasp at the heart of the child as well as the intellect of the critic.

It is my understanding that Dr. Scott may soon move on to another task, having accomplished the seemingly impossible of making the NCFA into, as the Washington Star says, "a remarkable phoenix-like achievement." We in Washington in particular, but also in the Nation for which Washington should stand as something special, have strong reason to thank Dr. Scott for what he has done, and to wish him well in his new and challenging assignment.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

LOVABLE ART

(By Donnie Radcliffe)

Remember that agony of childhood—the warning "don't touch?"

Well, philosophies have changed a little over at the Smithsonian's National Collection of Fine Arts and in the newly-opened Junior Museum, the invitation is "do touch"—sticky fingers and all.

Yesterday, a vanguard of small fry, stuffed with punch and cookies, touched, hugged, squeezed and kissed nearly a dozen small-scale 19th-century animal sculptures to the smiling approval of mommies and museum officials.

The grown-ups knew, even if the youngsters did not, that the patina of each creation, many by Paulanship, was safely protected by a plastic wax.

"They still cannot touch things in the museum proper," said Director David Scott.

"But here the idea of touching is meant to be part of the orientation before they tour the museum."

It is an extension of the National Collection's highly successful concept of involving the child physically in art and sculpture rather than losing him in lectures.

Ann Glascock, in charge of the children's tours, calls the Junior Museum a "warm-up" or "exercise" room.

"We'll bring them here, tell them to become machines and then 'turn' them on. Next we'll ask them to be a statue and in that way begin to explain the difference between a machine and a statue.

"Finally, we'll work into color and texture and ask them to feel things."

From the Junior Museum, exiting by a diamond-shaped hole in an otherwise commonplace door (the entrance is through a circle), youngsters tour the collection where docents invite them to act out the paintings and sculptures they see.

"Can anybody find something to be?" one docent asked a group of small charges yesterday as she showed them an exhibit on the first floor.

"I need to go to the bathroom," piped up one wee voice while his companions silently transformed themselves into table legs and other nonhuman objects.

Not everything in the Junior Museum is in the readily recognizable shapes of turtles, deer, leopards and bears in bronze.

On one wall hangs the room's only painting, an 18-foot ceiling-high striped canvas by Gene Davis entitled "Raspberry Icicles."

There is also Lyman Kipp's specially-designed four-foot minimal sculpture called

"Salamanca" meant to be sat on or climbed up.

Richard Calabro's aluminum sculpture may be assembled and reassembled.

And Adam Peiper's "Astrolite No. 84," similar to those now in the private collections of Laurence Rockefeller, Otto Preminger, and John Hay Whitney is a mesmerizing glass ball filled with water and colorless plastic rings which, when viewed through a polaroid screen, turn into dazzling floating colors.

"I hope we may be able to designate this the Nancy Kefauver Junior Museum someday," said Scott, looking around at the children.

"Nancy's two great loves were art and children."

Yesterday, as the small guests left, each was invited to select a postcard reproduction of one of the National Collection's works of art.

Money for these gifts came from a fund established in memory of the late Mrs. Kefauver who was head of the State Department's "Art in Embassies" program.

NCFA AT ONE

This weekend the National Collection of Fine Arts celebrates its first year in its handsome quarters in the Old Patent Office Building.

The location itself is worth celebrating. A few short years ago, this architectural monument was scheduled for destruction and was to be paved with asphalt for parking. The NSFA has revealed the gracious interiors in their elegant purity as they had not been seen in many decades.

The NCFA itself is today a remarkable phoenix-like achievement. For many years it was a semi-moribund, little known division of the Smithsonian. Then, under the forceful leadership of director David W. Scott, the NCFA came out from behind the stuffed elephant and has become an extraordinary center of art in Washington.

The collection has been reshaped as an assemblage of American painting and sculpture which grows before the eyes of the regular visitor. A brilliant series of special exhibitions has shown in depth the contributions of many individual American artists of the past and present. This nation's artistic heritage has been given a place of its own in the Nation's Capital.

May the extraordinary productive year now ending be the first of many for the NCFA and Dr. Scott.

COMMEMORATING 75TH ANNIVERSARY OF NORTH ADAMS STATE COLLEGE

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. CONTE. Mr. Speaker, in 1894, on a small patch of land in North Adams with a view of the beautiful Hoosac Valley and the impressive Berkshire Hills, a college was born. Over the years it has grown and continues to grow, and it can proudly take its place among the many fine colleges and universities that are found in the First Congressional District of Massachusetts. And so it gives me great pleasure to call to your attention that this year marks the 75th anniversary of the founding of North Adams State College.

In 1894, the Massachusetts General Court established the State Normal School at North Adams. It remained a 2-year college until 1932 when the name was changed to the State Teachers Col-

lege at North Adams and a 4-year course leading to a bachelor of science degree in education was introduced.

Thus, 1937 marked a memorable year in the history of the college, for in that year two important events happened. The college became coeducational and graduate courses leading to a master of education degree were for the first time offered. Improvement and expansion were the guiding words for the State Teachers College.

Many years ago, when I was a State senator from Massachusetts, I realized what excellent educational benefits the college was providing to area residents and I realized the crying need for expansion—so that more of these benefits could be provided to more people. And so when in 1956 an appeal was made by North Adams State Teachers College to the Commonwealth of Massachusetts for approximately \$1,500,000 for construction of a new science-auditorium-gymnasium project. I fought long and hard to see that this money would be appropriated. I filed a bill to try to secure this money, but the bill was continually stalled in the legislature. But I would not give up, because I realized the great importance of this money for the future of the school and thus ultimately for the future of the citizens of the area. Finally, after almost 2 years of struggle, I could be happy to report that \$1,500,000 had been appropriated by the State legislature for the new building project.

In 1960, the Commonwealth of Massachusetts authorized the college to grant the bachelor of arts degree, and appropriate courses were then offered. A few years later, a new and special program was introduced. This program prepares men and women as medical technologists and it is run in affiliation and cooperation with Pittsfield General Hospital. And it was just last year that Hoosac Hall, an eight-story dormitory which happens to be the tallest building in all Berkshire County, was opened. For the future, new classrooms, a new library, amphitheaters, an administration building, and other structures are in the process of being constructed, and new programs and courses are being planned. It is apparent, I think, that North Adams State College has dedicated itself to expanding its facilities to provide educational opportunities to more people, and has dedicated itself to the continual improvement of those educational opportunities.

The college catalog lists the present objectives of the college:

To provide both a sound liberal and professional education on the undergraduate level, graduate study for teachers in service in both liberal and professional education, and to provide certain public services to the area, such as liberal arts evening courses for a degree or personal enrichment, consultant services, and a clinic for vocational testing and reading problems.

The North Adams State College is to be commended for all this. It has done in the past, and continues to do in the present, an outstanding job in all these educational endeavors. We are all very proud of the achievements of the college and proud to note today the 75th anniversary of North Adams State College.

INFLATION AND INVESTMENT

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. HARTKE. Mr. President, trying to cool our rambunctious economy is not unlike the effort required to break a wild horse. Each requires a great deal of patience and perseverance as well as a willingness to sustain a few bruises. Unfortunately, this current inflationary period has proven itself to be unusually high spirited, with the result that the American consumer is quickly turning a brilliant black and blue. Virtually all the economic indicators show that the current inflation is not being significantly abated, even in the face of stringent monetary and fiscal policies. Thus, time has long since past for urging continued patience and perseverance in the face of obvious failure.

In an address delivered before the New York Society of Security Analysts' Portfolio Management Seminary on April 17, 1969, Henry Kaufman highlighted with unusual ability and incisiveness the root causes of inflation and the methods which might be used to combat it. Mr. Kaufman acknowledges that we are now all victims of an inflationary psychology which, if not cured, will serve to further complicate any ultimate solution to the problem. He points to the fact that the bond market has recently shown an unsettling softness which he feels is directly attributable to inflationary influences. He also pinpoints certain new economic forces which have gained importance in the last 20 years and which have had the effect of propelling the economy forward at an accelerated pace.

Mr. President, I ask unanimous consent that Mr. Kaufman's address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHANGING INVESTMENT CLIMATE

(By Henry Kaufman)

If it were in my power to wave a magic wand this afternoon and order up the perfect environment for institutional investments, what would be your wishes? What is it that you would like to assure a cloudless investment horizon and therefore an unusually profitable investment decision? I suspect that we would all agree on some very fundamental and important prerequisites. Probably most basic and crucial of all, we would favor peace because wars have such disruptive influences, especially on our economic aspirations. Concerning the state of the economy itself, we would probably all favor a backdrop of moderate assured growth, moderate unemployment, some unused physical resources and price stability. This setting would permit the normal economic growth rate plus some acceleration without bumping into economic and financial ceilings. Under these circumstances, the financing of our economic requirements would pose no problems to our monetary authorities and the international position of the dollar should strengthen. To these blessings, we might also add domestic, political and social stability, which Americans take for granted.

In looking back, we have never had a period of time in the post World War II years in which all of these perfect conditions prevailed. There has always been the absence of

at least one or several beneficial environmental forces. Immediately following World War II, we suffered from the war's inflationary aftermath, the adjustment to a peacetime economy, and the problems of fiscal and monetary management in the new environment. There was also the disruptive influence of the Korean War in the early 1950's. Perhaps the nearest we came to the perfect investment climate was in 1962-63. At that time, the economy had moved well out of a recession. The unemployment rate was falling but still at 5.5%. Plant utilization in manufacturing was slightly above 80%. The trend in wholesale commodity prices had been virtually flat since 1958. The dollar was still strong but admittedly was showing the first real signs of international weakness.

The current setting does not score high in meeting our test for a perfect investment environment. There is both economic and financial friction. There is a high utilization of labor resources, strong inflationary momentum and expectations of never-ending inflation. Interest rates are very high and the availability of credit is shrinking. To many, these economic and financial disequilibria suggest that we may again be at a cyclical turning point. While I do not entirely disagree with this kind of observation, I find it rather simplistic. There is a tendency in cyclical analysis to overlay comparable periods. This, however, is rather statistical and does not take account of some very fundamental structural changes which have been occurring. These changes have had a profound influence on economic and financial decisions and will probably continue to affect our future investment climate. Therefore, in order to fully understand the complexity of the changing investment climate, I should like to discuss some of these new forces.

INTERNATIONAL COOPERATION

In the post World War II period immense strides have been made in bringing the people of the world closer together through technological, political, and economic measures. To be sure, we are far from a Utopian international arrangement, but think back to the days of Hitler, the 1930 depression, the feudal times of Europe, or even to the days of Alexander the Great, and ponder when was there a greater feeling of hope for man to break his bondage with misery and ignorance. Was it then or now? Of course, it is now.

Twenty years after World War I, we were at the brink of another war. Nearly twenty-four years have passed since the end of World War II and while there have been several limited wars, a worldwide confrontation has been avoided. Indeed, the ultimate weapons, the atom and hydrogen bombs, have become war deterrents instead of the final enticement to aggression.

The progress towards world integration is perhaps best visible in transportation and communication. There is hardly a spot left on earth that is not readily accessible or within range of telephone, radio or television. Travel has become a growth industry, and escape places for the venturesome are increasingly difficult to find.

The integration of the world has also been helped along through regional efforts such as the Common Market and through the growth of the multi-national corporation and through the stability of the international financial system. Admittedly, our international financial system has been battered and tattered lately but it has survived because of either enlightenment or self-interest, or both. This is in sharp contrast to the developments after World War I when currencies were devalued, gold was revalued, exchange restrictions multiplied and, eventually, trade contracted sharply.

In any event, all of these international developments and others not mentioned have on balance turned the world more to political stability than to instability and this in turn has been a powerful positive force for the investment climate.

EFFECTIVENESS OF SOCIAL DEMANDS

In the post World War II period, there has also been a great awakening to social demands. It is not that the need to alleviate poverty and to improve our health, education and welfare facilities weren't there before but rather that these needs attained a strong political voice. It was probably a culmination of events that contributed to this new force. The depression of the 1930's, the rapid rise in our standard of living, World War II, and the improvement in technology all seemed to have been contributing factors. All political platforms now recognize our social problems and requirements and our major parties are more closely united than divided in facing the social challenges of our times.

Many social aspirations have become realities in the past two decades. Many others are still to be fulfilled and new ones have emerged. The awareness of our Government of these aspirations has been a powerful influence on our investment climate. Let me illustrate this in two ways—one is the gradual abatement in the fear of another depression, which lingered for quite a while following World War II. The Government has, of course, instituted many important stabilizing programs and the fact is that there have been very few and only short interruptions in the growth of the economy.

My other illustration concerns the way we now view the period following the Vietnam War as compared with the attitude of our people as they looked forward towards the years immediately after World War II and the Korean War. At that time, there were generally fears of recessions and even depressions as military spending would be cut drastically and the magnitude of private economic demand was uncertain. In contrast, because of the greater recognition of the requirements of our society, we currently long for the post Vietnam years and the re-deployment of war capacity for productive civilian use.

THE NEW POPULATION

A third very powerful new force is our new population. Here I am referring to the increasing number of young people coming into our labor force. Their skills, their background, and their desires are in many ways different from young entrants into the labor force several decades ago.

This new population, having been reared in the post World War II period, possesses none of the economic fears so evident in earlier generations. Consequently, their traits differ. They spend freely and at an early age in their adult life. They do not generally possess a strong feeling about our Puritan heritage. It is nearly absent. Benjamin Franklin's saying, "Who goeth a borrowing goeth a sorrowing" does not apply to them. Generally, our new population has allocated an increasing percentage of earnings to debt service and has relied more on contractual than on discretionary savings for providing funds for that rainy day.

Another important characteristic of this new population is its drive to implement aggressive economical and financial decisions when put into leadership positions. The increasing emphasis on performance in portfolio management is the result of the initiative and prodding of the young. The conglomerate movement was surely given added momentum from the young, both in financial institutions and in business corporations. It is also no surprise to find that young people frequently dominate the rapidly growing new sectors of our private economy while the policies of stable and traditional industries are still set by an older generation.

In looking towards the future, I should like to make only a few observations on the significance to the investment climate of this new population. Their propensity to spend will probably increase and so will their reliance on contractual savings. Moreover, the new generation will be more highly skilled,

trained and educated than their counterparts several decades ago. Consequently, as they enter the labor force, they will be asking and indeed will be entitled to relatively high starting salaries and wages which will allow them a high standard of living at the start. They will also be moving into less cyclical working endeavors, which will also enhance their credit worthiness. From an investment viewpoint, it is also worth wondering as to what will happen when command of the traditional and stable business is relinquished to the young.

One factor frequently overlooked about our emerging new population is the influence of the underprivileged. As we strive to overcome our bigotry, the Negro and other oppressed minority groups will enter the mainstream of our economy. Their skills and educational background will be raised, enabling them to help man the machines, program the computers and even enter the management class of our society.

In turn, this newly emerging group will be entitled to a higher standard of living. Its demands for goods and services will increase and change. The "Ghettoed" man of today will be tomorrow's home buyer, summer vacationer, and Ph. D. Thus, we will also have new savers and investors. In essence, many of our social problems today actually enhance our future opportunities. As we meet these challenges, the economy will strengthen immeasurably and so will our democracy.

TECHNOLOGICAL PROGRESS

The most evident feature of our times, which has captured the imagination of all, is technological progress. The technological innovations thus far in this century are unparalleled in the history of mankind. We differ from the past in that we incorporate technological change into our thinking, our plans, and our decisions and we confidently look forward to rapidly increasing technological improvements. Contributing to this optimism is talk about a new leisure class and a post-industrial society. The romance of technology has generated tremendous optimism and hope in the future.

Our rapid industrial strides are quickly laying to rest one of the great fears of technological advances—namely, technological unemployment. It has been a myth all along because innovations and new processes generate new services and products and with them the demand for new skills and additional labor. In many ways, labor is in a more advantageous bargaining position in a highly mechanized and computerized business than in an industry still heavily dependent on manual labor.

Technology has forced us to accept another change. A wealth of a nation cannot be judged anymore merely by its natural wealth and resources or its total population. It is the skill of its people which is becoming an increasingly important determinant, particularly as industrial activity diminishes in relative importance and secondary activities gain in significance. Perhaps real wealth will be increasingly identified with knowledge, which it has always been anyway, but in the future it may have a higher market value.

PLANNING

One of the important by-products of our economic progress has been the advent of planning as part of an effective business approach. Today we have corporate long-range planning, product planning, investment strategies and market objectives, ranging from local to international in scope. Perhaps some of the plans may not materialize. Nevertheless, long-range plans help to define and clarify the future, add optimism to business objectives and therefore tend to strengthen the investment environment.

However, because of the increasing popularity of planning, the analyst is put into the difficult position of having to evaluate projections. Accurate judgments on future

plans are difficult to make. It often requires a look around the corner and not the extension of a trend line. We still have not developed adequate techniques for assessing the real risk in embarking on new programs. Unfortunately, there are no future facts but only past ones. For example, it has become highly fashionable lately to put in new plant and equipment quickly, in order to replace labor with machines and to produce in larger quantities. We hear that to some extent these decisions have been motivated by the rising costs of labor and equipment. Therefore, it is valid to ask to what extent do these decisions neglect the risk of obsolescence, particularly if rapid technological advance is a new feature of our environment and international competition can be expected to intensify. In other words, wrong planning decisions in our technological age are going to have a much more dramatically adverse impact on earnings than did the scuttling of a labor assembly line. The planning lead time in an advanced industrial economy tends to be long and thus enhances the risk in the capitalization of research and development expenditures and in huge expenditures for fixed assets.

Long-range planning, including the defining of objectives and the allocation of resources, has not been adopted by all sectors of our economy. Surprisingly, its popularity in the United States lies with the private sector, especially with business. In the totalitarian countries, it is the sport of Governments, which frequently utilize long-range plans for slogans and public relations objectives. Unfortunately, the lack of even intermediate planning by our Federal Government has often been a de-stabilizing influence on our economy.

THE INSTITUTIONALIZATION OF SAVINGS AND INVESTMENTS

On the financial side, the most significant development during the past two decades has been the institutionalization of savings and investments. It provided the means by which our enormous economic growth could be financed efficiently and accommodatingly by our enormous savings. It also gave our financial system additional depth and resiliency, thus providing institutions with broader lending and investing potentials and with the ability to adjust smoothly to new market conditions.

The enormous size of this institutionalization is staggering. Twenty years ago the net inflow of new funds to non-bank financial institutions totaled \$10 billion annually as compared with \$40 billion in 1968. In the early years following World War II, the annual increase in bank credit rarely exceeded \$6 billion, while last year it totaled \$38 billion. These large flows into financial institutions facilitated the financing of increasing credit demands. In 1968, the net demand for credit totaled \$84 billion as compared with only \$11 billion two decades ago. In 1968, the net volume of mortgage financing and net new corporate bond flotations was three times as large as in 1948, and municipal financing five times as large.

The intermediation role of our financial institutions has grown rapidly in the post World War II years not only because of our rapid economic strides but also because of our confidence in the dollar. Generally, savers have turned over their savings to financial institutions in return for a fixed compensation. In addition, most new funds of financial institutions have been invested in bonds and mortgages. In fact, over ninety-five per cent of the credit demands of our economy in the past twenty years has been financed through the issuance of debt instruments. Consequently, the ability to borrow has contributed importantly to the financing of our Federal and local Governments, of business, and of the household sector.

However, during the last few years our financial system has come under increasing

pressure from a surge in inflationary expectations. This development raises the perplexing question of whether our financial structure will survive in its present form if inflation is not checked quickly. The fact that our credit markets have survived a rather vicious battering thus far should offer little solace. The battering has inflicted scars deep enough to hamper the efficiency of the marketplace. Let me just recite a few of the problems that have surfaced in our credit markets:

In recent years, the net volume of home mortgage financing has made little headway while total credit expansion has soared. The net volume of 1-4 family mortgages, which reached a postwar peak of \$15.7 billion in 1963, fell to \$10.7 billion in 1966, recovered only to \$15.3 billion last year and, according to our estimates, should fall to about \$13 billion this year.

In the corporate bond market, it is virtually impossible for anyone but the highest-rated borrower to issue a straight debt bond. This has forced many medium and lower-rated borrowers to issue convertible bonds. For example, the net new volume of convertible bonds represented 33% of all net new corporate bond issues in 1968 as compared with less than 4% in 1963.

For the second time in four years, the tax-exempt market is unable to finance the demand as monetary policy is restrictive and the commercial banks, the largest buyer of tax-exempts, have no new investment funds.

The U.S. Government market has largely become a market of money market instruments. It has suffered not only from the problems associated with excessive private economic and financial demands but also from large financing requirements of the Federal Government itself.

The high level of market rates has repeatedly hampered our deposit institutions. Here, too, for the third time in three years a substantial slowdown in savings flows to these institutions is in process. Moreover, life insurance companies are again having to cope with an increase in policy loans which were already above average levels in 1968.

The shift in the portfolio preferences of institutional investors from bonds to equities and debt obligations with equity kickers is even more rapid and intense than the statistics suggest. For example, the annual net new purchases of bonds and mortgages by non-bank financial institutions accounted for 85% of their total new funds in 1958, 78% in 1963, and 70% last year. Thus, while their total new inflow of money has increased substantially, their commitments in mortgages and bonds have decreased percentage-wise and have been flat dollarwise. However, there is a gap in our information. We do not know how much of the volume of mortgages and bonds purchased by non-bank institutions contains an equity inducement. It has probably been on the increase and therefore the figures which I just cited to you are really too conservative and understate the shift away from the investment in fixed income securities.

INEPT STABILIZATION POLICIES

These financial distortions are largely due to inept stabilization policies, which is the responsibility of Government. Since the escalation of the Vietnam War, the record of stabilization policies has been very poor. The inflationary rate has been high. The timing and implementing of official actions has lacked the skills so widely heralded by the "New Economics." There was the failure to legislate tax increase quickly as the war intensified, the massive credit reflation in 1967 and the quick reversal in monetary policy from restraint to ease in mid-1968.

The complexity of this failure goes beyond a willingness by Government to accept moderate inflation as the price for fuller utilization of resources. Policymakers completely neglected the impact of inflationary policies

on expectations. An increasing number of participants in the private sector of our economy have become aware of the inflationary bias in national policies, have accepted it and are incorporating this bias in their own decisions. This, of course, tends to freeze the rate of inflation or increase it.

The most important deficiency in combating inflation is the failure to recognize the new forces which have surfaced in the past twenty years and which are propelling the economy ahead. I spoke of them earlier. If international cooperation (be it ever so inconsistent) is nevertheless fostering optimism, if social demands have attained a strong political voice, if our new population is aggressive and talented, if technological progress is capturing our imagination, if planning is spreading in the private sector, and if our savings and investment process is largely institutionalized now, then the inherent long-term strength of the economy is much greater than envisioned in the actions of our policymakers which have often been dominated by fears of "over-kill."

It therefore seems that two different strategies are at work. There is the strategy of the private sector, which is heavily influenced by intermediate and long-term factors. In contrast, there are the actions of official policymakers which are short-term and based on the feeling that the private sector is fragile and has fundamentally changed very little. The private sector is incorporating the basic changes into its plans but Government is not. Government also tends only to react and not to anticipate, and it therefore frequently lacks a planned strategy.

THE ALTERNATIVES

As we look ahead, therefore, the key question is whether our fiscal and monetary managers can formulate a stabilization strategy which takes into consideration our new environment. In this connection, there is some hope. In the last few months a new consensus has emerged to resolve our inflationary economic and financial woes and to return the economy to orderly and sustainable growth. The Federal Reserve has moved to monetary restraint and the new Administration has assigned a high priority to the fight against inflation. However, it is much too early to conclude that a return to anything but fleeting stability is assured.

If the Federal Reserve has adopted a new long-range strategy, it will require some time to become evident and to really convince the marketplace. The current restrictive credit posture of the Fed is not unusual. It is what we would typically expect when confronted with rampant inflation in a setting of high utilization of resources. This is a classical showdown in which the Federal Reserve will win this first round. It will continue to shrink credit availability until there is a sufficient abatement in the economic and inflationary momentum. It has done this before. However, whether or not the Federal Reserve has embarked on a new and more disciplined strategy will become evident only thereafter when the economic indicators begin to slide and business expectations turn somewhat hazy. This will be the time for the Federal Reserve to demonstrate that it will not repeat the mistakes of 1967 and 1968 and that it will not reflate the banking system quickly and massively. It will be a difficult task because the economic background will differ from the current exuberance, there will be more political opposition, and the Fed itself will have to be convinced that the economy is not fragile but has enormous underlying vitality.

Success or failure by the Federal Reserve will have very significant implications for the investment climate. Assuming that the Federal Reserve will persist with its new restrictive strategy, the consequences should be a very substantial slowdown in economic activity later on this year, the appearance of a real profit squeeze, a decline in interest

rates, followed in 1970 by a gradual economic recovery. A sharp de-escalation of the war effort would provide the opportunity to accomplish this transition without some very painful moments in our financial markets as well as dislocations.

These events would be a small price to pay for the return to stability. However, this view is not shared by all. There are some who would prefer to keep the economic throttle wide open and others who feel that the Federal Reserve will compromise its new strategy as soon as the economy slows down. Let us assume that the Federal Reserve will not succeed in curbing the current excesses. What would be the consequences? The current inflationary expectations would be validated. This would encourage more spending and less savings and therefore hamper the savings and investment process, a key determinant of economic growth. The flight from the dollar would accelerate both domestically and internationally. Protectionism and trade restrictions would appear again.

For business corporations, operations would become exceedingly difficult. The practice of financing nearly all external financing requirements through debt would quickly come to a halt because investors would insist on earnings participation. Therefore, the average maturity of corporate debt would fall sharply; straight bond financing would decrease and convertible and equity financing would increase, thus penalizing earnings per share.

Moreover, in an inflationary environment ready access to the credit market is not certain to the business corporations. This is because with continued inflation our Federal Government, municipalities and home owners would find it extremely difficult to finance their needs through the issuance of debt. Under these circumstances, it is highly likely that the Government would initiate procedures to allocate economic and financial resources based on some predetermined socially desirable objectives. Thus, institutional investors might be required to allocate a predetermined percentage of their net new funds for the purchase of securities, financing specific social projects, and only the remainder would be available for business. Furthermore, business pricing policies would come under increasing Governmental surveillance and wage demands could not be effectively curbed by Government.

For the security analyst, it should now be very clear that a flourishing fixed income market will be extremely helpful to stocks while the demise of bonds would be an ominous omen.

THE ABM AND THE NATIONAL SECURITY

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. LIPSCOMB. Mr. Speaker, on May 4 and May 6, 1969, the Los Angeles Times published editorials which I feel merit entry in the CONGRESSIONAL RECORD. The May 4 editorial, "The ABM and the National Security," is not a defense of the ABM, but more of an appeal against the unilateral disarmament type of psychology which has been coming to the fore.

As the editorial highlights, the main purpose of the ABM proposed by the President is to insure the survival of a significant proportion of our land-based Minuteman ICBM's—and of our bomber forces—in the event of a first strike by

the Soviets. Safeguard is designed secondarily to protect virtually the whole country against the kind of smaller scale ICBM threat which Communist China will be able to pose in the 1970's. Finally, if a missile were to be fired accidentally in our direction from any quarter, Safeguard would enable us to shoot it down.

The perspective maintained throughout the editorial in discussing the arguments for and against the ABM, the Russian missile activities, and the usefulness of the proposed ABM is to be commended. It is this type of unemotional perspective that is critically needed in the current debates on the ABM.

The editorial follows:

VIEWPOINT OF THE TIMES: THE ABM AND THE NATIONAL SECURITY

President Nixon vows to fight as hard as he can for the proposed "Safeguard" missile defense system because he believes "it is absolutely essential to the security of this country."

ABM critics, in turn, deride the proposed system as a military boondoggle, and charge that its deployment will set off a new arms race, divert resources from badly needed domestic programs and "turn the United States into a garrison state."

The controversy, which turns on whether Congress will or will not vote \$900 million for the first phase of the \$7 billion project, is developing an emotional intensity of the same sort which caused the country to tear itself apart over Vietnam.

In a statement calling for rational debate instead of name-calling, Freedom House correctly observed that opposition to the ABM does not necessarily signify indifference toward the security of the United States.

But the moderate, nonpartisan society also warned that ABM supporters should not be dismissed as "bloodthirsty warmongers, tools of the 'military-industrial complex' or the like."

ARGUMENT HAS GROWN

If there is more heat than light in the debate, it is because the confrontation has escalated into much more than an argument over the merits of a specific weapons system.

Aviation Week, which is anything but hostile to defense spending, made precisely this point in a recent editorial.

The uproar over the ABM, the journal warned its readers, represents an "emotional explosion" against the growth of the military establishment into what many people see as a "vast octopus consuming enormous amounts of blood and money without producing very much security for the nation."

As a result, a jaundiced congressional eye is being cast not just on the ABM, but on military spending as a whole.

Some members of the Senate, in particular, are demanding slashes of a magnitude which would condemn the United States to a second-best military posture relative to the Soviet Union—a situation which most Americans, if faced with a conscious choice, are not prepared to accept.

MUST BE PUT IN FOCUS

If the new skepticism toward defense spending is to serve constructive ends, some perspective is needed, both in regard to the ABM itself and to the larger issue of allocating more resources to civil needs and less to the military.

What is Safeguard?

It is important to understand first what the ABM system, as announced by the Nixon Administration on March 14, would not do.

It would not protect the cities of the United States against the kind of massive missile attack which the Russians are capable of launching, nor is it intended to.

As the White House put it, "There is no

way of doing that. Even if we built a 'thick' defense around our cities at enormous cost, some attacking missiles would get through—enough to inflict extremely high casualties and damage."

To deter the Russians from launching such an attack, Mr. Nixon would continue to rely—as did his predecessors—on keeping the Kremlin convinced that we could absorb a surprise blow and still destroy the Soviet Union with what is left of our missiles and bombers.

As of now, there is absolutely no doubt but that the United States has this capability. The question is whether we will have it in the period from 1973 on.

Russian buildup

In 1965, the year of the massive U.S. escalation in Vietnam, the Soviet Union had some 200 land-based intercontinental ballistic missiles in place compared to our 854.

As of last summer, the Russians had 800 ICBMs compared with our 1,054. Today, they have something over 1,000—and are still deploying more every month—while we have leveled off at 1,054.

The Administration readily agrees that, as of now, our superior bomber forces and missile-firing Polaris submarines give us a clear edge, despite the parity in land-based ICBMs.

The Russians, however, are not standing still.

If they continue to deploy ICBMs at the rate of 200 to 250 a year, while the United States indulges in a unilateral missile freeze, they could have twice as many ICBMs as us by 1973.

Furthermore, the ICBMs now being deployed are the big SS-9 or Scarp missiles which can carry single warheads up to 25 megatons or three smaller multiple-reentry warheads—each of which is several times larger than the warheads atop our Minutemen.

The Russians, meanwhile, also are building missile-firing submarines of their own, as well as killer subs which presumably are intended, in event of hostilities, to knock our Polaris subs out of action before they can fire their missiles.

Finally, they have already built a relatively unsophisticated ABM system around Moscow, and are known to be conducting research and development toward a more advanced system.

The Pentagon's best judgment is, as President Nixon told a recent news conference, that the Soviet Union may be "substantially ahead of us in overall nuclear capability" in 1972 or 1973, unless something is done now.

Defense Secretary Melvin Laird is convinced that the Russians are trying to build a "first strike" capability—that is, the ability to knock us out with a surprise blow.

There is no proof of that. But, as Mr. Nixon put it, "We have to base our policies on their capability"—and this capability is rising in an ominous way.

Enter Safeguard

The main purpose of the ABM proposed by the President is to insure the survival of a significant proportion of our land-based Minuteman ICBMs (and of our bomber forces) in the event of a first strike by the Soviets.

Safeguard is designed secondarily to protect virtually the whole country against the kind of smaller-scale ICBM threat which Communist China will be able to pose in the 1970s.

Finally, if a missile were to be fired accidentally in our direction from any quarter, Safeguard supposedly would enable us to shoot it down.

Negotiations

In announcing a proposed go-ahead on the ABM, President Nixon made it plain that he hopes it will not be necessary to build the whole \$7 billion system. Construction

can be stopped whenever arms control talks with the Russians produce results.

In the first phase, what amounts to prototype ABM installations would be built in the vicinities of two Minuteman complexes (in Montana and North Dakota) which are said to contain about 350 ICBMs.

Mr. Nixon is convinced that these two ABM complexes alone should, upon their completion in 1973, go a long way toward deterring a would-be enemy from the temptation of a surprise attack by the United States.

Whether the remaining ten Safeguard complexes would ever be built depends upon the progress of arms control talks with Moscow.

The opposition

One thing which makes the ABM debate so confusing to the ordinary American is the sharp disagreement among the so-called experts.

The Safeguard system, which has been likened to "shooting a bullet with a bullet," involves an extremely complex marriage of radars, computers and missiles.

Some of our most eminent scientists sincerely doubt that, if built, it will work—and they have mounted a vigorous and highly effective lobbying effort to impress their skepticism upon Congress and the public.

Other scientists, equally qualified and sincere, are confident that Safeguard will do the job it is designed to do, and believe it should be built.

Officials recall that both the hydrogen bomb and the Polaris submarine were developed—fortunately for the security of the United States—in the face of similar disagreement among the "experts."

Dean Acheson, who chaired a presidential advisory group on the hydrogen bomb question 20 years ago, says that "everything which is being said at the present time was said to me then." And he added: "Then, as now, scientists were acting as professors of morality."

Calling Dr. Strangelove

Assuming Safeguard will work, there are still a lot of knowledgeable people who argue that it will not really provide the protection advertised.

If the Communist Chinese were to decide to commit national suicide by launching a nuclear attack on the United States in the 1970s, it is argued, the existence of Safeguard would not stop them.

AN EASY JOB

They would need only to lob in a few short-range missiles from offshore submarines, or smuggle some A-bombs aboard freighters bound for Los Angeles, New York or other port cities.

In the event of a massive Soviet missile attack on the United States, ABM opponents argue that we could fire off our Minutemen before the incoming missiles arrived.

Even if we failed to do so, they insist, the Russians would still have to score near-perfect bull's-eye on virtually all of our Minuteman silos, bomber bases and Polaris subs—else they would face certain destruction from our retaliatory blow.

The survival of a substantial retaliatory force is best guaranteed, in the opinion of many experts, not by installing ABMs, but by building more offensive missiles, putting multiple warheads on them—and perhaps mounting some on hard-to-hit mobile platforms such as barges or railroad cars.

Surely, argue the ABM critics, a start on Safeguard can at least be postponed for a few months more. By that time, arms control talks should be under way, and we will have better intelligence on whether the Soviet ICBM buildup is aimed at achieving parity with the United States or an intimidating superiority.

SOME ROOM FOR DOUBT

The Nixon Administration has not, as a matter of fact, been entirely convincing in its

insistence that the country faces a now-or-never decision on the ABM. Even if one assumes the worst about Soviet intentions, a few months' delay does not have to condemn the United States to a position of inferior power.

The U.S. Senate, however, will gravely and irresponsibly imperil the security of the United States if it votes down the ABM without serving clear notice that the action is provisional—that the Soviet Union is expected to match our own show of good faith by stopping its buildup of offensive missiles.

If Moscow disappoints these expectations, the anti-ABM senators should make plain, they will support President Nixon in doing whatever is necessary to maintain the American nuclear lead.

Unfortunately, there is no evidence that the more emotional foes of the ABM are prepared to exercise that kind of statesmanship.

THE SITUATION IN VIETNAM

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. THURMOND. Mr. President, the State is one of the principal newspapers in the State of South Carolina, and enjoys an enviable reputation for its judgment and accuracy. In particular, its editorial page consistently shows thoughtfulness and vision. Therefore, I was particularly impressed with the State's recent editorial on the Vietnam situation.

The State comment on published reports that the United States may attempt to get Hanoi to agree to a mutual pull-out; and if this fails, the United States may order a unilateral pullout. The State points out that Hanoi has no reason to accept a mutual reduction of forces, leaving a unilateral withdrawal inevitable. This would be equivalent to abandoning the Vietnamese and all that we have at stake.

Mr. President, the State argues that this solution is not acceptable to the public's frame of mind, judging by public opinion surveys, and concludes that we must be prepared to buck the pacifist tide of minority dissent.

Mr. President, I commend these sentiments, and I ask unanimous consent that the editorial "Unilateral Insanity," published the State of Monday, May 5, 1969, be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNILATERAL INSANITY

The Nixon administration, according to reports from Washington, finally has settled on a "solution" to the Vietnam war. The plan breaks down into two parts: (1) Paris negotiators will attempt to get Hanoi's signature to an agreement for mutual troop withdrawal, but (2) if this fails, Washington will order a unilateral pull-out.

Further details are unknown at the moment. Chalmers Roberts of the *Washington Post* says a new enemy offensive could gum up the schedule, forcing the Nixon administration to bring the troops home slowly. But the word is out that, whatever Hanoi does, President Nixon plans to begin scaling down American participation in the war effort, probably as early as this summer and no later, certainly, than fall.

Questions inevitably arise as to the wisdom of the plan. To begin with, a mutual reduction of forces seems highly unlikely, especially in view of Washington's intention to go it alone. Why should Hanoi de-escalate under these circumstances? In addition, it is foolish to suppose that South Vietnamese forces can take up the slack left by the departing GIs—or that the Saigon government will be able to survive the upheavals that are bound to occur once U.S. military support is removed.

In short, the plan seems to have been designed to accomplish a single purpose: to get America out of Vietnam, and never mind what happens once we leave. This was not the original objective, which was to preserve South Vietnam from Ho Chi Minh's troops and fifth columnists of the National Liberation Front. The original objective, in fact, is inconsistent with an American troop withdrawal. South Vietnam's forces, by common consent, are not yet up to resisting unassisted the Communists, who are well-trained, well-armed, fanatical and entrenched throughout the south.

There is this possibility, however: that the proposed backdown in Vietnam is a "trial balloon," hoisted in an attempt to define the limits of U.S. public opinion. How badly does the nation want peace? Badly enough to abandon Vietnam and, if need be, the rest of Southeast Asia? If this is the public's frame of mind, any political administration in Washington would want to know about it.

But it is not the public's frame of mind, to judge by polling results. Public opinion, every survey shows, is heavily weighted against a unilateral troop pull-out and in favor of military escalation if the Paris talks collapse. This is what the public wants and what national honor demands. The question is whether the Nixon administration, unlike its predecessor, is prepared to buck the pacifist tide of minority dissent.

TAINTED GLORY ALWAYS EXPLODES

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. MICHEL. Mr. Speaker, although Justice Fortas has resigned from the Supreme Court, I am sure we have not heard the last of this incident. Meanwhile, I noted an editorial from the May 16, 1969, edition of the *Peoria Journal-Star* which addresses itself to this and other similar problems during the Johnson administration.

I recommend it to my colleagues as a good example of how the folks back home evaluate and consider these issues which are often so close to us that our perspective tends to become somewhat blurred. I include the editorial in the RECORD at this point:

TAINTED GLORY ALWAYS EXPLODES

Lyndon Baines Johnson began his presidency with the Bobby Baker mess, and ends it with the Abe Fortas mess.

The irony is that after Bobby Baker and Billy Sol Estes, the American people in massive numbers and the commentators and entertainment figures and a massive swatch of academia, persuaded themselves to believe Lyndon Johnson's campaign oratory.

They weren't interested in the "means" only in the "ends," themselves, for the practices and policies they had become enamored of—and they chose Lyndon Johnson as their "means," they thought.

He was a consummate politician, and they took pride in this. "He knows how to get things done," they said, and gloated at how he would "manage" affairs to the results they desired.

LBJ'S EXPEDIENCIES

Instead, of course, Johnson's presidency, after election, was a catastrophe from start to finish.

It required no great amount of brains, but just a small amount of balance, here in Peoria for us to comment just before that fateful election, that some of the statements by which Barry Goldwater was driving away votes were true, and that in any case, Goldwater was an honest man.

And it didn't take much brains, and only a little bit of maintaining one's balance, to comment that Mr. Johnson was making statements that were not true to attract votes, and pledging himself to policies that he could not perform.

It didn't take much brains to predict that Mr. Johnson would be elected, and that after election he would perform many of the things Mr. Goldwater had openly forecast and been derided for.

Can you imagine what might happen in this country if people with a lot of brains kept a little bit of balance? If they fore-sware such fanatic feeling for "ideologies" in favor of some old good-fashioned respect for honesty and honorable methods—instead of putting ends before means in their "morality"?

It is discouraging, and makes people bitter and cynical when a Bobby Baker affair explodes, and more so when an Abe Fortas comes tumbling down, from such a high eminence.

When I was new at newspapering, these things shocked, disillusioned and made me cynical.

Not any more.

For Bobby Baker's playhouse did come crashing down around his ears, and achieving Supreme Court of the United States has no honor or pleasure in it when it ends one's life career in humiliation and disgrace.

Indeed the presidency which Lyndon Johnson sought all his life became not only a hollow victory, but a shattering, bitter experience—tasting of gall and wormwood—and ending in humiliation. It did not produce the glories and the wonders and the satisfactions he expected, but the very opposite.

ABLE MEN BUT . . .

These were and are extremely able men. They had to be. They had unlimited possibilities and vast satisfactions open to them on their merits. They didn't have to apply themselves with extra drive, and cut corners, or disregard high ethical standards.

The moment they did so, rather than better assure their success, they built into that success a fatal flaw which no future performance could, in the end, overcome.

When such performances are repeated, it isn't difficult, even in a comparatively short life in this business to see people who seem to be doing very well, indeed, and whose methods are questionable—and to say, "He's riding for a fall."

After many such experiences, this newspaperman is no longer the cynic of his first experiences. I now look upon such without cynicism, but with patience and confidence, that such persons have compromised their ultimate chances of fulfillment, and already inflicted the wound on themselves for which the pain comes later.

And there is no vengeance sharper than for the man who reaches to within an inch of the final, topmost goal, and says, "I got away with it!", so that just at this moment, the prize turns to a burning coal in his hand.

That breaks something inside of a man that even physical direct punishment cannot.

Especially when, the rest of his days, he must say to himself, "I could have done it. I was good enough. I had the ability. Why did

I blow it all by wanting too much and being too careless how I got it?"

This lesson ought not be that people can get to such high places when engaging in some shady methods. The lesson should be that such attainment explodes in your face, if it is tainted.

The very hour of glory becomes the hour of the collapse, more often than not.

Integrity, a sense of honor, is still important—to this country, and its future, and to the individual human being who seeks a genuine fulfillment and satisfaction in his own life.

This is not a world of hypocrisy.

Honor exists. It needs to exist more widely, and to be more widely respected.

It is very "relevant" indeed to a "whole" life for the individual—and to society.

It's about time the "realists" quit treating honor as "camp" and started treating it as the realism it is in our supposed art, literature, humor, communications, and colleges.

PROCLAMATION IN SUPPORT OF PRESIDENT NIXON'S PEACE PRO- POSAL

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks a proclamation which was issued on May 18, 1969, by the U.S. Jaycees in support of President Nixon's peace proposal.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

The official Jaycee proclamation presented to President Nixon by Smith stated:

"Whereas, The United States Jaycees stand in complete support of the efforts of President Richard M. Nixon in the quest for honorable and positive peace in the country of South Viet Nam as well as the rest of the world, and

"Whereas, we enthusiastically support the more than one-half million Americans in South Viet Nam and proudly salute and pay tribute to those 35,000 Americans who have gallantly and unselfishly sacrificed their lives in this quest for peace, and

"Whereas, we believe that the National Liberation Front and the North Vietnamese government should unquestionably understand the resolve of the people of the United States, not to crumble from within but to stand firmly and resolutely in support of our President in the quest for honorable peace and the right of self-determination in South Viet Nam;

"Therefore, be it resolved, that we, The United States Jaycees, encourage and solicit the support of every organization and every American in providing complete and positive unity in support of the President of the United States of America in his efforts to effect a lasting world peace and pledge to him our continued support for his endeavors in our behalf as Americans."

Some eighty-seven civic and service organizations have been contacted by the U.S. Jaycees and encouraged to adopt similar resolutions and forward them to the President.

Several times in the past, the Jaycees have endorsed national policies of the President of the United States. In 1940, the organization was the first group to give full endorsement to the peacetime draft. In 1965, the Jaycees adopted a resolution supporting the nation's Viet Nam involvement in defense of freedom throughout the free world.

THE CENSUS IN PERSPECTIVE

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. OLSEN. Mr. Speaker, I want to discuss briefly another aspect of the decennial census which has been subjected to unjustified attack. This concerns its mandatory character—the requirement that people must be enumerated.

Now we all know that the most laudable endeavor can be portrayed in such a way as to make it appear deplorable. I suppose we could poison the attitude of a stranger toward baseball, the national pastime, if we simply asked if he approved a sport in which one player can injure another by hitting him in the head with a ball, hard as a rock and thrown at lightning speed. Something of this sort is taking place in connection with one of our oldest national institutions—the decennial census.

It almost defies response when a person asks a question like this: "Do you think you should be slapped in jail for refusing to tell the Government in Washington how you heat your house?"

Or like this: "Do you think it's right to take a man to court for refusing to tell the Government what kind of work he was doing last week?"

By the same token, it begs agreement when one person tells another he thinks it is terrible that some blabbermouth-ing bureaucrat demands to know how old you are.

These one-sided questions and comments not only miss the point, but they mislead the public. Let us analyze this kind of distortion from two points of view.

First, a penalty for refusal to answer the questions has existed since the census originated in 1790. Yet, in all these years very few persons have been fined. Very few cases have been taken to court. No one has ever been put in jail. The courts could impose a penalty of up to \$100 and 60 days in jail. However, I think it is worth noting that the census managed to get along from 1790 to 1920 with the courts empowered to levy only a fine and no jail sentence. The latter was added for the 1930 and subsequent censuses—not bureaucratically, keep in mind, but by the Congress itself to emphasize the need for all people to respond.

I trust that no one is under the impression that the census takers—or the courts, for that matter—are interested in flouting the rights vested in them by law. The record scotches any such notion. In 1970, as in every previous census, the people will be required only to answer the questions to the best of their knowledge and ability. The penalties were not conceived, nor have they ever been used, to embarrass anyone who does not respond with 100 percent, unequivocal accuracy. That should be clear. At the same time it should be remembered that no nation in the world can or does rely upon a voluntary census. And no Congress of the United States, from 1790 onward, has regarded the census as any-

thing except an obligation of citizenship. The law has always recognized what experience with many voluntary surveys has shown: that the returns from a universal survey such as a census, if taken on a voluntary basis in whole or in part, would be of such low statistical quality as to be meaningless for many of the small areas for which census data are needed, and for many of the uses to which census statistics are put.

Furthermore, the mandatory provision emphasizes the significance of the census and the importance of sharing this responsibility equally among all the people. It is indispensable to a successful census. Without it the people would in effect be told that they really do not have to respond, that they can do no great harm by throwing the form away. Millions would probably do so.

In these times many of us are understandably weary and sometimes resentful of so much paper work. But let us not choose the wrong target for destruction. Let us acknowledge the unique and vital role of the census. Let us accept the fact that full participation is imperative for a census to be effective. And let us view the penalty provision in that light.

So much for the background. Now to the current point.

Those critics who single out one question or another and link it with an extremely remote threat of punishment neglect the main consideration. The answering requirement was adopted to apply to the entire census—to the whole set of related figures that emerge from this nationwide canvass of the people. It enables the Government, acting in the broadest public interest, to collect sufficient data from which to draw a clear picture of our attainments and our needs.

I know from my years of experience as a member of the Subcommittee on Census and Statistics that no item is accepted for the census questionnaire without the most careful evaluation. Each must serve a definite public and governmental purpose.

A question on heating systems, for instance, has been included in every census since 1940, the year in which the scope of the decennial canvass was expanded to cover housing as well as population. The type of heating equipment is a key indicator of living conditions. Local agencies use the data in appraising community health and safety standards. The question, incidentally, will be asked of only one in five households next year. It will not be asked, you may be sure, because some insolent bureaucrat wants additional grounds for putting innocent citizens in jail.

For a much longer period—back to 1840, in fact—census takers have been asking citizens about the kind of work they do. The census is the only source of data embracing all persons engaged in some form of economic activity. And detailed census tabulations provide the only source of information on occupational skills of the labor force in States and local areas. This reservoir of data has a multitude of uses—for example, to lay out economic development and manpower training programs. This inquiry,

I want to add, also will be made of residents in only one of every five households.

As for how old you are, I can assure you that no one involved in the census is interested in the age of any particular person. But since age is an important factor in examining the makeup of the population, the item has been included since the census began in 1790. It has many specific uses, too, in such program areas as social security, health, housing, and education.

So we see that if anyone chooses, he can hammer away at the census by taking a question out of context—by distorting its meaning—by exaggerating its language—or by spreading the idea that the census is an excuse for turning loose a posse of prosecutors against unsuspecting, law-abiding citizens. That kind of assault is as unreasonable as it is unfair.

The truth is that every question approved for the census is designed to fulfill a specific governmental need for information. It is important in itself. And it is an important part of the whole body of information which Americans are called upon to assemble only once every 10 years.

ESSAY BY MISS JANE E. O'LEARY,
WHAT IT MEANS TO BE AN AMERICAN CITIZEN

HON. CLAIBORNE PELL

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. PELL. Mr. President, recently, I have had correspondence with Miss Jane E. O'Leary of 79 Michael Drive, Warwick, R.I. She enclosed an essay that she had written, entitled "What It Means To Be an American Citizen," which I believe is worthy of the attention of Members of Congress.

I ask unanimous consent that her essay be printed in the Extensions of Remarks, for it clearly indicates that this young woman has grasped the real meaning of citizenship in our great country.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHAT IT MEANS TO BE AN AMERICAN CITIZEN

There is a Bill of Rights in the United States that guarantees every American citizen the right to freedom. The four rights below are ones that I have had first-hand experiences with. The people in some countries do not have the freedoms that we do. We are fortunate that the men who wrote the Bill of Rights realized what freedoms there should be.

Every American has the freedom of speech. You may talk to your friends in whatever manner you please. If people want to know what you think about this and that, you may tell them what you think without being afraid of being locked up. I wrote to the Editor of the Providence Journal and told him what I thought about the war in Vietnam. It was published on the editorial page for people to read if they wanted. And that is the freedom of speech.

There is a freedom of religion in America. If you do not choose to go to church, you do not have to; but that doesn't mean that you can't. If you like, you may visit a church once or twice to see what it is like. In some countries there is no freedom of religion. The Germans didn't like Jews and killed six mil-

lion of them. At one time in Russia the government closed all of the churches because they wanted to have more control over the people.

A right to own property is another of the many rights. You may put a fence around your yard if you don't want people in your yard. If you own something and someone tries to take it from you, you can get help from the police. Every American person has the right to buy property that he can afford—you may not be turned away because of your race or religion. We should be proud for this right because some countries are without it, for instance China.

There is one more freedom I would like to mention, called trial by jury. This means you have a right to go on trial and have a jury determine whether you are innocent or guilty. You are not punished unless you are found guilty. You may sue someone if they are doing something illegal against you or someone else. I have never been on trial but I visited a courtroom when a man was on trial for larceny. There were two sides with witnesses on each side. There was a lawyer on each side but only one judge. After they were through talking with the witnesses the judge made the final decision. He ended up letting the man go free because one person should have been in court to testify and he wasn't and a search warrant should have been issued. Trials are very interesting and I would like to visit another some time.

I had this essay finished but something made me change it. In the mail I unexpectedly received a letter and it was from Senator Pell commending me on a recent press release. That shows me that leaders, very busy ones, still find time to write to young people in our country. Where else could this happen but America—this land was made for you and me.

EXCERPTS FROM A SPEECH BY CONGRESSMAN GEORGE BUSH, DELIVERED AT THE ANNUAL SPRING DINNER OF THE NATURAL GAS MEN OF HOUSTON

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. PRICE of Texas. Mr. Speaker, our distinguished colleague, Hon. GEORGE BUSH, recently addressed the annual spring meeting of the Natural Gas Men of Houston, Tex. It was a speech in which Mr. BUSH made some very timely remarks on the oil depletion allowance, and on the emotional climate now attached to that particular issue. I wholeheartedly concur with his position and remarks. In light of the high interest now focused on this matter, I think it would benefit us all in our understanding of this situation to read excerpts from Mr. BUSH's address, which I now submit for insertion in the RECORD:

EXCERPTS FROM A SPEECH BY CONGRESSMAN GEORGE BUSH, DELIVERED AT THE ANNUAL SPRING DINNER OF THE NATURAL GAS MEN OF HOUSTON

As much of the attack on the oil industry and oil taxation has been primarily emotional, I have urged that the intellectual level of the debate be escalated. The time is at hand for sobriety of judgment in this matter rather than additional excesses of argument based on emotional sentiment.

In reviewing the record now before the Ways and Means Committee, the evidence clearly reveals that:

(a) on total taxes, the oil industry does pay its share of taxes.

(b) the oil industry is not disproportionately profitable. Using return on invested capital as a yardstick, the industry ranks right in the middle of all other industries. It is not more profitable than most manufacturing enterprises.

(c) the price of petroleum products has not risen nearly as fast nor gone nearly as high as products of other industries.

(d) there is an acute need to find more domestic reserves; the ratio between proved reserves and consumption has declined rapidly.

(e) the gas industry picture is exceptionally perilous in terms of long-range supply and consumption.

The above points were not substantially challenged in our committee, and yet incessant emotion prevails—the myth continues of the “rich oil man” getting fat at the expense of other taxpayers.

Here is a key example of emotion on the question of oil taxation. You have all heard of the 154 cases of really rich people, non-taxable individuals who pay no tax year after year. If you ask the man in the street why these rich people pay no tax at all, they reply “They are rich oil people using that oil depletion allowance.”

And yet the figures provided to the Ways and Means Committee on these cases show that total income for these people came to \$112 million and depletion on their income came to less than 1 percent of the total. And yet the industry still gets blamed—depletion still gets blamed—depletion is still called a dangerous loophole.

I hope the committee will separate fact from fiction.

I am pleased that President Nixon one week ago reaffirmed his position that the depletion allowance must remain unchanged. This reflects Mr. Nixon's awareness of the eminent importance this provision has in relation to our nation's future.

I am pleased that the Treasury's tax recommendations did not contain suggestions for changing the intangible drilling charge—provisions of the tax laws. If these provisions were ever necessary, the time is now. Although these provisions are under assault in our committee, and in the Congress, I will continue to fight for their preservation. We must separate emotion from fact.

There is a widespread feeling around Washington that if we opened the floodgates to foreign oil there would be lower gasoline prices—lower fuel prices.

To this, I say you might see a temporary price reduction but our domestic industry would be driven to its knees and rendered impotent by a flood of foreign oil, and then the price of that foreign oil will surely rise. We'd be over a barrel and the Arabs would know it. Up would go our price.

NOTE.—Since Congressman Bush speaks from notes rather than a text, there may be additions to, or changes in, the above. However, the Congressman will stand by the above quotes.

ADDRESS BY MRS. HENRY
STEWART JONES

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Tuesday, May 20, 1969

Mr. THURMOND. Mr. President, the delegates to the Continental Congress of the Daughters of the American Revolution recently received a warm and spirited welcome on National Defense Night from Mrs. Henry Stewart Jones.

Mrs. Jones' address was a fine example of patriotism and a noble expression of American ideals. Mrs. Jones maintained that patriotism “is not a matter of idle flag waving, but a most solemn and pressing duty.” This is a great and spirited sentiment.

Mrs. Jones argued convincingly to maintain our strong military posture. She praised Secretary of Defense Melvin Laird for his analysis of the Soviet threat, and warned of the dangers posed by godless communism.

Mrs. Jones also contrasted the moral basis of the American cause with the aggression of the Soviets. She said:

To us, National Defense represents something more than a strong military posture. We seek to preserve the moral, the spiritual and the Constitutional values which brought this Nation to the pinnacle of greatness and gave the American people a degree of freedom unparalleled in history. This is a positive program which can engage the mind and heart of every member.

Mr. President, I congratulate Mrs. Jones on her stirring message and ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ONE NATION, ONE CONSTITUTION, ONE
DESTINY

(By Sara Roddis Jones)

It is my privilege tonight to extend warmest greetings to you all—distinguished guests and Daughters of the American Revolution. I also want to extend special greetings to those Daughters who are attending a Continental Congress for the first time. One cannot leave these halls without deep pride that no Daughter has ever conceded that patriotism is old-fashioned. For us, patriotism is not a matter of idle flag waving, but a most solemn and pressing duty. Our first objective, therefore, is to do all in our power to help preserve our constitutional Republic, to keep America strong and free—in other words, to keep America, American.

To this end, we seek “to cherish, maintain and extend the institutions of freedom.” To us, National Defense represents something more than a strong military posture. We seek to preserve the moral, the spiritual and the constitutional values which brought this Nation to the pinnacle of greatness and gave the American people a degree of freedom unparalleled in history. This is a positive program which can engage the mind and heart of every member.

Here I want to pause a moment and express gratitude to the many Daughters who help promote these ideals by forwarding contributions to Dollars for Defense. These dollars aid immeasurably in carrying on the work of the National Defense Committee.

I also want to express appreciation for the fine cooperation given by our National Vice Chairmen and State Chairmen and Chapter Chairmen of National Defense during the past year.

I wish I could share with you all the many fine letters that come in from men and women from all walks of life thanking the DAR for its leadership and unflinching patriotism.

During the past year, our President General has had as her theme Daniel Webster's famous words: “One Nation, One Constitution, and One Destiny.” This theme is a timely reminder that the future of our Country lies in our hands. Either we love our Country and guard its Constitution—or one day we will lose both.

We speak of the DAR as a great service organization. What greater service can we

render our fellow countrymen than to hold aloft the principles which made this Country great, to do all in our power to keep America sovereign, solvent and free. We are unashamed in our determination to hang on to America. We do not propose to find ourselves a disarmed province in a godless and socialistic, one-world government. We will not willingly surrender our present enviable status as “One Nation under God” for one world without God.

It is our purpose, therefore, to expose and oppose anything which threatens constitutional government or our own survival as a Nation. Through the years, we have expressed the belief that a strong military posture was the best guarantee of peace. So long as we remain free and strong, all the world can hope for ultimate delivery from tyranny. If we fail, the lights of freedom will go out all over the world.

With this in mind, during the past year we have expressed our grave misgivings over the recently ratified Nuclear Nonproliferation Treaty. We are not a political organization. At no time did we expect to succeed in opposing the Treaty, but we chose to take our stand on principles with the 15 courageous Senators who had the vision and intestinal fortitude to vote against it. And why?

Because the Treaty is aimed at nonnuclear nations! Actually the greatest threat of nuclear warfare stems from the Soviet Union itself, and ultimately Red China which is not a party to the Treaty.

Because the Treaty will not stop the arms race! It leaves the Soviet Union free to continue development and build-up of nuclear weapons, but will effectively prevent the modernization of armaments for the defense of Europe.

Because the Treaty denies and excludes the option of the United States to selectively proliferate purely defensive weapons to hard pressed allies! Thus, its main effect is to bind the nations of the noncommunist world and simultaneously to extend United States commitments to defend the free world.

Because the Soviet Union sacrifices nothing and has repeatedly shown itself no respecter of treaties! On January 8, 1969, at the very moment the Soviet Union was pressing for United States ratification of the Treaty, Moscow showed its contempt for the spirit of the Treaty by concluding an agreement with Cuba under which the Soviet Union undertook to help Cuba expand its nuclear program. There was no indication that this help would be confined to purely peaceful uses—and Cuba is just 90 miles off our shores.

These are but a few of the reasons why we fear the consequences of this Treaty. We deplore the fact that almost anything can be put over in this Country in the name of “peace.” But we have no peace—and not since we joined the United Nations have we fought a war we were allowed to win. First there was Korea, and now we are bogged down in Vietnam in one of the longest and most unpopular wars in our history.

The Soviet Union is not only supplying 80 percent of the military supplies to North Vietnam but is testing our will to win this or any other war. If the war in Vietnam is to be won, it must first be won in the United States. Our boys are committed to victory, but no army is stronger than the people behind it.

Here at home, the “disarmers” and the “doves” are gambling with our future by arguing about the wisdom of deploying an antimissile system. The Soviet Union has already deployed about 80 percent of its antiballistic missile system. Secretary of Defense Melvin Laird, who makes terrifying sense in his defense of a United States antiballistic missile system, has testified that the costly Soviet weapons programs are clearly aimed to gain nuclear superiority. The Soviets are spending billions to destroy our missile sys-

tems, yet the "doves" of this Nation argue that it is folly to protect our missile sites. We do not presume to know all the answers to this thorny problem, but we do know that events long have proved that the Soviets respect only strength. If we let down our guard, we can expect no sweet charity from the Soviet Union. How can this or any other nation sit idly by and fail to protect its defensive striking power?

In asking this question, it is not suggested that this Nation succumb to Maginot-line thinking. The best defense is still a good offense. But this Nation's leaders have announced that we will never be the first to use nuclear weapons. Shall we also deny ourselves effective second-strike weapons and retaliatory power?

These are grim questions. But we must find the answers if we are not to go the way of Carthage some 21 centuries ago. Here was a nation that so loved peace that no price to keep the peace was too exorbitant to pay. The people of Carthage disarmed unilaterally—exactly as we are doing today. They made endless concessions to Rome but, in the end, it was not enough. They lost everything—their lives, their homes and their wealth. A great civilization disappeared from the earth. May God forbid that we follow that same trail to oblivion in our quest for peace.

Here one must note that it is not just armaments which will save this Nation. If a man has nothing to believe in, he has nothing to defend. The communists long since have undertaken a systematic program designed to encourage disregard for authority and disbelief in values that we hold dear.

God and the doctrine of eternity, they say, are myths to perpetuate slavery. Cast off your chains, they cry, and follow the doctrine of reason, not religion. The tragedy of it all is that communism has made successful inroads in two-thirds of the earth's surface because it offered a new dedication to those who had none.

We must match that dedication with a renewed dedication to our own ideals and way of life, for where in the world are the most chains? In the communist world, of course. Ours is the authentic revolution! Ours was the revolution that made men free. In this Nation we have always believed that liberty was God-given—and our reward has been a degree of freedom that is the envy of the world.

Despite this, here in our own America, the communists have successfully involved themselves in areas of racial strife and student unrest, seeking not the benefit of the group they have infiltrated, but seeking rather to keep strife and riots going so that the ultimate beneficiary will be the communists.

Let us listen, therefore, to the warning of J. Edgar Hoover, Director of the Federal Bureau of Investigation:

"Communism has hurled us a mortal challenge. Our response, and the response of free men everywhere, will determine whether or not freedom survives. It is no longer sufficient for us to adopt the negative approach of merely reacting negatively and defensively to every shift of communist tactics. We must place greater emphasis on the positive role which our democratic way of life can perform in this struggle."

A demonstrated faith in our great heritage is the mightiest weapon we have in the fight for freedom and against communism. The place to start is in our schools, in our churches, and in our homes.

Let us root out the permissiveness which becomes anarchy, a life without standards, a body without a soul. Let us substitute, instead, the ancient virtues of self-discipline, morality, honesty, patriotism, and, above all, love of God.

We need not sit forever idly by and permit the Supreme Court to deny our children simple prayers in our schools. The constitutional prohibition against state support of "an establishment of religion" was

never intended to obliterate all references to Divine power from public activities in which the State has a part.

Just recently it came to our attention that there was a plan afoot to remove all mention of God from the military. The emphasis was to be on morality—not God. But, and let us never forget this—every moral code has its roots in religion. Without religion, there is neither a moral code nor morality.

The first duty of education is now, and always has been, to build a responsible citizenry. We are presently engaged in a life-and-death struggle for our God-given liberty and against the dialectic materialism of atheistic communism. We will not win that battle by denying the Faith of our Fathers. There is no middle ground between communism and a freedom based on the self-discipline of religion.

Benjamin Franklin summed up this thought when he said: "Man will ultimately be governed by God or tyrants." Alexis de Tocqueville put it another way when he said: "Despotism may rule without faith, but liberty cannot."

Each of us has a part in defending the moral, the spiritual and the constitutional values on which our freedoms are based, and as we do so, let us remember:

I am only one, but I am one. I cannot do everything, but I can do something, and what I should do and can do, by the Grace of God I will do.

ROCKFORD SCHOOL BOARD HONORED

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. ANDERSON of Illinois. Mr. Speaker, no one can question the unique and vital role played by the local board of education in American life. It is the epitome of democracy at work in our local communities and citizens who serve on school boards are entrusted with a great responsibility and a high honor. The school board in turn is entrusted with the responsibility to provide an educational program which truly meets the needs of the community and is responsive to the demands of our changing times.

It was therefore with a great deal of pride that I participated in an awards ceremony this past weekend honoring the Board of Education of Rockford, Ill., for its outstanding accomplishments in the field of public education. The occasion was the 1969 National Education Association-Thom McAn school board awards program held at the NEA headquarters on Sunday and Monday, May 18 and 19, 1969.

The Rockford Board of Education was awarded "National First Place for Systems Over 6,000 Enrollments." The award was in recognition of a unique program started in the Rockford district in response to parent dissatisfaction with educational opportunities provided for their children. The resulting program was a new communications link with the black community and a teacher academy that have nurtured many educational innovations in the Rockford School District.

I wish to commend the National Education Association and the Thom McAn

Shoe Co. for making these awards possible and I wish to extend my heartiest congratulations to the Rockford Board of Education for this outstanding achievement and the example they have set for other school systems in our country.

I think special recognition is due the former president of the Rockford Board of Education, Mr. Clifford Carlson; superintendent of schools, Dr. Thomas A. Shaheen; and Rockford Education Association president, Mrs. Bernice Domeier. Also on hand for the awards presentation was Mrs. Marcella Harris, a member of the Rockford School Board.

At this point in the RECORD I introduce a description of the Rockford program as it appeared in the awards brochure:

ROCKFORD BOARD OF EDUCATION DISTRICT NO. 205, ROCKFORD, ILL.: NATIONAL FIRST PLACE—SYSTEMS OVER 6,000 ENROLLMENTS

In the city of Rockford, Illinois, the Board of Education was confronted with two problems: a lack of communication between the schools and the black community and a lack of communications between classroom teachers and other educational innovators. As a response to parent dissatisfaction with the educational opportunities provided for their children, this Board of Education established the Washington Community School with Ombudsmen in the black community and a teacher academy.

The Washington Community School is a junior high school staffed only with those teachers who want to be there. A team of three Ombudsmen provides a communications link between school and community and works out conflicts that arise. Teams are being developed for the four feeder elementary schools and two receiving senior high schools of the area.

The Teacher Development Center has served as the proving ground for many educational innovations in the Rockford District. This center provides classroom teachers an opportunity to work with outstanding teachers and to learn about the latest methods and equipment. This enables them to incorporate their new knowledge into their own classroom teaching.

The Rockford Education Association points out that, though these unique and inventive school projects have been in existence only a short time, the results have already been felt by the lay and educational community.

CLIFFORD CARLSON,
President, Rockford Board of Education.
THOMAS A. SHAHEEN,
Superintendent of Schools,
BERNICE DOMEIER,
President, Rockford Education Association.

THE ROLE OF THE INDIVIDUAL

HON. TED STEVENS

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. STEVENS. Mr. President, on May 19, 1969, the University of Alaska honored Robert O. Anderson by awarding him an honorary degree of doctor of laws.

Mr. Anderson is a remarkable individual. He is chairman of the board of the Atlantic Richfield Co., chairman of the Aspen Institute for Humanistic Studies, vice president of the John F. Kennedy Center for the Performing Arts, regent of New Mexico State University, and trustee of the California Institute of Technology.

His deep understanding of the complexity of the individual as a whole being and his concept of the essential relationship of the arts and industry have exercised a stimulating, worldwide influence on educational and cultural affairs.

His address to the convocation dealt with the role of the individual in today's society. In an age of ferment fostered by just such a search by our Nation's youth, I commend his remarks to the attention of the Senate.

I ask unanimous consent that the remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF THE INDIVIDUAL

Members of the Board of Regents, Members of the Faculty, Distinguished Guests, Candidates for Degrees: I am greatly honored to have been asked to address this convocation, and have looked forward to this day with keen anticipation, for it affords me the chance to appear before a group of men and women who will face unique challenges and opportunities in their lifetime. I say this in spite of the obvious problems that seem to confront the world on all sides today.

Your University is most remarkable. It has literally seen and been part of the course of Empire.

Since the discovery of the new world and the dream of a Northwest Passage from Europe to the Orient, men have sought, and died seeking, their fortune in the far North. Hendrick Hudson searched in vain during the early 17th Century. He was followed 160 years later by another ill-fated dreamer, Captain James Cook. Many more men with their same character and determination, together with a strong and varied native tradition have helped to form the vigor and character of you and your fellow Alaskans.

A scant century ago two incidents in history played a definitive role in determining the course of this country and the existing world balance of power.

The first was the death of Emperor Maximilian of Mexico many thousands of miles to the south. The other was the decision of Alexander II of Russia to sell a piece of land that at that time represented little more than a source of furs to the Russian court and nobility.

With the first event, the presence and ambition of the Austro-Hungarian Empire in the New World came to a final conclusion. The second event a few months later saw the presence of Imperial Russia removed from the continent. Thus the year 1867 was truly a year to remember. The presence of two great European powers of the last century vanished from the American scene.

As difficult as it may seem, nevertheless, up until some 200 years ago, the idea that people could improve their life simply did not exist. Certainly, the hope of a better life is as old as mankind, but the exciting prospect of 18th Century political philosophy was that such a dream could be realized by free men working together for their common good.

Democracy was a new and revolutionary concept. For the first time, people realized they might look to the future with hope rather than fear and anxiety.

Here, in Colonial America, far from the tradition of England, scholars and students alike were largely free of political retaliation and enjoyed a level of academic freedom virtually unknown by their European counterparts. No wonder, then, that the concept and principles of a free society grew and were first realized in the birth of this nation.

The success of the American Revolution and subsequently the French Revolution came on the eve of the industrial revolution,

and thoughtful men quickly saw that the latter coupled with a free society offered the means to a better and more secure life. Unfortunately, the early years of the industrial revolution were largely years of disappointment, despair, and unforeseen difficulty for the European nations, difficulties that we in America were destined to escape.

As a new country, with vast resources and a seemingly endless frontier, we could welcome all, and each could find a life to his liking. The catalyst was the concept of the strong and reliant individual reacting to an endless variety of opportunities. These are the hopes and conditions of Alaska today. As a relatively new nation, we have been through many difficult periods, yet we stand today, the oldest revolutionary government in the world and the largest and wealthiest of the free nations—as such we have inherited responsibilities that we cannot ignore.

These are the responsibilities of leadership; they are the responsibilities that men and nations alike must accept as those that go with advantage or privilege. As a people and as a nation, we have advantages and resources heretofore unknown and, if we cannot use these wisely and well, we cannot expect more of others. As a nation, we must offer cooperation and assistance to the free world without injecting ourselves into the affairs of others. As individuals, we have to accept the responsibilities of citizenship and actively work for a better and fuller life. With technological advances, we continually exceed our goals in the manufacture of goods and our agricultural output continues to exceed our own needs. Coupled with scientific and medical advances, we can be virtually assured that in the coming decades, we will have the ability to produce material goods far in excess of our present consumption. Our problem will be to see that our vast ability to produce is distributed in such a fashion that poverty and suffering are reduced and eventually eliminated.

Although our country has succeeded in utilizing science and technology within the framework of a free society to provide a high standard of living, we must not forget that important as our material needs may be, they alone cannot provide a full life. Only the individual can achieve this. No amount of recreation or entertainment can replace or be an adequate substitute for personal intellectual enjoyment.

During the last twenty years, we have given greater and greater emphasis to scientific development—a need accentuated by a political war in which productive capability might be the decisive factor. Aside from our military needs, we have developed thousands of practical tools and aids that we use in our everyday life, and yet we are only on the threshold of scientific discovery and appreciation! Still, with all of this, we are a troubled people as we look at ourselves and the world around us. Even with the many accomplishments of recent decades, the majority of the world's people, and many of our own, are restless and confused. The major questions of our time center about the individual, his welfare, and most importantly, his relationship to society and his state.

Our entire political philosophy is based on the essential concept that the individual at all times remain sovereign to his government. We are governed by our own consent with our government subservient to its people. In order for such a government to function in an effective and orderly manner and provide an environment in which the citizen can retain his liberty and personal security, we as individuals consent to be governed by, and respect the decisions of, the majority.

In sharp contrast, the Soviet Marxists world believes that the individual is totally subservient to his or her government, and, as such, his individuality must be submerged or even denied. He or she is virtually the property of the state and the subservient

individual becomes the desired standard. In such a world, academic freedom along with personal freedom become dangerous and cannot be tolerated. The naked and arrogant display of power in Czechoslovakia last year was eloquent testimony to the fact that individual freedom cannot exist in a collective society.

Within your lifetime, a majority of people throughout the world will decide what their relationship will be to their government. This troubles them and it most certainly troubles us. If our way of life is to prevail, it can only do so if we continually exert ourselves to keep the individual in the proper perspective. We have the material means to provide an adequate standard of living, but that by itself is not enough. We must educate people, not only to earn a living, but how to live a fuller life.

To assist us toward this end, a vast array of all human knowledge has been directed towards helping man discover the all too often hidden potentiality of his own mind and spirit. Generally speaking, the group of scholarly traditions which focus upon this are described as the Humanities. Unfortunately, they have been somewhat neglected in our present pre-occupation with scientific inquiry.

The Humanities are usually considered to include the study of history, literature, the arts, religion and philosophy. The fine arts and the performing arts are modes of expressing thoughts and feelings visually, verbally, and aurally. The method of education associated with the Humanities is based on the liberal arts tradition we inherit from classical antiquities.—The basic attitude toward life centers on a concern for the human individual, for his emotional development, for his moral, religious, and aesthetic ideas, and for his goals, including in particular, his growth as a rational being and a responsible member of his community.

The classical concept of the Universal man is essentially that of a personal embracing of a broad range of interests, ideas and abilities.

Intellectual curiosity is a much better gauge of age than physical condition and we must continue to question and challenge ideas as we go through life.

You leave here today with various degrees, yet your true education can and should continue for your lifetime. Books and the country around you offer a lifetime of exploration into the ideas of man and the subtleties of nature. We humans have not been too kind to our planet, and I hope it receives more of your attention now that it has in the past. Reservation of our natural environment is as important as any intellectual achievement.

The wheel has been described as man's greatest invention, yet it is puny in comparison to the achievement of that first distant caveman, who, sitting in a group, said, "If we are going to get anything done, the first thing we have to have is a little order." At that point civilization was born!

Today, order and the personal security that goes with it are in serious jeopardy. This, and not the wheel, is the single greatest problem confronting us if we are to meet and resolve the many social and economic issues that must be resolved during the balance of this century.

While I personally come from the great desert country of our American Southwest, I have always felt an affinity for the North country. Aside from the obvious attractions for the fly fisherman such as myself, I have always admired the people themselves. Like our New Mexican, you see and accept people for what they really are. Character, rather than position and wealth are the basis of acceptance.

In a society which is becoming increasingly complex and urban oriented, I believe people like ourselves who live in the less populated areas enjoy a much greater chance

to know each other and particularly ourselves. I wish to emphasize the latter, as we cannot really know or understand others until we know and understand ourselves.

The vast majority of you are Alaskans and live in what I believe to be an exciting State. I can assure you that it will be even more exciting during your lifetime.

I know of no greater fortune than to be part of a developing country, and for you fortunate few, the opportunity for personal growth and achievement is at its maximum.

Alaska today is a new frontier for young people of the so-called lower '48 and many of the more venturesome and hardy will join you here in the next decade or so.

Together you cannot possibly become anything but a winning team. The resources and opportunities are limited only by the people who have the will and determination to resolve them.

The development of the Arctic is still in its infancy and what you have seen is only the start of a much larger effort. It is difficult to portray the great change ahead, but it will dwarf anything in the State's history.

Ironically enough, the discovery of large accumulations of hydrocarbons in the Arctic Slope, within sight of a range of mountains still bearing the name of the Russian royal family, occurs at the very time that Russia itself is facing impending shortage of petroleum that may very well adversely affect its own future for at least another decade or more. Their posture and position in the middle east may well be based on economic necessity rather than political expansion.

In closing, I would simply like to say I am optimistic about Alaska and its people. Problems abound and many more are yet to arise, yet we live in an exciting world and I am confident that this State and its people will measure up to anything that may be required of it.

Now I cannot resist passing along an observation or two on life that I believe stand out above all else I have learned in the 30 short years since I, myself, received my college degree. The first is simply the fact that life passes with extreme swiftness, and unless one is continually aware of this, much of life will pass you by. Maybe it is merely a foot race with death, but the satisfaction of achievement and accomplishment will go to those who run the fastest. The second, and possibly the most important is to try to see the world through the eyes of others. You will be surprised how much more you will see and find in life.

ABM: SHOULD THE UNITED STATES GO AHEAD?

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. LIPSCOMB. Mr. Speaker, I am entering the second part of two articles on the ABM, which the Los Angeles Times published on May 4 and May 6, 1969. I have already entered the entire May 4 editorial, "The ABM and the National Security," in the CONGRESSIONAL RECORD and feel that the May 6 editorial deserves equal treatment.

The May 6 editorial, "ABM: Should the United States Go Ahead", explores the dangerous implications of a unilateral missile freeze and examines some of the current assumptions regarding "excessive" military spending.

The editorial points up the oft-overlooked facts that first, in 1960, long before the Johnson escalation in Vietnam,

defense spending accounted for 8.7 percent of the gross national product and 47 percent of the total Federal budget; second, in 1969, defense spending is \$35 billion higher than it was 9 years ago. But it still accounts for only 8.8 percent of GNP and 43 percent of the total Federal budget; third, during the Vietnam war years, spending for major social programs has more than doubled, while defense outlays are up only 52 percent. Moreover, while the United States has been involved in Vietnam, the Russians have been aggressively building their military strength.

The Institute for Strategic Studies estimates that total Soviet military spending is now on a parity with the non-Vietnam portions of ours—and as a percentage of GNP, is almost twice as large. More important, 4 years ago, we had a 4-to-1 lead in ICBM's. Today, the Russians have caught up with us and may be going beyond parity to superiority.

Because of its contribution to the ABM discussion, I am happy to enter the entire Los Angeles Times May 6 article in today's CONGRESSIONAL RECORD:

ABM: SHOULD THE UNITED STATES GO AHEAD?

Sen. Henry Jackson (D-Wash.) noted the other day that we were spending five times as much on defense against manned bombers at the end of the 1950s as we would spend on the "Safeguard" missile defense system proposed by President Nixon.

Why was there so little outcry then and so much now?

The answer, of course, lies in the rising resistance to military spending—the feeling among Americans that we have allowed our national priorities to get out of whack.

To keep the record straight, the polls show that the American people as a whole still favor a strong defense establishment. And, of those who have made up their minds on the ABM, over 60% are for it.

There is no question, however, but that sentiment for a tight rein on Pentagon spending is on the increase.

PAPER EAGLE

As far as the average citizen is concerned, the new resistance to military spending has many roots. These include frustration over high taxes, inflation—plus the seeming inability of the world's most powerful military establishment to defeat a rag-tag army of Vietnamese Communists, or prevent the kind of humiliation we suffered in the Pueblo incident.

CREDIBILITY GAP

Leaving disenchantment of that sort aside, the heart of the trouble is the growing cost and complexity of modern weapons systems.

During World War II, destroyers and submarines cost in the neighborhood of \$5 to \$9 million apiece; today, the going price is closer to \$200 million. Today's fighter planes can carry price tags a hundred times higher than the models which outfought the Germans and Japanese 25 years ago.

What particularly angers congressional critics are the cases where costs run 200% to 300% higher than estimated. The overrun on the big C-5A transport plane alone is now calculated at \$2.1 billion.

Even after soaking up enormous resources, the new weapons systems are sometimes a flop, the prime example being the Navy version of the F-111 swing-wing jet fighter.

PORK BARREL, 1969 STYLE

While all these factors are relevant, they are not the whole story.

WALK AROUND VIETNAM

In hard-rock political terms, what we are seeing is the opening round in a fight over the so-called Vietnam dividend—the billions

of dollars which will be up for grabs when the war ends or is drastically reduced.

In this context, the so-called military industrial complex is locked in a struggle with competitive power centers—made up of scientists, educators, anti-poverty warriors etc.—which want federal money for their own projects.

Since the end of the Vietnam tunnel is not in sight, these interests tend to favor a big slash in the non-Vietnam portion of the defense budget now.

The ABM, because of its controversial nature, makes an attractive target. If the first domino falls, reason the more zealous anti-Pentagon crusaders the political atmosphere will be conducive to congressional veto of other portions of the defense budget.

Fair is fair

There can be no question but that the attack on America's urban ills—poverty, slum housing, snarled transportation, environmental pollution and the like—deserves a far greater claim on the country's resources than it has enjoyed in the past.

If the new skepticism is to serve a constructive purpose, however, it is important to separate fact from distortion. And the facts are as follows:

In 1960, long before the Kennedy-Johnson escalation in Vietnam, defense spending accounted for 8.7% of the gross national product and 47% of the total federal budget.

In 1969, defense spending is \$35 billion higher than it was nine years ago. But it still accounts for only 8.8% of GNP and 43% of the total federal budget.

During the Vietnam war years, spending for major social programs has more than doubled, while defense outlays are up only 52%.

To cite specifics, the federal contribution to welfare programs is almost twice what it was six years ago. Outlays for education and manpower training have more than quadrupled, as has spending for community and regional development. Medical expenditures, thanks to Medicare, are up more than 700%.

Where to cut?

These statistics hardly bear out the picture, assiduously cultivated by Pentagon critics, of a country which has turned its back on human needs in the name of national security.

Obviously, however, the pertinent standard for "sufficiency" in the war on poverty and environmental blight is not the past but the future.

We can do better—if ways can be found to cut the military budget, which is the largest single category of federal spending. And given sufficient determination, ways can be found.

It is hard to believe, for example, that the United States really needs all the 429 major and 2,972 minor military bases which it maintains around the world. Surely a substantial number can be closed if U.S. overseas commitments are reviewed hard-headedly.

Another obvious target is the Pentagon's contracting and weapons evaluation procedures, so that the problems of cost overruns and "white elephant" weapons systems can be reduced to manageable proportions.

The Soviet enigma

Inevitably, such a tightening up means that more weapons projects must be vetoed before too much money is invested in them—and Safeguard, all things considered, is a borderline case.

What must be avoided, however, is the know-nothing approach which manages simultaneously to be against the ABM, advanced new bombers and fighters, modernization of the Navy and upgrading of our Minuteman and Polaris missiles—all without regard to what the Russians are up to.

And, the Russians have been up to plenty while the United States has been otherwise engaged in Vietnam.

In fiscal 1965, the last year before the massive escalation of the U.S. role in the war, our defense spending totaled \$50 billion.

As a result of war outlays, the total figure soared to \$80 billion—but the non-Vietnam portion of the military budget is still not much over \$50 billion.

The downhold in non-Vietnam spending was accomplished, to a considerable degree, by postponing or stretching out new strategic weapons projects.

As Sen. Jackson observed the other day, the budget for strategic forces is actually almost 50% less than it was in fiscal 1962, if inflation is taken into account.

While we were cranking down our side of the arms race the Russians have been cranking their side up.

The Institute for Strategic Studies estimates that total Soviet military spending is now on a parity with the non-Vietnam portion of ours—and as a percentage of GNP, is almost twice as large.

Beyond parity?

Four years ago, we had a four to one lead in ICBMs. Today, the Russians have caught up with us and may be going beyond parity to superiority.

We still have a big lead in bombers, ballistic missile-firing submarines and total number of warheads. But the Soviets are now building Polaris-type subs of their own, as well as subkillers which could be used against our Polaris fleet.

As for the big U.S. lead in warheads, UCLA Prof. William G. McMillan, a longtime defense consultant, warns that the Russians may be using a different kind of arithmetic.

They may figure that one nuclear torpedo can destroy a Polaris submarine and all 16 of its missiles. One suborbital missile could take out a bomber field with a score of B-52s and a much larger number of H-bombs.

At this point, no one says for sure that the Soviets are shooting for an intimidating strategic superiority. But the evidence is too strong to be ignored.

Missile freeze

Both the Administration and ABM opponents agree that the best solution is a Big Two arms control arrangement which would effectively prevent either side from gaining a first strike capability over the other.

Mr. Nixon argues that an immediate start on Safeguard is essential to the U.S. bargaining position in such talks. Sen. William Fulbright (D-Ark.) charges that a start on the ABM would imperil the arms control talks and provoke the Russians to countermeasures.

Neither argument stands up to critical analysis.

The Kremlin, it turns out, has accepted President Nixon's announcement on the ABM with more equanimity than the chairman of the Senate Foreign Relations Committee. Arms controls talks are still expected within a few weeks or months.

This is not surprising. After all, the Russians have 67 ABMs of their own in place around Moscow, and are thus in no position to argue that defensive missiles are provocative.

U.S. DETERMINATION VITAL

Beyond that, the Kremlin leaders understand, if Fulbright and like-minded senators do not, that deployment of ABMs around ICBM silos—as distinct from cities—is not the act of a nation which is thinking in terms of a surprise attack on the other side.

There would be little point, after all, in spending billions to protect empty silos against a retaliatory blow.

Compromise

It does not necessarily follow, however, that congressional approval of Safeguard is essential to success of arms control negotiations.

What is essential is that the Russians know that the United States is not prepared to indulge in a unilateral missile freeze while

the Kremlin indulges in a unilateral drive for strategic supremacy.

Unfortunately, the ABM opponents are coming perilously close to creating the opposite impression.

What, then, is the solution? Two alternatives suggest themselves:

Congress can approve a go-ahead on phase one of Safeguard—with language putting the Administration on notice that construction should be stopped if arms control talks show promise.

Congress can withhold approval—but with language putting the Soviets on clear notice that we are prepared to escalate our side of the arms race if the Soviets do not halt their own missile buildup.

The latter alternative is preferable. If the lawmakers choose neither of these alternatives, but instead turn the ABM down in a euphoric atmosphere of unilateral disarmament, they will be not only wrong but irresponsible.

VITAL PROBLEMS OF SPAIN AND PORTUGAL

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 20, 1969

Mr. THURMOND. Mr. President, it is a pleasure for me to invite the attention of Senators to three articles on Spain and Portugal written by Mr. Thomas Waring, editor of the *News & Courier*, Charleston, S.C. Mr. Waring recently returned from a visit to Spain and Portugal where he obtained firsthand knowledge for in-depth reporting.

I congratulate Mr. Waring for his outstanding articles on the vital problems of Spain and Portugal and the relationship of these problems to U.S. foreign policy. Mr. Waring presents a keen analysis of the issues involved in U.S. military bases in Spain and in Portugal's longstanding interests in Angola, Mozambique, and Guinea. I commend these articles to Senators for a better understanding of these problems which are of great importance to the United States.

I ask unanimous consent that the articles be printed in the *Extensions of Remarks*.

There being no objection, the articles were ordered to be printed in the *RECORD*, as follows:

BULWARK OF WEST: PORTUGAL IN AFRICA

(By Thomas R. Waring)

LISBON, PORTUGAL.—While Portugal has many unsolved problems, Prime Minister Marcello Caetano's government sees new hope for restoring peace to the African provinces. Dr. Caetano has just returned from a visit to Mozambique, where joyous crowds welcomed the successor to Dr. Antonio Salazar. It was the first such state visit in many years.

Dr. Alberto Franco Nogueira, minister of foreign affairs, granted me an interview in his office near the waterfront of Lisbon's busy harbor. Earlier in the day, I had watched a military band at a pier, and a detachment of soldiers preparing to embark for service in Africa. Half of Portugal's national budget is spent on governing the three African territories of Angola, Mozambique and Guinea, and the drain on manpower as well as money is heavy.

"Much improvement has occurred in Africa," Dr. Franco Nogueira told me. "The terrorists have no hope of success. They lack support of the masses and some have joined

the Portuguese authorities in Mozambique and Angola. In fact they are going through a boom of industrial development. Many now realize Portuguese policies in Africa are more realistic, and that they can meet the problems of the people. Some other African countries are cooperating.

"In the United Nations and elsewhere, disillusionment, frustration and disappointment are appearing over U.N. policies."

For years, the United Nations, with support of the United States, has been pressuring Portugal to leave Africa—a contingent to which the Portuguese were the first to carry Western European civilization. The navigators and settlers went there before white men came to America. The Portuguese have no more intention of yielding the African provinces than Americans have of giving back their country to the Indians.

One of the incidents to which Dr. Franco Nogueira referred was the surrender of Chief Kavandame of the warlike Makonde tribe in Mozambique. This tribe, estimated by some at 200,000 in number, has supplied most of the manpower for the revolt against Portugal. The Portuguese say 60,000 Makonde warriors have laid down their arms—an estimate that some observers call an exaggeration. Time will tell whether Chief Kavandame, at 65, or younger leaders schooled by communists in terrorism carry more weight with the black masses. Without the Makonde, the main guerrilla organization called FRELIMO would be crippled.

Dr. Franco Nogueira declined to specify other African countries now cooperating with Portugal. Another source said that Dr. Hastings Banda, in Malawi, was showing interest in a hydroelectric dam on the Zambezi River planned by the Portuguese to serve that region. Zambia also looks to the Portuguese ports as outlets for its copper.

The foreign minister was asked to comment on his country's relations with the United States. He has just returned from Washington.

"It is no secret," he said, "that there has been strain and many difficulties in past years. We believe, with a change in views toward Africa and the reasons behind Portuguese policies which are in the long-range interest of the West, we can expect better understanding from U.S. public opinion."

He declined to elaborate on expectations from the Nixon administration. Earlier this spring, during the American Society of Newspaper Editors' convention at Washington, Nixon administration spokesmen declined to predict changes in U.S. attitudes toward the Republic of South Africa, Rhodesia and Portugal, the three leading governments controlling the Southern part of Africa. All three have been the targets of terrorism organized by communists from Russia, China or Cuba.

Southern Africa is a rich prize for whoever can hold it. In choosing sides, Western powers need to weigh their own strategic interests along with the current political fashions about independence and colonialism. The Portuguese believe they still represent Western civilization in clinging to their overseas provinces—last of the European empires.

THE SPANISH ATTITUDE: U.S. BASES IN SPAIN

(By Thomas R. Waring)

MADRID.—While doubts have been raised in Washington, about the whole system of strategic U.S. military bases overseas, a negative attitude prevails also in influential circles of Spanish opinion over renewing arrangements for U.S. Air Force and Navy installations in Spain.

The differences are much more complex than money.

Insofar as Spain is concerned, both national security and the dignity on which Spaniards lay such stress are big issues. A full understanding of all the factors would require a review of Spanish history and customs. More specifically, the current history

of this ancient nation, including the Civil War and 30 years of government by Generalissimo Franco, shape both official attitudes toward other nations and the temper of a proud people.

Isolated for centuries from the rest of Europe by the Pyrenees, and successively conquered by Romans, Visigoths and Moors, Spain then underwent the agony of a civil war that left the country exhausted. Franco managed to avoid entanglement in World War II, saving Spain from total catastrophe. Neither he nor others, who are looking anxiously to the future when this chief of state no longer governs, want to turn Spain into another battleground just as it is achieving a measure of prosperity.

Inside the country, various forces are jockeying for position: Labor unions, the new middle class, "liberals" of many hues, monarchists, restless students and as always the Roman Catholic Church.

As recently as 1953, when negotiations began for building U.S. bases in Spain as a deterrent to Soviet aggression in Europe, Spain and its small neighbor Portugal were very much alone on the Iberian peninsula. Both were virtually police states under one-man dictatorships. The peace they enjoyed entailed some sacrifices. Among these sacrifices was the esteem of other countries, absorbed with their own notions of democracy and individual liberty.

In some circles, notably in the United States, Spain and Portugal became pariahs—the object of contempt on the ground of "fascism." While communist powers wiped out both life and liberty wholesale elsewhere in the world, the Iberian countries bore the brunt of criticism in the "Free World."

The U.S. bases supplied the most important opening of Spain to the outside world in many years. Tourism blossomed and opened new windows for two-way vision. Foreigners learned some of the good things about Spain, and the Spaniards began to pick up pointers from the visitors, both military and civilian.

Meanwhile Spain began to achieve other measures of international "respectability", including admission to the United Nations. Spain now holds a seat on the Security Council. It yearns for admission to the European Common Market.

Since France dropped its military commitments in NATO, Spain has grown in importance as a European bastion against communist threat. Yet Spain is not a member of NATO.

Lack of recognition is painful to these people. While the United States "builds bridges" in the hope that more contacts will foster better understanding with declared enemies, it has seemed to Spaniards that the Americans are unaccountably cool toward their Spanish friends. All these and other factors too complicated for further discussion lie behind the reappraisal of U.S. military presence.

The five-year lease on three air fields and the sea base at Rota expired last Sept. 26, and a six-month grace period expired March 26 of 1969. Unless new arrangements are made—and not even the final deadline date is legally clear—the United States may have to remove its men, planes and ships from installations that it built on Spanish soil.

While the strategic considerations that prevailed in 1953 have changed, others have arisen that cause at least a preponderant military judgment in the United States to declare the bases essential for defense against the USSR.

Some Spaniards have a real anxiety about exposing their country to nuclear attack in the event of war between Russia and the USA. Such a view was expressed in an article in ABC, one of Spain's leading newspapers. ABC supports the monarchy. The author of the article, a supporter of Don Juan for king, is an old-line statesman who served in the

pre-civil war cabinet of Primo de Rivera. His name is Jose de Yanguas Messia.

After reviewing his reasons stated in previous articles as early as 1952 in opposition to the U.S. bases, Mr. Yanguas Messia noted recent statements about negotiations in the American press, including one attributed to "a Pentagon official." He quoted this source as saying the transaction was a simple military agreement between two countries: one pays to use the installations and nothing more.

To this elder statesman of Spain, whose voice still carries weight, this attitude is "nothing more or less than if one were handling the rental of a farm or city property."

The United States, he points out, no longer has a monopoly of nuclear arms. The magnitude of nuclear war is the chief antidote for avoiding it. Clear foresight counsels against the "uncontrolled risk" that would result, he said, from continuing to keep in Spain bases that would be prime targets in the event of war between nuclear powers—a conflict which we would have no part in initiating.

The matter, he concluded, should not be treated as a matter of "compensations." Rather he regards it as a matter of concession. I am an advocate of political friendship and economic cooperation with the United States," he concludes. "I am not, and I think I should say so, for renewal of the bases."

Whether this article is a trial balloon sanctioned by the government to help Spanish negotiators, a preparation of public opinion for departure of Americans or just another newspaper article is not clear. When the press is controlled as closely as it is in Spain, and when public officials are reluctant to be committed on pending matters, such an editorial opinion nevertheless is worth considering.

Fundamentally, the interests of Spain and the United States seem closely identified. It should be possible to fit them into common action if each side observes sympathy and forbearance in approaching the other. If friends can't get together, what hope is there for reconciling enemies short of annihilation?

LESSON FOR AMERICANS: WEAKNESS OF SPANISH REPUBLIC SPARKED CIVIL WAR

(By Thomas R. Waring)

MADRID.—While following news of civil disorder in the United States and reflecting on events leading up to the Spanish Civil War in 1936, some uncomfortable similarities come to mind.

From where I sit in a house on the outskirts of Madrid, I can see the Guadarrama mountains, still snowy on the peaks, over which Spaniards fought bitterly in that tragic conflict. In another direction I can see in the suburbs some of the angular apartment houses that monotonously gird all the bulging cities of Spain today. Though graceless, they represent peace and a measure of prosperity.

While campus riots, strikes and civil rights marches in the United States have not approached the excesses of agony that Spain endured, some of the angry words and brutal deeds being reported daily from America have an ominous resemblance to Spain's prelude to civil war.

Mobs inflamed by irresponsible leaders caused death and destruction throughout Spain. The republic, proclaimed in 1931 as a democratic way to freedom from monarchy and a means to substitute progress for decay, proved unable to govern. By 1936, anarchy was opening Spain to communism. It was a deliberate plot, according to some observers, for Russian conquest on the cheap.

The Nationalist Army, led by Gen. Francisco Franco, triumphed in 1939 over the republic and pacified the country. Thirty years later, though grumbling is heard about

oppressive control, people and property are reasonably secure and the country prospers.

Man's memory is short. It needs constant refreshing from the records of history. Americans have something to learn from this venerable land. Luis Bolin has provided a readable account in his book called "Spain: The Vital Years" (Lippincott, 1967). A journalist and Spanish patriot who had a key role in the nationalist movement from the beginning, he personally engineered the transfer of Franco from the Canary Islands to lead the uprising in continental Spain. As a press officer for Franco, Bolin had a front seat view of the times about which he writes. And he writes English better than most of his English-speaking colleagues.

While this comment is not intended as a review of Bolin's book, some excerpts from it are so timely in their phrasing that they might have referred to another decade and another country.

Among the leaders of the movement that established the Second Spanish Republic in 1931, and later one of its numerous premiers, was Alejandro Lerroux Garcia. Bolin lists Lerroux as one of the three men who deserve the most blame for failure of the republic. The others were Zamora, who gave Spain's gold reserve to the Russians, and Gil Robles. As a sample of Lerroux' philosophy, here is what he is recorded as having told his followers before he came to office:

"Pillage and sack this decadent civilization; destroy its churches and its gods, raise the veils worn by nuns and make mothers of them. Burn all the deeds to private property and elevate the proletariat to judicial rank! Do not hesitate before sepulchers and altars! Fight! Kill! Die!"

No public official has spoken like this in America, but others have—and Lerroux was not in office when he uttered his brutal counsel.

Commenting on the invasion of law courts at Salamanca by a mob bent on lynching magistrates, judges and lawyers, a "liberal" writer for whom these excesses had become sickening said:

"The horde was made up of mere boys who raised clenched fists, and filthy toothless harpies carrying a poster with the words, 'Long live free love'. This grotesque mob paraded the streets under the protection of the authorities. Our revolution is filling up large cities with human dregs no longer tolerated in smaller towns and allowing them to merge with the rotteness that already exists there."

Indalecio Prieto, a Socialist said:

"Spaniards have never, but never, witnessed anything so tragic as the spectacle their country now offers to the world. Spain is totally discredited abroad. Its lifeblood is being drained by strife and disorder devoid of any revolutionary purpose and the resources of government and national vitality are being worn down by a state of chronic unrest which is proving too much for the people."

Though this socialist saw no revolutionary purpose in such anarchy, the purpose must have been strong undercover. In an article Jan. 3, 1936, the year civil war began, the communist leader Joaquin Maurin said:

"Our revolution, which began by overthrowing Primo de Rivera" (the military dictator who had given Spain firm government prior to abdication of King Alfonso XIII) "is now in its seventh year, which may well be a decisive year for all. The Asturias affair was only a prologue, a dress rehearsal for much that is yet to come."

The Asturias affair concerns the wanton sacking of Oviedo, in which 4,000 were killed and much fine property destroyed by Asturian miners with dynamite. At the time of Maurin's statement, 60,000 children in Madrid were out of school, partly because many school houses had been burned, and unemployment totaled 900,000 in Spain.

Bolin lists three phases of the Republic: 1) unqualified zealots ignored rights and misused authority; 2) the will of the people at the polls was ignored and opposition quelled by violence and 3) the Popular Front encouraged terror and threatened to split the country into Soviet republics to make way for communism.

Answering critics of the use of force for peace and justice, Bolin quotes Lord Melbourne's defense of his handling of British labor riots in 1831:

"To force, nothing but force can be successfully opposed. All legislation is impotent and ridiculous unless the public peace can be preserved and the liberty and property of individuals saved from outrage and invasion."

Bolin also quotes the U.S. Declaration of Independence on the right and duty of the people, after long abuse, "to throw off such government and to provide new guards for their future security."

Though nothing so violent as the terror in Spain has yet occurred in the United States, some of the disorders in streets and campuses have been accompanied by startlingly similar threats uttered by militants and protesters against American society.

The spark that set off the Spanish civil war was assassination of Calvo Sotelo, a member of parliament in opposition to the government.

When author Bolin told a British audience in 1936, he believed Spain was on the brink of revolution, he was not believed. He recalled the War of the Roses, and the American Civil War—then only 70 years finished. Forty days later the Civil War began.

After three years of bitter fighting, which cost an estimated 600,000 lives and untold suffering, Franco won. He has ruled the country ever since with a firm, sure hand.

As usual with a one-man government, orderly succession presents a grave problem. Spain is now a monarchy without a king. What happens after Franco? The best guess seems to be restoration of a king to the throne and selection of somebody in Franco's circle as a new chief of government.

The second republic, and an earlier disastrous experiment with democracy in the 1870s, have made "republic" a dirty word in Spain. Fortunately, Americans have long and successful experience with the republican system. They know how to make it work. They can save their republic from the wreckers if they follow the rules and act in time. They can avoid Spain's agony by studying the record of anarchy and revolution, and stamping them out before civil war and heavy policing are necessary to keep order.

JOHNSTOWN JUNIOR FIRE DEPARTMENT AWARDS

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. SAYLOR. Mr. Speaker, for the 18th consecutive year, the fire department of the city of Johnstown, Pa., gave awards to the participants in their junior fire department program and to the winners of their fire prevention poster contest. To the best of my knowledge, this junior fire department program is the only one of its kind in the Nation and it deserves special recognition because of the impact on the community. More importantly, perhaps with recognition, other fire departments around the country might institute similar programs and thus multiply the awareness of home fire

prevention action throughout the Nation.

The 1969 program involved approximately 100 hours of instruction in fire prevention and resulted in finding and eliminating approximately 6,800 home fire hazards in the community with a total of 1,255 children from 19 public and parochial schools taking part in the program. The first is the "fire chief" section, wherein those children reporting and correcting the most fire hazards are made honorary chiefs of the department.

In the first category of the program where children reported and corrected the most fire hazards, Mark Spenger of Central Catholic School became the 1969 Junior Fire Chief of Johnstown, Pa. Also there were honorary district fire chiefs as follows: Becky Dull of the Chandler School for district 1; Joetta Kay Johncola of Tanneryville School for district 2; Roberta Wilson of Central Catholic School in district 3; Alan Balak of St. Patrick's School in district 4; and, for the first time in the years of the competition, there was a tie for honors in district 5: Kenard Pruey and Tim Cover of the Maple Park School will share the honor of district fire chief for 1969 in district 5.

The second part of the competition is the fire prevention poster contest. In this category first prize went to Mark Strandquist of Westwood School; second prize was awarded to Philene Weaver of Visitation School; with the third prize being given to David Condo of Westwood School. It is interesting to note that an estimated 90 percent of the pupils involved in the total program submitted posters on fire safety.

Mr. Speaker, I highly commend the Johnstown Fire Department and all the principals and teachers involved in this program for making fire prevention at home a concern of every child. I also extend my special congratulations to the new Johnstown Junior Fire Chief for 1969, Mark Spenger, and the district junior fire chiefs which will serve under him during the year.

INTEREST RATES ON U.S. SAVINGS BONDS

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mrs. GRIFFITHS. Mr. Speaker, recently I received the following letter from a constituent of mine, Lester Wegrzecki, concerning the interest rates on U.S. savings bonds. His comments voice the feelings of many persons today, and I would like to place his letter in the RECORD for everyone to read. The letter follows:

DETROIT, MICH.

DEAR CONGRESSMAN: During the last few years we bought very month one E-Bond, not so much as capital investment, as to prove my voluntary support for the monetary system of our government. E-Bonds pay 4.25% on maturity and do not bring any interest for the first 4 months after purchase. Recently, the Federal Government-Treasury Department started issuance of the new kind of notes with much better terms. It means 6.42% on maturity—after the same 7½

years—and interest payable with checks mailed to the owner every six months.

Do I have to drop my patriotic habit of buying E-Bonds, cash all my savings bonds and savings notes and switch to the new kind of notes? I feel rather bad about being cheated by our authority—myself and many of my friends and co-workers, and many more working people who trusted their small savings buying E-Bonds for security. Is there any legal way to protest such a practice, and protect E-Bond investors from that kind of disappointment. Can you do something positive about it.

LESTER WEGRZECKI.

STATE OF THE COUNTY MESSAGE IN MONROE COUNTY, N.Y., RE- VEALS SERIOUS NATIONAL FISCAL AND SOCIAL PROBLEMS

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. HORTON. Mr. Speaker, my distinguished colleague and fellow Representative of the county of Monroe in New York, BARBER B. CONABLE, JR., and I wish to call the attention of this body to a very timely and meaningful message. I am referring to the "state of the county" message, delivered to the Monroe County Legislature by County Manager Gordon A. Howe in January.

As the Congress begins to grapple with legislation that will attempt to deal with the great foreign, domestic, and fiscal problems facing our land, it is too easy to look upon these problems from a purely Federal standpoint. The Federal Government is not alone in having a critical shortage of resources needed to fulfill demands for programs and services. We are not alone in our temptation to look to other levels of Government to do what we cannot do.

Mr. Speaker, the budgetary and inflationary crisis we face, brought on in some measure by the Vietnam war, has brought on a crisis of astronomical proportions in State and local governments. We at the Federal level share the responsibility for responding to many new needs of this Nation in the past decade. We have set up new agencies, new programs, new goals—all in response to an increasingly urbanized and socially conscious America. In many instances, the Federal Government stepped in to fulfill needs, some local in nature, which State and local governments either could not or would not fulfill.

Slowly in many of these areas, the Congress has had to give way to resource realities, and to hold back on full funding of many authorized commitments. Within the Federal perspective, these moves were necessary, and are necessary. But we have left in the wake of reduced Federal help, State and local governments which are faced with catastrophic revenue problems.

At the same time they face heightened expectations for services and programs on the part of their constituencies.

As County Manager Howe ably points out, many of these problems, particularly at the local level, are brought on by

inadequate or nonexistent intergovernmental relationships. The Federal attitude has been one of coaxing and incentive—offering the lure of funds to States and localities that would adopt a worthy Federal goal as their own. These worthy programs have too often fallen outside the realm of budget planning and revenue availability; and their effect has too often been the creation of perennial budget crises at the local level.

Particularly in this difficult time, when the demands of a costly war and the effects of inflation limit our flexibility, we must take into consideration at every turn, both the benefits and consequences of our actions for the States and localities, and we must take bold initiatives to improve the fiscal picture for all levels of government.

Tomorrow morning, Mr. Speaker, a distinguished and unique delegation from Monroe County, N.Y., will begin a 2-day series of meetings with Federal legislative and executive officials, to point up these severe problems of local government, and to support Federal policies which would facilitate the solutions of these problems.

The arrival in Washington of 24 of Monroe County's 29 county legislators to plead the case of local government before the policymakers of the Federal Government represents a significant initiative in intergovernmental relations. They are making a positive and sincere attempt to communicate and cooperate with the Federal Government on common problems and goals.

The delegation includes the following county legislators:

Hon. Gordon B. Anderson; Hon. R. Graham Annett; Hon. Robert E. Cappon; Hon. Kenneth P. Courtney, president of the legislature; Hon. Joseph R. Esposito; Hon. Joseph N. Ferrari; Hon. Edwin A. Foster; Hon. Gerald Jed Hanna; Hon. John Richard Hoff; Hon. William C. Kelly; Hon. Frederick W. Lapple; Hon. Hyman T. Maas; Hon. Edward B. Mogenhan; Hon. Lucien A. Morin; Hon. Robert P. Neilon; Hon. Dorothy M. Riley; Hon. John J. Romano; Hon. Nicholas R. Santoro; Hon. Robert H. Scheerschmidt; Hon. Gary E. Smith; Hon. Peter J. VanderTang; Hon. Anna Mae Watson; Hon. Charles W. Westfall; Hon. Henry W. Williams, Jr.

Accompanying the legislators are several other distinguished citizens of the county of Monroe, all of whom have helped to organize and carry out this journey to Washington. Richard M. Rosenbaum, county Republican chairman, Mr. Joseph Bonavilla, Miss Josephine Lombardo, Mr. Walter Meunch, Mr. Alexander Peyton, Mr. Philip Proffetta and Mr. Arthur Robinson, Mr. Michael Casella, Mr. William F. Dwyer, coordinator of the trip, and Mr. Alan Van Campen will also be attending the legislators' meetings on Capitol Hill, at the White House, and at executive agencies.

Both Congressman CONABLE and I are proud of this effort.

President Nixon, as one of his first official policies, announced redoubled efforts to cooperate and communicate with other levels of government. While our intentions at every level have been good,

we too often have begun needless competition for revenue, for programs, and for policymaking power. Competition between levels of government is just too costly to justify its benefits. We must all work together toward the goal of a better America for all our people. The need for renewed and expanded intergovernmental cooperation and discussion is well expressed in Mr. Howe's message. We implore each Member of this body to take a few minutes to read his message, as a means of immersing himself, if only for a few moments, in the detailed and difficult problems faced by a progressive metropolitan county.

The state of the county message follows:

STATE OF THE COUNTY MESSAGE, JANUARY 7, 1969

(By Gordon A. Howe, county manager)

Ladies and Gentlemen: While this day opens a new year, the final year of the 1960s, it also places us on the threshold of a new decade in which the challenges of public administration will be greater than ever before.

The public today is more conscious of the cost of government than at any time in many years. Despite every effort that could be made, it was necessary for the County of Monroe to join other units of government in increasing its tax rate for this year. The combined effect of the tax increase by the City of Rochester, the towns, school districts and special districts has been to arouse the public and focus public attention on the demands made today on local government.

Comparatively, the Monroe County resident still will live in a county with one of the lowest tax rates in the State of New York. The following table shows what the typical Monroe County taxpayer would pay in property tax if he lived in one of the other major counties of New York State:

Average family's 1969 property tax bill

County:	
Nassau	\$215.00
Suffolk	211.00
Westchester	200.00
Onondaga	177.00
Monroe	148.40
Erie	147.00

In noting the tax burden upon the people, it should be noted that the same family which has a county property tax in Monroe County of \$148.40 in 1969 will pay the Federal Government \$1,507.24 in Federal income taxes for the same period.

The fact that we have a comparatively low property tax here does not lessen our responsibility to do all in our power to operate government at the lowest possible cost as we have in the past.

The growth of this County and the accompanying growth of revenues will help ease the tax burden on county property owners in the 1970s. Expanding sales tax income, for example, will assure town residents that their property taxes will be lower in the 1970s than they are this year. The assumption by the County of millions of dollars of services previously financed by the City will mean that City residents should benefit by a lower tax load.

COUNTIES TO LEAD WAY IN DECADE OF 1970'S

County government today and in the next decade will be the major local unit of government. However, we have reached a critical point in our growth and development. While the County assumed major city costs, City taxes have continued to rise. When the County agreed to expand its aid to schools from the sales tax, the result shifted revenues from towns and villages and their tax

rates rose accordingly without any reduction in the school tax. Instead of recognizing these changes as benefits many taxpayers unfortunately seem to believe that the County alone is responsible for higher taxes. This is not the case. It will take a major public education effort to dispel such a belief and illustrate to the average citizen the vast range of vital services which his county tax dollar buys for him, his family and his community.

The environment in which we live is affected in crucial ways by County government activities. Clean air, pure water, open spaces for play, modern interurban roadways, protection from communicable diseases all are elements of modern life which are affected by County programs. The County of Monroe, in short, has a direct effect on the quality of our community. If most people believe we live in a pleasant community, the County can take credit for its important role in maintaining the environment.

The administration of justice is a large County responsibility—and a costly one. The court system and our system of justice are major services of county government. Few people stop to think of this benefit which is financed by their tax dollars.

COUNTY MUST CARE FOR UNFORTUNATE

Those who are unfortunate or unable to care for themselves are County charges. While there are many problems stemming from the welfare burden in this community, the fact is that the County is bound by law to provide food, clothing, shelter and medical, psychiatric, nursing, and many other kinds of care to the needy and the unfortunate who cannot provide for themselves. Without County administration of the social service program, the City of Rochester—the place of residence of 90 per cent of the welfare caseload—would be bankrupt and there would be no uniform system for caring for the needy, aged and infirm on a communitywide base.

No government is perfect. The County of Monroe in the decade of the 1960s has been singled out for praise across the nation on many occasions. We have high quality government that is recognized as outstanding in the nation. Nevertheless, the prospect of a new decade of the 1970s with new kinds of challenges places us in a period when reappraisal of the County's role is in order.

We should not assume that our programs of the 1960s will meet our needs or serve our purposes for the 1970s.

YEAR 1969 IS TIME TO REEVALUATE

The year 1969 should be used as a time to re-evaluate our local government services and to set public policy goals for the 1970s. We need a framework of public policy which has the support of the public. We need guidelines for our operations. If we determine we no longer can afford all of the services of the past, we should make a solid determination that specific services are no longer to be County responsibilities.

The County Legislature is the policy making body of County government. It is representative of all of the people of the community. County legislators are the legislators closest to the people. Each represents approximately 22,500 persons compared to a constituency of nearly 75,000 for a district councilman in the City of Rochester. It is proper that your Honorable Body should undertake a reappraisal of the policies which guide this County.

The year 1969 will be patterned after policies determined in the adoption of the County budget. It is a year in which some County services were abandoned because of fiscal pressures. We will no longer have a mobile chest x-ray unit, a traveling library, an historian's office operating with a full-time staff, and there are severe personnel restrictions placed on the County government for the year.

LEGISLATURE SHOULD SET POLICIES FOR 1970'S

County government will function better and will serve the public better if we establish clear guidelines within which we are to function in the 1970s.

There are numerous areas in which a new look at public policy can produce important results. This can be done through the medium of your own committees.

Following are some policy areas which should receive the attention of your Honorable Body in the months ahead if we are to set meaningful public policy goals for the 1970s:

Social Services: This has become a costly burden upon the County largely because of State and Federal requirements. Furthermore, the Federal portion of these requirements are decidedly unfair to the taxpayers of the State of New York and the County of Monroe. The needy in the community receive full support as defined under a very liberal policy mandated upon us by the State of New York. Moreover, this assistance has risen sharply. In 1963, a family of four—husband, wife, boy age 14 and girl age 8—received a payment of \$238.85 if they qualified for subsistence. Today, this is up to \$321.00 per month. In contrast, the same family would receive only \$253.59 per month if they resided in Ohio; only \$93.09 per month if they were Mississippi residents; and only \$89.00 per month if they resided in Florida. There is no question but that the national imbalance of standards has placed the taxpayer in this State and County in the position of paying a heavy premium in social services because of extraordinarily liberal conditions prescribed by the State under State and Federally financed social service programs.

Present regulations which mandate such an expenditure in the County of Monroe are unrealistic in the absence of fair and equitable national standards for subsistence payments. If the present unfair situation is to be changed, change can begin with a statement of policy and a petition to both State and Federal governments urging adoption of national standards.

FEDERAL POLICIES ADD TO PROBLEMS

Monroe County taxpayers also have been victims of the failure of the Federal government to live up to its promises to combat poverty with federal funds. Although numerous programs were undertaken in good faith by local governments, the Federal government withdrew its support. As a result, the County of Monroe, in the recent past, has had to assume the cost of hundreds of thousands of dollars worth of programs which it did not originate and which it is doubtful it can continue to afford if the local tax rate is to be kept within reasonable bounds. At any rate, the entire package of programs from which Federal support has been withdrawn should be reviewed. It must be determined if these programs individually have sufficient value to the community to be continued along with the millions of dollars of County funds which are being funneled to the poor, the ill and the needy under County-funded programs. The County of Monroe for years has funded an effective program to assist the poor and even without the Federally-inspired poverty programs, the County still will be operating an effective and comprehensive program to help the needy of this community.

There should be a limit to the amount of money local taxpayers are expected to contribute toward programs which essentially are started by other levels of government. Programs which are worthwhile should be continued or possibly even expanded. Those that do no work or cannot justify their existence by showing positive contributions to people should be ended so available funds can support the effective programs.

MONROE SHOULD LEAD IN WELFARE CHANGES

There are many State requirements that need intensive review. Numerous State man-

dates to Monroe County are needless or inefficient and the burden of both State and Federal social service programs has grown heavy enough that the entire field should be scrutinized. There is a definite need for major changes. Monroe County, based on our experience with the huge increases in social service costs, should be in a position to contribute recommendations for change which will benefit both the taxpayers and the people who need the social services.

Intergovernmental Relations: The failure of the Federal government to maintain support of poverty programs illustrates the need for the examination of intergovernmental relations and intergovernmental financing of public programs. The County has taken over both City of Rochester and Federal programs in the recent past. It has been suggested that the County take over additional City programs. There is logic to placing planning and traffic engineering on a countywide basis, for example. Whether these and other such consolidations are to take place is a matter of policy and should be discussed by your Honorable Body. The County also supports a number of activities through "authorized agencies." These are not strictly government services in every case and, as the tax load grows heavier, it should be decided as a matter of policy if the County's taxpayers are to continue to support these public-private partnerships.

TOWNS, VILLAGES NEED VOICE

To preserve the voice of the towns and villages in the fabric of local government, it would be timely to study the feasibility of a "Council of Governments" to provide a formal voice to these units of government in decisions affecting them and the county. Town supervisors, village mayors, and town, village and city officials have responsibilities which are affected in important ways by the actions of the County. It is appropriate that they should have a more formal voice in the affairs of local government than they do at present and possibly a "Council of Governments" could open up this line of communication in the public interest.

Taxation and Finance: In assessing our policy goals for the 1970s, no area is more important than the field of taxation and finance. The City Manager has suggested a countywide income tax as a means of generating revenues which the City cannot now raise to ease the City's budget problems and those of the schools. The census of 1970 will make a major readjustment in the distribution of the sales tax revenues which will help local governments meet the growing obligations upon them. Tax and financial policies for the 1970s can have an effect upon the economic growth of this community and this, in turn, can reflect itself in the employment picture. These are basic and important policy areas which should be given attention by your Honorable Body and its finance committee.

Public Safety: The burden of funding police services has grown to sizeable proportions in certain major towns. As a result, there has been preliminary discussion about possible establishment of a consolidated police unit to serve the entire community. There are Federal funds available for studies of such consolidation. The establishment of a countywide police service unquestionably will reach a point of decision in the 1970s. It is timely to begin studies of this area of government service and to determine County policy in relation to policing this metropolitan community.

NEW DISTRICT COURT COULD SPEED JUSTICE

In connection with public safety, the load on our courts deserves consideration. The existing court structure is overburdened. This has a direct effect on the efficiency with which justice is administered. It is time to think in terms of relief of the courts possibly by establishment of a new civil court to operate on a district basis. Such a court

structure would handle important civil matters which now burden other courts. It could be established without upsetting the present court structure.

The cost of our courts and court-related services has reached above \$6-million per year. This is a large amount and, essentially, the County has little control over the courts operations but must meet heavy court expenses. Because of the State of New York's involvement in the system of justice in this State, these costs properly should be State expenses. Administratively, the State has the major voice in the operations of the Courts yet the main burden of expense still rests on the shoulders of the local taxpayer. This inequity already has brought about proposals at the State level to place the costs of the courts on the State. The County should encourage and promote such a step as a matter of justice to the taxpayer.

Parks and Recreation: During the 1960s, the County of Monroe embarked on a major land-purchasing program to preserve natural areas of the County for future parklands. Parklands are a resource which cannot be created once open spaces are urbanized. This program has been virtually without equal in the nation. We have sought to tailor our land purchases to known demand of our growing population. Land costs have soared during the 1960s and there is little doubt that this inflation will continue unabated or even at an accelerated pace in the 1970s.

EXAMINATION URGED OF PARKS PROGRAM

It is appropriate for your Conservation, Recreation and Natural Resources committee to examine where we stand in order to develop a policy for the 1970s. We should decide on a recreation policy and determine the line between countywide recreational programs and those that properly belong with the City and the towns and villages. We should decide if park fees are to be designed to make park programs self-sustaining or at what level they properly can be subsidized.

Public Works: The County of Monroe operates a complex series of structures and services. These include the Civic Center and its 1,300 car parking garage, the Rochester-Monroe County Airport, the Iola complex of County buildings, the Community College at its new 4,000-student campus, the downtown County Office Building and the new 10-story Health-Social Services building on Westfall Road.

The 1970s will project the County further into the public works area if we accept the challenge to undertake a countywide refuse disposal district and if we proceed with development of a master drainage control program for the County. The "pure waters" program will involve tens of millions of dollars in construction of sewage treatment facilities.

We will need to review and determine new public policies in relation to many of our public works projects. For example, the future of the Port of Rochester is a current consideration and this service should be re-evaluated. The direction and control of our handling of drainage problems is another matter which is growing to serious proportions. We will face a question on the future development and expansion of water service to meet the total community needs as the City of Rochester's water service needs grow beyond the City's capability to produce water through its present system. It is possible that water demands will indicate the desirability of creating a countywide water district to provide the most efficient and workable framework to keep ahead of the rapidly expanding need for water both in the City and the suburbs.

The entire public works area involves major policy considerations. Public works projects are among our most costly and important operating programs. The policies which guide our operations in this field in the 1970s will help guarantee the public that tax funds are used on the most essential

programs for the benefit of the greatest number of people.

ROAD, RAIL NEEDS MUST BE MET

Transportation: The long-awaited metropolitan area transportation study now is in the hands of Monroe County's consulting engineers for review and recommendations. It has been the intent of the County administration and your Honorable Body to undertake a major cash expenditure on County highways year by year in the 1970s. This policy pre-dates, however, the most recent budget and the difficult fiscal squeeze upon the County of Monroe. Therefore, your Honorable Body should review the County's highway needs for the 1970s and set a policy on both cash expenditure on highways and the scope of a program undertaken with highway bonds. Also, the issue of expanded bus-versus-rail transit to serve our future needs should receive a critical review so the transportation program ultimately recommended will fit into policies set down for this county.

Employee Relations: There is continuing discussion at the State level and in other counties of major changes in the Taylor Law which gives employee unions the right to organize and negotiate with the County administration. Any proposed changes in this law must be studied to determine their effect on the excellent relationship which exists between the County administration and the employee negotiating units which were recognized in 1968 by your Honorable Body under the Taylor Law.

The County of Monroe is a large, dynamic and growing service business. We rank among the ten largest employers and our gross budget ranks County government well within the ten largest enterprises in the community. We serve a population which will reach 700,000 people in the opening weeks of 1970. Our rate of population growth is accelerating—Monroe County's population rose 8,700 people between 1960 and 1961 but between 1969 and 1970 it will grow by an estimated 16,000 persons. This places new responsibilities and challenges upon County government. In meeting our responsibilities, we must run County government on a businesslike basis within clear policy guidelines which reflect the desires and needs of the public.

LEGISLATURE SEEN AS BEST FORUM

In setting public policy goals for the 1970s, all segments of today's society should be consulted. You, as County Legislators, are the best channel of communications through which your constituents can express their views. Government will be stronger and more effective if the people have such a voice in the policies which will govern them in these changing and challenging times.

You can be assured of the complete cooperation of the administration in developing policy guidelines. Upon the request of your committees, you can receive thorough reviews of current programs and proposals for future policies.

We have both an opportunity and a responsibility to set before ourselves new public policy goals for the coming decade. This is a program worthy of our best efforts throughout 1969 so Monroe County can continue to occupy a position in the 1970s as one of the nation's finest, best governed counties. That must be our overriding goal for the future as it has been throughout our history.

ROTC VITAL TO DEFENSE EFFORT

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. CHAMBERLAIN. Mr. Speaker, in view of the recent attacks made on

ROTC units at some of our universities I would like to make some observations in this area.

There are today some 353 colleges and universities that have ROTC programs. They represent a vital part of our defense effort. This June the Army expects to graduate a recordbreaking 16,606 new officers with ROTC commissions. By comparison West Point will turn out only 750 second lieutenants.

It is interesting to note that with all the concern about Vietnam, ROTC enrollment has been growing rather than declining. The Defense Department states that they have a backlog of some 335 petitions from colleges seeking either Army, Air Force, or Navy Reserve training programs.

This is not to say that there is not room for improvement. Secretary Laird has indicated that changes are to be made in the ROTC curriculums providing for more elective courses, greater local control over the programs, more university level training as well as less military drill.

Although it may appear that our ROTC programs are weathering their assaults, it is clear that the current activities to disrupt these programs at our colleges and universities are indeed serious and cannot be ignored, for our ROTC system with its reservoir of manpower is essential to our national security.

It is ironic that those who have sought to attack the ROTC programs on our campuses have failed to recognize the fact that these very programs have made our services virtually dependent upon the citizen-soldier, thereby helping to safeguard the country against the rise of a military elite.

Two recent editorials appearing in the State Journal, of Lansing, Mich., on Tuesday, May 13, 1969, and the Jackson Citizen Patriot, of Jackson, Mich., on Wednesday, May 14, 1969, discuss this situation particularly well, and I commend them to the attention of my colleagues:

[From the Lansing (Mich.) State Journal, May 13, 1969]

COLLEGES SHOULD BACK ROTC PROGRAMS

Certain campus extremists who evidently wish to dictate just about every phase of university and college activities have now started, inevitably, to zero in on the Reserve Officers' Training Corps (ROTC).

Protests are spreading on various campuses with some of the more radical groups demanding that ROTC be abolished from the colleges entirely. Other more moderate organizations are arguing that ROTC should be a non-credit course.

The two views need to be separated to be clearly understood.

Those of the extreme radical bent, in calling for abolishment of ROTC, are following a familiar pattern of attacking any organization which stands as a potential barrier to their goals.

ROTC for decades has served the nation well in providing a ready officer reserve in time of national need. On a majority of campuses it is a voluntary program as far as students are concerned. There is no reason whatever why young men who wish to serve their country in this program should be denied that right by self-appointed groups who declare themselves as exclusive judges of what people can do or not do.

We are told by some of the radicals that

ROTC teaches and instills violence in the minds of young men. This has about as much credibility as saying that professional football makes killers out of fans or that a youth who reads Hamlet will become a murderer.

The other more moderate argument is that military credit courses should not be offered on campuses devoted to arts and sciences and where faculty does not control the content of the curriculum. It is said that ROTC should be extracurricular if it is to remain on campus.

While the second claim is more understandable, it could also be argued that no academic credit should be offered for students choosing medicine or law careers, since they, too, are controlled by agencies outside the university.

Throughout American history there has always been an anti-military undercurrent running through the land—a fear of making the military too attractive a life.

It would be ideal, indeed, if this nation could abandon military training and reliance on reserves. Unfortunately, and regardless of the rantings of the radical groups, there is no evidence that other major powers hostile to this nation have shown any inclination to reduce their armed forces or their reserves.

Most of those leading the protests today are too young to remember or perhaps care about the pre-World War II period when Adolph Hitler frequently boasted that soft American youth would never be able to stand in his way.

Only geography and the fighting delay provided by allied nations gave this nation time to disprove that claim.

History has never favored any country that abandoned its capacity for defense. It would be nice to believe otherwise but at this stage of history there is no evidence to support the hope that anything has changed.

Young men should have the right to serve their country as they see fit, including through ROTC, without dictation from those who have decided that they alone know what's best for the nation.

[From the Jackson (Mich.) Citizen Patriot, May 14, 1969]

ROTC OPPONENTS PRESENT PARADOX

Secretary of Defense Laird has joined those who see campus protests against the Reserve Officer Training Corps as totally incongruous with resistance, from the same source, to the draft system.

Pointing out that ROTC is one of the "big building blocks" in the Nixon Administration's program to end the draft and establish a basically volunteer military force, Secretary Laird says, "you can't have it both ways."

The logic in Mr. Laird's argument is obvious. Since its inception the ROTC has, indeed, been one of the nation's guarantees of a military force, either volunteer or conscripted, which is primarily civilian in nature. The citizen-soldier concept has done well for America in all its history.

If the protesters are successful in killing the ROTC program the nation would have to fall back on a purely professional officer class, something the dissidents should fear even more.

The paradox of the protests, however, has an explanation, although one largely devoid of logic.

The ROTC is a handy, visible target for hard-core protesters who are seeking to discredit the American system any way they can. Currently they are making the system of higher education their target. Their aim is to disrupt and destroy it, even though they may have no plans for rebuilding it.

ROTC, being a part of the higher educational scene and having a direct connection with the military, is a target of opportunity.

The more moderate students who follow the New Left agitators against ROTC hardly are thinking the proposition through. They are unhappy about the war in Vietnam and

easily are led into attacks on the ROTC because it is of a military nature. Yielding by college administrators and faculties to demands to downgrade ROTC tend to give respectability to a cause which has its inception in the desire of the New Leftists to destroy America as it is.

The opposition to ROTC does not, as Secretary Laird indicates, make any sense. But neither do any other objectives of the New Leftists. The pity is that so many more moderate and loyal students allow themselves to be misled.

A RESOLUTION AUTHORIZING INVESTIGATION BY CONGRESS AND THE FCC OF THE DENIGRATORY STEREOTYPING OF ETHNIC GROUPS IN MOTION PICTURES AND ON TELEVISION

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BIAGGI. Mr. Speaker, I introduce this resolution in righteous anger. It is indefensible in the one Nation on earth where liberty is most cherished, where equality before the law is espoused and brotherhood advocated, that the mass media should continually and unabashedly produce and distribute material which defames ethnic groups, creates unrest, promotes discord, and foments bitterness in ethnic, racial, and religious group relationships.

Both the motion picture and television industries have codes which outlaw this type of denigration of minority groups, but these codes are flagrantly ignored. I am particularly aware of the portrayal of Italian Americans as shady, underworld characters, typically involved in the Mafia or the Cosa Nostra; but other groups are similarly defamed as ignorant, shiftless, cunning, rapacious, or drunkards.

With all our outrage against prejudice, fought with legislation that attempts to force its demise, we nevertheless continue, in this Nation proudly hailed as a "melting pot," to allow malicious stereotyping in the field of entertainment.

We all know that the way to end prejudice is to teach our children to view all people with an open mind, to judge each man individually on his own merits, and to make judgments unencumbered by the preconceived opinion known as prejudice.

As the song from "South Pacific" goes:

We've got to be taught to hate and fear.
We've got to be taught to hate all the people
our relatives hate.
We've got to be carefully taught.

The children of today are influenced more than ever before by television and motion pictures. They are being taught, not brotherhood, but intolerance, not acceptance of human differences but hatred of their fellow man. We abhor the violence of the entertainment media for its effect on the young. We should be similarly aware of the corrupting influence it has over their minds in stereotyping ethnic groups. The entertainment media should not be permitted to exploit our children and our future by perpetrating lies about ethnic groups. These

media have a responsibility to the Nation to live up to espoused American values and to do their part in preparing for a better tomorrow.

That we continue to allow certain groups to be maligned, while espousing ideals of brotherhood and tolerance, is the worst kind of hypocrisy, and it has no place in America. It is time that the Congress of the United States investigate the flagrant disregard of the television and motion pictures industries' codes that ban this kind of defamation.

Italian Americans, German Americans, Irish Americans, and others who have contributed so much to the building of America, who helped settle her, who contribute to her industry, perform the obligations of citizenship with unquestioning pride, and fight and die for America—these decent and patriotic people deserve better. We are a nation of immigrants, and this has been our strength. It is contrary to all the cherished ideals of Americans that the defaming of these groups should be permitted to continue in films and on television, and to be allowed to poison the minds of our children. It is imperative that we take determined steps to investigate this matter and to set things right.

NEW PRESIDENT FOR IOWA MEDICAL SOCIETY

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. SCHWENGEL. Mr. Speaker, the Iowa Medical Society recently chose as its president, Dr. J. H. "Jack" Sunderbruch of Davenport, Iowa. The doctors of Iowa could not have made a sounder choice. Dr. Sunderbruch is a man with a proven record of public service, and this new position is a continuation of the heavy contribution which we have come to expect from him.

Mr. Speaker, I include a newsclipping pertaining to this subject in the RECORD, as follows:

HE'LL FIND THE TIME

If you want a job done well, find a busy man to do it. So the saying goes, and Iowa Medical Society members apparently believe it.

Dr. J. H. (Jack) Sunderbruch of Davenport has been mighty busy, hereabouts, on a great number of worthwhile things. Now the state's medics have tapped him to head their organization.

This energetic general practitioner was city health physician here for about a quarter-century. He also has served as president of the Davenport Chamber of Commerce, the Scott Medical Society and the Mercy Hospital staff, and as secretary of the St. Luke's Hospital staff. He also was an unsuccessful candidate for mayor.

He's the father of six children and grandfather of 11. He's an avid sports fan, and an activist in political and civic affairs.

He is the first from Scott County to head the state medical unit since Dr. Gordon Harkness held the post in the early 30s.

The state society in honoring him salutes the medical profession in Scott County.

Dr. Sunderbruch simply hasn't time for another job—which is a way of saying he'll do the new one well.

THE DALLAS JOB FAIR

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. COLLINS. Mr. Speaker, early in 1968, Dallas business and civic leaders, under the energetic direction of Mayor Erik Jonsson and Morris Hite, became convinced that private enterprise represented the only long-range solution to providing meaningful jobs and opportunities for the underprivileged youth in the greater Dallas area.

Through their efforts they involved more than 500 Dallas businessmen who gave unselfishly of their time and effort to seek summer employment opportunities for Dallas area youth. That first year, 1968, the first Dallas Job Fair brought these dedicated employers together with more than 5,000 youngsters. By the end of the day over 3,200 young people could attest to the success of the 1968 Job Fair. The Dallas business community had employed the youngsters in a wide variety of occupations from construction and clerical help to defense contract plants and motion picture theaters.

Mr. Speaker, many of the youngsters employed that summer of 1968 used the money they made to further their education. And Job Fair, 1968, went down in history as a tremendous success—but Dallas had already begun plans for an even more productive second Job Fair to be held on May 15, 1969.

Mr. Speaker, I bring to your attention this article entitled "National Officials Say Job Fair Great," which appeared in the Friday, May 16, edition of the Dallas Morning News:

NATIONAL OFFICIALS SAY JOB FAIR GREAT

The Job Fair in Dallas already has become more successful than similar programs operating twice as long in other cities, the deputy director of the President's Council on Youth Opportunities said here Thursday.

Howard Phillips said Dallas "has made great strides" toward solving the problems of youth unemployment through its Job Fair program.

"The Chamber of Commerce and business leaders work together here better than any city I have seen so far," Phillips said. "This is a must for successful summer youth hiring project."

Phillips and Andy Gallegos, southwest regional coordinator for the President's Council on Youth Opportunities, were in Dallas to observe afternoon Job Fair activities at Memorial Auditorium.

More than 3,500 young people were offered jobs during the day and approximately 1,500 more will receive opportunities later through the Texas Employment Commission placement service.

Phillips said 10 major cities utilize the Job Fair idea for summer work opportunities. Many have been in operation for five years, he added.

"President Nixon has often said that business leaders can do more than any federal office to overcome unemployment problems," he said. "We hope to encourage youth hiring programs such as this one any way we can."

Gallegos said a key problem of Job Fair is convincing employers that young people really are interested in getting and holding good jobs.

"Most of these kids are from slum areas where they've never been given a chance by

anyone," he said. "If an employer shows an interest, the youngster often proves to be his best worker."

Phillips said his Washington office presently is working with youth coordinators in 50 major cities to set up education and job training programs.

In addition, the President's Council supports efforts to provide a number of fine arts programs for youngsters in low income areas.

"We're pretty busy these days," the deputy director said. "But we can't do it all without the help of private individuals."

As these U.S. officials so aptly point out, the Dallas 1969 Job Fair was the most successful program of its type in the entire Nation.

Mr. Speaker, Dallas has conclusively demonstrated that where there is civic and business imagination and leadership, there is no need to depend on the ever growing Federal Government to provide assistance. The Dallas Job Fair program speaks well for local leadership and determination, and should be considered an exemplary case study for our Nation's other metropolitan areas.

I would like to commend our Dallas mayor, Erik Jonsson, and our president of the Dallas Chamber of Commerce, Morris Hite, for the inception of this remarkable program.

In addition, the 1969 Job Fair attracted more than 8,000 youngsters, and found jobs for more than 5,000 on the very first day. The cochairmen this year deserve our thanks: Mr. Morris Hite, Mr. Billy Medina and Mr. Frank Clarke. No fair is a success without a successful job solicitation—and this year it was expertly handled by Mr. Sydney Peatross and Mr. Joe Kirven. And the youth participation was some 8,000 strong due to the leadership of Mr. Willard Crotty.

Mr. Speaker, most certainly the Members of Congress know that no large program can be successful without extensive and careful planning. The Dallas Job Fair had a logistics and systems committee, headed by Mr. Tom Mickleck and Mr. Roosevelt Johnson, which was responsible for the smooth running of the entire operation. And Mr. Richard Moynihan, as executive director of the 1969 Dallas Job Fair, should certainly be commended for his outstanding leadership.

I know my colleagues join with me in praise of the city of Dallas, and its innovative approach to employment opportunities for our underprivileged youngsters of the Dallas area.

NATIONAL JEWISH HOSPITAL AND RESEARCH CENTER

HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BURTON of California. Mr. Speaker, I should like to call to the attention of my colleagues in the House, the outstanding scientific and humanitarian work which is being performed by the National Jewish Hospital and Research Center at Denver.

The National Jewish Hospital is a non-

sectarian treatment and research center for tuberculosis, severe asthma, emphysema, and other chronic chest diseases.

A testimonial dinner is to be held in San Francisco on June 18 for the benefit of the hospital. I could not let this occasion pass without noting with gratitude the over 189,000 days of free care which the National Jewish Hospital has provided to residents of the State of California.

I am sure my colleagues would wish to join with me in recognizing and paying tribute to this outstanding and selfless contribution to the health and well-being of others and to extend to the officers and staff of the National Jewish Hospital and Research Center our appreciation and best wishes for continued success in the struggle against chest diseases.

A BILL TO CHANGE THE DEFINITION OF "AMMUNITION"

HON. ROBERT B. (BOB) MATHIAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. MATHIAS. Mr. Speaker, I am today introducing legislation to remove the unreasonable and unnecessary restrictions on the sale of ammunition placed on our sportsmen, hunters, and businessmen. This legislation will change the definition of "ammunition" under the Gun Control Act of 1968, to exclude all ammunition other than that used in destructive devices.

By removing ammunition or cartridge cases, primers, bullets, or propellant powder from the law, would make it possible to make purchases without having to go through the complex registration and recordkeeping procedures now required. The adoption of this amendment would completely eliminate the burdens which the Gun Control Act places on our law-abiding citizens.

The present definition reads:

The term "ammunition" means ammunition or cartridge cases, primers, bullets, or propellant powder designed for use in any firearm.

The new definition in the legislation I am introducing reads:

The term "ammunition" means ammunition for a destructive device.

A destructive device is any explosive, incendiary, or poison gas; any type of weapon, other than a shotgun or a shotgun shell, which may be readily converted to, expel a projectile by the action of an explosive or other propellant, and which has any barrel with a bore of more than one-half inch in diameter; or any combination of parts either designed or intended for use in converting any device into a destructive device.

I think the provisions of the law concerning the sale of ammunition not only goes too far, but the intent of Congress has been surpassed by the regulations established by the Treasury Department under the Johnson administration.

The Gun Control Act, in section 922(b)(5), clearly states that the one selling or delivering any firearm or am-

munition must note the name, age, and place of residence of the person making the purchase.

However, in addition to these three questions, the Treasury Department has issued regulations that require: first, the date; second, manufacturing; third, caliber, gage, or type of component; fourth, quantity; and fifth, mode of identification. The issue here is not the questions, for they in themselves are meaningless, but the real issue is that a registration of any type is required of our honest hunters and sportsmen.

The forcing of this type of registration on all purchases of ammunition is, in my opinion, placing both undue and unnecessary restrictions on citizens. I feel, and I know that many Californians feel, the enforcement of such regulations will not be significant factors in reducing the incidence of crime. The harassment and inconvenience to both the buyer and the shopkeeper, who is required to keep such records, is not justified by a reasoning that this is a necessary crime control measure.

I envisioned when this act was being considered in the House of Representatives in October 1968, that the restrictions placed on the sale of ammunition would discriminate against and place undue hardships on sportsmen, hunters, and businessmen. This was one of the major reasons why I voted against the final version of the Gun Control Act when the vote was taken on October 10, 1968.

The legislation I am introducing today will correct the present injustices and will permit our citizens to once again buy ammunition without being intimidated or harassed by the Federal Government.

THREE MARYLAND SOLDIERS DIE IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. LONG of Maryland. Mr. Speaker, Sp4c. Harry N. Stonesifer, Sp4c. Philip T. Regan, Jr., and M. Sgt. James G. Case, three fine young men from Maryland, were killed recently in Vietnam. I wish to commend their courage and honor their memory by including the following article in the RECORD:

THREE MARYLAND GI'S, STONESIFER, REGAN, CASE, DIE IN VIETNAM

Three Army servicemen from Maryland, including a career soldier who was serving his second combat tour, have been killed in Vietnam, the Defense Department announced yesterday.

Those killed were:

Spec. 4 Harry N. Stonesifer, son of Mr. and Mrs. Grayson A. Stonesifer, of 4208 Baltimore street, Baltimore Highlands.

Spec. 4 Philip T. Regan, Jr., son of Mr. and Mrs. Philip T. Regan, of 2707 Hughes avenue, Adelphi.

M. Sgt. James G. Case, husband of Mrs. Patricia A. Case, of 81-A Shamrock road, Cumberland.

Specialist Stonesifer, 25, was killed April 30 when a military vehicle he was riding struck a mine during a combat mission.

He enlisted in the Army in July of 1965, and after extensive training as an armament repairman was sent to Vietnam in July, 1967. After his year-long tour of duty was over, he was sent to Germany, where he was stationed for about eight months. He was sent for a second tour in Vietnam on April 10.

According to his father, Specialist Stonesifer intended to make the Army a career. Besides his parents, he is survived by a brother, Grayson A. Stonesifer, Jr., who lives in New Jersey; and three sisters, Mrs. Katherine H. Beech, of Pasadena, Mrs. Sylvia Fry, of Baltimore, and Mrs. Evelyn Shaffer, of Glen Burnie.

Specialist Regan was killed April 27 during a combat mission. He had been in Vietnam since July, 1968.

Born in Washington, he was a graduate of High Point Senior High School in Adelphi, where he was a member of the school's golf team that won the metropolitan Washington high school championship in 1966.

After graduation from high school in June, 1966, he attended the University of Maryland for a year and then volunteered for the draft.

His father said that letters home indicated that his son was in combat "almost the entire time he was there."

Besides his parents, he is survived by four sisters and a step-brother.

RESULTS OF 1969 QUESTIONNAIRE

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. KING. Mr. Speaker, I would like to take this opportunity to inform the House of the results of my annual questionnaire which I recently mailed to more than 138,000 families in the 30th Congressional District of New York.

As in the past, the residents of the 30th District responded enthusiastically to this request for their views and opinions on some of the most critical domestic and international issues of the day.

To date, I have received more than 27,000 replies to the poll, which I believe indicates an extremely high level of interest in national affairs, a fact that I greatly appreciate.

I know that my colleagues in the House will be interested in the results of my 1969 questionnaire. I therefore insert at this point in the Record the final tabulated results of my poll:

TABULATED RESULTS OF 1969 QUESTIONNAIRE [Results in percent]

1. Would you favor a resumption of all-out bombing of North Vietnam if the enemy continues to step up its action during Paris peace talks?

Yes 81
No 14
Other 5

2. Should tax incentives be granted to encourage private industry to help meet our social and economic problems?

Yes 65
No 28
Other 7

3. Do you favor converting the Post Office Department into a Government-owned corporation to operate on a self-supporting basis?

Yes 71
No 28
Other 7

4. Do you favor my bill to increase the \$600 Federal income tax exemption to \$1,000?

Yes 93
No 5
Other 2

5. Should young men who have avoided the draft by fleeing the country be given amnesty when hostilities cease in Vietnam?

Yes 10
No 86
Other 4

6. Should Congress take the necessary steps to correct deficiencies in the present electoral college system?

Yes 91
No 6
Other 3

7. Do you favor dismantling the Office of Economic Opportunity (Poverty Program) and transferring some of its functions to other departments?

Yes 70
No 20
Other 10

8. Should the income from investments of private foundations, religious organizations and social clubs be taxed?

Yes 77
No 19
Other 4

9. Should federal aid be denied college students who engage in disorderly demonstrations, disrupting the administration of our colleges?

Yes 93
No 6
Other 1

10. Do you favor continuing our Nation's space program at about present level of \$4 billion a year?

Yes 54
No 39
Other 7

11. Would you support an automatic cost-of-living increase for those under Social Security and Railroad Retirement Acts?

Yes 85
No 12
Other 3

12. Do you favor extending the National Labor Relations Act to agriculture? (The NLRA authorizes elections to determine when a union is to be recognized as the collective bargaining agent of workers subject to the Act.)

Yes 41
No 42
Other 17

13. Do you favor lowering the voting age to 18?

Yes 41
No 57
Other 2

14. Would you favor legislation fixing the minimum wage at \$2.00 per hour?

Yes 52
No 44
Other 4

U.S. RESPONSIBILITY TO PROTECT ITS FISHERMEN

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BOB WILSON. Mr. Speaker, I am today introducing legislation which is intended to bring the Peruvians and

other Latin American countries that illegally seize American fishing vessels on the high seas to meaningful negotiations to settle this longstanding dispute.

This bill, authored earlier by our distinguished colleague, Congressman Tom Pelly, would prohibit U.S. imports of fish and fish products from these countries in the event of future seizures, unless the nations involved were negotiating in good faith with the United States.

Our fishermen, the boatowners, and those of us in Congress who have struggled so long with this frustrating problem recognize that a permanent solution can be achieved only through a negotiated settlement. Our frustration results from the fact that Peru, Ecuador, and Chile refuse to enter into meaningful negotiations on this fishery limit dispute. Just 5 days ago another of our tuna boats was seized on the high seas by a Peruvian patrol boat—less than 24 hours after a Peruvian delegation had returned from the United States where it had been discussing the problem of Peru's expropriation of American-owned oil properties in that country. Such acts of piracy make us wonder just how sincere Peru is about trying to settle the oil property seizure and the fishing limit dispute.

While Peru complains that actions by Congress are unwarranted and unfair exercises of economic pressure, Peru has failed to take into account that her own unilateral use of force to impose her position on the jurisdictional question is a far more unfriendly act since it involves the use of weapons by one country against the citizens of another country in waters accepted by nearly all nations as being the high seas.

Until Peru, Ecuador, and Chile sit down with the U.S. negotiators and conduct serious, meaningful talks to settle this dispute, the United States has every right, indeed a responsibility, to protect its fishermen in this matter, including the use of economic sanctions against any nations that continue to seize our vessels. Under this bill, the United States would shut off its market for these fish imports only if the seizing nation refused to enter negotiations. We recognize the economic hardship this could cause these Latin nations, for in 1968, the United States imported nearly \$65 million in fish products from Peru and more than \$12 million in fish products from Ecuador.

I am pleased that the chairman of the Fisheries Subcommittee of the Merchant Marine and Fisheries Committee has already agreed to hold hearings early next month on this legislation. And I hope that when the legislation is reported out of committee, the House will give it early attention and approve it.

THE CONSEQUENCES OF PUSSY-FOOTING AT HARVARD

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. WYMAN. Mr. Speaker, the continuing failure of many university au-

thorities to deal firmly, responsibly, and swiftly with outrageous insubordination on the part of individual students is approaching the proportions of a national disgrace. If it keeps up, the only thing to do is close the school long enough to get a new university administration that at the very least can keep its own house in order. A part of this package is a new contract with students on an individual basis in which it is agreed that expulsion will follow willful violation of university regulations, accompanied by forfeiture of tuition.

Students who take over a university building and refuse to get out upon request should be kicked out of school then and there. Students should know that if they do this, or engage in similar willful violations of university rules, they will be expelled forthwith. College administrators can make this clear merely by stating the policy to prevail at their college. Why do they not?

The state of approaching chaos bordering on anarchy prevailing on some campuses was predictable as infractions of the rules were blinked at or the other cheek turned by college heads who just would not risk the security and comfort of their jobs on a flat confrontation with the ringleaders. Well, that confrontation is here and it must be faced. Failure to face it at Harvard was the subject of an interesting and challenging commencement address at Franklin Pierce College in New Hampshire by Al Capp last month. The extent of the contempt with which many citizens regard the pussy-footing weakness of spineless university administrators is admirably expressed in Mr. Capp's address, which I am including in the Record at this point because of the serious importance of the subject.

A BLASTING CAPP IS TOUCHED OFF UNDER FAIR HARVARD
(By Al Capp)

(Al Capp has always been outrageous. In the first place, he is an outrageously funny man, as the author of the zany cartoon strip "Li'l Abner." Then in the 1950s, his ideas outraged the political right. Today, he outrages the left, but he claims that the political spectrum has shifted, not he. In the following speech, delivered to the graduating class at Franklin Pierce College in Rindge, N.H., April 27, Capp outrages some people at Harvard. Franklin Pierce, incidentally, awarded him the honorary degree of doctor of humanities.)

I live in Cambridge, Mass., a stone's throw from Harvard—but if you duck you aren't hurt much—and I know you'll believe me when I tell you I'd rather be speaking here today. It's safer, and it's at your sort of college that I can use the commencement speaker's traditional phrase. I can say you're the hope of the future without bursting out laughing, as I would if I said it at a Harvard commencement—assuming, of course, that there will be a commencement there this year. They haven't heard from the Afros or the SDS yet.

Three or four of the Afros may decide that commencements are racist institutions, and then five or six SDSers may decide that commencements are a CIA plot, and then of course the entire faculty, administration and student body of Harvard, with the courage that has made them a legend, will replace its commencement by some sort of ceremony more acceptable—something they know the boys will approve of—say, a book burning; they loved that at Columbia, or a dean killing; they never quite accomplished that at

University Hall. Dean Ford let them down by having recuperative powers they didn't count on.

But the fact that you can have a commencement here without getting down on your knees to a student wrecking crew, or without calling up the riot squad, is mainly luck. You enjoy advantages Harvard doesn't.

For one thing, you have the advantage of not being so revered for the wisdom and courage of past generations of administrators that you haven't noticed the moral flabbiness and intellectual flatulence of the majority of your present generation of administrators and faculty. You show me any institution with such a glorious past that anyone presently employed by it is regarded as retroactively infallible, and I'll show you a collection of sanctimonious fatheads.

But the greatest advantage Franklin Pierce has over Harvard is that you are not rich enough to hire three such famous professors as Rosovsky, Galbraith and Handlin and not extravagant enough to waste the wisdom of the only one of them with guts and sense—Handlin. All three are world-renowned historians. All three this week have helped make history.

Prof. Henry Rosovsky was born in Danzig. When the young Nazis invaded the University of Danzig in the '30s and beat up its professors and disrupted its classes, Rosovsky's family gave up their citizenship and fled to the United States. In the '60s, Rosovsky was teaching at Berkeley. When the young Nazis invaded there, Rosovsky gave up his professorship and fled to Harvard. When the young Nazis invaded there the other day, Rosovsky gave up the chairmanship of his department and started packing.

Prof. Galbraith, as national chairman of the ADA, was the intellectual leader of the Democratic Party in the last election and one of the Nation's few political thinkers over 19 who mistook Sen. McCarthy's menopausal capriciousness for high-principled statesmanship.

Prof. Handlin has won the Pulitzer Prize and other honors for his histories of those groups who, so far, have risen from their ghettos by sweating blood instead of shedding it, by shaping up instead of burning down.

Although Harvard is the home of these three wise men and hundreds more, it was the only bunch in town that was dumfounded at what happened there. Everybody else in the community expected it. We had all watched Harvard for the last few years educate its young in the rewards of criminality. We had watched Harvard become an ivy-covered Fagin.

We saw it begin a couple of years ago when Secretary of Defense McNamara was invited to speak at Harvard. Now, it is true that McNamara was a member of a despised minority group, the President's Cabinet, but under the law, he had the same rights as Mark Rudd. Harvard's Students for a Democratic Society howled obscenities at McNamara until he could not be heard.

He attempted to leave the campus. The SDS stopped his car, milled around it, tried to tip it over. McNamara left the car. The SDS began to club him on the head with the poles on which their peace posters were nailed. If it hadn't been for the arrival of the Cambridge police, who formed a protective cordon around McNamara and escorted him through a series of interconnecting cellars of university buildings to safety, he might have been killed.

The next morning, Dean Monroe was asked if he would punish the SDS. And he said—and if you want to know where the malignancy started that has made a basket case of Harvard, it started with this—Dean Monroe said that he saw no reason to punish students for what was purely a political activity. Now, if depriving a man of his freedom to speak, if depriving him of his freedom to move, if damn nearly depriving him

of his life—if that's political activity, then rape is a social event and sticking up a gas station is a financial transaction.

Now, there's nothing unusual about a pack of young criminals ganging up on a stranger on their turf as the SDS ganged up on McNamara; it's called mugging. And there's nothing unusual about a respected citizen, even a dean, babbling imbecilities in an emotional crisis; it's called a breakdown.

Both are curable by the proper treatment, but there was something unusual, and chilling, too, about seeing the responsible authority, Harvard, treat a plain case of mugging as democracy in action and a plain case of hysterics as a dean in his right mind.

MEAT CLEAVER TACTICS

Well, after Harvard taught its young that the way to settle a difference of opinion is to mug anyone who differed with them, it was no surprise that they'd soon learn that shoving a banana into an instructor's mouth is the way to win a debate and bringing a meat cleaver to a conference is the way to win a concession. Because that's what's happened at Harvard in the last month.

When its militants stormed into the opening class in a new course on the causes of urban unrest and stopped it because they found it ideologically offensive, the instructor attempted to discuss it with them. So one of the militants shoved a banana into his mouth. This stopped the instructor, of course, he stopped the class and then Harvard dropped the entire course.

This week, the Crimson published a photograph of a black militant leaving a historic conference with the administration—historic because it was here that the administration granted black students, and only black students, hiring, firing and tenure powers equal to that of any dean. The militant was holding a meat cleaver. The next day, President Pusey said that Harvard would never yield to threats. Shows how silly a man can look when he doesn't read his local paper.

President Pusey said that, by the way, at a televised mass meeting advertised as one in which all sides of the question would be fairly represented. The Harvard student body was represented by a member of the SDS (numerically, they are less than 1 per cent). The average resident of the Cambridge community was represented by a black militant graduate student who lives in Roxbury and commutes in a new Cadillac. And anyone who'd call that unfair representation would have been mean enough to say the same thing about the Chief Rabbi of Berlin being represented by Adolf Eichmann.

And so when Harvard was raped last week, it had as much cause to be surprised as any tart who continued to flounce around the fellas after they'd unbuttoned her bodice and pulled down her panties.

APING MAYOR DALEY

What surprised the world was Harvard's response. Nowhere in the world was Mayor Daley's response to precisely the same sort of attack by precisely the same sort of mob more loftily denounced than at Harvard. Yet in its moment of truth, Harvard responded in precisely the same way Daley did.

Pusey called for the cops just as Daley did, and the cops treated the criminals at Harvard just as firmly as they treated the criminals in Chicago. The Harvard administration applauded President Pusey's action to a man. There is no record that they ever applauded Daley.

That either proves that the Harvard administration believes in the divine right of kings to act in a fashion that, in a peasant, is considered pushy. Or it may prove that President Pusey is just as Neanderthal as Mayor Daley. Or it may prove that President Pusey learned how to handle Neanderthals from Mayor Daley. At any rate, if they're looking for a new president of Harvard, I

suggest they teach Mayor Daley to read and write and offer him the job.

Let's forgive the president of Harvard for not having the grace to thank the Mayor of Chicago for teaching him how to protect his turf; they aren't strong on graciousness at Harvard this year. But as a member of the Cambridge community, what alarms me is that Harvard doesn't have the brains to protect itself, and the community, from further, more savage and inevitably wider-ranging attacks. And I feel that I have the right to speak for some in the Cambridge community, possibly equal to that of any resident of Roxbury who parks his car there for a few hours a few days a week.

I've lived in Cambridge over 30 years. My children and grandchildren were born and raised in Cambridge. I help pay the taxes that support Harvard. I help provide Harvard with the police that it will increasingly need to protect it from the once-decent kids it has corrupted into thugs and thieves, and the worst kind of thugs and thieves—the sanctimonious kind.

I ask, and my neighbors in the Cambridge community are asking: If a horde of howling, half-educated, half-grown and totally dependent half-humans can attack visitors in their cars, and deans in their offices, and get away with it, how long before they'll widen their horizons a block or two and attack us in our homes?

If they can use clubs and meat cleavers on the Harvard community today and get away with it, who stops them from using clubs and meat cleavers on the Cambridge community tomorrow? Certainly not the Harvard community. If it was necessary last week for Harvard to organize a round-the-clock guard to prevent the untolled-trained pups they've made into mad dogs from blowing up the Widener Library and the Fogg Museum, must we of the Cambridge community prepare to defend ourselves from the pack Harvard has loosed among us? Or should we all pull a Rosovsky and take off to safe, sane Saigon where it's legal to shoot back at your enemy?

A REPLACEABLE FEW

When the president of Harvard proved that, in a crisis, he was the intellectual equal of the Mayor of Chicago and called the cops, it was his finest hour. Although it was true that he had presided over the experimental laboratory that created the Frankenstein's monster that stomped mindlessly into University Hall, fouling everything in its path, he did, at long last, recognize what he had wrought and took the steps to rid his university and our community of the filthy thing.

After throwing the SDS out physically, the next sane move was obviously to keep them out officially, and expel them. And leave them to the criminal courts to educate, or to the Army, or to the gutters of Toronto, or to the rehabilitation centers and public charity of Stockholm. Their few score places at Harvard, and those of their sympathizers, could have been instantly filled by any of the tens of thousands of fine youngsters, black and white, they had been chosen instead of.

And Harvard could have gone on with pride and strength as an institution of learning, as an example of the vigor of the democratic process to other universities, instead of degenerating into the pigpen and playpen it is today. But after the president of Harvard made the one move that might have saved Harvard, the Harvard faculty, in the words of San Francisco State President Hayakawa, betrayed him.

RUN OR RESTRUCTURE

And that brings us back to Rosovsky and Galbraith. And to Handlin.

Rosovsky, whose family had given up and fled when the German Nazis invaded the University of Danzig, who gave up and fled when the California Nazis invaded Berkeley,

gave up the chairmanship of his course and started packing when the Cambridge Nazis invaded University Hall. And all over this country—at Cornell, in New York—other professors are using the Rosovsky solution: giving up and running away. The only trouble with it is that, sooner or later, you run out of places to run away to.

Now, the Galbraith solution is one that is bound to be popular with his fellow puberty-worshippers: those who have just achieved puberty, and those who worship those who have just achieved it as sources of infinite wisdom and quite a few votes. But I'm not criticizing Galbraith's religious convictions. What I say is, in this country, any professor who is panting to get back into public life is free to worship the SDS chapter of his choice.

Galbraith's solution is to promptly restructure our universities—and Harvard more promptly than any other, because, in Galbraith's opinion, those who administer Harvard have "little comprehension of the vast and complex scientific and scholarly life they presume to govern." Well, now, who does Galbraith presume to replace them with?

If those who created Harvard, and made it into the vast and complex scientific and scholarly structure it became, must be restructured out of it because they have too little comprehension, who has enough? The only ones who claim they have, and who will shove a banana into the mouth of anyone who denies it, are the student militants.

And so the Galbraith solution is a forthright one: Let the lunatics run the asylum.

Well, I'm going to tell Galbraith the news: they've already tried your sort of restructuring, Ken. They tried it at Berkeley; they tried it at Cornell; they tried it at Harvard all last week, and the result was that on Friday, a mob of militant students, of a Harvard frenziedly restructured to suit their wildest whims, marched into the Harvard planning offices.

They shouted obscene charges at Planner Goyette. When he attempted to answer, they shouted him down with obscenities. They demolished the architectural model of Harvard's building plans, they kicked over files, they hurled telephones to the floor. And while Goyette cowered and his secretaries screamed, they marched out, uninterfered with by the six policemen who were summoned there presumably to see that they remained uninterfered with, unrebuked and, of course, unsatisfied.

And they won't be satisfied until Harvard is restructured the way they restructured Hiroshima. They'll be back, on another day, to another office. Possibly Galbraith's.

Well, those were the voices that prevailed at Harvard, the resigners like Rosovsky, the restructurers like Galbraith*. There was another voice, however, the voice of Oscar Handlin.

Prof. Handlin said he was appalled at the argument that the students' takeover of University Hall, their attack on the deans, their destruction of private property and their thefts from personal files were unwise but not criminal. It was criminal, said Handlin, by every decent standard.

If Harvard had not chickened out, said Handlin, if it had had the courage to recognize the criminality on its campus over the last few years, beginning with the beating up and silencing of McNamara and continuing through innumerable other incidents of the brutal deprivation by its mad-dog students of the rights of those who dared to dissent with them, it "would not be in the position it is in today—following the road that Berkeley has followed, following the road that has destroyed other universities."

*Prof. Galbraith, it seems has decided on the Rosovsky method for himself. He has announced that he is taking off for Trinity College at Cambridge University for one year while the restructuring goes on.

A CIVIL RIGHTS REVERSE

Oscar Handlin urged Harvard not to go down that road. That was last week. This week, Harvard has gone so far down the road that it can never turn back. In this last frantic, fatal, foolish week, Harvard has reversed the civil rights advances of the last 20 years.

Today at Harvard, any student with the currently fashionable color of skin is given rights denied to students of the currently unfashionable color. Harvard, which educated the President who brought America into the war that defeated fascism, today honors and encourages and rewards its fascists. Harvard, which once turned out scholars and gentlemen, now turns out thugs and thieves—or let me put it this way: now, if you are a thug and thief, Harvard won't turn you out.

Once people were attracted to the Cambridge community because Harvard was there. Today, because Harvard is there, people are fleeing the Cambridge community, even Harvard's own.

Harvard's tragedy was that it was too arrogant to consider that it too might be vulnerable to the cancer that is killing other universities. And when Oscar Handlin diagnosed it as malignant, Harvard was too cowardly to endure the radical surgery that could save its life.

And that's why I can say that colleges like yours, as yet too unproven to have become arrogant, and too determined to prove yourself to be anything but courageous, are the hope of the future. Because I believe that America has a future.

It has become unfashionable to say this; it may be embarrassing to hear it; but I believe that America is the most lovely and livable of all nations. I believe that Americans are the kindest and most generous of all people.

I believe there are no underprivileged Americans; that even the humblest of us are born with a privilege that places us ahead of anyone else, anywhere else: the privilege of living and working in America, of repairing and renewing America; and one more privilege that no one seems to get much fun out of lately—the privilege of loving America.

UNIVERSITY OF IOWA MUSEUM OF ART

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. SCHWENGEL. Mr. Speaker, the Christian Science Monitor of April 3, 1969, featured a story on the new museum of art at the University of Iowa. It would be difficult to list the many persons who should be recognized for making this outstanding museum possible. Suffice it to say that they should all feel immensely proud of themselves for having a part in this magnificent gift to the University of Iowa, and the people of Iowa. There is, however, one person who should be singled out for his almost superhuman efforts to make the museum a reality, and that person is Frank Seiberling, director at the school of art. Frank is a tireless worker, and is certainly to be commended for his efforts on behalf of the museum.

The article follows:

IOWA'S NEW MUSEUM: AN "OPEN" PLACE FOR ART

(By Christopher Andreas)

IOWA CITY, Iowa.—The best way to describe the new Museum of Art at the University of Iowa is to say that the visitor intent on see-

ing the art it contains is unlikely to notice the building, except perhaps its central sculpture court—and, from the exterior, its attractive position on the west bank of the Iowa River.

Part of the growing Iowa Center for the Arts, the museum is the work of the New York firm of Harrison and Abramovitz. The architects have made the interior "open," with galleries differentiated by a variety of levels instead of connected by too many small openings. There is little or nothing about the building which seems to interfere with the easy circulation of people and the easy display of paintings and sculpture.

And the University of Iowa has a by-no-means miserable collection of these commodities to display. It first of all has the large and intense "Mural" which Jackson Pollock painted for Peggy Guggenheim, and which was given by her to the university. It has a small Miró, painted on burlap, an enigmatic thing of considerable delight as well as some dread that goes generally under the name of "Rosalie." Its full title, however, is possibly the longest of any painting and certainly one of the prettiest: "A Drop of Dew Falling From the Wing of a Bird Awakens Rosalie Asleep in the Shade of a Cobweb." But, in spite of its title, this purchase by the university in 1948 apparently produced in the Midwest recurrent ripples of aesthetic distress and rural contumely.

LIKE A DISCOVERY

"Carnival Triptych," by Max Beckmann, was another early purchase, characteristic of the German artist's work in its allegorical attack on violence and suffering.

The most recent large addition to the collection is a fountain sculpture by the Belgian artist Pol Bury. The work was commissioned to coincide with the opening of the museum, and is a permanent part of it.

Consisting of two stainless steel upright forms, curved back to back, "Kinetic Fountain" stands in water and has on each side numerous projecting elements over which water trickles from above. The elements are moved silently by a hidden motor, but their nervous motion is so slight that it has to be watched for; it is like a discovery that something which is presumably inert may in fact be alive. In this piece Bury has made a further variation on an idea which has occupied him since the early '50's.

The biggest private gift to the university museum (and the initial reason for its being built) is the Owen and Leone Elliott Collection. This almost entirely European collection of paintings, drawings, prints, and silver contributes very substantially to the size and quality of the museum's holdings. It includes small paintings by Picasso, Matisse, Léger, Braque, Gauguin, Kandinsky, Bonnard, Gris, de Chirico, Morandi, and Jawlensky (among others). The Jawlensky is a particularly proud, tough painting (of his wife) called "Spanish Woman with Mantilla"—magnificent evidence of the strength of this German expressionist's abilities with color and bold form.

This museum and its collection can hardly fail to be an asset to the university. Its directors, Ulfert S. Wilke (director) and Gustave von Groschwitz, are both men with no small experience in the museum field. Mr. Wilke (an avid collector, particularly of African art and artifacts) is apparently determined to keep the exhibitions in the museum continually changing, except for the core of major works.

MONUMENTAL

At present, to celebrate the opening, there is a showing of works by former and present teachers as well as graduates, of the university's school of art; a few sculptures on temporary loan; and a rather dull exhibition of prints by former students of a teacher in the school of art, Mauricio Lasansky.

Among the sculptures on loan are two large constructions by Mark di Suvero, one

of which is a supremely monumental sculpture consisting for the most part of a yellow snowplow (which is hung so that it can swing) and a gigantic tire from an earth-mover. It is an uncompromising, heroic, and—both by association and construction—an elemental object. If the university could find a way of acquiring it, this piece would be an admirable addition to its collection.

Among its former teachers, the art school numbers Grant Wood, Philip Guston, and more recently, the English artist David Hockney. Works by each of them are on show, together with that of many others, of varying interest.

A week-long celebratory festival begins this Sunday (May 4). It consists of almost anything appropriate from an ice-cream social to concerts, poetry readings, films, an extravaganza, a happening, and the first public marionette performance of Aeschylus's "The Libation Bearers." Participating visitors will include Hans Haacke, Allan Kaprow, Roger Stevens, and a panel of art people: Brian O'Doherty, Dore Ashton, Jack Burnham, Max Kosloff, and George Rickey.

DIXIECRAT-CONSERVATIVE REPUBLICAN COALITION

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BOLLING. Mr. Speaker, the United Association Journal in its May 1969, issue contains an article about the House coalition of Southern Democrats and conservative Midwestern Republicans. The article is written by the able and respected general president of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada—AFL-CIO—Peter T. Schoemann. The article is based on a study issued earlier this year by the Democratic study group. President Schoemann in his article quite properly points out that this political coalition is responsible in large measure for the dearth of effective and comprehensive legislation to remedy our domestic needs. It follows:

DIXIECRAT-CONSERVATIVE REPUBLICAN COALITION

(By Peter T. Schoemann)

In a city where initials are accepted as part of the scenery there's a set of capital letters that have gone mostly unnoticed.

I'm referring to the DSG—it stands for the Democratic Study Group. And that stands for some 120 dues paying members of progressive Democratic Congressmen, elected primarily from districts in the Northeast, Midwest and the West, all densely populated areas.

A harder working or more closely knit bunch of people you'll not find on Capitol Hill. And the Wall Street Journal and the New York Times attest to DSG muscle in stories they print every so often.

The public is not generally aware of the extraordinary efforts this group makes and also the good legislation this group helps to pass.

The DSG was organized in September of 1959 to counterbalance the power of the House coalition of Southern Democrats and conservative Midwestern Republicans.

Back in the fall of 1959 the Democrats had a clear and fat majority in the House, 283 to 153 and in the eyes of the voters the 86th Congress was indeed a Democratic-controlled Congress.

And the Democratic members from the big cities and industrial centers fully realized

they would have to run for reelection on the record of that same Congress.

These Congressmen were worried because time after time they were being defeated in their attempts to pass progressive legislation by a well-disciplined Dixiecrat-Republican coalition.

The final indignity was the successful passage by the coalition of the Landrum-Griffin Act.

Senator (then Representative) Lee Metcalf, of Montana was the guiding light of the DSG in those days and he was elected chairman by the 120 members recruited from 34 states.

Other officers elected by those DSG charter members were: Frank Thompson, Bill Green, Abraham Mutler, Sidney Yates, John Blatnik, James Roosevelt and Frank Coffin.

And in March of 1960 the DSG achieved their first notable victory when they successfully opposed a Treasury-backed bill raising long-term interest rates. They accomplished their objective by first delaying and then finally killing the measure after it had been reported by the Ways and Means Committee.

Since that time the DSG has grown from what was initially described as a "loose and informal" association of like-minded members into an elaborate organization with an executive committee, a full-time staff, a vote-rallying whip system, and a campaign fund-raising committee.

NEW DSG STUDY

It does a good deal of research and frequently will hold chalk talks for its members before a crucial vote.

The DSG recently completed a study I found to be quite interesting and I want to share the contents of this paper with you because it spells out the very reason for the existence of the DSG and it brings us up-to-date on the condition of the Dixiecrat-conservative Republican coalition.

The study is based primarily on 30 key votes cast during the 90th Congress, selected to provide a representative picture of voting patterns based on four factors:

Liberal-Conservative Persuasion—The 30 votes include most of the major liberal-conservative tests of the 90th Congress.

Administration Support—The Democratic Administration took a stand on all but four of the 30 issues.

Support of Democratic Party Principles—Twenty of the 30 votes involved programs and policies advocated in the 1964 Democratic Party platform and many of the remaining 10 involved traditional Democratic policies.

Party Unity—On 27 of the votes a majority of Democrats voted one way while the majority of Republicans voted the opposite.

Therefore the gist of the study was to pinpoint support or opposition to the national Democratic Party positions, policies or programs.

The study was broken down into two parts. Part One examined the voting patterns of Democrats associated with the DSG as compared with non-DSG Democrats and Republicans. Part two examined the voting records of Democratic committee and subcommittee chairmen.

In Part One it brought out that on vital humanitarian and social issues such as hunger, poverty, and education DSG Democrats voted 98% in support of Democratic programs and policies compared with only 38% for non-DSG Democrats and 36% for Republicans.

The national Democratic position prevailed on only 13 of the 30 key votes, and in the 17 defeats 76% of the non-DSG Democrats teamed up with 88% of the Republicans in opposition to the majority of Democratic members.

The non-DSG members included a total of 75 Democrats who voted against more often than in support of the national Democratic position on the 30 key votes in this survey.

All but two of these Democrats were con-

servative to ultra-conservative members from Southern and border states. Their opposition was directly responsible for two-thirds of the 17 Democratic defeats.

Part Two of the study showed that during the 90th Congress there were a total of 114 chairmen heading 21 standing committees and 141 subcommittees. The difference is caused because several members chaired more than one subcommittee.

There were 75 Democrats who voted more in opposition than in support of the Democratic programs, and Part Two records that 42 of the 75 were committee and subcommittee chairmen.

DISSIDENT CHAIRMEN

As a group these 42 Democratic chairmen voted an average of only 13% in support of Democratic programs.

This was almost exactly opposite the record of the other 72 Democratic chairmen who averaged 88% support.

So, on many of the most crucial votes of the 90th Congress, one-third of the Democratic committee chairmen voted against the Democratic Administration, Democratic Party principles, and the majority of their Democratic colleagues and were responsible for the defeat of many Democratic programs.

These 42 include eight of the 21 standing committee chairmen: Colmer of Mississippi; Mills of Arkansas; Ichord of Missouri; Rivers and McMillan of South Carolina and Poage, Mahon and Teague of Texas.

The extent of their alienation from and opposition to the Democratic programs can be seen in the fact that 34 of these 42 chairmen exceeded the average Republican in their opposition to the national Democratic position on the 30 votes in the study.

As a group these 34 chairmen voted only 8% in support of the national Democratic position on the 30 votes surveyed. The overall Republican record was 24% support.

The 34 included six committee chairmen, Colmer, Mills, Ichord, Rivers, McMillan and Poage whose average as a group was only 12% support.

A summary of the findings found that DSG Democrats voted 91% in support of Democratic policies and programs.

But non-DSG Democrats nearly equalled the Republicans in opposing Democratic programs, 69% to 76%.

The opposition of non-DSG Democrats was responsible for two-thirds of the 17 Democratic defeats on the 30 key votes.

Democratic committee chairmen and subcommittee chairmen alone were responsible for over half the 17 defeats.

One out of every three Democratic committee and subcommittee chairmen, 42 out of 114, voted more often against, than in support of Democratic programs.

Thirty-four Democratic chairmen, including six full committee chairmen exceeded the Republicans in their opposition to Democratic programs, 92% to 76%.

The other 72 Democratic chairmen voted 88% in support of Democratic programs.

OPPOSITION INCREASES

And finally the study shows that the number of Democrats voting more in opposition than support of Democratic programs has been steadily increasing over the past 16 years, from zero in the 83rd Congress to 53 in the 90th.

Eight of the 34 chairmen (including one full committee chairman, Colmer) voted 100% against national Democratic programs, and principles on the 30 key issues. Fourteen others voted more than 90% in opposition.

All but one (Baring of Nevada) of the 42 Democratic chairmen who voted more in opposition than support are from Southern and border states. However, analysis of their voting records would seem to indicate that the extreme opposition of these chairmen is not necessarily due to regional differences over race and civil rights, but involves in-

stead a basic disagreement with Democratic programs, policies and principles in general.

This conclusion is supported by the voting records of the 42 Democratic chairmen on non-civil rights issues in the 89th Congress as well as the 90th. In the 89th Congress, for example, three out of four of the 42 chairmen voted against such basic Democratic programs as Medicare, aid to education, model cities, anti-poverty, rent supplements, distressed area aid for Appalachia, and minimum wage increases.

THE POWELL CENTENNIAL IN GREEN RIVER, WYO.

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. WOLD. Mr. Speaker, today the attention of the world is focused upon our three bold astronauts who are speeding toward the moon in a final test for the journey that will allow man, for the first time in his history, to set foot upon another heavenly body.

They are in the truest sense the descendants of other equally bold explorers—men such as Prince Henry, Columbus, Copernicus, Kepler, and our American astronauts, beginning with Commander Shepard.

Therefore, I think it especially appropriate that we should think back 100 years to a man of equal courage; a man who charted a course through the least-known region of this great land of ours. That man, Maj. John Wesley Powell, set out from Green River, Wyo., on May 24, 1869, to run the Colorado River and its tributary, the Green River.

Many and fierce were the dangers his nine companions and four wooden boats faced. But Major Powell, undaunted even by four men who quit, conquered a truly hazardous and unknown land.

We are men who live by the promise of the future and the fulfillment of the past. In knowing that Major Powell succeeded, we can know man will set his foot upon the moon.

The great area that Major Powell opened up 100 years ago has truly become a land flowing with "milk and honey."

The sterile desert land made fertile by the hand of man, the settlements that have sprung up in the Great Plateau are all testimony to the foresight and vision of this man, John Wesley Powell.

Therefore, I think it fitting that a summer-long series of celebration and festivities in Major Powell's honor will be held by cities along the river.

On Saturday, May 24, on the 100th year to the day that Major Powell set out, a host of dignitaries will gather at Green River in my district, the great State of Wyoming, to recognize this man by a reenactment of the launch, an unveiling of the design for a commemorative stamp, and the dedication of a granite marker.

Because of the significance of the day, I include at this point an article from the May 18, 1969, Washington Star, entitled, "Celebration Will Mark Famous Powell Expedition," in the RECORD:

CELEBRATION WILL MARK FAMOUS POWELL EXPEDITION

(By Carrick Leavitt)

GREEN RIVER, WYO.—"The good people of Green River turn out to see us start. We raise our little flag, push the boats from shore, and the swift current carries us down."

It was May 24, 1869, and the man who wrote those words was to go down in American history as one of the bravest and best known of scientific explorers.

Maj. John Wesley Powell, a one-armed Civil War veteran, and nine other men floated down and charted the Green and Colorado Rivers from this Wyoming town through the awesome Grand Canyon to what is now Lake Mead in Nevada.

This year marks the centennial anniversary of the Powell expedition. A celebration will begin with the dedication of a national monument here May 24, on the shores of the Green River, and a centennial expedition will depart by boat to run the river using the same time table as the Powell expedition.

Among the groups to observe the centennial will be the National Geographic Society, U.S. Geological Survey and the Smithsonian Institution's bureau of ethnology, all of which Powell was instrumental in founding. Cities along the rivers will hold celebrations throughout the summer.

"Our boats are four in number," Powell wrote 100 years ago. "Three are built of oak; stanch and firm; double-ribbed, with double stem and stern posts, and further strengthened by bulkheads, dividing each into three compartments. It is expected these will buoy the boats should the waves roll over them in rough water."

"The fourth boat is made of pine, very light, but 16 feet in length, with a sharp cutwater, and every way built for fast rowing, and divided into compartments as the others."

"The little vessels are 21 feet long, and, taking out the cargoes, can be carried by four men."

BRAWNY CREW

Questions of the unknown surging river gnawed at the men. Were there crashing waterfalls ahead that would hurl the frail boats hundreds of feet below? What of the foam-crested rapids? Would they become trapped within the towering canyon walls to face slow starvation? What of the fierce Indian tribes dwelling in the regions of Utah, Colorado, Arizona and Nevada?

"J. C. Sumner and William H. Dunn are my boatmen in the 'Emma Dean'; then follows 'Kitty Clyd's sister,' manned by W. H. Powell and G. Y. Bradley; next, the 'No Name,' with O. G. Howland, Seneca Howland, and Frank Goodman; and last comes the 'Maid of the Canyon,' with W. R. Hawkins and Andrew Hall."

Of this brawny crew only six would make the journey's end. Constant dunkings and sheer terror brought on by the swirling, rock-studded river dampened Goodman's enthusiasm and he left the party within a month.

Skeptical Indians along the way told Powell sections of the river could not be run. "Water heap catch'em," the Indians said.

And an old Indian named Pariats told the explorers of the fate of a member of his tribe who attempted the river.

Powell records the account:

"The rocks," he said, holding his hands above his head, his arms vertical, and looking between them to the heavens, "the rocks h-e-a-p, h-e-a-p high; the water go h-oo-woogh, h-oo-woogh; waterpony h-e-a-p buck; water catch'em; no see'em injun any more! No see'm squaw any more! No see'em papoose any more!"

By the end of the first month the expedition had mapped about 300 miles of the Green River. They had sailed through the rapids of Flaming Gorge, Canyon of Lodore, Whirlpool Canyon up to Split Mountain in Eastern Utah.

On June 9 the "No Name" was wrecked and shattered into pieces at a 12-foot waterfall Powell was to name Disaster Falls. A thousand pounds of supplies were lost to the river.

But the men continued. They wound through desolation and labyrinth canyons across the rapids pulling the boats over whitewater too rugged to ride.

Late in the afternoon of July 17 "the water becomes swift and our boats make great speed," Powell wrote. "An hour of this rapid running brings us to the junction of the Grand Green, the foot of Stillwater Canyon, as we have named it. These streams unite in solemn depth, more than 1,200 feet below the general surface of the country."

DOWN THE COLORADO

This confluence of the Green and Colorado Rivers awed the expedition, and Powell noted in his daily log:

"Ten thousand strangely carved forms . . . a whole land of naked rock with giant forms carved on it; cliffs that cannot be scaled and canyon walls that shrink the river into insignificance with vast, hollow domes, and tall pinnacles and shafts set on the verge over head. . . ."

On the group sailed, down the mighty Colorado, past the junction of the San Juan River, through colorful Glen Canyon and into the mouth of the untamed Grand Canyon.

August 13, and Powell wrote of the approaching ride through the roaring Grand Canyon. "We are now ready to start our way down the great unknown," he said.

"What falls there are, we know not; what rocks beset the channel, we know not; what walls rise over the river, we know not."

The frantic, bone-jarring ride was made through the roaring canyon and by Aug. 27 three men decided Powell's wild ride must end. The Howland brothers and Bill Dunn elected to abandon the party and hike overland to find a Mormon settlement in the north.

The three were reported to have died later at the hands of Indians.

A few days later the six men remaining floated around a bend and one of them exclaimed, "yonder's an Indian in the river." But upon approaching closer the explorers found the "Indians" were Mormon fishermen. The settlements of St. Joseph and St. Thomas were nearby.

The journey was over!

In the weeks and years that followed, Powell and his crew were hailed from coast to coast for their feats and for the scientific information gathered during the three-month expedition.

LAND POLLUTANTS

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mrs. HECKLER of Massachusetts. Mr. Speaker, in our country today, much attention is given the problems of air and water pollution. There is yet another pressing problem of pollution, however, which receives less publicity: this is the problem of "land" pollution. I should like to share with my colleagues the very interesting remarks of Mr. Fred S. Farr, Coordinator for Highway Beautification, Bureau of Public Roads, on the topic of land pollutants, when he posed the challenge of "cleanup" to the congressional breakfast of the Scrap Iron & Steel Institute on April 17, 1969.

The address follows:

LAND POLLUTANTS

(Remarks of Fred S. Farr, Highway Beautification Coordinator, Bureau of Public Roads, at the congressional breakfast, Scrap Iron & Steel Institute, Apr. 17, 1969)

Disposal of solid waste, as you gentlemen so well know, is a serious problem throughout our country. It is simply the question: can a highly sophisticated, industrialized society such as ours get rid of its own garbage?

While air and water pollutants are indeed a serious problem, so likewise are the land pollutants. What do we do with old stoves, refrigerators, washing machines, hot water heaters, and many other used-up, worn-out domestic appliances? The steel mills refuse to take this kind of metal for reprocessing, and the sanitary land-fill people don't want it either.

The most serious part of our solid waste disposal program is the scrapped automobile. It is estimated that there are some 30 million used cars lying around the countryside today—some on hillsides in Maryland, West Virginia, California, or Tennessee, where you will see two to five abandoned cars, and others in large automobile graveyards, and still others in scrap metal yards just sitting there rusting. Others, fortunately, are in metal salvage yards, working their way back into steel and iron production. To this natural junk pile, we add some one and one-half to two million additional scrapped autos each year.

The Highway Beautification Act of 1965, which is concerned with the physical and aesthetic appearance of the highway corridor, addresses itself to one phase of the solid waste disposal, but is not intended as a cure of what to do with the basic problem of junked cars.

As you know, in 1965 Congress stated that the purpose of the Act was to protect the public investment in our highways, promote safety and recreational value of public travel, and preserve the natural beauty through the control of outdoor advertising and junkyards, the scenic enhancement of the highway corridor, through landscaping, acquiring scenic strips of land, developing scenic overlooks, and promoting safety rest areas and information centers for the traveling public.

The 1965 Act is concerned with the physical appearance of the roadside as well as the road itself.

Our Highway Beautification Act has had problems, particularly due to the strong opposition to outdoor advertising controls and the lack of money to accomplish its goals.

Congress, in the 1965 Act, provided for the control of auto salvage yards located within 1,000 feet of and visible from an Interstate or primary highway. Effective control for existing auto wrecking yards is accomplished by screening, through landscaping or fencing, or by removal where fencing is not possible to accomplish. Scrap metal processing plants located in industrial areas are not required to be screened or removed, although Federal funds are available for screening these yards in such areas.

The immediate impact of this legislation is to prevent the unchecked sprawl of visual blight along our highways. Auto salvage yards may no longer be established, outside of industrial areas unless they are screened from view or located so as not to be visible from the main highways.

Auto salvage yards as most people know were junkyards in existence on October 22, 1965, the date of enactment of the Highway Beautification Act, must be screened if possible. Otherwise removed, owners shall be compensated on a seventy-five percent Federal-25 percent State participation for screening or removal costs.

Thus far, 40 States have enacted enabling legislation and the program has received strong support from private industry. Nevertheless, we have made but a small dent in

the Nation's salvage yard problem. A 1966 inventory indicated that there were 17,500 so-called junkyards located along interstate and primary highways that would have to be screened or removed.

Although \$20 million was authorized for each of the fiscal years 1966 and 1967 to carry out Title II of the Highway Beautification Act, only \$11,500,000 was apportioned to the States for these two years for salvage yard control due to the States' then inability to use more money. Early in the program most States needed additional legislation to perform this work off the highway right-of-way and they had not had time to act adequately in this area. Most States are now geared up to meet their obligation but Congress appropriated no funds for 1968 and 1969, and for fiscal year 1970 \$3 million has been authorized but not yet appropriated.

The 1966 estimate indicated that it would cost a total of \$121 million to screen or remove the 17,500 so-called junkyards scattered along 268,000 miles of interstate and primary highways. Of this cost, \$90 million would be the Federal share.

As of March 31, 1969, 110 of these yards had been removed, 1,443 had been screened; approximately 10 percent have been screened or removed.

While screening or removal bans the salvage yard from the motorist's view, the ideal goal is to recycle the steel scrapped autos back into the iron and steel industry. A number of Federal agencies have been working with private industry to find a solution to this problem. We in the Federal Highway Administration have received excellent cooperation from the Scrap Iron and Steel Institute. We have met with representatives of the steel companies, and, recently, Thomas Mann, President of the Automobile Manufacturers Association brought to our office some of his members from Ford, Chrysler, General Motors, and American Motors. We have asked the Automobile Manufacturers Association to help us set up a Government-industry task force to define the problem of where lies the bottleneck in getting scrapped cars back into the steel industry.

Just this week in Alexandria Bill Storey and I visited a scrap metal processing yard and saw automobiles being shredded up at the rate of one car every 27 seconds; some 700 cars a day or 250,000 cars a year are being recycled back into the steel industry by this one yard alone. Fortunately, there is a good supply of junked cars available, and steel mills are located within a range that makes shipment economically feasible for this scrap processor.

The majority of shredders are located in large population centers—not far from steel mills. However, there are many automobile hulks lying in auto graveyards where the owner, dreaming of the old World War II bonanza in junked cars, hangs tight and won't sell. Many other cars lie out in fields or beside roads or in gulleys, no one willing or available to haul them to a shredding plant.

The problem of the automobile recycling starts out with abandonment, pick-up, titling, disposal to an auto parts dealer—moving from auto parts dealer to scrap dealer, crushing and baling cars, transportation to scrap processors having available the proper type of equipment to cut or shred up the scrapped car, as well as having an available market for steel scrap. These are all part of the intricate problem of solid waste disposal. In addition, pollution control laws, while desirable, handicap the burning of auto seats and upholstery in many processing yards.

Somewhere along the line, we will find the answer to why these junked cars don't move—it will probably cost additional money. Before projecting as to where that money will come from—taxes, additional registration fees, etc.—we feel it essential to

find out what is the problem—identify it first, and then find out how much it will cost. That, we feel, is our immediate task.

I would be remiss in not complimenting the many communities that have gone out on a clean-up campaign of their own. Some of the States, such as Vermont, are making it attractive to bring in scrapped cars, and now Maryland is moving ahead in this important effort.

The Business and Defense Services Administration, of the Department of Commerce, and the Bureau of Mines, in the Department of the Interior, are making important contributions to the Government-industry approach.

The Highway Beautification Act will accomplish its goal when newer auto salvage yards are located so as not to be visible from the main traveled highways, and when the metal and other waste disposal plants along our roadsides are screened from the motorist's view. All of these efforts should contribute to improving the appearance of our highway corridor for the enjoyment of motorists and non-motorists alike, as well as contribute to the re-use of an important natural resource.

There is a big job ahead in cleaning up roadside clutter. Only by the best of effort by Government—Federal, State, and local—working with private industry will we be able to clean up our roadside garbage. The problem of solid waste disposal is with us and growing—if we don't lick it soon it will soon lick us. The task is there!

LEICESTER B. YATES—IN THE BEST TRADITION OF THE TEACHING PROFESSION

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. CORMAN. Mr. Speaker, an example of the most unusual dedication to the career of teaching has come to my attention. This concerns Leicester B. Yates, who is retiring this June after more than 30 years of teaching at the U. S. Grant High School, San Fernando, Calif., which is in my congressional district.

In the world today, where it would appear that there are tremendous problems at all levels of teaching; where the very relevancy of education itself has been questioned; and where, even at the starting point of elementary and secondary education, the quality of education in this Nation is at stake, it is heartening to know about Leicester B. Yates and how he has spent the past 30 years in discharging with distinction the responsibility and obligation to develop and train youngsters, and to provide them with guidelines essential for effective and creative progress into higher education and into society itself.

The colleagues of Leicester B. Yates have commented on what it is that has made Mr. Yates the best of the teaching profession.

I would like to share their comments with the Members of the House, and in so doing, to extend my congratulations to Mr. Yates on the excellence of his service to his students, their parents, the community, and to the Nation itself, and to wish him well in his retirement.

I quote his colleagues' letter in part:

The colleagues of Leicester B. Yates, who is retiring this June after more than thirty

years of teaching, at U.S. Grant High School in the San Fernando Valley, feel that Les has been in the best tradition of that oft-maligned and little acknowledged profession.

Thirty years of daily work with children of all ages and all backgrounds has not dimmed the enthusiasm with which Les has approached each day's task of helping to broaden the lives of his charges. His devotion to the needs of the youth of Los Angeles is legendary among the members of the education fraternity. He is on the job early and late. He shares his wealth of materials, painstakingly collected in his wide travels, with his colleagues. An acknowledged expert on the Civil War period, he shares his knowledge in speeches and lectures and enriches the lives of his students and the student body with the expertise with which he arranges displays about the school.

Feeling that the expression "a sound mind in a sound body" is more than a platitude, Les has encouraged participation, has coached, and has officiated for many years at school-boy, college, and Amateur Athletic Union events.

As preparation for his career as a teacher, Les started out in the field of advertising. He early discovered that he had something more important to sell and turned to teaching. He has taught high school students Government, U.S. History, California History, Economics, Contemporary American Problems, and French. In adult education programs he has specialized in Government, Citizenship, and American History. He has sat on Los Angeles curriculum and textbook committees; he has served the Board of Education as a consultant in Social Studies; and at the school level he has sponsored clubs, coached track and field, and been his department's chairman.

Leicester Yates has spent his lifetime in the service of the young people of our society. Many of our youth have benefited from his devotion and dedication. In this he is typical of the best of our nation's teachers who will be calling it a career this June. They give of themselves; they give of their time; they give their very lives for the benefit of our children. And all this for very little financial reward.

There are few occupations more demanding and more often condemned than that of school teacher. It is time that we recognized the efforts these dedicated people perform in our behalf. There is no more fitting time than now as the school year is approaching its end when many thousands are closing out a career and preparing for a well earned retirement.

Leicester Yates and his colleagues are deserving of our best thanks.

GRATITUDE FOR OUR LAW ENFORCERS

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BIAGGI. Mr. Speaker, May 15 has been established as "Peace Officers Memorial Day" in legislation passed by Congress and signed by President Johnson. Those of us who serve or have served as law-enforcement officers appreciate the honor being paid our fellow officers who have died defending society against criminal activities.

As the principal defenders of law and order in our Nation, peace officers deserve our gratitude. They are daily faced with a perpetual and increasing stream of law breakers. According to FBI statistics, serious crime in the United States increased 17 percent in 1968 when com-

pared with 1967. Crimes of violence were up 19 percent, led by robbery up 29 percent, murder and forcible rape up 14 percent each, and aggravated assault up 12 percent. The crimes against property rose by 17 percent as a group. This alarming growth of crime in 1968—and throughout the 1960's—has been met by an almost static growth in police strength throughout the same period. This has caused a great increase in the pressure placed on our law enforcement agencies. Despite this handicap, our peace officers have done a remarkable job.

Efforts have been made by the police to improve the service they provide society. Innovations in training and technology are being sought. Much work has been done in an effort to improve police-community relations and to allow citizens to air their grievances.

In attempting to perform their lawful duties many of our law enforcers have risked their lives. An increasing number are being killed. In 1967, for example, 76 officers were killed by criminal action. This raised the toll of tragic deaths to 411 for the 8-year period from 1960 to 1967. In addition, 247 law-enforcement officers were killed in accidents during the same period. In 1967 there was an 11-percent rise in the rate of assaults on police officers. Nationally there were 13.5 assaults every 100 officers. In the face of this danger our police agencies have continued to fight crime and disorder to the best of their ability.

It is to these brave defenders of social order and stability that we pay our respect today. They need and deserve our support. This support would be of little value if it were maintained only on Peace Officers Memorial Day. In view of the increase in crimes both against the police and against society it is necessary for all Americans to help our police every day of the year. By helping the police we are protecting ourselves, our families, and our Nation from crime.

I HAVE A DREAM

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. RHODES. Mr. Speaker, it is a real privilege to insert in the CONGRESSIONAL RECORD the remarks made by Dr. John F. Prince, president of the Maricopa County Junior Colleges District, on May 1, in Phoenix, Ariz., when 70 applicants were admitted to citizenship by U.S. District Court Judge Carl Muecke.

Dr. Prince, who received his undergraduate and Ph. D. degrees in philosophy from the University of Arizona, was the main speaker on this very special occasion. I believe all who read his remarks will agree with me that a man with a deeper understanding of the dreams and aspirations of all men, as well as of the very essence of America, could not have been selected to welcome these fine new Americans to our midst. Dr. Prince's remarks follow, and I am proud to share them with my colleagues:

I HAVE A DREAM

A revered American a few years ago said with simple Biblical eloquence, "I Have a Dream. . . ." And he went on to express the hopes for his people, using the age-old philosophical device of man—imaging the world as it would be: cutting away the dirt and ugliness, brightening the picture of life with warm, loving colors expressing man's hunger for the good life.

When a couple, warmed by love for each other, has their wedding day, joyous is the occasion and they have a dream in which the years ahead glow with the promise of the good life—the home, children to love, and success in their sharing the years.

When a child is born, the parents have a dream for him—that he will be strong, brave, and will lead the good life and enter into his manhood alert, educated, and his days will be rich in honors and sweetened by success.

The farmer plants the seed and in his dream he sees the brown soil greened by a rich crop that markets well and prosperity come through his efforts.

The merchant hangs out his sign and his dream has in part come true, and his single strength will strive to make the remainder of the dream come true.

The door opens and the newly hired man goes in to his first day's work on the new job. He has a dream that sees him rise steadily in the business or factory, his efforts bringing success and recognition.

So, important beginnings are often enriched by good intentions, brightened by a dream of what can come from this day on, the wedding, the christening ceremony, the grammar school graduation, the first job—the day a person becomes a citizen in a new country.

It is our privilege to share this memorable occasion with 70 of you—new citizens of the United States. You come from 19 countries. America has grown great on such as you—the bearers of old and rich cultures that in time blend into the American way of life. With few exceptions, each of us in the courtroom today either came or our early families came from the distant shores. We share like ancestors and like beginnings—all starting as new citizens. I don't think any of us forget our national origins. We liken ourself to the people of this or that nation. When I war within myself, I say, "It's the English and Irish blood of my ancestors locked in combat—North Ireland vs. South Ireland. When one of my children argues with me I remind her of the Irish blood she carries in her veins. Her behavior is to be expected. Hot-headed, freckle-faced Irish girl. The past is to each of us a matter of pride.

When you first came to the United States, it was a new beginning and you had a dream. It is our sincere hope that the dream is becoming a realization. It is our hope that this simple but most important ceremony renews your dream and re-invigorates your efforts to make it all come true.

One of our good New England writers said: "If one advances confidently in the direction of his dreams, and tries to live the life which he has imagined, he will meet with a life unexpected in common hours."

And so each of us has a dream. As fellow American citizens, each of us has a hope for our Nation.

Would our mutual hopes for America be something like these?

That we can have peace with honor for us, our children, and their children down through the years.

That every American can have equal opportunity to make his life meaningful and dignified in the manner deserved by man created in the image and likeness of God.

That we will grow in wisdom, learning to live together in our land, and with all nations of the world in peace and mutual respect, because brotherly love is the highest wisdom.

Would these be the hopes we would have?

All of us American citizens can as Thoreau said make our dreams come true if we endeavor to live the life which Americans have imagined in the Declaration of Independence, the Constitution, and the Bill of Rights.

We have the machinery to do it—the flexible government that can effect change. We have a body of law that is sensitive to the rights of the majority, the minority, the individual. In hundreds of courts, men work each day to find the just and fair way to resolve the problems of life.

We have the schools and colleges to train our minds and bodies for productive living, the doors being open for peoples of all ages.

Join the team! Live well your individual American lives so that you will meet with a success unexpected in common hours.

Join the team to make the United States the land we have dreamed it can be. Participate in the work to make the dreams for our country come true.

Welcome to the United States! Welcome, fellow Americans!

TWO MARYLAND MARINES KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. LONG of Maryland. Mr. Speaker, Pfc. John Linn and Pfc. Carlisle O. Wark, Jr., two fine young men from Maryland, were killed recently in Vietnam. I would like to commend their courage and honor their memory by including the following article in the RECORD:

TWO MARINES FROM MARYLAND, BOTH 20, KILLED IN VIETNAM

Two 20-year-old Marine privates first class from Maryland were killed by enemy fire in Vietnam, May 11, the Defense Department announced today.

Killed while on search-and-destroy missions near the An Hoi combat base in Quang Nam province were:

Pfc. John Linn, son of Mr. and Mrs. Oscar D. Linn, of 9809 Telegraph road, in Seabrook, Prince Georges county.

Pfc. Carlisle O. Wark, Jr., son of Mr. and Mrs. Carlisle O. Wark, Sr., of 1308 Popular avenue, Arbutus.

Marine Corps spokesmen were unable to say yesterday whether the two young marines were killed in the same action.

BOTH IN SAME BATTALION

Private Linn, whose mother said he had just returned to combat action in Vietnam after three months in a military hospital in Guam after catching malaria, was assigned to H. Company, of the 3d Battalion, 5th Marine Regiment.

Private Wark was assigned to L Company of the same battalion.

Both young men trained at Parris Island and Camp Lejeune, S.C., then went to Camp Pendleton, Calif., for final training before being sent overseas.

Private Wark, who was raised by his grandparents, Mr. and Mrs. Ernest C. Wark, in Cape St. Claire, Md., enlisted in the Marines last spring, then entered the service a few days after graduating from Severna Park High School.

"He enlisted because he wanted to be a United States Marine," his stepmother, Mrs. Carlisle O. Wark, Sr., said yesterday. "He was very proud to be a marine."

Private Wark, had no brothers or sisters, is survived by his grandparents, his father and stepmother, and by an aunt and uncle, Mr. and Mrs. Lewis Russell, of Cape St. Claire.

Private Linn, who went to Vietnam last October, two months before Private Wark, left a job as a gas-station attendant and mechanic last February to enlist in the Marine Corps.

"He thought that he might be drafted," his mother, Mrs. Oscar D. Linn, said yesterday. "So, rather than be drafted, he enlisted."

Besides his parents, Private Linn is survived by two brothers, Staff Sgt. Orie Linn, stationed in Washington, and James Linn, and a sister, Miss Frances Linn.

THE ABM CONTROVERSY

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. MARSH. Mr. Speaker, as with most Members of this House, I hope to maintain a flexible view on all matters of national defense, in order to respond appropriately to changes in defense requirements as reflected either from technological advances or diplomatic developments.

There has been called to my attention, however, a statement which I believe is significant in that it comes from an organization not known for any arbitrary position on a national policy decision in the field of national defense—the AFL-CIO Executive Council.

As I believe the statement is worthy of study in our consideration of a major defense commitment, I include it at this time under leave to extend my remarks in the Extensions of Remarks, as follows:

STATEMENT BY THE AFL-CIO EXECUTIVE COUNCIL ON THE ABM CONTROVERSY

Last year Congress authorized and appropriated funds for the deployment of the "Sentinel" anti-ballistic missile (ABM) system designed primarily for the defense of our cities. The issue before the country today is whether the entire idea of an ABM system should be dropped or whether it should be deployed on a more limited scale.

The proposal for a more limited "Safe-guard" ABM system—primarily for the protection of some of our nation's retaliatory forces—was made by President Nixon, on March 14, 1969, when he declared "I am announcing a decision which I think is vital for the security and defense of the United States, and is also in the interest of peace throughout the world. . . . It is a safeguard of our deterrent system, which is increasingly vulnerable due to the advances that have been made by the Soviet Union since the year 1967 when the Sentinel program was first laid out." In his plea to Congress not to abandon but to proceed with the work on the deployment of an ABM system, the President emphasized his belief that "it is essential for the national security, and it is essential to avoid putting an American President, either this President or the next President, in the position where the United States would be second rather than first, or at least equal to any potential enemy."

The AFL-CIO Executive Council believes the above declaration embodies a sound doctrine of national defense for our country. While we recognize that there can be honest differences of opinion over a particular method of assuring maximum security for our country, we emphasize that there can never be a good argument for our country's not assuring itself the best available national defense.

From our founding convention in 1955 to

date, the AFL-CIO has consistently supported the goal of a strong national defense. We have never joined in attacks upon the efforts of any Administration to carry out this solemn responsibility, and we shall not do so now.

We have always underscored the urgency of acting to meet the pressing social and economic problems facing our country. We do not believe that the pursuit of either objective should be regarded as precluding the other. Both are essential to the security and progress of the nation and both must be faithfully and vigorously pursued.

American labor has always worked for peaceful solutions of international differences. We are, however, awake to the grim facts of international life today. The USSR has been expanding its military budget by at least ten percent annually. This mounting strength centers on missiles with multiple, independently targetable warheads of high accuracy. It constitutes a potential grave threat to our country's land based missiles, bombers, and bomber-bases. Since 1962, the USSR has been developing and deploying an extensive ABM system.

The proposed Safeguard system provides only for safeguarding American lives and defense capacities. It does not call for increased American retaliatory power.

More than two years ago, when questioned about the Soviet ABM system, Soviet Premier Kosygin himself declared that "a defense system which prevents attack is not a cause of the arms race but represents a factor preventing the death of people."

No expert can guarantee in advance how effective any weapon can be in defense or offense. The President's proposal calls for continuation of research and development and each successive deployment phase is to be constantly examined and reviewed annually in the light of technological advances and the international situation at hand.

The Executive Council does not join in any debate over how effective the proposed ABM system will actually be in action. We hope there will never arise the need for such a test. But certainly this nation must at least endeavor to protect enough of our deterrent force to enable our country to discourage any potential enemy from initiating a nuclear assault against the American people.

Under these circumstances, the AFL-CIO Executive Council declares that the President of the United States, as our nation's Commander-in-Chief and as the one primarily responsible for our country's foreign policy, should be supported in fulfilling his duty to determine—in consultation with scientists, military experts, the Congress and other Constitutionally appropriate authorities—the most effective ways of meeting the vital defense needs of our country.

Failure to be militarily prepared does not lead to peace.

CIGARETTE SMOKING

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. WOLFF. Mr. Speaker, recently I received a telegram from the Nassau County, N.Y., Medical Society that eloquently pointed to the health problems created by cigarette smoking. Because this subject is currently a topic of debate here in Washington and throughout the country, and because this telegram is so much to the point, I include it in the RECORD so that my colleagues will have an opportunity to read this message:

CXV—833—Part 10

GARDEN CITY, N.Y.

May 7, 1969.

HONORABLE LESTER L. WOLFF,
House Office Building,
Washington, D.C.

Strong congressional action is needed to prevent the insidious and persistent promotion of the public health menace of cigarette smoking. Unconcerned and physical promotion of cigarettes is direct conflict with indisputable medical proof that chronic bronchitis, lung cancer, coronary vascular disease and emphysema are directly attributed to cigarette smoking. The 2,200 divisions of Nassau County urge Congress to take strong action to warn people, particularly our young people about the serious health hazards of cigarette smoking. This is a national problem. A manpower problem, a medical problem and, most important a problem affecting the good health of every potential cigarette smoker and every presently smoking American.

NASSAU COUNTY MEDICAL SOCIETY.

SCHILLER CORP. IS SUBCONTRACTOR OF THE YEAR

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. O'HARA. Mr. Speaker, last week I had the honor of presenting Mr. James R. Schiller, president of the Schiller Corp. of Warren, Mich., with the Small Business Administration's Small Business Subcontractor of the Year Award.

Mr. Schiller accepted the award plaque on behalf of his firm's subsidiary corporation, Speedring, which manufactures components for aircraft, space, and missile systems.

The Schiller Corp. was founded just 22 years ago by Mr. Schiller and a few partners who invested \$35 weekly to set up a machine shop in the rear of a Detroit service station.

Today the Schiller Corp. employs 425 people in the parent company and four subsidiary operations. They manufacture laser optical systems and ultraprecision navigation components for airborne vehicles including commercial transports and those in the Government's scientific research programs. Schiller components—some of them honed to a tolerance as fine as one-millionth of an inch—are aboard 75 percent of all our space vehicles.

Schiller components are responsible in great part for the navigational precision of all of America's space flights. Its laser optical systems have resulted in space photography whose precision and detail provide invaluable information to scientists above earth resources. And now the newest application of Schiller's laser scanning technology is in electronic data processing.

I also commend the Small Business Administration and other Government and private participants for their imagination in launching this program of recognition for small businesses. It has resulted in subcontracts to small firms throughout the country increasing from \$3.6 billion in 1964 to more than \$6.5 billion in 1968.

I want to point out, too, that Schiller won out in very tough competition. Thousands of firms throughout the Na-

tion, which employ fewer than 500 people, were eligible to be considered. The Schiller Corp.'s Speedring subsidiary was one of eight area winners—and then took top honors nationally among 150 nominees. The Schiller subsidiary earned a "superior" rating on all counts. The company was cited for product perfection, accuracy of cost estimates and delivery schedules, its valuable engineering studies, technological ingenuity, and management competence.

I include the press release from the Small Business Administration announcing the award and feature articles about the Schiller Corp. from the Detroit News and Detroit Free Press in the RECORD, as follows:

[From a Small Business Administration press release]

Speedring Corporation, a Warren, Michigan firm, won the nation's top subcontracting award today, when it was chosen as the Small Business Subcontractor of the Year by the government-industry judges.

The competition, initiated by the Small Business Administration, involved approximately 150 small subcontractor-suppliers nominated for the award by major government prime contractors. Speedring won the top subcontracting honors for the firm's outstanding performance in small business subcontracting.

The firm manufactures aircraft components principally geared to ultra-precision, electro-optical work and assemblies. This includes inertial and celestial guidance subsystems and computer assemblies used in aircraft, space and missile systems applications.

The Warren, Michigan, firm employs 375 workers and has been in business 22 years. Approximately 60 percent of Speedring's work is in government procurement.

In announcing the winner Hilary Sandoval, Jr. SBA Administrator said that the little concern is extremely capable and has a superior production record with the nation's major prime contractors.

"Speedring's proposals are exceptionally accurate. Their anticipated costs are well within their projections," Sandoval said.

An honorary plaque will be presented at the Small Business Administration's Second Annual Subcontracting Conference and Workshop to be held in Washington, today.

While Speedring Corporation won the national award, seven runners-up were honored as "area" winners.

Judges for the national small business subcontractor award represented McDonnell Douglas Corporation, Hughes Aircraft Company, Ling-Temco-Vought, Inc., Martin Marietta Corporation, National Aeronautics and Space Administration, General Services Administration and the Department of Defense.

[From the Detroit (Mich.) Free Press, Aug. 12, 1968]

MOONLIGHTER TO A MILLIONAIRE ON \$35

(By David C. Smith)

The trip from hard-pressed moonlighter to hard-working millionaire is a long one, but James (Bob) Schiller has shown it still can be made.

Schiller and five of his co-workers at Holley Carburetor Co. in Detroit decided 21 years ago that their regular jobs didn't provide enough income to make ends meet.

So each put up \$35 a week to start a new company which could be operated at night and on weekends. The only customer at the outset was Holley Carburetor.

Schiller later emerged as sole owner of the fledgling company, which today is Speedring Corp. of Warren, a producer of sophisticated

precision parts for the aircraft and aerospace industries.

In the process, Schiller has become a millionaire many times over. His stock interest in Speedring alone is worth more than \$11 million at present prices.

Last December 240,000 Speedring shares were offered to the public and the stock is now listed on over-the-counter nationally.

Schiller continues to hold some 560,000 shares, roughly 70 percent control. Eventually he expects to broaden the base of ownership in the company.

Like most founders, however, Schiller says he'd "like to keep 51 percent" control.

Speedring stockholders approved an increase in authorized shares from 1 to 2 million at the annual meeting in July.

Speedring today has 4,200 stockholders in all 48 continental U.S. states who received their first quarterly dividend—six cents a share—in March. Another six cents was paid in June. Schiller says this rate will not change during the foreseeable future.

From its meager start, Speedring's sales have risen to \$7.2 million for the fiscal year ended March 31, up from \$6.4 million the prior year and \$4.6 million as recently as fiscal 1963. Earnings for last fiscal year reached about \$505,000, up sharply from \$316,000 a year ago and only \$98,000 in 1963.

Although Speedring hasn't reported audited figures for the first fiscal quarter ended June 30, Schiller has estimated profits of \$180,000, or 21 cents, on \$1.8 million in sales for the period. This is up from \$172,000, or 31 cents (on a weighted average there were a greater number of shares outstanding) on \$1.7 million sales a year earlier.

Schiller has predicted "substantial improvements" for the full fiscal year ending next March 31.

Schiller, 48, dropped out of Northwestern High School in Detroit during his sophomore years after his father, a machinist, died.

He first served as an apprentice machinist at Congress Tool & Die Co. in 1937, rising to foreman and then plant manager. During World War II he served as a combat infantryman in Europe, returning to Detroit to manage several tool-and-die shops.

In 1946 he joined Holley—at a cut in pay to get into research work involving precision machined parts.

"I couldn't afford to work there without adding to my income, so I asked the manager whether he could give us (this five partners and himself) some work we could do at night," Schiller recalls.

Management agreed to give the group a subcontract for manufacturing governor systems for military aircraft.

"After this start we were able to get other customers in the same field," he says.

But not without a few trials and tribulations. When it came time to send Holley its first billing, the group realized it hadn't even adopted a company name.

"We sat around at lunch one day trying to come up with some names, but we couldn't agree on anything. Then one of the guys suggested we use the name of my squadron in the war—Speed-Ring. We liked it so we took out the hyphen and we've been called that ever since."

In those early days the six partners worked at their regular jobs from 7:30 a.m. to 5 p.m. six days a week, then went to their small machine shop behind a service station on Ford Road near Telegraph to put in another seven hours or so. They also spent all day Sunday at their "moonlighting" job.

Of the original six partners, two sold out within the first three months. Two more dropped out after two years. In 1955 the company became a corporation with just two of the original six partners still involved. Schiller assumed full ownership in 1958.

Only one of the partners—Arthur Brown has remained with Speedring since its inception. Two others, however, have since rejoined the firm. They are George Hill, now

vice president for engineering, and Robert Dopke.

A hard worker who boasts he can handle most of the complex jobs in Speedring's 55,000-square-foot main plant and offices. Schiller's ordinary work day begins at 7:30 a.m. and is completed nearly 12 hours later.

Except for an occasional round of golf and a few weeks each winter in Florida, Schiller continues to devote most of his time to Speedring. He is married, has two daughters and three grandchildren.

His "second family" is comprised of the 260 workers at Speedring who turn out complex parts precise to the millionths of an inch for use in government hardware and the commercial aircraft industry.

Close-tolerance Speedring components are used in the Polaris submarine and the Minuteman and Poseidon missile systems. Optical devices are produced for the Apollo, Gemini and Surveyor space programs. Speedring components go into the super-secret navigational system for the Air Force's F-111 fighter-bomber. The company also makes parts for the mammoth C-5A military transport.

On the commercial side, Speedring is making brake parts for Boeing's 747 airbus and parts for computers.

Schiller, fully aware of Speedring's dependence on the whims of federal budget planners, has pushed to win new civilian business. The company's backlog a year ago was topheavy with government work (95 percent) and scanty with commercial (5 percent). Today this has been narrowed to 65-35.

"Fifty-fifty would be a nice balance," he says, adding that two acquisitions are in the mill.

Speedring booked \$2,003,381 in new business last month, boosting its current backlog to \$5,790,001, more than double the year-earlier figure of \$2,684,192.

Speedring claims to be the nation's largest independent user of beryllium, a pure metal that weighs one-fourth that of steel. On the C5A alone Schiller estimates weight savings of 1,600 pounds per set of brakes.

By employing its own know-how in a variety of technical fields (chemistry, metallurgy, machining, hydraulics, electronics, coating) and by using a number of "exotic" materials, Speedring has capitalized on its ability to create unique products.

"We're like the Yankees," says Schiller. "Everybody is taking potshots at us." Unlike the now lowly Yankees, however, Speedring has weathered the "potshots" to retain leadership in its specialized field.

Maybe Schiller should have compared his company with the Tigers.

[From the Detroit (Mich.) News, Sept. 13, 1968]

SPEEDRING HELPS SPACECRAFT SOAR

(By Edwin G. Pipp)

When American astronauts make the first flight of the Apollo spacecraft next month they will navigate with a star telescope containing parts built in Warren.

Astronauts who make the first landing on the moon will be relying on parts built by the same plant for navigation and for the blastoff from the lunar surface.

In fact, some 75 percent of all the nation's aerospace projects have some parts produced by Speedring Corp., with headquarters at 7111 East 11 Mile, Warren.

Speedring is the largest independent suppliers of precision components, assemblies and subsystems for the aero-space and commercial aviation industries in the United States.

Its products are built to tolerancy that only a few years ago were impossible.

"Mass production of items that have tolerances of two or three millionths of an inch goes on at the rate of two or three a month.

Some sub-assemblies for spacecraft are so

precise that contaminants as small as a grain of face powder would wreck them.

Workmen worry about the heat of their bodies, sweat of their hands and even their breath which can change the dimensions of metal they are working.

Speedring was started 21 years ago by a group of "moonlighting" machinists employed by Holley Carburetor Co.

They rented the back of a garage and began doing work on a contract basis for their own employer. Holley agreed to the arrangement, because it would have had to pay overtime if the work had been done in the Holley plant.

Soon the moonlighters had more work than they could handle on this basis, and went into full-time business for themselves.

When they sent out their first bill for services, the machinists realized their partnership didn't have a name. They called it Speedring because that was the name of a Navy fighter plane squadron in which one of the group served in World War II.

For the first 10 years the company did an unspectacular business, making precision aircraft parts out of conventional metals such as stainless steel.

The business began to change dramatically in 1957 with the development of "exotic" space-age materials such as beryllium. These materials combine extreme lightness with qualities which make it possible to shape them to precise sizes.

Today about 60 to 70 percent of Speedring's production uses beryllium.

One of the machinists who * * * James R. (Bob) Schiller, now 49. He was born in Smiths Falls, Ontario, came to Detroit as a boy, and ended his formal education with graduation from Northern High School.

Five years ago Schiller bought out his partners and became sole owner of Speedring.

He said the firm now has a "leg up" on other precision aerospace firms because of the wide variety of work it can do, not only with beryllium but with other metals, ceramics and oxides.

"Other companies can reach the same precision we can for parts of an item, but then have to go outside to get it completed," he said. "We can complete the job in our plant with the plasma coatings, or whatever else is required."

On a recent tour of the plant, which includes three "clean rooms" and a white tile floor in the main work area, he remarked often that "the cost of precision comes high."

He picked up one piece of beryllium about eight inches long and four inches in diameter, with a number of fine holes and a variety of angles.

"This is for an Air Force satellite. Its cost is about \$15,000."

For its precision work Speedring is permitted a 14½ percent profit, before taxes, by the government. This compares to 8 to 10 percent for other aerospace firms, he said.

Average pay for most of the 325 employees at the main plant is \$14,000 to \$19,000 a year.

Speedring operates a wholly owned subsidiary plant, Cullman Avionics Inc., at Cullman, Ala., near the Marshall Space Flight Center at Huntsville, Ala., and several other small units at various Michigan locations. One location is secret, because the work involves atomic energy.

The firm recently established an Ultrasonics Division in Eaton, Ohio.

Frank Holmes, vice-president for marketing, said the firm now is getting into electronics and optics and expects to enter the oceanography field as the aerospace industry moves into this new field.

Last December the company made a public sale of some of its stock, and these shares are now traded in the over-the-counter market. Schiller still owns 70 percent of the stock.

In the fiscal year ended last March 31 Speedring had sales of \$7,194,922 and net profits of \$505,003.

Brian McMahon, vice-president for finance,

said the company is estimating that sales for the current fiscal year, ending next March 31, will rise to about \$9 million. He said profits are expected to be about \$650,000.

Based on the 800,000 shares now outstanding, last year's earnings were 63 cents a share and the projected figure for the current year will be 81 cents a share.

However, in its annual report Speedring based the per-share figure on an adjusted average of outstanding shares last year. Under this method, last year's earnings were 80 cents. Cash dividends of 6 cents a share.

WITHDRAW FROM GRAIN TREATY

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. FINDLEY. Mr. Speaker, the grim outlook for U.S. wheat exports, which in my view is directly related to our obligations under the international grains arrangement, is reported in the following article by Burt Schorr in the Wall Street Journal of March 12. It provides further reason for the United States to take steps to withdraw from the treaty, so it will no longer be handicapped by the international grains arrangement's inflexibility while other wheat exporters grab the markets.

The article follows:

ANALYSTS PESSIMISTIC THAT U.S. EXPORTS OF WHEAT WILL COME OUT OF SLUMP SOON

(By Burt Schorr)

WASHINGTON.—Agriculture Department analysts are increasingly pessimistic about chances that U.S. wheat exports will recover anytime soon from their current slump.

Foreign sales of U.S. wheat and flour in the crop year beginning July 1 at best will only match the depressed 500 million to 550 million bushels expected as the current year's total, department experts believe. Last year, exports totaled 761 million bushels. In 1965-66 a record 867 million bushels of wheat and flour equivalent moved out of the country.

In any case, barring massive crop losses from drought or other accidents of nature, U.S. producers and traders could well find themselves confronted by a near-billion-bushel carry-over of wheat stocks by July 1, 1970. Such a figure portends heavy Government storage expenses, which could prove unpopular with taxpayers lulled by the heavy drawdown of grain stocks during the mid-1960s thanks to heavy food aid and commercial export demand.

The pile-up of unsold U.S. wheat is only one aspect of a world wheat glut. Canada, for example, probably will begin its new crop year on Aug. 1 with a record 800 million bushels or so. Although close to the expected U.S. figure for the comparable period, this carry-over looms enormous when judged in light of Canada's relatively small national economy as compared with that of the U.S.

To grain traders and some Federal lawmakers, Uncle Sam's wheat-export troubles are greatly aggravated by the International Grains Arrangements (IGA) between wheat importing and exporting nations. The agreement, which took effect last July 1, was forged during a period of tight world grain supplies and threatened famine in India as a vehicle for orderly wheat trading as well as for cooperative food aid.

GOOD IDEA OF THE TIME

"It seemed the right thing to have at a time when we thought the world was going to starve to death," says an IGA expert in the department's foreign agricultural service.

Now, however, Agriculture Department of-

ficials openly concede that U.S. wheat export prices, aided by Government subsidies, have been consistently below IGA floors in recent months to meet world competition. There's general acknowledgment here, in fact, that only Canada scrupulously observed IGA price minimums, and Ottawa announced in March that henceforth it, too, would price wheat to meet world competition.

From the trade viewpoint, though, the department's export subsidy policy hasn't matched the aggressiveness of foreign wheat competitors. Moreover, the grains arrangement itself contains a built-in handicap for American wheat, grain handlers complain, because IGA prices largely are based on U.S. quotations at Gulf ports. "There's no way we can play footsy with our prices. They're visible to everyone," grumbles a grain company executive here.

The U.S. grain trade suspects that foreign competitors' price cuts may be even deeper than appears on the surface. A Telex message received in the Washington office of a major world grain company the other day seems to confirm trade charges that flouting the IGA pays off in wheat sales.

Sent by the company's man in Lisbon, the message reported on responses to wheat requests recently issued by the Portuguese government buying agency. U.S. soft red winter wheat was offered at \$63.33 a metric ton delivered, the communications noted—a figure about \$2 or \$3 below the IGA minimum. However, West Germany, France and Spain also IGA signatories, offered their wheat to Portugal at still lower prices. The Lisbon agent speculated that the Spanish price of only \$54.5 a ton would get most of the contract with the balance going to Rumania, which like other Communist-bloc nations is outside any IGA restrictions.

LOSING TRADITIONAL MARKETS

Because Portugal until recently depended heavily on U.S. wheat purchases, it's cited by IGA critics as further proof that this country is being shouldered out of its traditional markets. Australian sales to Peru and bilateral wheat agreements that Chile has signed with Argentina and Australia are other bits of evidence used in support of this argument.

Indeed, newly released Agriculture Department figures show that foreign shipments, excluding flour, by the five major wheat exporters—the U.S., Canada, Australia, Argentina and France—fell about 14% during the eight months ended Feb. 28, but the U.S. alone was down almost 40% in the same period.

Most of the reasons for this slide seem to have nothing to do with competition or the IGA, though. Pakistan and India, both massive consumers of American grain in past years, appear to have made permanent advances in their own production and have sharply pared their long-term credit purchases under the food-for-peace program. Shorter-term factors in the poorer showing were the temporary halt (since rescinded) that the Japanese ordered in U.S. wheat shipments when they discovered a dampness problem, and the dock strike earlier this year.

But then there's the problem of Brazil—a non-IGA member—whose American wheat imports slid to 21 million bushels in the eight months ended Feb. 28 from 38 million a year earlier. When Brazil sought 100,000 tons of wheat in March, it was deluged with some 75 offers and alternates aggregating 15 times that amount. It wound up taking 100,000 tons of Rumanian wheat plus another 50,000 tons from the U.S. (The U.S. purchase undoubtedly was influenced by Brazil's continued need for Public Law 480 shipments, one knowledgeable trade source here speculates.)

IGA GETS BACKING

For the present, the Nixon Administration is trying to keep the lid on anti-IGA senti-

ments. For one thing, most grower organizations, including the National Association of Wheat Growers and the National Farmers Union, continue to back the agreement. There is also the fear that dismantling the IGA might open the door to widespread commodity dumping, bilateral trading and other trade ills the U.S. has sought to cure since World War II.

"We must be patient" was the theme of Agriculture Secretary Hardin's reply to a recent suggestion by Rep. Findley (R., Ill.) that the U.S. quit the IGA. Speaking for the State Department, William B. Macomber Jr., assistant secretary for Congressional relations, wrote Mr. Findley that "the department believes that the arrangement has helped to keep (world wheat) prices higher than would otherwise be the case. . . . The (IGA) food aid convention has been helpful in diverting some foreign supplies from Commercial markets, thus making room for U.S. commercial sales."

This optimism could be sorely tested in the coming months if the continuing world oversupply of wheat continues to hold down U.S. exports as anticipated.

YOUTH SEES PURPOSE IN MILITARY SERVICE

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. RHODES. Mr. Speaker, the following article "Youth Sees Purpose in Military Service" which appeared in the Phoenix Gazette of May 7, 1969, should warm the hearts of all of us who are exposed daily to the complaints, the criticisms, the rebellions, and the confrontations of many American youths of Luis Ortega's age. I am proud to claim him and his family as my constituents, and I hope the example they set will serve to strengthen our belief in our American way of life.

The article follows:

[From the Phoenix Gazette, May 7, 1969]

TEMPEAN "SAVING PEOPLE'S LIVES": YOUTH SEES PURPOSE IN MILITARY SERVICE

TEMPE.—A 20-year-old Spanish-American youth takes a vastly different view of his Army service in South Vietnam from that held by many his age in the United States. "I really don't mind being here and I like my job of saving people's lives," wrote Spec. 4 Luis Ortega to his brother, Eddie, 8.

LUIS, A 1967 graduate of McClintock High School and member of its athletics Hall of Fame, is serving with the 237th Medical Detachment near Da Nang.

In the letter to Eddie, the six-month veteran of the undeclared war in Vietnam, wrote of his job as medic crew chief recovering wounded troops from a battle area to the nearest hospital.

"We do all we can to help them and, Eddie, like they say at hospitals here, 'We treat them, God heals them.'"

"I've seen everything from a baby being born to bringing guys in with their arms and legs blown off and still alive."

"It's a wonderful thing to see a baby come into the world but I feel sorry for them because they are so innocent and don't know what is going on around them."

Luis told Eddie that he has seen some of his best friends die "and I guess that's why I'm writing you such a long letter." . . . "believe me, Eddie, it really matures you to be over here."

His mother, Mrs. Margarita Ortega of 1417 Newberry, said she prays daily to Santo Nino

(Baby Jesus) to bring Luis back safely . . . "the same as He did for John Bill Jr."

Spec. 4 John Bill returned in January after serving a year with Company A, 715th Artillery Battalion, and now is stationed at Camp Carson, Colorado. He is a 1966 graduate of Westwood High in Mesa.

Mrs. Ortega said she and her husband, a mechanic, are proud of their military sons and also of the other six boys and three girls.

In simple language and with undisguised patriotism, Mrs. Ortega said she and her husband "are trying to bring up our children to be good citizens and if our country wants our other boys they will serve, too."

ETV—ITS PRESENCE AND POTENTIAL

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. PEPPER. Mr. Speaker, a review of community television broadcasting and the untapped impact potential of ETV in the State of Florida was presented in an eloquent address by the Honorable Floyd T. Christian, commissioner of education for Florida, on May 1 to the Subcommittee on Communications of the Committee on Commerce of the U.S. Senate.

Commissioner Christian spoke out in support of S. 1242 which may be reaching this body in the not too distant future. Mr. Speaker, I commend the statement of the honorable commissioner of education to my colleagues.

The statement follows:

STATEMENT OF THE HONORABLE FLOYD T. CHRISTIAN

My name is Floyd T. Christian. I appear before you as a member of the Board of Directors of the National Association of Educational Broadcasters, and as the Commissioner of Education for Florida, as well as a citizen extremely interested in the matters presently under consideration by this subcommittee.

I represent the following eight community television broadcast stations:

1. WTHS-TV, Channel 2, Miami.
2. WEDU-TV, Channel 3, Tampa-St. Petersburg.
3. WJCT-TV, Channel 7, Jacksonville.
4. WSRE-TV, Channel 23, Pensacola.
5. WFSU-TV, Channel 11, Tallahassee.
6. WMFE-TV, Channel 24, Orlando.
7. WUSF-TV, Channel 16, Tampa.
8. WUFT-TV, Channel 5, Gainesville.

These eight stations receive their financial support from State and local sources. In addition, channels 2, 3, 7, 23, and 24 receive gifts and donations from their community. The majority of our ETV stations have been in operation for ten years or more. The expenditure to upgrade our present stations to full power and to provide playback and minimum production of color would cost \$2,536,000. To provide a network which would interconnect all our ETV stations, and additional cost for construction would be \$3,498,000. Florida has two FM radio stations, WUFT, Gainesville, and WFSU, Tallahassee.

The lack of adequate resources of financial support for educational broadcasting has been an ever-present deterrent to the realization of the potentials for education inherent in this meeting.

During the past fourteen years there has been evidence of dramatic impact by the edu-

cational broadcasting system as it now exists, and great strides in forming the kind of system that can readily distribute effective instructional and educational materials to all levels of our society. In a recent review of accumulated research concerning the use of instructional television for instruction, Godwin C. Chu and Wilbur Schramm conclude, "There can no longer be any real doubt that children and adults learn a great amount from instructional television. The effectiveness of television has now been demonstrated in well over 100 experiments and several hundred separate comparisons performed in many parts of the world, in developing as well as industrialized countries, at every level from preschool through adult education, and with a great variety of subject matter and method." (Chu and Schramm, *Learning From Television: What the Research Says*, page 1.)

In 1967-68 the Florida Television Committee under the State Department of Education sponsored two outstanding experimental programs. I think the two programs are worthy of mentioning because of the impact they had on educational television in our state. To make possible the political broadcasts, it was necessary to change the Florida statutes, and this was accomplished by the 1967 Legislature. In October 1968 the Television Committee programmed the first statewide hook-up on political candidates. We sponsored four one-hour programs for the two candidates running statewide for the United States Senate. The candidates were provided free time on an educational network with a panel of distinguished newspaper reporters questioning them on the vital issues of the day. From the reports, telegrams, and telephone messages received we feel we had the largest listening audience ever obtained on educational television. Both commercial television and newspapers gave a large volume of space to these programs. In early November of 1968, the six candidates running for State Supreme Court were granted two one-hour programs that were also enthusiastically received.

A program that did not receive as much newspaper and television support as the political broadcast, but in my judgment, served a greater purpose for the community, was the Racial Tension Programming. The purpose of it was to "keep it cool." These were planned programs by the large cities over educational television stations. The community television stations in Miami, Tampa, Palm Beach, Gainesville, Pensacola and Tallahassee were given grants through the State Department of Education and the Television Committee. These were one-hour programs each week from members of the minority community and the disadvantaged group working with the power structure to prevent rioting and destruction of properties. The fact that these groups had an opportunity to have their grievances heard in a panel discussion prevented what could have been a "hot summer."

The United States Office of Education disclosed in a report of a survey conducted by its National Center for Educational Statistics in cooperation with state education agencies that there were a million more pupils enrolled in our elementary and secondary schools in 1968 than there were in 1967. (*New York Times*, Tuesday, April 15, 1969).

The population explosion and our commitment to mass education create a need for education to turn to techniques which facilitate the equalization of adequate learning opportunities for all citizens. This clearly indicates that technology must play a continuing role in the future. It is through the extension and improvement of our educational television and radio stations that we may create a basic backbone system that can distribute instructional materials to our citizenry.

The recently completed National Project for the Improvement of Televised Instruction, 1965-1968, conducted by the NAEB envisions and recommends in its final report, "Educational 'stations' could logically be developed into cooperatively supported, community communication resources that can house the staff and technologies for the proper structuring of many kinds of educational communications. They can serve as central "switchboards" to move experiences to appropriate places at appropriate times."

Pupils are being reached by television through closed circuit television, cable television, 2500 Megacycle transmission, and open circuit broadcasting. A comprehensive tabulation of the total number of student hours is not available. We do know, however, that the Lawrence McKune *Compendium of Television Education* (September 1, 1967, Volume 14) reported that 122 television stations had enrollments in excess of 6 million pupils; but perhaps even more significant is the inclusion in the report that some "99,107 teachers of Mathematics, Reading, Art, ETV Utilization, and Language Arts, in that relative order," receive training via television. (Foreword.)

For this system to mature in an effective manner, there is a need for continued stimulation with federal dollars. In many of the existing facilities, equipment, now obsolete after ten to twelve years of use, prohibits maximum effectiveness in instructional programs. Many stations are not able to transmit and produce programs in color; many stations are not currently broadcasting at maximum power; and yet, it is with these facilities that we might best approach some of the more serious problems confronting education today.

We need to apply television effectively to help the preschool child, to reach him in his home and bring him to a state of cultural readiness for the early school years. One notable demonstration of the application of television to this problem is found in the Children's Television Workshop, which will circulate via ETV stations extensive pre-school programming. Beginning this fall, this workshop is designed to stimulate the intellectual and social growth of approximately 12 million preschool children and prepare them for the beginning of their formal education.

We need to increase teacher productivity by extending our teacher training programs through television that can indeed reach our professionals effectively and efficiently.

We must assure that the instructional television materials reach the remote communities and segments of our population to whom quality instruction may not be readily accessible.

We must continue to emphasize the role of television in reaching the social problems in our urban areas.

The time is probably not far distant when academic buildings of every kind will be equipped with some sort of internal distribution of television and radio signals. Many are now. It seems essential that the experience with and knowledge about the development of materials for these systems be made available rapidly and effectively through a system of inter-connected broadcasting facilities.

There are noteworthy strides in many of our states to harness television's ability to provide instantaneous replicability and enhance the effective dissemination of instructional programs.

In the years to come, it is not unlikely that a greatly increased use of instructional technology will be applied to every level of education; and techniques developed may be applied to specific educational problems beyond the normal school day and outside the school institution as well as within. This development may help make possible higher

levels of instructional productivity and efficiency needed for a truly universal system of mass education.

I close these remarks with a final urging that this Committee treat favorably this bill for funds to serve as a continued stimulation toward bringing effective technology to bear on the critical problems found in education today, and which will surely continue to face us in the future.

RUSSIAN AIRLINE OFFICIAL PREDICTS SST SERVICE TO NEW YORK IN 1970

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. PELLY. Mr. Speaker, many times I have taken to the floor to discuss a matter of grave concern, particularly to the future of aviation in the United States. That is the lead the Soviet Union is building in the aviation field with their supersonic transport. And, we must not forget that the British and French have now flown two prototypes of their SST.

I have, over and over again, pointed out that Russia is swiftly becoming a fierce competitor in the airlines of the world, and most recently the International Association of Machinists and Aerospace Workers newspaper, the Machinist, has pointed out that on the Moscow-New York run, Aeroflot, the Russian airline competing with Pan American World Airways, will have carried more than twice the number of passengers than Pan Am by the end of July 1969.

Mr. Speaker, this is dramatic proof that the United States must not fall behind in the prototype development of the SST, which already is sliding behind schedule. I urge the President to quickly recommend a solution to the financing problem facing the American SST, and to proceed swiftly with the development of this vital program to American aviation, to the American labor force, and to our delicate balance of payments.

For the information of my colleagues I insert this newspaper article from the May 22, 1969, issue of the Machinist at this point of the RECORD:

RUSSIAN AIRLINE OFFICIAL PREDICTS SST SERVICE TO NEW YORK IN 1970

A Russian airline official has given the first hint of a production schedule for the Soviet Union's supersonic transport, the TU-144.

The latest issue of *Aviation Week* magazine reports on a recent speech in Dublin, Ireland, by Gen. Leonid V. Zholudev, deputy chief of Russia's government-owned airline, Aeroflot. Zholudev predicted that the TU-144 would be flying commercially within a year.

Commenting on Aeroflot's success during the first nine months of Moscow-New York service, Zholudev commented that the Russian SST could be flying that route by the end of 1970. That timetable would put the TU-144 in service about two years ahead of the British-French Concorde and at least eight years ahead of the U.S. Boeing 2707-300.

As Aeroflot and Pan American World Airways round out their first year of air service between the U.S. and Russia, Aeroflot holds a big lead in passengers. Estimates are that during the first year, ending in July, Aeroflot

will have carried 10,000 passengers to Pan Am's 4,000.

Aviation sources in U.S. and Russia agree that exclusive supersonic service on Aeroflot will undoubtedly increase tourism to Russia and give Aeroflot an even bigger lead in the passenger traffic.

VTOL deal—In addition to its SST, the British aerospace industry is building its reputation in vertical take-off and landing aircraft (VTOL).

The Department of Defense budget for fiscal year 1970 includes a request of fifty-six million, six hundred thousand dollars for the Marine Corps to buy 12 British-built Hawker Siddeley Harrier jet fighters. The Harrier now flying with the Royal Air Force, rises straight up like a helicopter and can fly at supersonic speeds.

In exchange for the Harriers, the Marines are willing to give up fifty-six and one-half million dollars worth of McDonnell Douglas F-4J Phantom fighters.

Tipping the balance of trade scales by slightly more than one hundred million dollars with the Harrier may only be a sample of what's to come if the U.S. falls behind in other areas of aerospace technology. SST opponents, take note.

GRAPES, GRAPES, WHO IS BUYING GRAPES?

HON. PHILLIP BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BURTON of California. Mr. Speaker, the struggle to achieve social justice for those who work in the fields and farms of our Nation continues.

As one who is and has been vitally concerned for a number of years with this pressing question, I was most concerned when I heard a report on WTOP-TV Newsday on April 24, entitled "Grapes, Grapes—Who's Buying Grapes?"

I should like to place in the RECORD at this point the text of that interview for the benefit of my colleagues who may have missed this program:

GRAPES, GRAPES—WHO'S BUYING GRAPES?

DAVID FRENCH. The national boycott against California grapes has been going on longer than any other action of its kind, but the government isn't co-operating according to syndicated columnist Tom Braden.

TOM BRADEN. Did you think of the Department of Defense as a boycott breaker? Well, let's have a look at the record.

Out in California, Cesar Chavez has been trying to get the grape growers to bargain with his union. In most industries, collective bargaining is a matter of law, but not in agriculture. So Chavez has organized a nation-wide boycott to try to get the growers to come to the table. Privately the growers admit that the boycott is working. Grape sales in grocery stores across the country have been cut by as much as 20 per cent. But the grape growers have found a much easier way to sell grapes.

Where? Why, of course, to the Department of Defense. This year the Defense Department will ship eight times as many table grapes to Viet Nam as in any previous year. The figure is already 2 million and will reach 4 million pounds by the end of the year. That's eight pounds of table grapes for every American in Viet Nam. And the army at home is also doing its share. All in all, the Defense Department will buy 16 million pounds of California table grapes, up from 7 million pounds from last year.

So congressional critics will be pleased to know that, though our weapons systems may not be delivered on time, and there are complaints about helicopters and rifles, the vaunted U.S. delivery capability works in one respect. We can sure get the grapes there. And those Americans who have been supporting the grape boycott with their food budgets, are breaking it with their taxes.

SAFEGUARD ABM SYSTEM AND THE CAUSE OF PEACE

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. LIPSCOMB. Mr. Speaker, in a May 17 speech before the North Dakota Motor Carriers Association in Fargo, N. Dak., our colleague, Congressman MARK ANDREWS, forcefully spoke on the "Safeguard ABM System and the Cause of Peace." Representing a North Dakota congressional district where one of the proposed ABM sites would be located, Congressman ANDREWS has taken the initiative in stating the need for the defensive missile system.

Drawing from his experience on the House Committee on Appropriations, Mr. ANDREWS has carefully and thoroughly outlined his reasons for supporting the Safeguard ABM System. I commend Congressman ANDREWS for his timely and informed contribution to the current ABM debate.

Under leave to extend my remarks, I submit the text of Congressman ANDREWS' speech for inclusion in the RECORD:

SAFEGUARD ABM SYSTEM AND THE CAUSE OF PEACE

We have now entered an age of missilery, yet the basic fundamentals involved in our nation's protection are little different now from what they have always been. Some 194 years ago, a silversmith in New England named Paul Revere, mounted his horse one April night and rode, as history tells us, through "every Middlesex, village and farm", to warn his neighbors of military invasion. Our American ancestors were few in number in 1775 and not blessed with an abundance of worldly goods.

The colonists were obviously no match for the power of England with its enormous professional army and the world's largest fleet. You may well ask, "What was Paul Revere actually doing? What was the practical purpose of his famous ride?" He was buying time for himself and his neighbors to prepare. They had no way of knowing when the British Crown would turn loose on them a full scale military assault. They could not know whether they were inviting a new 30 year's war or a hundred year's war.

How could they be expected to fathom the intentions of an autocratic King. But knowing history, they were aware that the British Crown had always put down rebellion in its Dominions, and all the leaders were sent to London Dock to be hanged for treason. It was this knowledge which prompted the famous comment by Benjamin Franklin, after signing the Declaration of Independence, "We must all hang together, or assuredly we shall all hang separately."

So a few days or a few hours of advanced warning could make a difference between life and death for them, or between organized resistance and the need to disperse into the wilderness beyond the King's authority.

Reflecting on American defense problems and the cost today, one is struck with the close parallel between the situation facing the colonists of 1775 and our own uncertain outlook. We are a nation without imperial pretensions. We have no desire to occupy any other nation or to bend its people to our will. We have set up a vast establishment called the Department of Defense, and we insist that its mission be confined directly to the defense of this Republic. Even so, we find that billions each year must be applied to defense activities. Why is this so?

It is so mainly because we cannot know the true intentions of our enemies, and we must try to prepare for every eventuality. We must buy time for survival and response if such a situation is ever forced upon us. And, even more important, we must make sure that our technical knowledge is advancing at a constant rate so that we have available to our nation the latest in sophisticated know-how in this age of satellites, moonshots and many other advances that were only dreamed of a decade or two ago.

We cannot hope to match the manpower of the 1,300,000,000 persons behind the iron and bamboo curtains of censorship and secrecy. We have no means of certifying the true intentions of their leadership. We can only be guided by assessment of their past actions. The history written in the U.S.S.R. since 1917 offers small reason to place confidence in their good intentions. For over 50 years they have preached that an agreement with the capitalist is nothing but a chance to take advantage of a sworn enemy. During the same 50 years they have done everything in their power to weaken self-government anywhere in the world and to promote the creation of police states.

Their essential attitudes have not changed, but we must face each new day with the realization that they are in the world with us. They do have very advanced weaponry. Their commitments are unreliable. Their objectives are uncertain. Their good faith is obscured by regular planned actions which seem to support continuation of an international strategy of terror. And, worst of all, their interpretation of just what advantage may be gained from any given situation is unknown on this side of the ocean until after they have acted.

While we all hope for a mutual cutback in armaments, the cutback must be mutual, and verification by the U.S. must be assured, so that we can know for certain what is going on in the closed society of the Communist World. Unfortunately, the Communists have never been willing to agree to the kind of verification considered necessary for our safety.

So much for the past and the present. What, then, of the future. If the foregoing statements do not still hold—if the mission of our Defense Department therefore, is to be changed—then the people must so signify. If our people are willing to risk a little more on Soviet good intentions, if our people feel that we don't need to stay abreast of technological improvements, then we can spend much less on national defense. But a decision of that kind, with today's weapons and tomorrow's advancements, can involve the very life or death of the entire nation. It cannot and should not be made by the President or Secretary of Defense or the Congress alone. The defense of our nation is a decision that involves all of us and should only be made by all Americans. First, of course, we must have all the facts. Public Officials can only weigh the risks, make available information and offer suggestions for protection from those risks. If the time arrives when the people conclude that the cost of that protection is too high, then the decision to recede and accept the greater risks must be the people's to make, as the risks are theirs to shoulder.

And, let's look frankly at the American mood of today. First, we're approaching the

end, we hope, of a war—a war that has probably been the most unpopular our nation has ever been engaged in. Every time our nation has concluded a war there has been an overwhelming public opinion toward disarmament and against the military. It happened after the Civil War, after the Spanish-American War, after World War I, World War II and after Korea. Add to this feeling the fact that during the last few years the Defense Department has been less than prudent in many of its major contracts. The TFX scandal, for example, or the Sheridan tank case. Also, the draft, designed for the full mobilization of World Wars I and II, has been a bone of contention among our young men.

Thus, the situation is ripe for political opportunists who jump at the chance to exploit concern and seek headlines, rather than give the facts—self-seekers who fan the flames of discontent and attempt to cater to the mood and the emotions of the present, rather than the need, opportunities and obligations of the future.

It is easy to strike a responsive cord by saying, "Think of all the good things you can have by refusing to spend money for defense."—easy, that is, if you forget to add into your figures the cost of the risk of losing our freedom.

We even have a prominent politician in our own state who points out that the Minuteman Missile System was constructed to be impervious to nuclear attack. He asks, "What has changed that now makes it vulnerable?" This kind of statement certainly gains him the headlines he desires, but it completely avoids the obvious facts. He conveniently forgets that Soviet technology hasn't stood still in the last decade. Among other things, the Soviets have developed the SS-9 intercontinental ballistic missile, with a 20-plus megaton warhead, which is far more powerful than anything we have. With its payload equivalence of more than 20 million tons of TNT, if an SS-9 dropped anywhere near one of our Minuteman sites, the site would be totally ineffective. If we were to follow his logic, we would all still be driving around in Model T Fords and farming with horses, since there would be no such thing as obsolescence. The French would still be safe behind their Maginot Line which was built in the early 30's as totally impregnable. But, of course, technology caught up and passed them, and France was overrun.

The greatest need for President Nixon's ABM Program is not solely to deploy two sites or twelve sites or to protect us from a small Russian attack or a foreseeable Chinese attack, or a stray missile that may come in by mistake. The greatest need is to give continuity to the development of technology on our side of the iron curtain—technology that can give us the lead time we might so badly need in some difficult time in the future.

Roosevelt was told by many scientists that the atomic bomb would never work. President Truman had most of the scientific community in his time opposed to his go-ahead on the hydrogen bomb. President Eisenhower had the professors saying that we couldn't take accurate photos from satellites miles up in space to allow us to know what the enemy was doing. But, these Presidents all had the courage of their convictions. They all recognized that the military safety and thus the future of America depended on one thing—staying ahead in technical knowledge. Where would we have been during the time of the Cuban Missile Crisis if President Kennedy hadn't had at his disposal the lead in technology given this nation by the action and wisdom of Presidents Roosevelt, Truman and Eisenhower.

I have no way of knowing who the President of the United States might be a decade or so from now sitting at a world conference table with the leaders of the other nations

that share this globe with us. But, whoever he might be, and whatever the time in history, it is vital to our best interests that he represent an America that is a first-rate power militarily.

When I was first elected to represent you some six years ago, the national budget totaled \$111 billion. This year Congress is asked to consider a budget in which the funds requested total \$192.9 billion. During the six years total spending by the government has risen almost 74 percent. Our Defense budget request this year, of course, is still the largest one in our budget. Yet, in the time that I have been privileged to serve in Congress, defense spending has actually dropped from 45% to 41% of the budget, even though we've been involved in Viet Nam. These actual budget figures certainly belie the argument that our nation's fiscal problems are solely due to "runaway defense budgeting."

Now, what of the Safeguard System, originally called the Sentinel, the very development of which has spurred so much dissension. The idea of an ABM System is not new. It has been the subject of research for over 15 years—15 years during which dramatic advancements have been scored in our knowledge and abilities in space. A decade ago there was little hope held for its eventual success, but within the past two years we have seen giant strides made that now indicate the state of the art has progressed sufficiently to justify on-site deployment testing of such a system.

So much has been said and written about the Safeguard System that mass confusion seems to have resulted. I believe, therefore, it would be helpful to summarize for you at this point first, what the Safeguard is designed to do as part of our Nation's defenses; secondly, the positions taken by those who oppose it; and, thirdly, the responses of those who support it.

First of all, about the Safeguard System itself. As now proposed it would include two sites being set up for in-place, functional testing. If, at the end of this testing, it was found that the system performed well the two sites would be expanded to twelve which would then give us coverage of our country.

As now proposed, it is designed to do three things, and President Nixon pointed out these three in his message to the nation outlining the deployment of this system and the significant changes made from the Johnson sentinel concept. Mr. Nixon indicated it should: first, protect our present landbased ballistic missile forces, which because of new developments in the Soviet Union, were no longer as secure as we once had reason to believe; secondly, the Safeguard System would be capable of intercepting a minor attack from new and emerging nuclear powers such as China; thirdly, and perhaps most important, the Safeguard System would give us the opportunity of intercepting and shooting down a mistaken attack by a handful of missiles launched in error from Soviet Russia or anywhere else.

With over 2,000 missiles on both sides of the world ready to go, the possibility of a circuit closing by mistake is always with us. At the present time our only reaction against a mistaken attack would be massive retaliation with our own missiles.

Yet, we've heard one of our state's prominent politicians state, "... Why do we now seek to protect, with an ABM system, silos whose retaliation Minuteman missiles should be long gone in event of attack?" (unquote) I think most of us feel that if our nation is to remain dependent on the sole alternative of massive retaliation and instant incineration for the world in case of a small attack, then we indeed have entered an age of nuclear madness.

A defensive missile system is a long overdue complement to our offensive missile system. The Safeguard system contemplates the

deployment of two units, one in North Dakota and one in Montana, to be constructed as research and development projects. The total cost is not tens of billions of dollars, as some would have you believe, but \$2.1 billion with an initial expenditure of \$900 million during the next fiscal year. These are, indeed, fantastic sums, but this expenditure next year represents slightly over one percent of our Defense budget. If for this we can gain a workable missile defense system and an alternative to massive retaliation, we will have made, I feel, a wise investment.

Now, just what is the Safeguard System. It is an interception and destruct system, utilizing both long-range and short-range radar identification of incoming enemy missiles, and long-range and short-range interception capabilities. The long-range anti-missile, the Spartan, can intercept at a distance of several hundred miles. The short-range missile, the Sprint, can intercept up to 25 miles traveling at unusually high speeds to meet any enemy missiles that may have avoided contact with the Spartan. The long-range anti-missile, the Spartan, has been tested on many occasions, as has the Sprint. The new radar with a 360 degree detection ability has been used in our moonshot. The computers are within the state of the art and have now progressed sufficiently to justify on-site testing. Thus, while all the component parts are in existence at present, the "entity" needs to be tested and certified for real reliability.

The main substance of the arguments of the opponents of the ABM System can be grouped in four distinct categories.

First, that this is being done to keep the pipeline of the defense industries full and is stimulated solely by the military-industrial establishment.

Second, that the installation would be obsolete before it is built.

Third, that it would cost far too much money—money much better spent for the domestic needs of our nation.

Fourth, that this would escalate the arms race and make even more difficult the anticipated strategic arms control talks with the Soviet Union.

All of these arguments have been repeatedly met and answered by the President and other proponents of the Safeguard deployment. No solution has been given by the opponents to the three needs that the President stressed in justifying the ABM deployment:

One, the protection of a portion of our retaliatory force against a first strike.

Two, a protection of our nation against a small attack from a lesser nuclear power such as China.

Three, a way to deal with a missile fired in error by malfunction from one of the major powers.

The philosophy behind the Safeguard decision is, of course, the conviction that first strike capability is a threat of nuclear war, while second strike capability is a deterrent to war. Our defense officials are convinced that the Soviet Union is attempting to maintain second strike or deterrent force against our ICBM weapons. If the ABM is effective and deployed, we will have an assured second strike deterrent—far better than depending solely on massive numbers of offensive missiles as at present. There is no serious doubt that the best way to deter a nuclear attack is to maintain the unmistakable ability to inflict unacceptable damage on any aggressor even after absorbing a first strike on our forces.

It is interesting to observe at this point that after the announcement of the Safeguard System there were no questions raised by the Soviets regarding our desire to maintain an ability to inflict second strike damage. Initial reaction by the Soviet Press indicated very little concern about the matter

because they feel it's proper for us to protect our defensive capabilities.

In fact, in a press conference in London on February 9, 1967, shortly after President Johnson announced the study of an ABM System, Premier Kosygin was asked: "Do you believe it is possible to agree on the moratorium on the deployment of an anti-missile defense system?" He replied in part:

"I believe that defensive systems, which prevent attack, are not the cause of the arms race, but constitute a factor preventing the death of people. Some argue like this: What is cheaper, to have offensive weapons which can destroy towns and whole states or to have defensive weapons which can prevent this destruction? At present the theory is current somewhere that the system which is cheaper should be developed. Such so-called theoreticians argue as to the cost of killing a man—\$500,000 or \$100,000. Maybe an anti-missile system is more expensive than an offensive system, but it is designed not to kill people but to preserve human lives."

Kosygin's argument could well be used in our nation also. Moreover, it was after former President Johnson's announcement to proceed with the more provocative city-oriented Sentinel ABM System that the Soviet Union agreed to engage in strategic arms limitation negotiations. It is also significant that the Soviets are now on their second generation of deploying an ABM System, and that the British Government, as well as most of our NATO allies, have publicly supported the concept of the ABM. So much for the ABM System as military hardware and its effect on world opinion.

But, as I mentioned earlier, our people are suspicious of the expenditures made for defense. Who could help but be when one reads these stories in the newspaper about the TFX scandal. The plane contract was awarded, not to the low bidder, but to a company in Texas, which turned out a plane that not only cost three times as much as the original estimate, but has not been able to be used effectively yet by the Air Force. Also, the \$1.3 billion Sheridan tank fiasco, which has produced a tank that at present is almost as hazardous for its crew as it is for the enemy.

Actions such as these cannot be condoned by any American, regardless of political party, and we can only hope that the Defense Department, under new leadership, will see that this type of contracting is not allowed to continue. But abuses of the procurement system cannot be allowed to be used as the justification for America to cut back much needed defense system deployment.

Certainly, the President, who is hard-pressed today to start new programs he feels desirable for the internal growth of our nation, would like to avoid the funding necessary for weapons of this type and use the money instead for dams, roads, bridges, education, and anti-crime programs and all of the many other things that America needs. He knows, however, because of the information he has at hand, that this system is absolutely necessary and vital for our nation's future.

All the billions spent on national defense during the "cold war" years are nothing but a repetition of Paul Revere's ride—an effort to buy security for ourselves, and time for the world to mature and solve its most dangerous problems without resorting to nuclear warfare. We can even, in some ways, compare Paul Revere's horse to the scientist's laboratory. Both have the ability of giving us that extra time we need so desperately. Time to stay ahead while we attempt to resolve our differences peacefully.

Fortunately, many weapons have been purchased and deployed but never used; and on reaching obsolescence were consigned to the scrap heap—but they kept the peace while

they were on duty, and this is why they were developed.

Faced with all of these facts, what, then, will be my position as your Representative.

First, as of this time, I feel it is highly necessary to deploy—as research and development prototypes—these two Safeguard installations.

Second, it is important to know that despite what the confusers would have you believe, this is not an ongoing authorization to proceed. Anything beyond the original two prototype sites will take a new authorization and a new appropriation by Congress. I will not support further funding beyond the \$2.1 billion for these prototypes unless there is convincing evidence that the system does in fact work. Reliance on a faulty deterrent is more dangerous than no deterrent at all.

Third, I will not in any event base my position on blind acceptance of the good intentions of the Soviet Union. History forbids it. In the Cuban crisis we held a missile superiority of three to one and the showdown was resolved in our favor. But with all of the talk about our country being satisfied with parity or less in weaponry now, we must realize that the Reds might misinterpret and since they still do not understand free and open debate in an open society, may miscalculate our power. Hitler miscalculated and he confused himself into believing that America did not have the capability to resist and would not, in fact, resist. So, he took a chance and World War II resulted. Our apparent weakness invited that war.

Preservation of peace and avoidance of nuclear conflict has been a continuing effort. Our journey on that path has never been a partisan, political issue. It would be tragic if this tradition no longer holds. Perhaps many leading opponents of the ABM have always favored compromise at any cost. They fear confrontation. They fear the use of power by the American people. Yet, history teaches us that only evident military supremacy on the part of the free world can prevent war.

Fourth, I think it is a mistake to put the sole reliance on our nation's strategic defense in one system. We must face the fact that science is universal and holds no permanent secrets for exclusive use by any nation. Any weapon that can be built, will be built; but it might not be used. Such was the case with gas, and bacteria warfare weapons in World War II. Because both sides had them in quantity, they were not used.

It should be the function of diplomacy to concentrate on securing such international agreements as will encourage friendships among all nations and gradually make weapon building an expensive folly. Meanwhile, we have to remember that a police state will use any weapon if it can do so with impunity, as Hitler did with the V-2 rockets against England.

Fifth, I accept the definition of the Safeguard system as a wholly defensive weapon. A system with a range of a few hundred miles can hardly be an aggressors weapon, yet listen to the outcry from the same voices that always cry out in fear of any change on the chess board of world affairs—in the immediate postwar era when we decided to build a nuclear weapons force; next when we decided to build a hydrogen bomb; then when we decided to deploy an intercontinental rocket force; and again when we decided to construct the Polaris submarine fleet. Each time, the same people sang the same tune—we were aggressors, building weapons to blackmail the world.

Now by some tortured logic, these same people would tell us the system of rockets to cover a few hundred miles is escalation of the war threat because we are reducing the ability of an enemy to use his rockets

against us. And, if we have an enemy who worries about that point, then he must have aggressive intentions. Presumably they would have us trust the Russians' good intentions as did the people of Czechoslovakia.

Sixth, I am convinced that we must reduce our total defense spending, which now stands at 8.9 percent of our gross national product. I would like to see us work toward a figure averaging 7 percent or less if possible. This should be able to be done without compromising our basic and necessary research programs or our strategic deterrent. Some policy of this kind is required or we will be drawn into a permanent and continuing role as world policeman.

I have confidence in our technology and our ability to remain ahead of an enemy qualitatively for as long into the future as we must, but since 1954 we have virtually alone held together the ranks of the free world and communism has been exposed in all of its weaknesses. It is now time for other nations to exert and defend their nationhood, if they will, and to police their own areas. If they won't, our sons should not be offered as hostage for their failures.

We must move toward the conference table on disarmament, but we must also insist on verification of the other side so we can be sure that an agreement is not merely a worthless scrap of paper. The Kremlin has used our defense expenditures as an alibi for the obvious weaknesses of their political and economic system, their failure to unify their satellites, their failure to develop Russia internally, and their failure to meet consumer goods demand. It is to our long-term advantage to shatter that alibi and force exposure of their weakness in the eyes of their own people. We must do this by fostering the interchange of ideas and people between our countries, not by allowing an iron curtain to bar their peoples' eyes from what opportunities and freedoms exist in the rest of the world. We must move to have them understand us better, and we they. But, of course, once again let me add that in any dealings with the Russians, we have to make sure that all the cards are played face up on the table.

And, finally, let's not forget that the search for knowledge and the desire to broaden our technology must be a constant and sustained thing if we are to remain ahead.

Knowledge and design of this Safeguard ABM or any other weapons system is merely one more step in the drive to remain abreast or ahead of those who would oppose us and all we stand for. If, after site testing, it is a proven addition to the national security and if changing events in the world require it as a response, and if there is no acceptable alternative to meet the three identifiable dangers as laid out by President Nixon, then it certainly deserves support and deployment. That decision must be made in the 70's, but we will have the opportunity to make it only if we move ahead with test site deployment now. One very prominent and Senior Democratic Member of the House put it bluntly, "I'd rather not need it and have it than need it and not have it."

Actually, a decision in support of ABM is no different than the first great military decision of our country, when the Continental Congress started its own Navy by purchasing and armoring the old French Ship "Bon Homme Richard", and directed John Paul Jones to patrol the Atlantic as a first line of defense for this continent.

In conclusion, I believe that the great majority of the people I have the privilege to represent in Congress—and, indeed, the great majority of the people throughout the nation, with their down-to-earth common sense, are having a tough time swallowing the so-called sophisticated arguments that conclude it is somehow bad to defend ourselves. Frankly, I don't understand those who

regard deployment of an ABM by our country as provocative, but not provocative of the Soviet Union to have already deployed two ABM Systems. Nor do I understand why it would be provocative of us to defend our Minuteman forces against a developing Soviet preemptive first strike capability, whereas it is not provocative of the Soviets to develop that destabilizing capability. We are told, if you pause to think about it, to stop our provocative action of punching the Soviets on their fist with our eye. I sincerely hope that such an inverted Alice-In-Wonderland view of the world will not be allowed to prevail.

In the context of the total picture of history as it has been written, I would consider support of continued ABM development to be the action of a dove, not a hawk, for history leaves no doubt that only the strong can discourage attack and bring peace to the world of men.

THE AFL-CIO COMMENTS ON THE ANTI-BALLISTIC-MISSILE SYSTEM

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. WOLD. Mr. Speaker, each day that passes bring the Congress closer to the day when it must decide whether to provide funds for the "Safeguard" anti-ballistic-missile system. The issue is controversial; we had debate on the subject even before President Nixon announced his decision.

The arguments pro and con have ranged from the logical to the scientific, to the philosophical.

The executive council of the American Federation of Labor-Congress of Industrial Organizations, which represents the millions of Americans engaged in collective bargaining, has come forth with an especially worthwhile comment on the ABM controversy and I include it in the Extensions of Remarks of the RECORD:

STATEMENT BY THE AFL-CIO EXECUTIVE COUNCIL ON THE ABM CONTROVERSY, MAY 15, 1969, WASHINGTON, D.C.

Last year Congress authorized and appropriated funds for the deployment of the "Sentinel" anti-ballistic missile (ABM) system designed primarily for the defense of our cities. The issue before the country today is whether the entire idea of an ABM system should be dropped or whether it should be deployed on a more limited scale.

The proposal for a more limited "Safeguard" ABM system—primarily for the protection of some of our nation's retaliatory forces—was made by President Nixon, on March 14, 1969, when he declared "I am announcing a decision which I think is vital for the security and defense of the United States, and is also in the interest of peace throughout the world. . . . It is a safeguard of our deterrent system, which is increasingly vulnerable due to the advances that have been made by the Soviet Union since the year 1967 when the Sentinel program was first laid out." In his plea to Congress not to abandon but to proceed with the work on the deployment of an ABM system, the President emphasized his belief that "it is essential for the national security, and it is essential to avoid putting an American President, either this President or the next President, in the position where the United States would be second rather than first, or at least equal to any potential enemy."

The AFL-CIO Executive Council believes the above declaration embodies a sound doctrine of national defense for our country. While we recognize that there can be honest differences of opinion over a particular method of assuring maximum security for our country, we emphasize that there can never be a good argument for our country's not assuring itself the best available national defense.

From our founding convention in 1955 to date, the AFL-CIO has consistently supported the goal of a strong national defense. We have never joined in attacks upon the efforts of any Administration to carry out this solemn responsibility, and we shall not do so now.

We have always underscored the urgency of acting to meet the pressing social and economic problems facing our country. We do not believe that the pursuit of either objective should be regarded as precluding the other. Both are essential to the security and progress of the nation and both must be faithfully and vigorously pursued.

American labor has always worked for peaceful solutions of international differences. We are, however, awake to the grim facts of international life today. The USSR has been expanding its military budget by at least ten percent annually. This mounting strength centers on missiles with multiple, independently targetable warheads of high accuracy. It constitutes a potential grave threat to our country's land based missiles, bombers, and bomber-bases. Since 1962, the USSR has been developing and deploying an extensive ABM system.

The proposed Safeguard system provides only for safeguarding American lives and defense capacities. It does not call for increased American retaliatory power.

More than two years ago, when questioned about the Soviet ABM system, Soviet Premier Kosygin himself declared that "a defense system which prevents attack is not a cause of the arms race but represents a factor preventing the death of people."

No expert can guarantee in advance how effective any weapon can be in defense or offense. The President's proposal calls for continuation of research and development and each successive deployment phase is to be constantly examined and reviewed annually in the light of technological advances and the international situation at hand.

The Executive Council does not join in any debate over how effective the proposed ABM system will actually be in action. We hope there will never arise the need for such a test. But certainly this nation must at least endeavor to protect enough of our deterrent force to enable our country to discourage any potential enemy from initiating a nuclear assault against the American people.

Under these circumstances, the AFL-CIO Executive Council declares that the President of the United States, as our nation's Commander-in-Chief and as the one primarily responsible for our country's foreign policy, should be supported in fulfilling his duty to determine—in consultation with scientists, military experts, the Congress and other Constitutionally appropriate authorities—the most effective ways of meeting the vital defense needs of our country.

Failure to be militarily prepared does not lead to peace.

OUR FLAG

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend

my remarks in the RECORD, I include herein an outstanding poem entitled, "Our Flag," written by Mrs. Vivian E. Bennett, Waltham, Mass.

This poem is very impressive, and very well done, and it is a real contribution to poetic expressions concerning our great flag of which we are all so proud.

OUR FLAG

(By Vivian E. Bennett, Waltham, Mass.)

Oh teach them the meaning
and the reverence too
Of our emblem of Liberty
The Red White and Blue.

The Red is for valor
To defend native sod,
Blue is for Loyalty
And reverence to God.

The White for truth
And Hope for me and you,
Each Star a State
On the field of blue.

Teach them their heritage
Why Freedom we enjoy,
Make "Old Glory" revered
By each girl and boy.

A real Patriot is proud
to defend it away,
So the pledge of Allegiance
We recite each day.

This proud flag has flown
On land and sea,
A symbol of freedom
For you and for me.

Teach them Freedom's not free,
'Till we give it to others
And in Peace we can live
With all men as brothers.

In song and in poetry
Long may it wave,
O'er the land of the free
And the home of the brave.

NOTE.—The meaning of the colors was taken from the book "Our Flag," published by Edward J. Cronin, Secretary of the Commonwealth, June 1949. He was the beloved Secretary of State for 10 years.)

HIS EXCELLENCY AUGUST ZALESKI

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. DERWINSKI. Mr. Speaker, I remind the Members that the Polish government in exile continues to function in London and the voices of its officials are far more representative of the people of Poland than the mutterings of the Moscow-controlled puppets in Warsaw.

Therefore, I insert into the RECORD the address of His Excellency August Zaleski, president of the Polish Republic in exile, May 10, 1969, at Caston Hall in London, at the opening of a new session of the Council of the Republic of Poland, which functions as a parliamentary body in exile.

The text of President Zaleski's speech follows:

"In opening this session of the Council of the Republic of Poland, the second of the present term, I have first to state with sadness that the political, as well as economic and cultural, position of the country has not improved. We note rather a worsening of the situation in various fields of the na-

tional life under the imposed Communist régime.

Since the March events of 1968, when Communist reprisals against students and writers reduced the Polish people to silence, almost nothing has remained of the illusory hopes of the "Polish October".

Nearly every field of activity is under control of the ruling Communist party which permeates and tries to mould in its own fashion every field of creative endeavour. Shortages in shops, defective supplies, an ailing industry—such are the results of the centrally directed so-called economic planning.

Particularly hard must be the life of Polish youth, the generation on which the future of the nation depends. So-called "socialist construction" has brought the youth into a cul-de-sac. School-leavers face increasing prospects of unemployment, all the more so that these are the numerically strong age-groups of the post-war population boom.

The despotic state is afraid of any independent opinion and tries to mould its citizens according to a single pattern. Centrally organised mass-meetings, demonstrations, false information, demagoguery in the press and radio, reprisals against writers and intellectuals—all these are daily occurrences in present-day Poland living under the yoke of Russian communism.

The Communist régime did particularly great damage to the good name of Poland in the world through its anti-Zionist campaign, which soon went over into anti-semitism, and through its participation in the invasion of Czechoslovakia undertaken in the interest and by order of Soviet Russia.

Only an imposed Communist rule could have forced Poland, a country with a long tradition of tolerance and freedom, to such heinous deeds.

The coordinated struggle against the Church and religion in Poland goes on. The Communist party and its territorial branches continue to harass the clergy and the faithful—an action which, incidentally, often leads to results diametrically opposed to those intended.

Also in the international field there is little ground for comfort. In the United States, after 8 years of Democratic rule, the Republican Party has come to power. At the head of the new Administration is President Nixon, who visited Poland in 1959. He has there enthusiastically received and he spoke many fine words. It is to be hoped that the new President will not follow into the footsteps of his predecessor President Roosevelt who in Tehran and Yalta has surrendered to Russia the entire eastern half of Poland and has accorded Russia such rights and privileges over the rest of the country that Poland has virtually become a Russian colony. Poland was not even admitted to the conference table where her fate was being decided, although there was in existence a Polish Government which was recognized by the Allies, and Poland had armed forces which with all their might had contributed to the Allied cause.

The changes which we are witnessing at the moment in France will undoubtedly have far-reaching consequences not only for France alone, but for the European Community as well. So far France has played a dominant part in this community. Now the crux of the matter is that Europe is facing a choice between a United Europe with Britain and one in which the most powerful state will be Germany. The German Federal Republic with a population of 59 million, with a huge industry and strong currency, is a power to be reckoned with. British membership would provide a certain counter-weight against a possible German attempt to dominate the European Community.

It has to be said that it is in the interest of Poland that there should exist a United Europe of which a free Poland would also be a part. The Polish claim to participation in a

grouping of Western European states is self-evident both for economic reasons and in view of her age-long association with Western civilization.

Russia, after a period in which terror was somewhat relaxed under Khrushchev, is now reverting to her traditional role of oppressor and suppressor of any deviation from the political line dictated by the Kremlin. Outstanding proof of this trend is the so-called "Brezhnev doctrine", the persecution of Russian writers who dare to vent views not quite in line with those of the rulers in the Kremlin, and the invasion of Czechoslovakia with the participation of some of Russia's satellites.

But the Kremlin has at the moment its own troubles. I mean the challenge to Moscow orthodoxy in the Communist camp, especially the ideological struggle with Mao Tse-tung which has recently taken the form of acute frontier clashes. This may have quite incalculable consequences, particularly in view of the fact that China increasingly voices her demands for the return of territories forcibly annexed by Tsarist Russia.

Thus the settlement imposed upon the world by the great powers after the Second World War, often in violation of law and justice, has failed to give the world the much desired peace.

Peace treaties envisaged in the Potsdam agreement failed to materialize, and there is no ground to believe that they would materialize soon.

The tasks of the Polish Emigration and the means at our disposal are different from those of Poles in Poland. We can and we should fully represent the full Polish *raison d'être*. It is our duty to inform the world about Poland, to protect and put forward demands in a way in which our captive country can not.

A great source of moral strength for the Polish emigration is the presence in their midst of the rightful authorities of the Polish Republic. This is what the Great Emigration of 1831-32 lacked, as did the emigration after the January Insurrection of 1863. They lacked the continuity of legal state institutions, and this was their weakness, notwithstanding the high moral calibre of their leaders.

We are all aware what sort of Poland we want. We want a free and democratic Poland in which we shall be our own masters under a Government of our own choice, living in a system and with laws of our own making.

This year we celebrate the 400th anniversary of the Union of Lublin, one of the few cases in history when many peoples became united of their own free will in a single Commonwealth. This act had the motto: "Let the free unite with the free, and equals with equals". It welded the Polish Crown and the Grand Duchy of Lithuania into "a single indivisible body, a single Commonwealth which made two states and peoples into one".

I hope that Poles outside their captive Fatherland will duly honour this great deed of the past of which Poland is so proud.

The Government will put before the Council reports of their activities and will present their plans for the future.

I declare the second session of the Council of the Republic of Poland open, and pray that God may bless you in your deliberations.

VA PROSTHETICS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks, I in-

clude a most thoughtful and informative article appearing in the April 1 issue of U.S. Medicine, by Dr. Turner Camp, area medical director of region 5 of the Veterans' Administration's system of hospitals. Dr. Camp has served with distinction in the Veterans' Administration. He served in the medical corps of the Navy during World War II and the Korean conflict and is still a Reserve officer doing frequent weekend duty in the Washington area. The article which follows shows the great steps which the Veterans' Administration has made in this field which not only has helped the veterans of this country, but all who suffer any sort of disability:

VA PROSTHETICS

(By Turner Camp, M.D.)

Thanks to modern medical practice combined with the incredible teamwork of the front-line medic, the helicopter pilot and the military surgeon, today's combat casualty has a far better chance of survival, a much greater potential for faster recovery, and more complete functional restoration than ever before in the history of warfare.

This message, emanating from the prosthetic program at the Veterans Administration Hospital in San Francisco, is intended not only as a tribute to military medicine and its combat-zone medical teams, but also as a feed-back report of the VA's contributions to the field of prosthetic care.

On 24 November 1967, Tommy Eugene Raper, a 19-year-old Army private, sustained injuries resulting in amputations of all four extremities as well as a perforated eardrum due to the explosion of an enemy mortar shell near the Cambodian border in Vietnam.

That he survived at all is remarkable. It may be attributed to the elasticity of youth, to the availability of whole blood administered on the spot by the front line medic, to the helicopter pilot who brought him to a medical station within the hour, and to the skilled two-man surgical team, one working on the left side, one on the right. We hope this report will reach these men.

FOLLOWUP VISITS

Although he has been a civilian since 18 September 1968, Tommy has had some followup visits at the Army's Letterman General Hospital, Presidio of San Francisco, in regards to the Chopart's amputation of his left leg, which must remain in a walking cast for a while longer.

On his first visit to our prosthetic clinic on 6 December 1968, Tommy was wearing his bilateral arm prostheses previously furnished at Letterman Hospital. He came in a wheelchair only because the leg cast on his left precluded extensive use of his above-the-knee artificial leg on the right.

As usual at clinic sessions, all of the specialists were there to carefully evaluate Tommy's needs, including a prosthetically trained orthopedic consultant, physiatrist, a prosthetic specialist who coordinates this activity, a physical therapist, a social worker and several prosthetists representing commercial artificial limb companies under contract with the VA.

In Tommy's case it was immediately apparent that only minimal deliberations by the team would be required to take care of his immediate needs. His post-surgical fitting and rehabilitation training at Letterman obviously had been excellent.

All Tommy wanted now was "to get my artificial arms fixed as soon as possible."

This was understandable considering the evidence of hard usage and the resulting changes in his stumps. The need for a new left below-elbow arm and a new socket for his right above-elbow prostheses was indicated and prescribed together with a few

additional items that Tommy had not considered before.

POWER DRIVEN WHEELCHAIR

To provide unassisted mobility during occasions when his artificial legs are not in use, a power driven wheelchair adapted for control by use of his hooks was specified together with a lightweight folding wheelchair easily transportable in his car. A hydraulic lift was considered for installation by his bathtub but Tommy would have none of this, preferring to settle for a shower chair.

His lower extremity prostheses will await evaluation at a later date. At that time his upper extremity stumps should be sufficiently stabilized to then consider spare arm prostheses so as to provide uninterrupted functioning whenever his present limbs break down or need repairs since he lives a considerable distance from any limb shop facility.

Not too long ago, the harsh term "basket case," with all of its dour connotations would automatically have been applied, labeling this young man for life. Hopefully, the term is becoming obsolete. Certainly in Tommy's case it does not apply for even before our services have well begun, he is still a sure shot with a deer rifle as he was before his military service. He drives an automobile, rides horseback and even looks forward to resuming his favorite hobby—drag racing!

Important work remains to be done, nevertheless, and Tommy will make many trips from his ranch home in Dos Palos, California to the clinic, a distance of some 150 miles, with expenses paid by the VA. Some will be even farther since he has selected a prosthetist in Vallejo to fabricate his new prostheses.

FEWER CLINIC VISITS

His visits to the clinic will become progressively less frequent, however, due largely to the streamlining of the VA's administrative procedures. For instance, the numerous personal visits or writing of letters back and forth to request or approve needed repairs or adjustments have been virtually eliminated. Adoption of the credit card idea in the form of a prosthetic service card has made this possible.

His recurrent need for replacement of stump socks involves only the mailing of a postage free request card to the VA distribution center in Denver, Colo., where prompt shipment is made directly to his home.

Tommy's punctured eardrum fortunately does not present a problem yet. At this stage he does not consider his slight hearing loss to be a handicap.

Nevertheless, another aspect of VA's inter-service collaboration will be brought to bear if needed.

Audiology service will scientifically test his qualitative and quantitative hearing loss and determine specifications for an individually fitted hearing aid best suited to his particular needs. Prosthetic service will procure it and a spare if the need is indicated. His battery replacements will be provided in the same manner as his stump socks and he will use a prosthetic service card to obtain factory repair services whenever needed.

ARTIFICIAL EYE CLINIC

Despite his multiple injuries, Tommy will not require the services of our plastic artificial eye and restorations clinic, except for the possible future fitting and fabrication of ear molds for use with a hearing aid.

For many other veterans, however, this is an extremely important part of our prosthetic service program, including the fabrication and fitting of custom-made plastic artificial eyes, lifelike custom designed body and facial restorations, ocular implants, surgically implantable skull plates and a large variety of special devices usually not available from commercial sources.

With Tommy's permission we have used his story to illustrate some of the typical pro-

sthetic services being provided today for thousands of disabled veterans.

The same teamwork approach, involving carefully planned coordination with other elements and disciplines concerned, is similarly applied in serving all of our beneficiaries, regardless of the type of physical impairment involved. In this respect the term "prosthetic service" is at best a misleading one, but for lack of better terminology the VA "prosthetic service" encompasses a wide variety of benefits and services many of which are totally unrelated to the word "prosthetic" as it is generally defined.

To be more specific "prosthetic services" as used in the VA includes the furnishing, replacement, maintenance and training in the use of such items as the following: for the blinded veteran, special canes, Braille writing equipment, shatterproof dark glasses, portable radios, Braille alarm clocks and pocket or wrist watches, disc or tape type recording equipment, and standard or portable typewriters.

In addition to prostheses, it also includes all conceivable types of orthopedic appliances such as braces, elastic hose, corsets and belts, orthopedic footwear, arch supports, splint and shoe modifications.

Depending upon the disability involved, "prosthetic service" relates to such other items as standard or motorized wheelchairs, adjustable hospital type beds, invalid lifts, respirators, oxygen equipment, cardiac pacemakers, air conditioning units and even home installations of hemodialysis equipment.

In essence, whatever is needed to assist in the physical, functional or cosmetic restoration of the veteran can usually be supplied as a "prosthetic service," if it is obtainable and if it is medically prescribed as part of specific treatment authorized by the VA.

POSTWAR DEVELOPMENT

This report could not have been made prior to the end of World War II at which time the VA faced a chaotic situation and an organized prosthetic program as such did not exist.

In fact, some mandatory government regulations at that time relating to the procurement of prosthetic appliances, reflected far greater concern for short-sighted economy than they did for the welfare of the disabled veteran.

Additionally, sources of supply for many types of appliances and devices were inadequate, extremely limited or nonexistent. Artificial limbs, for example, were available from only a few hundred small shops and more often than not both the facilities and quality of product bore a striking resemblance to what, in earlier years, you might have encountered at "Ye Olde Village Smithy."

There was little in the way of theoretical knowledge and no standardization or quality control; each limbmaker being guided by his own pet ideas or "trade secrets" which were jealously guarded. In the words of a House committee publication issued during the 90th Congress, "The plight of the amputee became spectacular."

REMEDIAL LEGISLATION

To remedy this situation, in 1945 Public Law 268 was passed by the 79th Congress, granting new wide-ranging authority to the administrator of veterans affairs in fulfilling the needs of eligible veteran beneficiaries. This significant law not only defined the basic prosthetic services to be provided, but further stipulated that these services could be procured "by purchase, manufacture, contract or in such other manner as the administrator may determine to be proper without regard to any other provision of law."

Upon this foundation a "prosthetic service" was established as a separate entity in the VA's department of medicine and surgery and for the first time in our history, appliances and related devices and services could be furnished to eligible veteran beneficiaries, not

in strict accordance with rigid rule books but rather on the basis of sound medical judgment, professional advice and human considerations.

But the best medical judgment and professional advice available at that time left something to be desired, principally because of an almost complete lack of any basic body of scientific knowledge related specifically to prosthetic devices.

For instance, everything there was to know anatomically about the function and structure of human joints was known and yet no where in available literature could be found any comprehensive analysis of the principles of human locomotion and the application of these principles to the design, construction, and fitting of an artificial limb.

In response to the obvious need for basic research and development in the entire field of prosthetic and sensory aids, in 1948 a continuing annual appropriation was authorized by Congress to the VA for this purpose.

RAPID PROGRESS

The impact of the prosthetic research and development program during the past two decades is perhaps best expressed by quoting one of our severely disabled Spanish-American War veterans who recently observed, "It is evident to me that more progress has been made during the past 20 years toward improving the quality of prosthetic devices and services than was previously accomplished in the entire history of man."

Our job at the more than 80 prosthetic services established in designated VA treatment facilities throughout the nation, is to assure that every eligible veteran living within the jurisdiction is afforded the fullest measure of authorized prosthetic services commensurate with his individual needs.

The responsibility for fulfilling this objective on a day-to-day basis rests primarily on the shoulders of the VA's prosthetic representative. Each of these employees, in addition to his extensive training and experience in all aspects of prosthetic care, has personally demonstrated his own ability to overcome a major physical handicap, and because of these special qualifications together with personal dedication, is able to establish the kind of rapport with veteran beneficiaries that is so essential to the success of this type of program.

Referring back to our observation at the beginning of this report, we hope that the military surgeon and all of his colleagues, who are engaged in saving lives and bodies wherever they are being attacked, will take encouragement from this report. To you and to the disabled we mutually serve, we pledge a continuing effort toward an ever improving program of prosthetic services.

ARE WE ALREADY TOO LATE?

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. RARICK. Mr. Speaker, many Americans, especially those who are learned in world conditions, are exasperated at the continued harassment and attacks against our military leaders charged with the security of our Nation.

We must remember that military men win wars—they do not start them. Overwrought pacifists and blundering diplomats bear that responsibility.

Having made every diplomatic blunder possible even before World War II, our

leaders should not be discussing preparedness and defense—they should be moving forward with all dispatch at their command motivated by the urgency of survival: Are we already too late?

Mr. Speaker, I insert an editorial from the Daily Oklahoman for May 13, and another newsclipping following my remarks:

[From the Oklahoma City (Okla.) Daily Oklahoman, May 13, 1969]

ARE WE ALREADY TOO LATE?

The Communist conquest and domination of the entire world has been the unswerving ambition of the Soviet Union since the days of Lenin. Russia now has an army more powerful than any three other nations combined. All it needs to attain its goal is a navy which can overwhelm the navy of the United States.

With this in mind, for the past several years, Russia has vastly enlarged its ship building capacity and this year will turn out 28 new submarines to the United States one or two.

At the present time, Russia already has 250 attack submarines compared to the United States 105. Of this number, 100 are missile launching submarines compared to only 41 of the United States. Of surface to surface missile carrying ships, Russia has 25 and the United States has none.

Of mincraft, Russia has 300 and the United States only 86. Of missile patrol boats, Russia has 150, the United States none.

Of destroyers, the United States has 177, of which 163 are more than 20 years old. Russia has 86 destroyers, all of them less than 20 years old.

Of the attack submarines, 60 of the 105 in the United States are more than 20 years old. All of Russia's 250 are less than 20 years old.

At the present rate of construction, within four years Russia can have more than three times as many attack submarines as the United States and they will be armed with bigger missiles than the Polaris and their estimated range is 1,500 miles.

For years many of our defense experts have talked about intercontinental missiles to be launched by Russia from within the Soviet Union.

Apparently very little thought has been given to the fact that Russia, in a few years, will be able to place 50 missile attack submarines off our Atlantic coast, another 50 within the Gulf of Mexico, another 50 in range of our Pacific coast and all could be commanded to discharge their missiles at the same second of time, aimed at every military airport, every naval base and installation and at every electric power station of size in the country.

Russian missiles could strike every one of our metropolitan cities and create a nationwide panic. We would have no means of defense, other than our submarines, if located near Russia.

The defense of the United States could be paralyzed within 15 minutes and the United States could become a Russian satellite.

No other country in the world could oppose the might of Russia and Russian commissars could take over the governments of any or every nation. China would be the only likely nation to offer resistance and that would be futile, for Russian hydrogen bombs would destroy China's nuclear bases and could destroy any Chinese city.

It is likely that in addition to the submarine armada, Russia would place in orbit a half dozen space ships loaded with hydrogen bombs of which one could be orbiting over the United States every 15 minutes and their bombs could be dropped on any desired target at Russia's pleasure.

President Nixon might be the last elected president of this country.

For the last eight years, our defense department has concentrated its attention and spent its money upon Vietnam. It soon may have to give additional attention to North Korea. Both North Korea and North Vietnam are supplied by Russia with abundant weapons and ammunition and tactical experts to supervise their warfare.

It is to Russia's advantage to keep the war going in Vietnam and start another in Korea. It probably will not permit North Vietnam to accept a peace settlement.

Only one thing will deter Russia from taking over the United States through submarine warfare, and that one thing would be such a powerful navy and submarine force of the United States that it could do damage to Russia equal to the destruction it caused in the United States.

A number of our military leaders recognize the doom that awaits us but for fear of alarming the public have spoken only in guarded terms.

The ABM safeguard system might be able to shoot down 80 percent of intercontinental missiles from Russia, but the other 20 percent could destroy us. It would afford no protection against submarine missiles. It is so much simpler for Russia to attack us by submarine that the use of intercontinental missiles would be only supplementary.

If the United States had as many as 75 nuclear powered submarines equipped with Poseidon missiles and maintained most of them within target range of Russia's vital cities and military installations, Russia would be unlikely to attack our country.

A crash program to enormously increase our naval strength and merchant marine, regardless of cost, appears to be the only deterrent to a capture of this country by Russia.

[From the Washington (D.C.) Evening Star, May 19, 1969]

CHINA POLICY STATEMENT KEEPS UP FIRE AT U.S.

TOKYO.—Communist China virtually told the United States today the price of improved relations between the two countries is American abandonment of Formosa and of the American policy of containment.

The Chinese policy statement in the Peking People's Daily, the organ of the Chinese Communist party, made clear that there has been no softening in Peking's attitude toward the United States by the leaders chosen by the ninth party congress last month.

The statement made no mention of a resumption of the Warsaw talks between the ambassadors of the two nations.

It denounced President Nixon as a "hypocritical priest" and "gangster" wielding "a blood-dripping butcher's knife."

SEES DOUBLE TACTICS

"Nixon resorts to crafty counter-revolutionary, double-faced tactics toward socialist China," it said. "On the one hand, he talks loudly about so-called 'peaceful co-existence' and plays the trick of sham relaxation; on the other hand, he persists in continuing to occupy China's territory of Taiwan (Formosa), carrying out repeated military provocations against our country, and further stepping up the rigging-up of military encirclement of China."

It charged that Nixon is plotting a new military alliance with Japan as its backbone to replace the Southeast Asia Treaty Organization.

While quoting Communist Chairman Mao Tse-tung that China will not attack unless it is attacked, the paper said the Chinese people "are determined to liberate their sacred territory of Taiwan."

PODGORNY CRITICAL

The United States also came under attack from Soviet President Nikolai Podgorny, who said the Americans have concentrated troops near the Soviet and North Korean borders and are today "the source of tension" in the world.

Winding up a visit to North Korea, Podgorny assured Premier Kim Il-sung the Soviet Union is the "reliable ally and friend" and would stand with North Korea "at the post of defending the common gains of socialism."

CLEVELAND ORCHESTRA MUST BE SAVED

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. FEIGHAN. Mr. Speaker, in an editorial yesterday, the Cleveland Plain Dealer described the severe financial plight of the Cleveland Orchestra. It is most saddening to realize that a truly great orchestra, which provides untold enjoyment to every segment of society, because it is unable to meet its annual operating expenses, faces possible demise.

Our Government has only recently begun to acknowledge the importance of the arts in society. Last year \$5.9 million was channeled into theaters, ballet companies, and orchestras by the Federal Government. This year the Appropriations Committee has before it an administration request for \$16,744,000 for the arts and humanities, of which \$7.5 million would be allotted to the National Council on the Arts for assistance to needy sources, such as the Cleveland Orchestra. This is a mere pittance to support a nationwide program of the arts. More is needed—much more—to do justice to the several worthy programs that face possible extinction due to excess fiscal strain.

I will do my utmost to bring about congressional approval of sufficient funds for the arts and for the Cleveland Orchestra. All who have taken pleasure in hearing a concert or opera; all who have viewed a ballet or dramatic production should pay careful heed to the calls of their local cultural centers when their aid is sought in meeting these financial responsibilities.

For the interest of my colleagues, I have appended the editorial from the May 19, 1969, issue of the Cleveland Plain Dealer:

ORCHESTRA MUST BE SAVED

The Cleveland Orchestra is in grave financial trouble. It plays to packed houses but still must dip into endowment funds to meet expenses. Another year of operating losses could see its demise.

This cannot be permitted to happen. The Cleveland Orchestra is one of the world's great orchestras. Its loss would be a blow to the musical arts and would severely damage the prestige of the city.

The orchestra must be saved, by greater support from foundations and private and industrial givers, by support from governments.

The Cleveland Orchestra has joined other financially troubled orchestras in New York,

Boston, Philadelphia and Chicago to seek new sources of financial aid.

This is a good start. Working together, the orchestras will be better able to impress on the sources of wealth the economic crisis faced by the performing arts in America.

It is ironical that at a time when interest and participation in cultural activities are growing, the arts are in financial trouble. It is ironical but it is a fact that American creative and performing artists are acknowledged as the finest in the world and yet, while living in the world's most affluent society, many of them have to subsidize their own creative work with outside jobs.

The arts play a vital role in establishing and shaping the values of society. They must be kept viable.

The orchestra should point out to industry that cultural and economic development go hand in hand.

They should appeal to Congress for greater financial assistance. Government support of orchestras, ballet companies and theaters is well established in many nations. It has barely started in the United States.

They should approach state and local governments for aid. Some cities already contribute significantly to the maintenance of their cultural institutions. Cleveland does not.

They should continue trying to win new public support with summer concerts, as the Cleveland Orchestra is doing at the Blossom Music Center. The orchestra is counting heavily on Blossom income to help offset operating losses, but this will not be enough. Outside help will be imperative.

OIL AND GAS EXPLORATION IN LAKE ERIE

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. DULSKI. Mr. Speaker, the people in my area of western New York State are rightfully concerned about the pending proposals for leasing underwater lands in Lake Erie for the purpose of drilling for natural gas.

Everyone already is fully aware of the acute pollution problem in Lake Erie and of the extensive measures which are being taken to halt the deterioration of this great body of water.

Now come these plans for oil and gas exploration along the lake bottom.

The matter of our natural resources is one of concern to all of us and their exploitation must be carefully supervised.

In the case of my home area, including the city of Buffalo, N.Y., and its adjacent communities, we are rightfully concerned about any action that might further affect Lake Erie, which is our chief source of domestic water supply.

At its meeting in Buffalo on May 6, the legislature of Erie County, N.Y., adopted the following resolution:

A RESOLUTION BY LEGISLATURE OF ERIE COUNTY, N.Y.

Whereas, there are presently proposals for leasing under-water lands in Lake Erie for the purpose of drilling for natural gas, and

Whereas, Lake Erie is the source of domestic water supply for millions of people, and

Whereas, the present pollution of Lake Erie serves as a threat to its continued use as a source of domestic water supply, and

Whereas, it has been demonstrated in other

parts of the country that the drilling for gas and oil in under-water lands has frequently led to the pollution of bodies of water, and

Whereas, it has been demonstrated that all known safeguards cannot prevent equipment failure or human error in drilling operations, and

Whereas, the pollution of Lake Erie is a major concern of the citizens of Erie County as well as the citizens of the State of New York.

Now, therefore, be it resolved, that the Erie County Legislature does hereby express its vehement opposition to the leasing of under-water lands in Lake Erie for either natural gas or oil exploration, and be it further

Resolved, that a copy of this resolution be forwarded to the President of the United States, the leaders of both houses of Congress, the Governor of the State of New York, the leaders of both houses of the New York State Legislature, the New York State Conservation Department, the State Health Department, and all members of the New York State Legislature who represent the County of Erie.

ALBERT N. ABGOTT,
NORMAN J. WOLF,
LESTER S. MILLER,
JOSEPH A. TAURIELLO.

Attest:

BENJAMIN DE YOUNG, Jr.,
Clerk of the Legislature of Erie County.

THE IACP'S 76TH ANNIVERSARY

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. BIAGGI. Mr. Speaker, I want to take this opportunity to extend my congratulations to the International Association of Chiefs of Police. The IACP, as it is known in the trade, is a professional, nonprofit organization based here in Washington. Its membership is made up of more than 7,000 executives in the law enforcement profession, representing approximately 60 countries including the United States and Canada. The current president is Chief Thomas Cahill of San Francisco, and the longtime executive director is Mr. Quinn Tamm, one of the most esteemed men in the field.

The IACP is dedicated to improving the profession, both for the men who work in it and, most importantly, for the citizens of this Nation whom it serves. The organization is, and I quote from one of their recent publications, "dedicated to continuous study and research in improved methods for the protection of life, liberty and property through the lawful exercise of police power."

Organized back in 1893, the International Association of Chiefs of Police has seen our society change and, with it, the role of the policeman. We have always had crime, but we have not always had the complex technology and unsettled social conditions which characterize modern life. In recent years particularly, police work, like the society it serves, has been in a state of flux.

IACP efforts are concentrated in four major areas of law enforcement, two of which—training and education, and research and development—are directly aimed at keeping the law enforcement

profession abreast of the times. In the area of education and training, the organization has been active in developing and promoting the widespread adoption of higher standards both for the education required of recruits, and for pre-service training. The IACP has campaigned diligently and effectively against the all-too-common situation of the rookie cop's being handed a badge, a gun, and a billy-club and told to go out and enforce the law. The other two areas of special interest are managerial consultation and highway safety. Technical guidance is provided in these areas on an individual basis, when requested, and in the forms of surveys and studies conducted and disseminated by the organization.

The importance of the International Association of Chiefs of Police as both the voice of the Nation's police and as a source of expertise on the national crime situation received official recognition last year when it was asked to provide a spokesman to testify before both the Democratic and Republican platform committees. The IACP recommended endorsement of two basic law enforcement principles: First, the primacy of local law enforcement; and second, the necessity for swift, sure justice to wrongdoers. It urged enactment of legislation which would include severe penalties for assaulting police officers, inciting riots, participating in organized crime activities, trafficking in LSD, and violating traffic laws. In an editorial in the IACP's monthly publication, the Police Chief, the executive director, Mr. Quinn Tamm wrote:

In summary, the committees were informed, no one is more anxious than the police to return our communities to havens of law and order where every citizen is afforded the protection that is his due regardless of his race, color, social or economic status. They were advised that those in the police service feel that definite advancement has been made toward this goal, but that final attainment is not possible until every citizen and his elected representatives fulfill their responsibilities to respect the law and support law enforcement.

It is an honor for me, both as a former member of the New York City Police Department and as a Congressman, to salute the International Association of Chiefs of Police on their 76th anniversary, and to commend them for their leadership in the law enforcement field.

J. CLARK SAMUEL HONORED AT TESTIMONIAL

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mrs. HECKLER of Massachusetts. Mr. Speaker, for 21 years, the Foxboro, Mass., Reporter has enjoyed the leadership and prospered from the wisdom of J. Clark Samuel, who retires as editor this month. The wide respect and admiration of the community is demonstrated through designation of Mr. Samuel as "Editor Emeritus." I share the sadness of citizens of the Foxboro area in the loss of this outstanding community leader. Mr. Samuel will always be remembered in the community to which he so unselfishly has devoted himself throughout his newspaper career. Although we shall certainly miss him in Foxboro, I join the many well-wishers who hope that Mr. Samuel's retirement will be most enjoyable and gratifying.

Under unanimous consent I submit an article from the Foxboro Reporter entitled "J. Clark Samuel Honored at Stirring Testimonial" for inclusion in the CONGRESSIONAL RECORD, as follows:

[From the Foxboro (Mass.) Reporter, May 14, 1969]

"COUNTRY EDITOR" J. CLARK SAMUEL HONORED AT STIRRING TESTIMONIAL

(By Art Brennan)

"You will never see another Selectmen's meeting like this one" Selectman Edward Fox warned, and he had never seen one like it before either, as a startled "Reporter" editor, J. Clark Samuel, was tendered a testimonial at the Town Hall attended by representatives from many clubs and town departments.

As Clark expressed it, after a stream of speakers and letters had commended his twenty-one years of journalistic service to the town of Foxboro, "I am totally overwhelmed." Visibly struck by the surprise affair, Clark said that he and his wife Jeanne would be leaving Foxboro in a physical sense only.

Mr. Samuel retires at the end of the month and the well known and well liked couple will then pack up and head South to Red Point Beach, North East, Maryland, where they have a home on a picturesque knoll overlooking Chesapeake Bay.

In honor of his upcoming retirement, representatives of the many clubs and town agencies whose activities he has reported over the years turned out last night for the testimonial, many giving scrolls and gifts as tokens of their appreciation.

EDITOR EMERITUS

Rep. Robert Aronson (R) Foxboro-Sharon spoke in behalf of Governor Francis Sargent, whom he described as a man who gave out citations only when he thoroughly knew the kind of individual it was for and the purpose of it. Rep. Aronson said that after hearing his description of Clark, the Governor said "If a man like that is going to retire, we can't have that; we'll make him 'Editor Emeritus.'" and so the citation was composed.

Rep. Aronson also presented a citation of his own which was read by Selectman Fox, in which he said, "If ever a man personified the combination of integrity and humor, of wisdom and tact, of involvement and determination, it is you." In his remarks in behalf of the Governor he said he hadn't had the chance to become a truly close friend of Clark's but in talking with him, reading his articles, etc., he became a friend of Clark's in attitude, coming to know and respect how Clark thinks and writes.

CONGRESSWOMAN HECKLER

Congresswoman Margaret Heckler also sent a citation noting the retirement and stated, "For twenty one years you have given selflessly of your time and energy in the interest of community service."

Senator John M. Quinlan, unable to attend, sent a congratulatory letter expressing his warmest wishes noting, "We have all

benefited from your being editor of "The Foxboro Reporter", which he described as one of the best newspapers in the state.

Also unable to attend, but forwarding a warm message, was local School Superintendent William A. Glynn, who said he would miss Clark in both a personal and a professional way, as a friend over the recent years and as a "good friend to education in Foxboro". He noted that when Clark had criticized the schools in any way it had always been constructive criticism.

During his 21 years in Foxboro, Mr. Samuel has been a member of the Foxboro Lions Club and a past president. He did not hold nor did he seek public office since he felt that it would create a conflict of interest in his work as editor of The Reporter.

He has been active in professional organizations, and is a member of the New England Professional Chapter of Sigma Delta Chi, the national journalistic society, president four terms of the Massachusetts Press Association, and member and director of the New England Press Association, and member of the National Newspaper Association.

PRESENTATIONS

Others making presentations in behalf of local organizations included Mrs. Helen Fuller for the Boyden Library Trustees who gave to Clark a foot-tall replica of the Civil War Soldier which stands atop Memorial Hall as a memento of the town.

Also: Commanders Thomas McGowan of the Lawrence W. Foster Post, American Legion and Gordon Winget of the Foxboro VFW Post, 2626, who gave citations thanking Clark for his assistance and publicity coverage throughout the years enabling the local veterans organizations to carry out their community projects.

The Board of Selectmen read a formal proclamation in behalf of the town recognizing Clark's service to the community and wishing him good fortune in continued successes during his retirement in Maryland.

Norman Lawton, 4-H representative, expressed the thanks of the 4-H organization for Clark's help in nurturing their activities throughout the years and said that if the Samuels would be able to attend, he planned to present them with a special gift at a 4-H event coming up on May 23rd.

St. Alban's Lodge, AF & AM, represented by John Fuller, also presented a message from the Masonic Lodge commending Clark's achievements for the community over the twenty-one year span. Mr. Fuller, noting the 150th anniversary of the Lodge, also gave Clark a supply of the commemorative "wooden nickels," noting that their value was strictly as a memento of the town.

Robert Conkey delivered a message of congratulations of the College of William and Mary president, Dr. Davis Paschal, with whom he had talked earlier in the day. President Paschal congratulated Clark and reminded him it had been William and Mary "where he polished his English."

COMRADE IN ARMS

Long time colleague on the paper, Vin Igo, finished off the program giving some examples of his and Clark's experiences over the years and said that Clark always wished to be thought of as the typical country editor, even as the town grew. "When the day comes when people and their roles are rated," he said, "that of the country editor will rank high on the list."

Citing his warm personal friendship with Clark, Mr. Igo presented a sum of money and a portable electric typewriter in behalf of many friends in the town.

GUESTS

Representatives present included the School Committee, Housing Authority, Town Clerk, Town Collector, Planning Board, Po-

lice and Fire Departments, Highway Department, school staff, Advisory Board, Foxboro Federal Bank, Rodman Ford Sales, Republican and Democratic Town Committees, Foxboro Knights of Columbus, the Association of University Women, League of Women Voters, Jaycees and Jaycee Wives, Little League, Lions Club, Assessors, Quaker Hill Restaurant, Town Hall employees, local neighborhood, Plymouth Bay Council of Girl Scouts, St. Mary's Council, several of the local clergymen, Foxboro Grange, as well as many other friends.

A collation was served following the testimonial.

Clark first came to Foxboro from New York City where he was engaged in public relations work. Prior to that he had worked as a reporter and rewrite man on these newspapers: The Waterbury (Conn.) Republican; The Albany (N.Y.) Times Union, and Knickerbocker Press, also Albany; The Philadelphia (Pa.) Public Ledger, Atlantic City, N.J., bureau.

He began his newspaper career at the age of 18 as a club reporter on his hometown paper, The Wilmington (Del.) Morning News, and was also a reporter on the old Wilmington Evening Evening, and the present Wilmington Evening Journal.

He attended Friends School, public schools and Tower Hill School in Wilmington. He also attended The College of William & Mary in Virginia at Williamsburg.

KOREA AND VIETNAM: THE PRICE IN BLOOD OF BANKRUPT POLICY

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. RARICK. Mr. Speaker, the United States is now engaged in one of its longest and bloodiest wars since the formation of the Union. It is an undeclared war against an unidentified enemy. In its course the leaders of our Government have consistently prevented the professional officers of our Armed Forces from ending the conflict in the only way that war can be successfully terminated—a decisive victory.

In an address to the House of May 14, 1969, on "Korea and Vietnam: The Penalty of Perfidy," I discussed at some length the background of our Korean-Vietnam involvement and quoted two significant published statements: one by Adm. U. S. Grant Sharp, former Commander in Chief, Pacific, on "We Could Have Won in Vietnam Long Ago" in the May 1969 issue of the Reader's Digest; and a second by Dan Smoot on "More Pueblos" in the April 28 issue of the Dan Smoot Report. In addition, I invited attention to my remarks to the House of Representatives in the RECORD of June 14, 1967, on "Crisis in World Strategy: What Would MacArthur Do?"

Because of the little known facts presented in my May 14 address and the documents cited therein, I would again urge all concerned with the formulation of our Vietnam policy to study it, especially the quoted parts, and not to depend upon editorials in the Washington Post.

In looking up the history of the Washington Post, which is, unfortunately, the only major morning newspaper in the

Capital City of our Nation, I find some very interesting facts. It was acquired by its present ownership at the depth of the great depression at auction for only a fraction of the value of this important property. It thereupon became strongly pro-Soviet even to the extent of forcing the resignation of its able editor-in-chief, Ira E. Bennett, after he refused to write editorials urging U.S. diplomatic recognition of Soviet Russia. It has also had an internationalist editorial policy favoring escalation followed by U.S. intervention in European wars with results against the best interests of Western civilization. It has advocated the surrender by the United States of its treaty based sovereign control over the Canal Zone at a time when such action plainly implies the surrender of the Panama Canal to Red power. It supports the unilateral withdrawal of U.S. forces from the Vietnam war and advocates a hostile policy against friendly Southern African countries, especially the strategic Republic of South Africa and Rhodesia.

Mr. Speaker, is it the policy of certain elements in our Government for the United States to withdraw from a conflict that Communist power does not wish us to win in Southeast Asia in order to embark upon a vastly more sanguinary one in southern Africa that these same internal forces manifestly wish the United States to undertake against the highly civilized non-Communist Republic of South Africa and non-Communist Rhodesia? As I stated on May 14, the once great organization, the Carnegie Endowment for International Peace, has published a general staff type of war plan for war against South Africa.

With such controlling editorial policies as I have noted above, the castigation of Adm. U. S. Grant Sharp by an unsigned May Day editorial in the May 1, 1969, issue of the Washington Post for his forthright signed article on the conduct of the Vietnam war conforms to the well-established pattern of this paper's performance over many years. In this connection, let it not be forgotten that the Washington Post appeared to trail the New York Times in support of Castro's takeover of Cuba.

It was, therefore, with much interest that I read in the May 13, issue of the Washington Post a number of ably written letters to the editor commenting on the indicated editorial, two of them by professional officers of our Armed Forces with a background of vast experience as regards the current war: Gen. Wallace M. Greene, U.S.M.C., retired, former Commandant of the Marine Corps; and Maj. Gen. Thomas A. Lane, U.S. Army, retired, formerly on the staff of General MacArthur in the Pacific.

Because of the relevance of the indicated letters to current problems in Southeast Asia facing our Government, I include with my remarks four of the letters and invite special attention to those by Generals Greene and Lane:

[From the Washington Post, May 13, 1969]

LETTERS TO THE EDITOR—CONCERNING
"ADMIRAL SHARP'S KNIFE"

Having read your lead editorial of May 1 ("Admiral Sharp's Knife") which appears to

have been written by some intemperate, uninformed and emotional person, I would like to take a stand by the side of Admiral Sharp and attest to the factual accuracy and reasonable conclusions of his article in the May issue of the Reader's Digest ("We Could Have Won the War in Vietnam Long Ago").

As with the questions of the F-111, the C5-A and the electronic barrier at the DMZ, the American people deserve to be told the facts regarding the management of the military campaign in Vietnam. In that respect Admiral Sharp's "knife" has served a useful purpose.

On the other hand, your article, in my opinion, certainly was not of much help in presenting the truth of the situation to your readers. With the sources of information open to a great newspaper like the *The Washington Post* and with the former Secretary of the Navy now the president of your paper and certainly available to you for consultation, it seems to me that you might have done better.

Gen. WALLACE M. GREENE,
U.S. Marine Corps (Ret.).

Admiral Sharp is right in asserting that the United States should have won the Vietnam war long ago. Instead, gradualism has given us another Korea; only this time it might drag on another ten years. War is a risky business: people get killed, nations are destroyed, so when the United States enters a war it should pull no punches. Worrying about the Russians or Chinese is immaterial in Vietnam because they are not supplying troops, only equipment. If they choose to become involved that is one of the risks, and the Russians and Chinese know the possible consequences of such an action. In short, the United States should put up or pull out.

J. S. TAYLOR,
Virginia Polytechnic Institute.

I reply to your May Day editorial concerning the recent comments of Admiral U.S. Grant Sharp.

More than anything else that editorial showed that Admiral Sharp's knife hurts where it cuts.

In the period 1966-68 the Admiral no doubt expressed his views. Even though they were not those of the decision makers, he, like any high member of our armed forces, did not engage in public disagreement with his civilian superiors. If in this time period he had said what he thought, as you suggested, *The Washington Post* would have been among the first to demand his removal. Admiral Sharp has timed his public comments as he should, after retirement.

I wonder who "Virtually every authority" includes. The Admiral's thesis is a professional military judgment based on complete data. Because of his widely respected military ability and experience and his practically unlimited access to relevant intelligence, I accept his judgment relative to a military question rather than that of *The Post* or some relatively low level officials whose knowledge of North Vietnam is limited to what they saw in South Vietnam.

What he says, that we got where we are because of ineffective use of military power as ordered by civilian authorities, is a valid point of view held by many responsible people. It is fitting and proper that this view be expressed in print and that the military leadership be allowed to defend itself against charges that it is responsible for what has happened in Southeast Asia.

Essentially, *The Post* is saying that Admiral Sharp is wrong because you say he is wrong. I suppose you would have your readers believe that *The Post* staff, sitting in Washington reading press dispatches, knows more of what happened in Vietnam than does the commander of the headquarters

through which most all intelligence, orders, analyses etc., were handled.

BOB CLARK, JR.,
University of Virginia.

Your editorial of May 1, 1969 attacking Admiral U. S. Grant Sharp for his article in May Reader's Digest, "We Could Have Won The War In Vietnam Long Ago", is a mean and unprincipled assault on a distinguished public servant. Its distortion of the Admiral's essay seems designed to smother by smear constructive discussion of what you call "a war which has obviously gone wrong".

It is your editorial writer and not Admiral Sharp who suggests that "civilian policy-makers in Washington were stupid, cowardly or naive—or all three". Admiral Sharp's restrained narrative implied only that their judgments were wrong.

Admiral Sharp's statement that "Secretary McNamara arbitrarily and consistently disregarded the advice of his military advisers" is a statement of fact and not of opinion. It is attested by Defense civilians engaged in the process. The observation of your editorial writer that the responsibility for decision rested with President Johnson seems calculated to obscure the fact that the President acted upon the recommendation of Secretary McNamara.

Just what competence does your editorial writer have to challenge the "competence and intelligence" of Admiral Sharp? This personal attack betrays an incapacity to respond cogently to the Admiral's thesis. It is not Admiral Sharp who suggests that the war goes badly "because someone was stupid or cowardly or false"; these are Washington Post words. Admiral Sharp kept the discussion on the level of good or bad judgment, where it should be. Your editorial introduces emotional irrelevancy to the debate.

When Admiral Sharp reported that the closing of Haiphong Harbor was vetoed because "closing Haiphong would not affect the enemy's capability of waging war in South Vietnam", he gave the more credible excuse for the veto. Your suggestion that closing the port would have brought Chinese and/or Soviet counter attacks is the counsel of irrational fear. That is what some people said to President Kennedy when he imposed a quarantine on Cuba.

I disagree with Admiral Sharp's judgment that effective conventional bombing and blockade would have ended the war, though I believe both measures should have been taken. But I think the challenge to Admiral Sharp should be made in constructive analysis for the benefit of our citizens and not in the vituperation to which the Post editorial has resorted.

I hope we may hereafter see in the Post a more mature and dispassionate consideration of important public issues.

Maj. Gen. THOMAS A. LANE,
U.S. Army, Retired.

[From the Washington Post, May 1, 1969]
ADMIRAL SHARP'S KNIFE

The Vietnam war is not over, or ended, but the re-writing of history has begun. The latest chapter is from Admiral U. S. Grant Sharp, the former commander of U.S. forces in the Pacific, who has written an article in the *Reader's Digest* entitled "We Could Have Won The War In Vietnam Long Ago." The Admiral's thesis is that airpower could have won it by destroying the North Vietnamese economy; the principal villain is former Secretary of Defense Robert S. McNamara. "We could have won the war long ago—perhaps by the end of 1967," Sharp writes. "We could have achieved victory with relative ease, and without using nuclear weapons or invading North Vietnam." The Admiral explains that now that he is retired, "I feel obliged to speak out, to warn the American people against the folly of conducting a major war on a piecemeal basis."

Thanks, Admiral. It is nice to know that

now, in 1969. It is information which might have been somewhat more valuable in 1968 or 1967 or 1966 or earlier, but at that time Sharp was formulating and partly responsible for the policy he now turns his back on. As far back as 1965, he predicted that the tide was turning, that the allies were "no longer losing the war." Now he breaks silence in the *Reader's Digest*, in a piece filled with cheap shots like this one: "In his handling of the war . . . Secretary McNamara arbitrarily and consistently disregarded the advice of his military advisers. His insistence that we pursue the campaign on a gradualistic basis gave the enemy plenty of time . . ." As Sharp knows better than any of us, it is the President who made the decisions on the air war in North Vietnam. But a former President, even an unpopular one, is a bit tougher target than an unpopular Secretary of Defense.

The Admiral's basic argument, which would be disputed by virtually every civilian and military authority with actual experience inside South Vietnam (experience which Sharp, headquartered in Honolulu, did not have), centers around the efficacy of airpower to destroy North Vietnam and thereby win the war. He states that in 1965 "we could have quickly broken North Vietnam's resistance." He would have bombed railroad yards and power stations in Hanoi, and the docks in Haiphong. In a 2000-word article, there is scant mention of the risks of Chinese or Russian intervention in the event of unrestrained attack on the North. It is possible (though not plausible or realistic) to make a case that there would have been no intervention; but Sharp does not discuss that question, except to say, from his Hawaiian vantage point that the risk was "minimal," and his implication is that civilian policy-makers in Washington were stupid, cowardly, or naive—or all three. All along, he writes, "our military leaders" recommended that Haiphong harbor be closed. The recommendation was vetoed because "it was claimed that closing Haiphong would not affect the enemy's capability of waging war in South Vietnam . . ." Wrong, Admiral. It was vetoed because of the fear of a wider war, a war possibly involving Chinese troops in the South or Russian troops elsewhere (Berlin, for example).

The re-writings will come in abundance now, and not all of them will be from military men. The knives are out—military vs. civilian, officialdom vs. the press, younger officer vs. older, and so on and on. These are efforts to assess responsibility for a war which has obviously gone wrong. Admiral Sharp's contribution represents the worst kind of apologia, a misconception and distortion of events so serious as to call into question both his competence and his intelligence. This is an article which does damage not so much because it is wrong (which it is), but because of what it says to the men who have fought and died in South Vietnam. It says to them, and to the rest of us: Look, none of that need have happened. A few more bombs on a power plant in Hanoi or a dock in Haiphong, heavy bombing from the beginning in the North, and the back of the insurgency would have broken. 34,000 Americans need not have died in South Vietnam. *We could have won the war in the South by bombing the North, if they had let us.* It panders to an ancient American belief, that things go badly not because they are inherently difficult (or intractable) but because someone was stupid, or cowardly or false. It refuses to accept the reality that events are sometimes outside the control of the United States, even the armed forces of the United States.

But Sharp's is an article which will receive notice, get play in the newspapers, cause comment. "We could have won in Vietnam long ago." It has a fine, resonant sound; and is as empty and hollow as a Chinese gong.

ROYBAL PROPOSES NATIONAL WELFARE STANDARDS, WITH FEDERAL GOVERNMENT TO PAY 90 PERCENT OF COST

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. ROYBAL. Mr. Speaker, I have introduced a bill, H.R. 11044, to relieve State and local taxpayers of the major financial burden of supporting the country's fast-growing public assistance programs, while establishing uniform national standards for minimum welfare benefits to apply across the board in all 50 States.

Public assistance is a national problem, with constantly rising costs now exceeding the funding capability of many of our local jurisdictions to handle by any further increases in sales, income, or property taxes.

They have about reached their limit, and the Federal Government is long overdue in assuming its responsibilities in this area.

The recent U.S. Supreme Court decision, eliminating residency requirements for welfare recipients, adds urgency to the need for quick action to help solve the acute fiscal crisis facing already overburdened State and county governments in trying to meet the mounting cost of caring for those eligible for the Nation's public assistance programs.

In addition to setting up uniform minimum benefits and eligibility standards, and authorizing 90 percent Federal cost-reimbursement—covering programs for aid to the aged, blind, disabled, and families with dependent children, medical; as well as emergency assistance and local administrative expenses—with higher maximum welfare payment ceilings, H.R. 11044 would also repeal the controversial child-welfare "freeze" provisions of the program for aid to families with dependent children—AFDC.

Regarding the AFDC "freeze," now scheduled to go into effect this summer, I believe such a regressive Federal aid cutback would simply attempt to shift the financial burden to local taxpayers, and would result in imposing even greater hardships on America's dependent children—who are neither responsible for their situation, nor able to help themselves in any way.

SUMMARY OF H.R. 11044

Mr. Speaker, in order to provide a somewhat more specific and detailed explanation of my bill, H.R. 11044, I would like to include in the CONGRESSIONAL RECORD the following narrative summary of the bill's major provisions:

SUMMARY

H.R. 11044 would amend the public assistance provisions of the Social Security Act by (1) increasing the Federal matching contribution for payment to public assistance recipients to 90 percent, (2) establishing nationally uniform minimum standards for assistance, and (3) repealing the child-aid freeze in the AFDC program.

TITLE I—INCREASE IN FEDERAL MATCHING

Section 101 of Title I provides for an increase to 90 percent in the Federal matching

contribution to the States for Old-Age Assistance. The maximum payment which would be matched is \$125 a month. In addition to 90 percent matching for cash payments, the bill provides for 90 percent Federal matching for allowable premiums under part B of title XVIII (Medicare) and for other insurance premiums for medical or any other type of remedial care, and for expenditures under the program of medical assistance for the aged. The Federal Government would also pay 90 percent of the costs of administering the program.

The program of Aid to Families with Dependent Children would be amended under section 102 to provide for 90 percent Federal matching for payments to AFDC recipients up to a maximum payment level of \$70 a month (\$100 for foster care). A Federal share of 90 percent would also be provided for premiums under part B of title XVIII (Medicare), for insurance premiums for medical or any other type of remedial care, and for emergency assistance to needy families with children. The Federal Government would also assume 90 percent of the cost of administering the AFDC program.

Section 103 would amend the provisions relating to the program of Aid to the Blind in the same manner as it amends the program of Old-Age Assistance. The amendment provides for 90 percent Federal matching up to a maximum payment level of \$125 a month, the same amount allowable under OAA.

Under present law each State receives Federal reimbursement for public assistance payments under a complicated formula which involves a "Federal percentage" based on the State's per capita income. Section 104 of the bill would eliminate this provision to conform with the new provision for 90 percent Federal matching for all States.

Section 104 would also eliminate the present Federal payment limitations for Puerto Rico and the Virgin Islands, providing instead that they would receive the same matching as the States. The dollar limitations would be retained for Guam.

Under section 105 the program of Aid to the Permanently and Totally Disabled would be amended in the same way as the other adult categories of Old-Age Assistance and Aid to the Blind. Ninety percent Federal matching would be provided, with a maximum payment level for matching purposes of \$125 a month.

Present law provides that States may combine the administration of the three adult categories. Section 106, recognizing the need for administrative simplicity, would allow the States to continue this method of administration and would provide 90 percent Federal matching up to a maximum payment level of \$125 a month, as is provided for the separate programs.

Section 107 would increase the Federal contribution to the States for programs under Title XIX (Medicaid). Under the bill the States would receive 90 percent Federal matching for the cost of payments made under Medicaid, including the cost of administering the program.

The effective date of all of the changes made under Title I would be December 31, 1969, as provided in Section 108.

TITLE II—UNIFORM MINIMUM STANDARDS AND ELIGIBILITY REQUIREMENTS

Title II of H.R. 11044 amends the public assistance titles of the Social Security Act to require that the States provide in their State plans for minimum standards and acceptance requirements for all applicants of public assistance. Section 201, which includes this requirement, would affect all of the public assistance categories, including Old-Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, and Aid to Families with Dependent Children.

Section 202 requires the Secretary of

Health, Education and Welfare to establish the minimum amount of assistance which would have to be paid to recipients under the various public assistance categories. The Secretary would also determine eligibility requirements, such as the amounts of other income and resources which must be taken into account in determining the need for assistance.

The minimum standards of payment and the acceptance requirements are to apply uniformly throughout the United States, and are to take into account the full need of all recipients. However, variations may be allowed between the various programs and also to take into account variations in cost of living in different geographic areas.

The minimum standards and acceptance requirements are to be up-dated annually.

Under section 203 the Secretary of HEW would be required to determine the expenditures made by the States in order to comply with the new requirements in Title II, and to reimburse them for these amounts.

TITLE III—REPEAL OF AFDC FREEZE

Section 301 would repeal the section of present law which would limit Federal matching to the proportion of all children under age 18 who were receiving AFDC payments on the basis of a parent's absence from the home in each State as of January 1, 1968. The "freeze" is now due to go into effect on July 1, 1969.

TEXT OF H.R. 11044

Mr. Speaker, at this point in the CONGRESSIONAL RECORD, I would like to include the verbatim text of H.R. 11044:

H.R. 11044

A bill to amend the public assistance provisions of the Social Security Act to increase the Federal share of a State's expenditures under the public assistance programs (including administrative expenses) to 90 percent, to provide for the establishment of nationally uniform minimum standards for aid or assistance thereunder, and to repeal the freeze on the number of children with respect to whom Federal payments may be made under the aid to families with dependent children program

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—INCREASE IN FEDERAL SHARE OF PUBLIC ASSISTANCE EXPENDITURES

Sec. 101. (a) Section 3(a) of the Social Security Act is amended to read as follows:

"(a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has a plan approved under this title, for each quarter, an amount equal to 90 percent of—

"(1) the total amount expended during each month of such quarter as old-age assistance under the State plan (including expenditures for premiums under part B of title XVIII for individuals who are recipients of money payments under such plan and other insurance premiums for medical or any other type of remedial care or the cost thereof), not counting so much of any expenditure with respect to such month as exceeds the product of \$125 multiplied by the total number of recipients of old-age assistance for such month (which total number, for purposes of this subsection, means (A) the number of individuals who received old-age assistance in the form of money payments for such month, plus (B) the number of other individuals with respect to whom expenditures were made in such month as old-age assistance in the form of medical or any other type of remedial care);

"(2) the total amount expended during such quarter as medical assistance for the aged under the State plan (including expenditures for insurance premiums for med-

ical or any other type of remedial care or the cost thereof); and

"(3) the total amount expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan."

(b) (1) Section 2(a) (12) (C) of such Act is amended by striking out "section 3(a) (4) (A) (1) and (11)" and inserting in lieu thereof "section 3(a) (3)".

(2) Section 3(c) of such Act is repealed.

(3) Section 6(c) of such Act is repealed.

(4) Section 1902(a) (20) (C) of such Act is amended by striking out "section 3(a) (4) (A) (1) and (11)" and inserting in lieu thereof "section 3(a) (3)".

Sec. 102. (a) Section 403(a) of the Social Security Act is amended to read as follows:

"(a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for aid and services to needy families with children, for each quarter, an amount equal to 90 percent of—

"(1) the total amount expended during such quarter as aid to families with dependent children under the State plan (including expenditures for premiums under part B of title XVIII for individuals who are recipients of money payments under such plan and other insurance premiums for medical or other type of remedial care or the cost thereof, and including emergency assistance to needy families with children), not counting so much of any expenditure with respect to any month as exceeds (A) the product of \$40 multiplied by the total number of recipients of aid to families with dependent children for such month (which total number, for purposes of this subsection, means (i) the number of individuals with respect to whom such aid in the form of money payments is paid for such month, (ii) the number of other individuals with respect to whom expenditures were made in such month as aid to families with dependent children in the form of medical or any other type of remedial care, and (iii) the number of individuals, not counted under clause (i) or (ii), with respect to whom payments described in section 406(b) (2) are made in such month and included as expenditures for purposes of this paragraph), plus (B) the product of \$30 multiplied by the total number of recipients of aid to families with dependent children (other than such aid in the form of foster care) for such month, plus (C) the product of \$100 multiplied by the total number of recipients of aid to families with dependent children in the form of foster care for such month; and

(2) the total amount expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan."

(b) (1) Section 408(c) of such Act is amended by striking out "clause (A) of".

(2) Section 408(d) of such Act is amended by striking out "section 403(a) (3)" and inserting in lieu thereof "section 403(a) (2)".

(3) Section 409(b) of such Act is amended by striking out "section 403(a) (3) and (4)" and inserting in lieu thereof "section 403(a) (2)".

Sec. 103. (a) Section 1003(a) of the Social Security Act is amended to read as follows:

"(a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for aid to the blind, for each quarter, an amount equal to 90 percent of—

"(1) the total amount expended during such quarter as aid to the blind under the State plan (including expenditures for premiums under part B of title XVIII for individuals who are recipients of money payments under such plan and other insurance premiums for medical or any other type of remedial care or the cost thereof), not counting so much of any expenditure with respect

to any month as exceeds the product of \$125 multiplied by the total number of recipients of aid to the blind for such month (which total number, for purposes of this subsection, means (A) the number of individuals who received aid to the blind in the form of money payments for such month, plus (B) the number of other individuals with respect to whom expenditures were made in such month as aid to the blind in the form of medical or any other type of remedial care); and

"(2) the total amount expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the plan."

(b) Section 1003(c) of such Act is repealed.

SEC. 104. (a) Section 1101(a) of the Social Security Act is amended by striking out paragraph (8).

(b) Section 1108 of such Act is amended by striking out everything down through "(d) Notwithstanding the provisions of sections 502(a) and 512(a)" and inserting in lieu thereof the following:

"LIMITATION ON CERTAIN PAYMENTS TO GUAM
"SEC. 1108. Notwithstanding the provisions of sections 502(a) and 512(a) "

(c) Section 1118 of such Act is repealed.

(d) Section 1121(c) of such Act is amended by striking out ", except that" and all that follows and inserting in lieu thereof a period.

SEC. 105. (a) Section 1403(a) of the Social Security Act is amended to read as follows:

"(a) From the sums appropriated therefor the Secretary of the Treasury shall pay to each State which has an approved plan for aid to the permanently and totally disabled, for each quarter, an amount equal to 90 percent of—

"(1) the total amount expended during such quarter as aid to the permanently and totally disabled under the State plan (including expenditures for premiums under part B of title XVIII for individuals who are recipients of money payments under such plan and other insurance premiums for medical or any other type of remedial care or the cost thereof), not counting so much of any expenditure with respect to any month as exceeds the product of \$125 multiplied by the total number of recipients of aid to the permanently and totally disabled for such month (which total number, for purposes of this subsection, means (A) the number of individuals who received aid to the permanently and totally disabled in the form of money payments for such month, plus (B) the number of other individuals with respect to whom expenditures were made in such month as aid to the permanently and totally disabled in the form of medical or any other type of remedial care); and

"(2) the total amount expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the plan."

(b) Section 1403(c) of such Act is repealed.

SEC. 106. (a) Section 1603(a) of the Social Security Act is amended to read as follows:

"(a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has a plan approved under this title, for each quarter, an amount equal to 90 percent of—

"(1) The total amount expended during each month of such quarter as aid to the aged, blind, or disabled under the State plan (including expenditures for premiums under part B of title XVIII for individuals who are recipients of money payments under such plan and other insurance premiums for medical or any other type of remedial care or the cost thereof), not counting so much of any expenditure with respect to such month as exceeds the product of \$125 multiplied by the total number of recipients of such aid for

such month (which total number, for purposes of this subsection, means (A) the number of individuals who received such aid in the form of money payments for such month, plus (B) the number of other individuals with respect to whom expenditures were made in such month as aid to the aged, blind, or disabled in the form of medical or any other type of remedial care);

"(2) the total amount expended during such quarter as medical assistance for the aged under the State plan (including expenditures for insurance premiums for medical or any other type of remedial care or the cost thereof); and

"(3) the total amount expended during such quarter as found necessary by the Secretary of Health, Education, and Welfare for the proper and efficient administration of the State plan.

(b) (1) Section 1602(a)(16)(C) of such Act is amended by striking out "section 1603 (a) (4) (A) (1) and (11)" and inserting in lieu thereof "section 1603(a) (3)".

(2) Section 1603(c) of such Act is repealed.

(3) Section 1902(a)(20)(C) of such Act is amended by striking out "section 1603 (a) (4) (A) (1) and (11)" and inserting in lieu thereof "section 1603(a) (3)".

SEC. 107. (a) Section 1903(a) of the Social Security Act is amended to read as follows:

"(a) From the sums appropriated therefor, the Secretary (except as otherwise provided in this section) shall pay to each State which has a plan approved under this title, for each quarter, an amount equal to 90 percent of—

"(1) the total amount expended during such quarter as medical assistance under the State plan (including expenditures for premiums under part B of title XVIII for individuals who are recipients of money payments under a State plan approved under title I, X, XIV, or XVI, or part A of title IV, and, except in the case of individuals 65 years of age or older who are not enrolled under part B of title XVIII, other insurance premiums for medical or any other type of remedial care or the cost thereof); plus

"(2) the total amount expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan."

(b) (1) Section 1903(c)(1) of such Act is amended—

(A) by striking out "that the Federal medical assistance percentage for such State applicable to" and inserting in lieu thereof "that 90 percent of the total amount expended as medical assistance under the State plan, with respect to"; and

(B) by striking out "shall be the Federal medical assistance percentage (instead of the percentage determined under section 1905 (b)) for such State" and inserting in lieu thereof "shall be substituted for 90 percent of the total amount expended as medical assistance under the State plan in applying subsection (a)(1) with respect to such State".

(2) Section 1905(b) of such Act is repealed.

SEC. 108. The amendments made by this title shall be effective with respect to expenditures made during calendar quarters beginning after December 31, 1969.

TITLE II—UNIFORM MINIMUM STANDARDS AND ELIGIBILITY REQUIREMENTS FOR PUBLIC ASSISTANCE

SEC. 201. (a) Section 2(a) of the Social Security Act is amended—

(1) by striking out "and" at the end of paragraph (12);

(2) by striking out the period at the end of paragraph (13) and inserting in lieu thereof "; and"; and

(3) by adding after paragraph (13) the following new paragraph:

"(14) provide, with respect to all individuals seeking or receiving assistance under the plan at any given time, for the application of the minimum standards and accept-

ance requirements promulgated and in effect at such time under section 1122."

(b) Section 402(a) of such Act is amended—

(1) by striking out "and" at the end of clause (22), and

(2) by striking out the period at the end of clause (23) and inserting in lieu thereof "; and (24) provide, with respect to all individuals seeking or receiving aid under the plan at any given time, for the application of the minimum standards and acceptance requirements promulgated and in effect at such time under section 1122."

(c) Section 1002(a) of such Act is amended—

(1) by striking out "and" at the end of clause (12), and

(2) by striking out the period at the end of clause (13) and inserting in lieu thereof "; and (14) provide, with respect to all individuals seeking or receiving aid under the plan at any given time, for the application of the minimum standards and acceptance requirements promulgated and in effect at such time under section 1122."

(d) Section 1402(a) of such Act is amended—

(1) by striking out "and" at the end of clause (11), and

(2) by striking out the period at the end of clause (12) and inserting in lieu thereof "; and (13) provide, with respect to all individuals seeking or receiving aid under the plan at a given time, for the application of a minimum standards and acceptance requirements promulgated and in effect at such time under section 1122."

(e) Section 1602(a) of such Act is amended—

(1) by striking out "and" at the end of paragraph (16),

(2) by striking out the period at the end of paragraph (17) and inserting in lieu thereof "; and"; and

(3) by inserting after paragraph (17) the following new paragraph:

"(18) provide, with respect to all individuals seeking or receiving aid under the plan at any given time, for the application of the minimum standards and acceptance requirements promulgated and in effect at such time under section 1122."

(f) The amendments made by this section shall be effective with respect to calendar quarters beginning after December 31, 1969.

SEC. 202. Title XI of the Social Security Act is amended by adding at the end thereof the following new section:

"NATIONAL MINIMUM STANDARDS AND UNIFORM ACCEPTANCE REQUIREMENTS

"SEC. 1122. (a) The Secretary shall from time to time (as provided in subsection (c)) determine and promulgate—

"(1) the minimum amount of aid or assistance which (with appropriate adjustments based on other income and resources as required by the relevant provisions of this Act) would have to be paid to eligible recipients under titles I, X, XIV, and XVI, and part A of title IV, and

"(2) the manner in which other income and resources should be taken into account in determining need for aid or assistance under such titles and the other conditions which it might be appropriate to impose in determining eligibility for such aid or assistance,

in order to assure that the purposes of such titles are being carried out effectively and without discrimination between applicants and recipients in different States. The minimum standards determined and promulgated under paragraph (1), and the acceptance requirements determined and promulgated under paragraph (2), shall (subject to subsection (b)) apply uniformly and equally throughout the United States with respect to aid and assistance provided under State plans approved under such titles.

"(b) The minimum standards and acceptance requirements determined and promul-

gated under subsection (a), which shall take into account the full need of all recipients, may vary as between the several programs of aid or assistance involved to the extent necessary to take into account the different requirements of the classes of individuals to whom such programs respectively apply, and may vary as between individuals in different geographic areas to the extent necessary to take into account any differences between cost levels in such areas; but any such variations shall be designed only to prevent aid or assistance under the programs involved from being of greater net benefit to one individual or class of individuals than to another.

"(c) The minimum standards and acceptance requirements described in subsection (a) shall be promulgated by the Secretary between January 1 and March 31 of each year, beginning with the year 1970, and such promulgation shall be conclusive for each of the four calendar quarters in the period beginning with the July 1 next succeeding such promulgation; except that the Secretary shall initially promulgate such standards and requirements as soon as possible after the enactment of this section and such initial promulgation shall be conclusive for the two calendar quarters in the period beginning January 1, 1970, and ending June 30, 1970."

SEC. 203. The Secretary of Health, Education, and Welfare shall, in the case of each State, from time to time determine the expenditures made during periods after December 31, 1969, under the plans of such State approved under titles I, X, XIV, and XVI, and part A of title IV, of the Social Security Act, which are necessitated by compliance with the new requirements under such titles imposed by the amendments made by this title, and shall pay to such State the amount of the expenditures so determined.

TITLE III—REPEAL OF AFDC FREEZE

SEC. 301. Section 403(d) of the Social Security Act is repealed.

POSTAL RATE INCREASE

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. DULSKI. Mr. Speaker, the administration has proposed an increase in postal rates even though the third step of the rate increase approved in December 1967 has not yet gone into effect.

My own conviction, as I have stated before, is that we should not consider further increases in postal rates until we take some effective steps to bring about a reorganization of the postal system.

Our Post Office and Civil Service Committee now is conducting extensive hearings on postal reform and I believe that we will come up with comprehensive recommendations in the next few weeks. Although I do not accept all of the conclusions he has reached, I believe that the recent column by David Lawrence in the Washington, D.C., Star touches on many of the factors involved as we look at the postal rate schedule. Following is Mr. Lawrence's column:

POSTAL RATE RISE, MORE INFLATION (By David Lawrence)

The government does more to create inflation than is perhaps realized. Thus, the administration has just proposed to Congress an increase in postal rates. While many letters and other articles put in the mails are exchanged between individuals, a large proportion of the postal revenue is collected

from private businesses. As postal rates go up, the charges to the consumer have to be raised accordingly.

Perhaps the most unfortunate phase of the government's hike in postal rates is related to the discrimination that is practiced. A person may drop a letter in the mail box near his home addressed to a store or friend in the same city, but the postage stamp costs just as much as if the letter were going 3,000 miles away. There was a time when the Post Office Department made a lower charge for letters to addresses within a city, but this practice has been discontinued.

Even higher costs for letters or articles mailed to the Midwest or points across the continent by residents of the east would cause little resentment if prompt delivery were assured. But it takes a long time for some letters to reach destinations, and the increases in postage which have been made in recent years have not helped matters at all.

In fact, private companies now are carrying lots and lots of packages long distances so as to insure prompt delivery. But even when publications, for instance, are sent across the continent by private airplane or trucking service, they must then be delivered to a Post Office and the regular postage rates have to be paid just the same.

Such inequitable factors have been given little consideration by Congress. It costs, for instance, less in postage to send a newspaper or other publication by what is known as second-class mail. But the rates have been steadily moved up, and it now is proposed that they shall be raised another 20 percent in the next year. These increases will undoubtedly be passed on to the consumer, so the general public will have to pay more.

The printed word is, of course, fundamental in the educational process of the nation, and there are still vast numbers of citizens who get their basic information from the print media. But the public pays a relatively small amount, because advertising revenues are expected to meet the expense and provide a profit. This doesn't always happen, and many a publication of large circulation has gone out of business because it could not get enough advertising to sustain itself.

One of the principal reasons why the publications are having difficulties today is that their competitors—television and radio—are absorbing a large part of the advertising revenue in the country. Although radio and television companies collect hundreds of millions of dollars each year from advertising "commercials," they pay to the government only a small license fee for using the airwaves. The charge is \$75 to a radio station for three years and \$150 to a TV station for three years.

Today, too, as a large number of trains have been discontinued, transportation by rail of package mail has been substantially diminished, and anybody who prints a publication that has to be distributed across the land has to add to other cost the heavy expenses of using trucks and commercial airplane service in order to reach all parts of the country promptly. Many publishing companies also have to bear the cost of sorting the mail in advance and putting it in pouches to help get better delivery from the Post Office Department.

A publication pays a relatively uniform rate of postage for news and editorial sections but the postage cost for the advertising pages varies according to the distance from the mailing point. This runs up to four times more for delivery in one area than in another, and constitutes, in effect, a tax on advertising.

Many companies that deliver publications all over the United States would not object to the rates they are being charged if they could be assured of prompt delivery. But they wonder why their competitors in television and radio are immune from any government levies at all on the advertising they

distribute over the air through channels allocated to them by the Federal Communications Commission.

Meanwhile, as postal rates go up, prices of publications go up, and that's the story of inflation in America in many a business and industry.

ONLY OURSELVES TO BLAME, BUT REASON MUST PREVAIL

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 20, 1969

Mr. WOLFF. Mr. Speaker, millions of words have been written by editorial writers looking at the problem of violence on our campuses from every direction. Of all that I have read while studying this problem a recent editorial in the outstanding weekly newspaper, the Westbury Times, struck me as a solid assessment of the situation. The editor of this consistently high quality newspaper, Martin E. Weiss, correctly deplores the sometimes apathetic response to the mayhem on our campuses. At the same time Mr. Weiss makes the equally valid point that change brought about by violence and in disregard of the democratic process is unacceptable.

Because I regard Mr. Weiss' comments as quite probing I commend this editorial to my colleagues' attention and insert it in the RECORD at this point:

[From the Westbury Times, May 8, 1969]

ONLY OURSELVES TO BLAME, BUT REASON MUST PREVAIL

Perhaps the most amazing thing about the protests, sit ins, lock-outs, strikes, building seizures and riots that have swept college campuses around the nation is the relative calm with which the public has greeted each new outburst.

It may well be that people have become injured to it all, but we suspect that the general attitude is simply one of laissez-faire.

In actuality, it is just such thinking that is the root cause of much of the problem.

Success and well-being have led far too many people to adopt the policy of letting someone else worry about the situation—but legislators, administrators, faculty, and law enforcement officials are no substitute for what is, too often, parental failure.

And, if we remain more interested in new cars, television sets, vacations, and all the other elements of pleasure, than in the message our young people are trying to get across, then we will have only ourselves to blame for that which will almost surely follow.

The other side of the coin is that no one person, nor any group of persons, is above the law. Moreover, college campuses are not sanctuaries meant to be inviolate from the dictates or mores of society.

If there is to be change, it must come through the democratic process—not at the end of a gun; if that which is wrong is to be righted, reason must prevail. Substituting one madness for another is insanity.

The inequities which exist, and our involvement in Vietnam, will not be ended by destroying the foundations of higher education. Rather, young people of serious intent will use their learning experience to provide themselves with the wisdom to make meaningful change.

They must, however, understand that if such change is to be lasting it must be obtained through the democratic process; that which is obtained through anarchy can be taken away in the same manner.

HOUSE OF REPRESENTATIVES—Wednesday, May 21, 1969

The House met at 12 o'clock noon.

Rev. Father Ward W. White, Vincentian Fathers House of Studies, Washington, D.C., offered the following prayer:

O God, You who have taught us to call You our Father, we need a father's care. We are tired, Lord, grant us energy. We are fearful, grant us courage. We are nearsighted, grant us vision. We are in turmoil, grant us peace. When we grow callous, teach us compassion. When we are tempted, teach us integrity. When we grow haughty, teach us true perspective.

Grant the Cuban people, Lord, a full share in Your courage, Your vision, Your peace, and that freedom without which human life is not fully human. This we ask in the name of the Lord Jesus. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 2948. An act for the relief of Maria Prescilla Caramanzana;

H.R. 3464. An act for the relief of Maria Balluado Frasca; and

H.R. 8188. An act to provide for the striking of medals in commemoration of the 100th anniversary of the founding of the city of Wichita, Kans.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 564. An act for the relief of Mrs. Irene G. Queja;

S. 620. An act for the relief of Richard Vigil; and

S. 1888. An act to change the composition of the Commission for Extension of the U.S. Capitol.

THE CRISIS FOR THE AMERICAN FOOTWEAR INDUSTRY

Mr. WYMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WYMAN. Mr. Speaker, the present threat to the American footwear industry from foreign imports of shoes and leather now out-of-hand, is beyond the peril point. Unless action is taken now, this year, this quarter, to check the import flood there will be additional thousands of American shoe workers out of a job and additional closings of American shoe factories. An indication of the growing, dismaying number of closings of shoe plants appears in the Extensions of Remarks in this RECORD.

The 1968 figures on foreign footwear imports are truly shocking. In 1968 foreign imports rose from 87 million pairs

in 1967 to 175 million pairs—more than 100 percent. This is a substantial portion of the entire American consumption. U.S. footwear production is off nearly 10 percent for the first quarter of 1969 alone.

We who represent constituencies with a substantial shoe and leather employment are asking Members to sign a letter appealing to President Nixon to initiate immediate negotiation with principal foreign supplying nations directed toward the establishment of voluntary import limitations. Shortly our capable chairman, the distinguished Member from Massachusetts (Mr. BURKE) or myself, will present this letter to you for signature. It is a worthy cause, a meritorious appeal, and its objective is a valid and continuing concern to all Members whether or not they have constituents who are employed in the footwear industry.

I hope all Members will join in signing this urgent request of President Nixon for action now to help protect this important domestic industry.

SGT. DALE K. LARSON

(Mr. HANSEN of Idaho asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HANSEN of Idaho. Mr. Speaker, on March 25, 1969, and again on April 3, 1969, the gentleman from Illinois (Mr. FINDLEY) inserted in the CONGRESSIONAL RECORD a list of the names of Americans who have lost their lives in the war in Vietnam.

The name of a fine young man from Idaho was apparently inadvertently omitted from that list. Sgt. Dale K. Larson, the son of Mr. and Mrs. Verl K. Larson of Burley, Idaho, was killed in Vietnam on November 12, 1968, while serving aboard a helicopter during a combat mission. Prior to his death, Sergeant Larson had served with valor and distinction in Vietnam, having volunteered for over 50 combat missions during the 4 months he was in Vietnam. Among the honors he received were the Air Medal with seven Oak Leaf Clusters and the Bronze Star.

I know my colleagues will want to join me in acknowledging the debt of gratitude owed by this Nation to Sergeant Larson for having paid the supreme sacrifice while in the service of his country and in extending to his parents, Mr. and Mrs. Verl K. Larson, and other members of the family, our sincere sympathy at their loss.

PELLEY REISSUES CALL FOR COAST GUARD PROTECTION OF U.S. FISHERMEN OFF PERU

(Mr. PELLEY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PELLEY. Mr. Speaker, the deterioration of relations between the United

States and Peru, coming on the heels of the seizure of another American fishing vessel last Friday, increases my concern over the upcoming fishing season off the Peruvian coast during which time a good number of U.S. fishermen will be working for tuna.

It is because of this concern that today I have requested that the President take the action necessary in providing Coast Guard protection off the Latin American coast for American fishermen.

This is not an idle concern, Mr. Speaker, because it is my thinking that as much as Americans on the high seas should be protected from illegal harassment and seizure, the rights of the coastal nation's 12-mile limit also should be protected. My request for the presence of our Coast Guard beyond the 12-mile limit is also to assure that our fishermen do not violate any international law, conservation agreement, or treaty.

Meanwhile, I again call to the attention of my colleagues my legislation which would cut off the importation to this country of fish and fish products from any country seizing U.S. fishing boats beyond the 12-mile limit and urge support of this measure as a means of getting these differences on fishing issues between the United States and Peru to a conference table where such matters as our historic rights on the seas can be properly discussed.

PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE PRIVILEGED REPORT

Mr. STEED. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations have until midnight Thursday, May 22, to file a privileged report on the Treasury-Post Office Departments appropriation bill for the fiscal year 1970.

Mr. JONAS reserved all points of order on the bill.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

CALL OF THE HOUSE

Mr. HALL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 57]

Anderson, III.	Chappell	Ford,
Anderson,	Chisholm	William D.
Tenn.	Clark	Frey
Baring	Clay	Gallagher
Barrett	Collier	Gialmo
Bates	Conyers	Green, Pa.

Symington
Waggonner
Whalen
Wiggins

The SPEAKER. On this rollcall 367 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

END THE SURTAX

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, yesterday before the Ways and Means Committee, Secretary of the Treasury David M. Kennedy and the Honorable Paul W. McCracken, Chairman of the President's Council of Economic Advisers, testified that President Nixon's proposal to extend the surtax would result in a budgetary surplus of \$6.3 billion. They also testified that a December 31, 1969, termination of the 10-percent surtax would result in a \$4.1 billion surplus while a September 30, 1969, termination of the 10-percent surtax would provide the administration with a balanced budget.

I oppose any extension of the surtax. It is quite evident that moderate revenue-producing tax reforms and the repeal of the investment credit can provide the administration with sufficient revenues to permit a balance in the 1970 budget. Termination of the surtax will stimulate aggressive action for revenue-producing reform.

Signs of a growing taxpayer revolt are evidenced throughout the Nation in the defeat of vital school and local issues. Under these circumstances, we must make every effort to lighten the taxpayers' burdens.

The termination of the surtax will provide needed and immediate relief.

CRITICAL OF FEDERAL TRADE COMMISSION

(Mr. FUQUA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FUQUA. Mr. Speaker, the Federal Trade Commission has undertaken drastic regulation of cigarette labeling and advertising without regard for the fact that this matter is under very serious consideration by the House Commerce Committee.

I personally oppose their action.

It seems to me that this is a slap at the Congress and is not in keeping with the proper function of our two governmental bodies.

This is the same course that the Federal Communications Commission took earlier this year.

It seems to me that when a matter is under active and very serious consideration by the Congress, then an agency

such as the Federal Trade Commission shows very poor judgment and lack of good taste in issuing orders which would promulgate actions which may or may not be enacted in such legislation.

But at the very least, the Federal Trade Commission should not have moved until the present Congress had had an opportunity to enact or reject legislation which is currently pending on this very subject.

It may be that the House Commerce Committee might recommend more stringent regulation or it may be that they will propose something entirely counter to the directive of the Federal Trade Commission.

The point is that Congress should have the time to act and that any Federal agency shows a lack of judgment and good taste when it usurps the lawmaking function of the Congress.

Regardless of the merits of the case, the Federal Trade Commission did not act properly in this instance. I think it is more reason than ever for the House Commerce Committee to get on with its deliberations and give the Members of the Congress an opportunity to express themselves on this subject.

PERSONAL ANNOUNCEMENT

Mr. BURLISON of Missouri. Mr. Speaker, yesterday's CONGRESSIONAL RECORD reflected that I was not present for the quorum call. This was an accurate reflection. I would like for the RECORD to state at this point the reason for my absence. I was in my home district in Missouri attending the funeral of an immediate member of the family.

SUPPLEMENTAL APPROPRIATIONS BILL

(Mr. MILLER of Ohio asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, I intend to cast my vote against the second supplemental appropriations bill for one reason—this will be the first and only opportunity Members of Congress have had to go on record against the recent exorbitant pay increases granted to Congressmen, the President, the Supreme Court, Federal judges, and other high Federal officials. I have consistently voiced opposition to these untimely and inflationary pay increases that were effected by a parliamentary subterfuge.

Let me state firmly that I realize the necessity of fully supporting our fighting men in Vietnam and I do endorse additional funds to provide the material and equipment needed for their operations. I also would support needed expenditures for other worthy Government programs that are funded in this bill.

I want to go on record as favoring the Government spending limitation to be imposed by this bill. I personally believe the ceiling should be set at a much lower level, but the concept of definite spending controls is highly desirable and long overdue. Congress should insure that the Government lives within its means. An

expenditure ceiling is a step in this direction.

The pay raise issue outweighs the merits of the necessary and beneficial programs for which additional funds are required. A more responsible procedure would be a separate vote on the appropriations for the pay raises and I will support all efforts to remove the pay raise provisions from the bill for a separate vote. Should such efforts fail, I will have no choice but to vote against the entire package.

PROVIDING FOR THE WAIVER OF POINTS OF ORDER AGAINST TITLE IV OF H.R. 11400

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 414 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. Res. 414

Resolved, That during the consideration of the bill (H.R. 11400) making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes, all points of order against title IV of said bill are hereby waived.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the minority, to the very able and distinguished gentleman from California (Mr. SMITH). Pending that I yield myself such time as I may consume.

Mr. Speaker, I shall not use all the time on this resolution. This is a rather unusual situation that we find ourselves in, parliamentarily speaking. We have debated the supplemental appropriation bill at some length under the privileged status of the Appropriations Committee. Now we come in with a resolution from the Rules Committee for one purpose and one purpose alone; that is, to waive points of order against a particular section of the bill.

Mr. Speaker, really, the legislative issue that is made in order here is a rather important one in my opinion and one which under different circumstances I should like to address myself to at some length but which I shall not do now.

The language that the rule waives the point of order against is found in title IV of the bill. Title IV of the bill places a ceiling upon the amount of the expenditures that the Chief Executive can make within the fiscal year. Now, that amount is, roughly, \$192 billion.

Frankly, Mr. Speaker, I am just a little surprised that the Chief Executive or the departments downtown have not raised some points of order themselves against this bill. But, I am very happy that they have not done so. I say that because here the burden of holding down expenditures is placed upon the President. In other words, he is placed in a straitjacket as it were. I do not think on the other hand, Mr. Speaker, that there is a great deal of difference in the manner in which this bill is supposed to be handled than the one last year under a previous administration. In the final analysis I think there is a great similarity in that the Chief Executive at that

time was somewhat placed in a strait-jacket also. However, Mr. Speaker, what I want to emphasize in these few remarks as I have done so many, many times on the floor of this House is the importance, yes, the necessity of cutting down on expenditures by the Federal Government.

Mr. Speaker, we hear a great deal about a tax revolt, and it is not being confined to the Federal Government by any means. I noticed that down in my great State some elections have been held recently for municipal offices which resulted in a considerable upheaval and people were thrown out of office who had held those offices for a long period of time. In my judgment that was a part of this reaction to high taxes that exist all over the country.

We, of course, here in the Congress set the pattern a long time ago and the States, the counties, the municipalities and the boroughs are falling in line. You cannot blame the people when we realize the very high taxes that we are extracting from them at every level of Government. In my opinion this upheaval, this general unrest among the taxpayers is going to not only continue, but it is going to accelerate. So what we are talking about here is the effort to place a ceiling upon the amount of money that can be expended and thereby apply the brakes to this ruinous inflation which threatens our entire economy.

Mr. Speaker, we might as well realize that it will cause some hardships, that it will cause some pet projects to go down the drain, and that it will necessitate some real sacrifices. But if we do not live up to this expenditure limitation—and in the final analysis the Congress is going to have to live up to it as well as the Executive—the control on unbridled spending can be wiped out, whatever good intentions there might be. It can be wiped out overnight through the simple method of supplemental appropriation bills such as the one we have here at this moment—so the Congress has its responsibilities as well as the Chief Executive.

Mr. Speaker, if anyone here on the floor is interested—and frankly, I am not sure that many are—I just want to emphasize a point which is of vital interest to the taxpayers. I was sitting here with a very able member on the staff of the Committee on Appropriations, a moment ago, and the discussion led to the amount of our national debt which as most of us know is now in the neighborhood of \$365 billion. But even more startling and more important is the fact that the second largest item of governmental appropriations is for the payment of interest on that debt.

Now, in answer to a question he pointed—and I do not know how many minutes I have been talking here, but let us say that I have been talking for 20 minutes—that the interest on the national debt is about \$31,000 per minute. Now, while I have been talking for 20 minutes, the interests on the national debt has increased \$620,000. Surely this should make all of us stop and consider whither we are headed.

Mr. Speaker, maybe we ought to stop, look, and listen. I just wanted to raise some warning signals again here this afternoon, for whatever they are worth, that some day down the line there is going to be a day of reckoning.

Mr. Speaker, who would have thought that we would have ever gotten to the point where we would be spending \$192 billion a year, 10 or 20 years ago? Yet now we are trying to limit that expenditure to these \$192,900 million.

Mr. Speaker, I have been over this so many times that I should not pursue it further.

Mr. JONAS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I am happy to yield to my friend, but before I do, may I say that the gentleman from North Carolina (Mr. JONAS), along with the gentleman from Texas (Mr. MAHON), the chairman of the committee, have both in my judgment done an excellent job of trying to apply the brakes here.

Mr. Speaker, I now yield to my colleague, the gentleman from North Carolina.

Mr. JONAS. Mr. Speaker, on behalf of the distinguished chairman of the committee, the gentleman from Texas, and also for myself I would like to express appreciation to the distinguished chairman of the Committee on Rules for his generous remarks. I agree with the gentleman from Mississippi that this spending limitation is going to create quite a burden for the executive branch of the Government.

It is already evident that the spending levels projected in the revised budget are too low. The gentleman from Mississippi mentioned the national debt and the interest on it. I think that before the year is over, we will find that the interest on the national debt will be substantially higher than it was estimated to be in the budget. Other examples could be cited but it is sufficient I think to remark that this limitation is going to be hard to live with.

While the revised budget is about \$4 billion under the original budget which we received in January, it nevertheless is about \$8 billion higher than the spending levels of 1969. In this respect I do not see how it can be regarded as austere. And as I frequently voted for spending limitations last year, and I offered several limiting amendments myself, I feel that I should vote for this one this year. To do otherwise, would put me in an inconsistent position and a "no" vote by me this year would be regarded as a relaxation of my feeling that substantial spending reductions are necessary if we are to win the battle against inflation and return to a sound fiscal policy, importance of the limitation of spending just because there has been a change in the administration downtown. Just as I supported and voted for and offered some of the amendments last year, I am supporting this spending limitation this year.

I would point out to those who are worried for fear the Government will run out of money under this spending

limitation that there always is the opportunity, as the gentleman from Mississippi has already explained, for the executive to come back to the Congress and submit a request and there will be opportunities all during the session for the Congress itself to impose some spending limitations on the individual appropriation bills as they come from our committee. We are going to have two on the floor next week.

So there is not any reason to be worried about the Government coming to an end because we impose this spending limitation.

This is an effort on our part to invoke some fiscal responsibility and to strike a blow for the economy which I think will be helpful to the Government and to the taxpayers of the country as well.

Mr. COLMER. Mr. Speaker, the gentleman certainly would agree with me, and this is one of the points I wanted to make and did make—that if this House—if this Congress wants really to have a confrontation with this situation that one of the best things it can do, if not the very best thing, is to stop authorizing new programs with built-in accelerations costs in them from year to year. I am sure the gentleman will agree.

Mr. JONAS. I agree with the gentleman 100 percent. I would go one step further. I will say that the first place to call a halt is on the authorizing bills. The second place is on appropriation bills which the committee reports and recommends to the House, and the third place is right here—this Chamber when the Members vote on final passage.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I commend the gentleman for his statement on the general subject of fiscal responsibility.

I wonder if the gentleman knows of a single bill providing for spending that has been brought before the House of Representatives up to this day and hour that has not called for increased spending?

Mr. COLMER. I would have to answer the gentleman in the negative.

Mr. GROSS. So that while the gentleman from Mississippi and the gentleman from Iowa fervently hope that this \$192,900 million ceiling, if imposed, will work—we hope it will work—but we hope for the best and fear the worst—would that be representing the thoughts of the gentleman from Mississippi?

Mr. COLMER. I will go along with my friend, as usual.

Mr. GROSS. The gentleman from Iowa will have to see better evidence than he has seen, however, in this session of Congress to convince him that this ceiling will have any meaning at all.

Mr. COLMER. I thank the gentleman. We can only hope and continue to try—otherwise we are lost.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Did I cor-

rectly understand the gentleman to state that the proposed limitation is along the same line of that contained in the resolution we adopted at the last session of the Congress in which there was a cutback of \$4 billion? Is this similar to that?

Mr. COLMER. In effect, to my mind, yes.

Mr. ROGERS of Colorado. It is.

Mr. COLMER. In that we place a limitation.

Mr. ROGERS of Colorado. Is there any language to guarantee that the veterans will be paid their pensions under this setup, as was provided in the resolution in the 90th Congress, to which I referred?

Mr. COLMER. My understanding, I may say to the gentleman from Colorado, is that there no exemptions and no exceptions provided for in this bill. I know the gentleman is a very devoted friend of the veteran, as most of us are. I am rather happy that he used that illustration because, as I said, we are all for the veteran, and I put my record up against the gentleman's or anybody else's on that. But what I want to say to the gentleman from Colorado is that I believe firmly that the veterans of this country who bared their breasts to the enemy on foreign soil, who flew across the trackless oceans, and who are now dying in Vietnam are perfectly, and would be perfectly willing, if it came to that, to make some financial sacrifice as well as to offer their blood on the altar of their country. I am firmly of the opinion, that the man who is willing to defend his country on the battlefield is willing to make a little sacrifice, if it comes to that, on the homefront. Moreover, I believe that most, if not all, of our veterans would like to see the rest of us make a little sacrifice in order to save the country here on the homefront.

But permit me to say further, to the gentleman from Colorado, that I see no reason for concern here. It has been my observation in my long years of service here, that this Congress is always zealous of the interest of those who have fought the battles of this country in times of war. If it develops that this procedure which we are adopting here today to save the Republic from the enemy of inflation and that our veterans may be hurt, I am confident that this Congress will see that our veterans are not hurt.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield further on that point?

Mr. COLMER. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. As I understand, in this Congress we have not as yet approved any of the 12 or 14 appropriation bills, that is, the regular appropriation bills.

Mr. COLMER. The gentleman is correct.

Mr. ROGERS of Colorado. It is anticipated that when July 1 comes, probably we shall not have approved half of them by that time, if any. If this resolution is adopted, at the coming of July 1, when we have a resolution to continue the

appropriations of last year, so to speak, how would this resolution be applied? Would it be applied in a reduction of a quarter of a billion dollars on last year? In what manner will it be applied if we have continuing appropriations?

Mr. COLMER. I think I can answer that question, but I would prefer to yield to the gentleman from Texas, the chairman of the Appropriations Committee, to answer the question and I would prefer that my friend from Colorado, for whom I have a high regard, would direct his technical questions to the chairman of the Appropriations Committee.

I yield to the gentleman from Texas.

Mr. MAHON. With respect to operations on and after July 1, 1969, for the agencies for which appropriation bills are not enacted into law by that time, there would, of course, have to be a continuing resolution. But we would act prior to that time—certainly in the House we hope to—on the independent offices appropriation bill, which usually contains the funds for the Veterans' Administration.

When we bring to the House a continuing resolution next month, the continuing resolution will be written in such a way as to take care of the situations which may be before us.

The \$192.9 billion ceiling which is placed on expenditures for next year by title IV, I might say, is, in the aggregate, about \$8 billion above the estimated total expenditure figure for the current fiscal year 1969.

There is another significant thing about this ceiling. This ceiling does not provide for any reduction whatever from the President's projected spending total. Last year, Congress made a \$6 billion cutback, and that had to be cut out of the hide of the budget. Title IV provides that the beginning ceiling of \$192.9 billion will increase or decrease, dependent upon what Congress does on the various spending bills involved, as they are considered. If Congress increases the budget on which the beginning ceiling figure is based, then the ceiling will go up; if the budget is reduced, then the ceiling is to be adjusted downward appropriately.

If there is a Member of this House who is not a friend of the veteran, or who has a spirit of ingratitude toward the veteran, I do not know who that Member is. I cannot see any thought or probability that any injustice will be done to the veterans. I, myself, will vote to provide any funds and will support any funds that are required or in any way reasonably justified before the Congress for such purposes. I think of all people who should have no concern about what Congress will do, the veterans are in the most secure position.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield further?

Mr. COLMER. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Mr. Speaker, the gentleman from Texas states that if it becomes necessary to have an extension—as we will, no doubt, have in certain areas—after July 1, as

we did last year when I think we went each month until November, if these things develop they will be taken care of at that time. Is it not possible we could put this kind of resolution for the continuation of appropriations over until that month?

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. COLMER. Mr. Speaker, I yield further to the gentleman from Texas.

Mr. MAHON. Mr. Speaker, when we have the continuing resolution before us next month, we can call before us the director of the Veterans' Administration or hear anyone else we need to, but we will make sure that the resolution is drawn in such a way that all needs are met for the returning veterans. Of course, there are accelerating costs and requirements. Everybody is in favor of taking care of them. There is no problem about taking care of that kind of thing.

Mr. ROGERS of Colorado. But what is wrong with postponing this resolution about the limitation until such time as it is actually before the House for consideration? This is a gestation of what we are going to say, of cutting down. Why do we not then and there, when the continuing resolution on the appropriations may be considered, make the determination rather than adopt this resolution at this time—which nobody seems to know exactly the meaning of?

Mr. MAHON. Everyone who will take the time to read the proposal, I think, will be able to ascertain what it means. It is on page 61 of the bill. I know the capabilities of the gentleman from Colorado. It is very plain here. It is a governmentwide proposal. It simply says:

Expenditures and net lending (budget outlays) of the Federal Government during the fiscal year ending June 30, 1970, shall not exceed \$192,900,000,000: *Provided*, That whenever action, or inaction, by the Congress on requests for appropriations and other budgetary proposals varies from the President's recommendations thereon, the Director of the Bureau of the Budget shall report to the President and to the Congress his estimate of the effect of such action or inaction on expenditures and net lending, and the limitation set forth herein shall be correspondingly adjusted.

Mr. ROGERS of Colorado. I wanted to ask the gentleman from Texas another question.

The SPEAKER pro tempore. The gentleman from Mississippi has consumed 25 minutes.

Mr. COLMER. I thank the Chair.

I am sorry I cannot yield any further time to the gentleman from Colorado.

Mr. COHELAN. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield briefly to the gentleman from California.

Mr. COHELAN. I just want to make a quick announcement at this time. I do not oppose the rule. However, when the matter comes up for debate, I will introduce an amendment to strike title IV and I will make my arguments at the appropriate time.

Mr. TEAGUE of Texas. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Texas (Mr. TEAGUE) whatever time I have remaining.

Mr. TEAGUE of Texas. Mr. Speaker, I thank the gentleman from Mississippi. I will not need that much time.

Mr. Speaker, I have been very much disturbed about this legislation as it pertains to our veterans' program. We all know there is a war going on in Vietnam, but few people realize the impact of the Vietnam war on our veterans' program. Demands on every major program of the VA are up over last year. Listed are the comparisons between the first 9 months of fiscal year 1968 and fiscal year 1969:

GAINS IN KEY WORKLOAD ITEMS EXPERIENCED BY THE DEPARTMENT OF MEDICINE AND SURGERY DURING THE FIRST 9 MONTHS OF FISCAL YEARS 1968 AND 1969

We get 75,000 new veterans discharged each month. Every single program the VA is in has gone up. Yet, we have not added a bed in a hospital. The VA hospital system is receiving the casualties directly from the military and this is a substantial added burden. Last year the VA hoped to get 4,000 additional employees for kidney machines and heart machines and intensive care, and so on. Instead of getting those 4,000, they were ordered to go back to the 1966 level, which meant getting rid of about 4,000 employees.

In the second session of the 90th Congress at the time the surtax was imposed, an agreement was reached between the Ways and Means Committee and the Senate Finance Committee that personnel levels in the Federal Government would be rolled back to the June 30, 1966, level. This was accomplished by section 201 of the Revenue and Expenditures Control Act of 1968.

When the provisions of the conference agreement came to our attention we found that every agency of the Federal Government was to be placed on a personnel reduction formula until the entire Federal Government reached the June 30, 1966, level. Since VA is a rapid turnover agency, the agency would have been required to remain on the reduction formula for approximately 30 months and would have cost approximately 30,000 employees. This would have led to the closing of at least 15 hospitals. The conference was reopened and a commitment was secured from the conferees and the Bureau of the Budget that the personnel ceilings would be applied agency by agency, therefore, VA was required to remain on the reduction formula until it reached its own June 30, 1966, personnel level which required the reduction of about 5,000 employees rather than 30,000.

VA has reached its June 30, 1966, level and was required to give up its request in the fiscal year 1968 budget for about 5,000 additional personnel mostly in medical which were needed to install new programs.

The Johnson budget was prepared under the assumption that the personnel ceiling would be removed, and the John-

son estimates contained funds for 3,587 additional employees in medical at a cost of \$31,567,000, an increase of 498 in medical and prosthetic research at a cost of \$5 million, an increase of 378 in the Veterans Benefits Office at a cost of \$3,200,000. The revised budget removed these recommended increases which, of course, are not needed unless the personnel ceiling can be removed.

I would remind the Members of this House that virtually all the legislation which has been enacted for veterans in recent years, and particularly that of the Vietnam era, has passed the Congress unanimously. We meant for these returning veterans to have the best that we could provide and this, Mr. Speaker, is going to cost some money, not only in benefits but in employee and personnel for the agency which administers these benefits. There is a greatly increased workload in all areas of the Veterans' Administration which deal with adjusted benefits. There is a backlog in the adjudication of claims, the highest which has existed since the end of World War II. If we vote in any way to curtail the activities of individuals processing these claims or the general administrative work of the Veterans' Administration, service which is already deplorable in some areas will decline even more and the Congress will be flooded with claims which in some instances will be justified, of unwarranted delays or lack of attention, and a general breakdown of handling of claims for compensation and pension, education, loan guaranty, insurance, and so forth.

Members should not forget, Mr. Speaker, that the casualties of the Vietnam war are being treated promptly in Veterans' Administration hospitals without the necessity of building a single new hospital. These new patients have been absorbed in the general workload of the Veterans' Administration and we are all happy and proud of that fact, but we cannot permit this agency in the middle of a war to suffer a cut that will impair its operations. The Subcommittee on Hospitals has just concluded a series of hearings in which every facet and phase of the hospital program of the Veterans' Administration has been carefully explored. The subcommittee heard eminent deans of outstanding medical schools, perhaps the best in the country, testify that the patient-employee ratio in the Veterans' Administration has reached shocking proportions, sometimes one-half, and in some instances one-third of what is found in well-run community hospitals or a hospital affiliated with a medical school. Without additional personnel and funds it will be necessary to provide further cutbacks in this great medical program which, I am sure, most of us upon mature reflection do not want to see occur.

Our Subcommittee on Hospitals also found great deficiencies in financial resources for research and medical education, both of which are vital if the type and quality of care which our veterans deserve is to be maintained.

Veterans organizations are concerned about this. The text of telegrams from veterans organizations are as follows:

The American Legion is gravely concerned about the ability of the Veterans Administration to carry out its mission to war veterans and their dependents unless that agency is exempted from the ceilings on budget expenditures for FY 1970 as proposed in Title 4 of H.R. 11400.

Some 70,000 new veterans, many of whom are disabled, are returning to civilian life each month from the Vietnam war. This, together with increasing workloads in benefits and service to all war veterans, is severely impairing VA's ability to effectively administer its programs. The cost of war and veterans benefits—a delayed cost of war—are essential obligations of our government.

The American Legion urgently recommends your support of an amendment to H.R. 11400 to be offered by Congressman Olin E. Teague to remove VA from spending and personnel ceilings so that the veterans program will not be further jeopardized.

HERALD E. STRINGER,
Director, National Legislative Commission.

Veterans Administration will be unable to meet the many demands resulting from Vietnam war under the proposed ceiling for fiscal year 1970, as provided in H.R. 11400, supplemental VA appropriation bill. Urgently recommend your support and vote of Teague amendment which will eliminate ceiling on veterans programs.

RICHARD HOMAN,
Commander in Chief, Veterans of Foreign Wars of the United States.

The 280,000 members of the Disabled American Veterans urge you to support an amendment to be offered by Congressman Olin E. Teague, exempting the Veterans Administration from the spending ceiling proposed in H.R. 11400. The increased demands on the Veterans Administration caused by the casualties of the Vietnam war and the need for updating legislation makes such an exemption essential for the welfare of America's disabled veterans.

CHARLES L. HUBER,
National Director of Legislation.

AMVETS urge you to support the Teague amendment to H.R. 11400 which will exempt the VA from the ceiling on expenditures proposed under this legislation. The Vietnam war is creating 70,000 new veterans each month, as long as it continues this number will grow. Certainly our young, brave veterans are entitled to the full range of benefits already granted by the Congress in its wisdom and to proper service for their future needs. We call upon you to represent them now as unselfishly as they represented America in her most difficult war. There is no ceiling on death, injury or loss of civilian pursuits, how can there be a ceiling on the compassion of our country? AMVETS look to you to speak for the new veterans of this Nation.

JOSEPH V. FERRINO,
National Commander.

MAY 20, 1969.

We support wholeheartedly the amendment you are going to offer today to H.R. 11400 to exempt the VA from the ceiling on expenditures proposed in this legislation. We have sent telegrams to key Members of Congress stating our support of this amendment.

VICTOR V. MILLER,
National Commander, Veterans of World War One, U.S.A., Inc.

So this is the kind of situation we are in in the Committee on Veterans' Affairs. I appreciate very much the words of the chairman. I had an amendment, which I am not going to offer, with the understanding that when our veterans bill comes along they will give consideration to these facts.

It does not make any difference if Congress gives VA all the money on earth if VA does not have sufficient employees to run the hospitals and provide the care necessary and handle pending claims. On the other side, it does not make any difference to provide all the employees, without the money to pay for them.

In the other body, in the last couple of weeks, they have been very critical of the VA not doing enough to tell our veterans what is going on. The situation today is completely different from that of World War II. When the servicemen came home from World War II they sat around in barracks for a week, and had plenty of time to be counseled. Today, when they come back from Europe, Korea, or Vietnam, they are right out of the service.

What we have done is go to Vietnam to establish centers. The results have been very good. We should have information centers in Korea. We should have information centers in Germany.

The Veterans' Administration maintains a staff of 10 contact representatives at seven locations in Vietnam. As of April 30, 1969, a total of 718,164 soon to be discharged GI's had been oriented on their potential GI benefits. Since the inception of this program more than 77,000 personal interviews have been conducted and almost 30,000 actual applications for benefits have been filed by GI's before departure from Vietnam. VA representatives assigned to duty in Vietnam are all volunteers and their tours are for 6 months' duration. Two VA contact representatives have been killed in Vietnam while carrying out their responsibilities.

CONTACT ASSISTANCE IN MILITARY HOSPITALS

The VA is conducting a comprehensive bedside assistance program while wounded GI's are still hospitalized in 115 military hospitals. During fiscal year 1968 more than 7,000 visits were made to military hospitals and personal interviews were conducted with 61,867 disabled servicemen. Vocational rehabilitation applications totaled 20,269 and claims for compensation approximated 25,000.

CONTACT SERVICE AT MILITARY SEPARATION POINTS

Preseparation group orientation on benefits is provided at 288 military separation points each month. During fiscal year 1968 almost 8,000 visits were made to these separation points by VA contact representatives, over 496,000 servicemen were oriented and 70,265 personal interviews were conducted.

LOCATIONS OF VIETNAM CONTACT CENTERS

Air Force: Tan Son Nhut, Bien Hoa, Cam Ranh Bay, and De Nang.
Army: Cam Ranh Bay and Long Binh.
Marine: De Nang.
Itinerant service: Phan Rang, Tuy Hoa, Phu Cat, Chu Lai, U.S. Naval Hospital, De Nang, and 29th Evacuation Hospital, Saigon.

Yet in this today there has been cut \$500,000 off this kind of program, when they have the biggest backlog they have had at any time in the VA program.

I want to say to the chairman that I will appear before your committee

when this budget comes along, because I do not believe they are treating the VA right.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I am glad to yield to the gentleman from Texas.

Mr. MAHON. The main problem here, I believe, which the gentleman from Texas (Mr. TEAGUE) has so well presented, is that of personnel limitations which were fixed in section 201 of the Revenue and Expenditure Control Act last year.

Let me say that in appropriation bills this year for the fiscal year 1970, we will probably propose to recommend some set-aside of that provision of the law as to personnel. We have already included such a set-aside provision in the versions of the bills which have been marked up to date. We expect to report the first one tomorrow. So the personnel problem can, I feel confident, be handled selectively and appropriately.

With respect to the amount of funds needed, that will be a matter for the House to decide. I am sure all of us are going to give our veterans the benefit of the doubt and see to it that they get ample funds for the various veterans programs.

Let me read to the committee the provision on personnel that we would propose to include in the bill making appropriations for the Veterans' Administration. It reads:

Positions in the agencies covered by this Act—

Which would include the Veterans' Administration—

whether financed from funds contained in this Act or from other sources, may be filled during the fiscal year 1970 without regard to the provisions of Section 201 of Public Law 90-364—

That is the tax bill—

and such positions shall not be taken into consideration in determining numbers of employees under subsection (a) of that section or numbers of vacancies under subsection (b) of that section.

In other words, it sets aside the limitation on personnel which is in operation at this time, and which is permanent law. It is, as I said, prepared to include this provision in the bill for the forthcoming fiscal year. I believe this will meet the situation adequately as to personnel ceiling restrictions on the Veterans' Administration.

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, I believe the very distinguished chairman of the Committee on Rules, together with the colloquy which has taken place between the gentleman from North Carolina (Mr. JONAS), and the other gentlemen, has ably explained this resolution which is pending before the House.

To some extent my understanding is just a little different, and I will mention that for what it may be worth.

I believe this is an unusual procedure, to handle it in this way today. It is necessary, for otherwise the resolution would have to lie on the desk for 24 hours, in order to have general debate.

I believe the approach of providing the

administration with a top ceiling is probably the first time that it has ever been placed into effect by the Congress, as to a ceiling limit for what they could spend. Last year we made them cut certain amounts, but this language, under title IV, will mean that they cannot spend more than \$192.9 billion.

Now, where I differ a little bit, if I understood the colloquy so far as the Veterans' Administration or anything else is concerned, is that this language does not apply to the action taken by the Congress of the United States. In our authorization bill for the veterans, we can exceed the money, in that authorization bill, that is set forth in the budget. If it is appropriated, that money can be spent, and the \$192.9 billion would be increased by whatever action Congress takes in authorizing and appropriating money over the budget top of \$192.9 billion.

I ask the gentleman from Texas (Mr. MAHON) is that not correct?

Mr. MAHON. The gentleman is entirely correct.

Mr. SMITH of California. In other words, we do not bind the Congress. We can come in next week and change this. We can repeal it. We can add to it. We can do whatever we want with any single authorization or appropriation bill, and the veterans will be taken care of when the independent offices appropriation bill comes in, after the authorizing legislation has been approved.

So other than that, Mr. Speaker, I think it is up to the Congress to cooperate. We have already taken one action in the maritime authorization bill, which increased the money over and above the budget request. That amount, if appropriated, will raise this ceiling by the difference between what the administration asked for and what this House of Representatives asked for last week. Next week we will have the space bill. A rule was granted on it yesterday. There is an additional amount in the space program, in the authorization bill, over and above the budget request. If that is approved by the House of Representatives and the Senate and if the money is appropriated over and above that figure, in my opinion, that will increase the \$192.9 billion. If I am not correct in that, I would like to have somebody straighten me out.

Mr. WAGGONER. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Louisiana.

Mr. WAGGONER. Mr. Speaker, I think the Committee on Appropriations and its chairman ought to be congratulated for the manner in which they are handling the spending ceiling this year. The chairman of the committee, the distinguished gentleman from Texas, and Mr. COLMER, the chairman of the Committee on Rules, and the ranking minority member of the Committee on Rules (Mr. SMITH) have explained in detail how this ceiling will work.

This ceiling limits the administration and the Bureau of the Budget, but it places no limitation on any action that the Congress might choose to take either to raise or to lower in any instance any

agency's budget. We all, to a man, share a sincere concern for our veterans. I know that this Congress is not going to be insensitive to the needs of our veterans or anyone else. We are doing a better job with placing a limitation on expenditures this year in this manner, in my personal opinion, than we did last year, because we placed too much of a burden for reducing expenditures on the executive branch of the Government and did not shoulder the responsibility in the legislative. We can raise or lower the budget any time we want to here in the Congress. It is up to the Congress, and that is where the responsibility ought to be.

Mr. FARBERSTEIN. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman for a question.

Mr. FARBERSTEIN. Would you agree that by labeling this as a limitation on appropriations it is a misnomer and actually it is solely a limitation on expenditures and not a limitation on appropriations?

Mr. SMITH of California. I do not think it is a limitation on appropriations.

Mr. FARBERSTEIN. I admit it is not a limitation on appropriations but just on expenditures. You are calling it a limitation on appropriations, and this is a misnomer.

Mr. SMITH of California. I do not think the language says that. I do not think anybody says that. It is a limitation on the amount of money that the administration can spend in fiscal year 1970 unless Congress raises it or lowers it.

Mr. FARBERSTEIN. The gentleman evidently agrees with me except that he uses more words than I to say so.

Thank you very much.

Mr. SMITH of California. It is going to be awfully tough for the administration under the present setup to live under this figure. Congress will have to help in every way that it can.

Mr. COLMER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore (Mr. EDMONDSON). The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. RYAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 326, nays 53, not voting 54, as follows:

[Roll No. 58]

 Mr. Helstoski with Mr. Hogan.

Mr. BRASCO changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

SECOND SUPPLEMENTAL APPROPRIATION BILL 1969

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 11400) making supplemental appropriations for the fiscal year ending June 30, 1969, and for other purposes.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 11400, with Mr. HOLFIELD in the chair.

The CHAIRMAN. When the Committee rose on yesterday, the Clerk had read through line 7 on page 2 of the bill.

Mr. CEDERBERG. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I will not take the full 5 minutes, but I do feel I want to express, as a member of the Committee on Appropriations, my concern regarding the excessive use of supplementals. You know, we have reached a point here where the ink is no more dry on the regular appropriations bills until we get the first supplemental. Then we get the second and the third and finally 30 days before the end of the fiscal year here we are up with another massive supplemental bill.

I recognize that we in Congress do take certain actions that sometimes do require consideration in the area of supplementals, but I just want to tell the House and the members of my committee that I do not like this approach at all. I am very unhappy with it. I think the time has come when we in the Committee on Appropriations should control ourselves better as to the handling of supplementals. Further, what we ought to do is tell the executive agencies not to come up with supplementals as prolifically as they do now.

In my opinion about one or two supplementals a year is enough. I am expressing my opposition to a supplemental bill in these amounts, 30 days before the end of the fiscal year in some instances with agencies trying to get money that was already denied in their regular appropriation bill.

Mr. Chairman, I object to this approach and I hope, Mr. Chairman, that something can be done to control what I consider to be an abuse of the supplemental appropriations procedure.

Mr. MAHON. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD on the subject of supplementals.

I would say that with respect to the matter of restoration of reductions made last year, less than 1 percent of the funds in this bill represent money for functions which were reduced in appropriations made by Congress last year. The amount so involved is some \$34 million. It is only about one-third of 1 percent of the approximately \$12 billion cut last year from the requests for new funds for fiscal year 1969. That is a pretty good record, I would say.

We always have a supplemental bill for the current fiscal year in the new session. This one, it is true, has been delayed somewhat longer than usual. I agree that we should avoid supplementals wherever and whenever we reasonably can. Most of this pending supplemental is for costs associated with the war in Vietnam, or for pay increases voted and put into effect last year, plus a few other items that are either mandatory under

basic law or rest on other requirements that the committee found justifiable.

But I appreciate the views of the gentleman from Michigan. Some supplementals are more or less inevitable for a variety of reasons. The basis for those in this bill are, of course, explained in the committee report accompanying the bill.

AMENDMENT OFFERED BY MR. RYAN

Mr. RYAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. RYAN: Strike out title I (beginning on page 2, line 1, and ending on page 3, line 5), and redesignate the succeeding provisions of the bill accordingly.

Mr. RYAN. Mr. Chairman, the purpose of this amendment is to strike out title I of the bill entitled "Military Operations in Southeast Asia" which would appropriate in supplemental funds some \$1.2 billion for the war in Vietnam.

This amendment is also sponsored by other concerned Members of the House, including my distinguished colleagues, the gentleman from New York (Mr. LOWENSTEIN), and the gentleman from California (Mr. BURTON).

Mr. Chairman, my amendment is appropriate at this point because it offers the only means that the House has to vote on the conduct of the war in Vietnam. The power of the purse is the one power that we in the House of Representatives have to call a halt to the continued infusion of men and money into the conflict in Southeast Asia—and the continued sacrifice of lives. If we do not seize upon this opportunity, then we will once again have abdicated the responsibility which we have to review and control the administration's exercise of foreign policy.

Again this year, as for each of the past 5 years, we have before us a request for supplemental appropriations to prosecute the war in Vietnam. For the fifth year in a row the costs of the war have been underestimated in the initial budget presentation.

Mr. Chairman, one-third of the funds contained in this bill, \$1.234 billion out of \$3.783 billion is for military operations in Southeast Asia under title I. The increased funds are needed to pay for increased troop strength over that originally estimated and budgeted for fiscal year 1969. Other funds are required because there has been an increase by 50 percent in bombings by B-52's in South Vietnam following the cessation of the bombing in the north.

A greater tonnage of bombs has been used in Vietnam than the United States used in all of World War II.

Despite the President's statement last week that the United States does not seek a military victory, the level of our military involvement in Southeast Asia is no less today than it was 1 year ago. The brutal fact that over 12,000 American servicemen have been killed since the Paris peace talks began is proof that the level of violence and destruction has not subsided. Witness the loss of 43 American lives and the wounding of 290 other American soldiers in the 11 assaults upon Apbin Hill, known as "Hamburger Hill" since about May 10.

Although the American people expressed their opposition to the continuance of the war through the political process last year, there has been no fundamental change in policy which would lead to the disengagement of American forces.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. RYAN. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Chairman, I would like to congratulate our distinguished colleague, the gentleman from New York (Mr. RYAN), for bringing this matter at issue before the Committee of the Whole House on the State of the Union. It is obvious to every single person on this floor that unless we slow down and reduce the level of violence and the level of expenditures in Southeast Asia, we will not be able to cope with the other problems confronting this Nation.

I believe the gentleman from New York is to be highly commended by all of us for having the insight to give us an opportunity to express ourselves at this very important point in time in the war in Vietnam.

Mr. KOCH. Mr. Chairman, will the gentleman yield?

Mr. RYAN. I yield to the gentleman from New York.

Mr. KOCH. Mr. Chairman, I would like to commend the gentleman from New York and ask the gentleman for his permission to join in cosponsorship of this amendment.

Mr. RYAN. Mr. Chairman, I appreciate the support of the gentleman from New York for this amendment. I believe the gentleman from California (Mr. BURTON) has pointed out very cogently that, as long as the war continues to drain some \$27 or \$28 billion as it already has done in fiscal year 1969, according to the report of the Committee on Appropriations, the necessary resources will not be devoted to solution of the pressing problems which confront us domestically.

This bill before us is inadequate in its treatment of domestic programs. The rent supplement program, for instance, was funded at less than 50 percent of the Johnson administration's budget request. Yet this bill provides no supplemental appropriations for rent supplements.

The section 246 interest subsidy program for rental and cooperative housing is still \$10 million under the authorization.

Mr. Chairman, it is essential that this war end. By voting against supplemental appropriations for it, we will tell the administration that, with all the urgent domestic problems facing our country, it will have to get along in Vietnam with the paltry amounts of money which have already been appropriated for fiscal year 1969—some \$27 billion or \$28 billion.

The only way to force a change in policy is to refuse to approve the allocation of any additional funds for the war.

As long as Congress continues to acquiesce in appropriations for the war, as long as Congress continues to rubber-

stamp administration policy, then Congress must share the responsibility with the administration for the continuation of that war. If Congress wants to bring the war to a close, it has the power to do so.

Mr. Chairman, in 1965, 1966, 1967, and 1968 I voted against supplemental appropriation bills which permitted the war to be expanded and escalated. I shall do so again today. It is time to halt the violence and destruction which have claimed the lives of so many Americans and Vietnamese.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MAHON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, as everyone knows, our Government is seeking to bring the war in Vietnam to a satisfactory conclusion. Peace talks are underway in Paris, and we certainly do not want to weaken the position of our Government at this strategic time. It is hoped that more and more of the fighting will be assumed by the South Vietnamese forces. This bill contains a quarter of a billion dollars for strengthening and modernizing the South Vietnamese Army in order to better equip them for taking over the fighting.

Mr. Chairman, it would be most ill-advised to pull the rug out from under our forces in Vietnam, so to speak, and out from under our negotiators at the Paris talks.

So, Mr. Chairman, I would hope that we can vote on this amendment at this time, and vote the amendment down.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would ask the gentleman how much of the additional appropriations, particularly as they relate to military pay costs for additional personnel, are for the addition of troops beyond those presently in Vietnam?

Mr. MAHON. There are no funds for the addition of troops beyond those presently in Vietnam.

Mr. OTTINGER. There is no money in here for additional troops?

Mr. MAHON. No, that is correct.

Mr. OTTINGER. I thank the gentleman for yielding.

Mr. MAHON. Mr. Chairman, I ask for a vote on the amendment.

Mr. LOWENSTEIN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I speak today because the confluence of recent events have made the timing of this discussion fateful for the country.

Last March 26, in a speech on the floor of this House I said:

Soon we in the Congress will be asked again for the funds to continue prosecution of the war, and then, as before, Members of Congress will face the most unacceptable of alternatives; for they will be told that to refuse to appropriate money to protect our fighting men is to consign to death yet more of those Americans who are surely among those least deserving to die—those Americans who are carrying out the orders of their

Government with a valor and loyalty in the face of the great difficulties and uncertainties of the situation that must rank with the highest such response of our history.

Yet valor and loyalty do not make wrong things right, or senseless policies sensible, or hopeless pursuits hopeful. So there will be those who feel that to vote money for the further prosecution of the war is not to protect lives, but indeed to make more certain that more lives will be pointlessly lost.

It is the imminence of this decision and the existence of stalemate and escalation in Paris and Vietnam that leads me then to urge the President the following steps:

First, the United States should begin at the earliest possible moment to withdraw with all deliberate speed as large a part of our Armed Forces in South Vietnam as would be consistent with the continued safety of those men who remain behind.

Second, the United States should make clear, to those whom we have supported and opposed alike, that it is our intention to continue to withdraw American troops from South Vietnam until none shall remain, providing only that during this continuing withdrawal the Government of North Vietnam and the Vietcong will participate in good faith efforts to resolve by negotiation the negotiable questions mentioned above.

Third, the United States should reiterate its willingness to assist in the relocation of people who do not wish to remain in South Vietnam under new circumstances that must arise in any peace settlement, and to assist through international agencies in the reconstruction of the land devastated by so many years of war.

There has been hesitation to begin the removal of American troops on the theory that to take such a step while negotiations are in progress could weaken the bargaining position of the United States and of the Government of South Vietnam. But I have become convinced that the opposite is in fact the case, unless we are still seeking to negotiate what are not in fact negotiable goals.

For if in fact the early withdrawal of American troops is one of our objectives in the negotiations, to begin that withdrawal could hardly be called a step away from achieving that one of our objectives. It even seems likely that to begin realizing that objective might well make it easier to realize other objectives as well.

The carrot of continuing the American withdrawal should increase the incentive for the Vietcong and the North Vietnamese to negotiate in good faith; while the stick of beginning the American withdrawal could hardly fail to make clear to the South Vietnamese government that we finally mean what we have been saying for so many years—that the war in Vietnam will be de-Americanized. That simple fact should prove a greater inducement to the government of South Vietnam to negotiate in good faith than all the exhortations that words can construct. It would at least remove their greatest incentive not to negotiate: the confidence that as long as there are not successful negotiations there will be an American army on hand to keep them in power.

Therefore, should the President begin the withdrawal of American troops and accompany that withdrawal with public declarations such as those proposed here, he would, I believe, facilitate negotiations rather than hinder them, and thus he would make a major start toward removing the barriers that separate the American people from the most nearly satisfactory resolution of their most difficult dilemma.

In short, it now seems clear that the beginning of the withdrawal of American troops would in fact strengthen our bargaining

position if we want to get all the Vietnamese involved to work out the quickest possible way to end the war and the least painful way to begin the reconstruction.

In any event, once these steps were taken and America's purposes were clear, there would be new unity at home in support of those who are negotiating and new hope for a healing of the spirit of this land; and there would be at last an irrefutable rebuttal to those who have denied the efficacy of the democratic process and who would tear it down the pretext that it has collapsed or has never worked.

The money necessary for the "protection" of the lives of those Americans still in the combat area would then be voted without the haunting sense that each dollar proclaimed as protection might in fact increase the likelihood of destruction.

Mr. Chairman, Americans ought today to be feeling great pride because our fighting men gained what is called a great victory in a battle in Vietnam.

Instead, many millions of Americans feel a gnawing and growing wound at their heart, because in fact several hundred more of our finest young men have become casualties in what must be the most irrelevant battle in our history since the Battle of New Orleans. How bitter the taste—and the fruits—of such a "victory" at such a price.

But what is most tragic about this "victory" is that the Battle of Hamburger Hill is simply a concentrated dose of what goes on all the time in less concentrated form, what goes on pointlessly, dangerously, and apparently interminably.

So the moment of "the most unacceptable of alternatives" has now arrived as expected, and once again we are asked for new funds to fight more such battles, to seek more such "victories" on the fevered road to disaster.

And since the withdrawal of American troops has not begun, since the President has not felt he could state the national goals in Vietnam in a fashion that would suggest that the beginning of such withdrawal is imminent since we still seem unwilling to use negotiations to pursue those things that are negotiable—above all, since military commanders still feel free to spill unmeasured blood to gain transient possession of distant hilltops—in these circumstances, I am convinced that to vote more money is to squander more lives.

I cannot believe that anyone here or anywhere else thinks that it is in the national interest to continue this war, to pile up more bodies on more Hamburger Hills. But that is what we authorize when we vote more money at this bloody moment.

We do not "strengthen our bargaining position" by such a vote, on the contrary, we make it less likely that the President will read correctly the national will to get out of Vietnam. We give the green light, in fact, to the continuation of the policies that have led to all this unredeemable slaughter.

Many of us will not do this. We will vote to save American lives. We will vote to salvage the security and honor of the Nation. The only way to do that under the present circumstances is to vote "no" on this appropriation and on all subse-

quent appropriations to prosecute the war. We vote no with the prayer that these votes will help persuade the President to reverse the course before the national unraveling becomes irreversible.

If the Congress abdicates its obligation to make this judgment on the national policy, it will do so to the peril of this country that we love next only to liberty and justice themselves.

So it seems to me that this is the place and this is the moment to say "No; not another dollar—not another profligate expenditure of lives. Begin instead today the withdrawing of troops, the de-Americanizing of the war, and begin at home with the pressing national agenda so long and so dangerously deferred and already so difficult to address." Then we can close ranks in support of the President, in support of his negotiators. We can vote the money for the closing-out in Vietnam and for the starting-in at home. We can offer protection for the South Vietnamese Government against massacres during transition if it will seek peace, or we can depart and let it tend to its own future if it prefers to fight. We can, in short, stop imposing a government on the people of South Vietnam and a war on the people of that country and our own.

I concluded my remarks here on March 26 by reading something that had been said by Senator Robert F. Kennedy a year ago. I read it again now haunted by the sense that grows more prophetic with each tragic day:

I am concerned . . . that the course we are following at the present time is deeply wrong . . . I am concerned that, at the end of it all, there will only be more Americans killed, more of our treasure spilled out, and because of the bitterness and hatred on every side of this war, more hundreds of thousands of Vietnamese slaughtered; so that they may say, as Tacitus said of Rome: "They made a desert and called it peace." I don't think that's satisfactory for the United States of America. I do not think that is what this country stands for.

Mr. KOCH. Mr. Chairman, I move to strike the last word.

The CHAIRMAN. The gentleman is recognized.

Mr. KOCH. Mr. Chairman, in March of 1968 the American people made emphatically clear that they no longer would support a government that persisted in the further prosecution of the Vietnam war.

Here we are today—15,000 American lives and \$27 billion later—being asked to approve more money for more killing in Vietnam. May I respectfully submit that the new administration and this Congress have failed the American people.

Earlier this year, I said on the floor of this House that I will oppose any appropriations for the further prosecution of the Vietnam war—that I will not vote a single dollar for more killing. The manner in which this supplemental appropriations bill is presented does not permit a separate vote on title I which is devoted exclusively to military operations in Southeast Asia. There are non-military appropriations in this bill which deserve support but we are told that such

items are inseparable from the war appropriation. I resent the intention and effect of such a procedure. I do not think it shows proper respect for those Members who deeply oppose our involvement in Vietnam and I regret to say that it appears to show a contempt for the outrage and agony that the American people feel over the continuation of this unconscionable war.

It is because of this procedure, knowing that any amendment to strike title I from this bill will fail, that I have no alternative but to vote "No" against the entire appropriations bill.

AMENDMENT OFFERED BY MR. ECKHARDT TO THE AMENDMENT OFFERED BY MR. RYAN

Mr. ECKHARDT. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from New York (Mr. RYAN).

The Clerk read as follows:

Amendment offered by Mr. ECKHARDT to the amendment offered by Mr. RYAN: Strike out lines 1 through 5 on page 3.

Mr. ECKHARDT. Mr. Chairman, for at least 2 years now I have had deep concern about our involvement in Vietnam. I feel most sincerely that what we have been doing has many mistaken premises and has extended beyond reasonable bounds activity of the U.S. Government which is for our benefit. Nevertheless, I have voted for all appropriations which included support of the troops in Vietnam. I have come to the point today, however, where I feel so strongly, along with some of my colleagues who have spoken here before, that I must express my protest against a wrongness of direction and a wrongness of pumping funds into that area.

Yet I am not willing to vote for an amendment that would strike all of title I, which includes military personnel, Army; military personnel, Navy; military personnel, Air Force; and also includes operation and maintenance, Army, Marine Corps, and Air Force, because I feel that many of these items necessarily must be spent or have been spent with respect to the necessary requirements of the personnel in the field.

However, I note that the items involved for military personnel, Army, are at \$110 million; Navy, \$14,500,000; Air Force, \$115 million; and then operations, \$96,310,000.

Operation and maintenance, Marine Corps, \$15,390,000.

Operation and maintenance, Air Force, \$242,700,000.

But the procurement item is far greater than any of these items and is \$640,100,000. The procurement item is largely prospective, and I believe that this is the place at which we should make our point, that continuation of procurement, in order to prosecute an effort on the part of the United States that is harmful, in my opinion, to the Nation, that that amount of procurement in this bill should be cut out as a strong statement against continuation of the war unchanged and unabated. For that reason I have offered the amendment to the amendment which would cut out the prospective portion of title I, the procurement section.

I would appreciate an "aye" vote. I believe this is a proper way to show we want to turn around, but at the same time we would not be withdrawing support of men in the field at this time.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from New York.

Mr. BINGHAM. Mr. Chairman, I thank the gentleman from Texas for yielding, and I commend him for the amendment he has offered. It offers a welcome opportunity for those of us who want to register at this time our strong feelings against the Vietnam war, and our belief that scaling down of the violence will help produce peace. I support the amendment offered by the gentleman from Texas, as well as the amendment offered by the gentleman from New York. There is plenty of money already available to do whatever is necessary to provide the forces now in Vietnam with what they need.

Mr. FARBERSTEIN. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from New York.

Mr. FARBERSTEIN. Mr. Chairman, I thank the gentleman from Texas for yielding.

Mr. Chairman, I want to go on record as concurring in the amendment offered by the gentleman from Texas to the amendment offered by the gentleman from New York. To my mind it makes good sense.

I do not think we should deny to our soldiers medical care, food, clothing, and housing. I do not think we should deny the needs of our personnel who are in the armed services, deny them the necessities of life.

However, I believe we can pretty well make evident our feeling insofar as the continuing of the Vietnam war; make evident this concern by concurring in this amendment and voting for this amendment. As I said before, it makes good sense and it is about time we turned over the fighting of this war to the Vietnamese.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. Mr. Chairman, I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I rise in support of the amendment. I congratulate the gentleman and associate myself with his remarks.

Mr. SIKES. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to restate the thrust of the amendments before us. The amendment offered by the gentleman from Texas to the amendment offered by the gentleman from New York would eliminate the possibility of providing additional weapons and equipment for the South Vietnamese forces and thereby limit their effectiveness in battle. Most importantly the amendment would make it more difficult for the Vietnamese to assume a greater part of the role in Vietnam which they now are prepared to do and have shown the ability to do. This is something we have long desired.

The amendment to strike title I offered by the gentleman from New York would simply, in addition to eliminating weapons and equipment for the South Vietnamese and replenishment of our own depleted combat stocks, which is badly needed, would have a further very serious and undesirable effect. It also cut off the pay—listen to this—cut off the pay of the members of the armed services who are on duty in Southeast Asia. Regardless of intent, this would be the effect of the amendment.

Is that what we want to do?

We are being asked to show a vote of no confidence in the men who literally are fighting and dying for this country. This amendment truly would jerk the rug out from under them.

Just a little while ago we were being told that all the Communists wanted was to have us stop the bombing and they would be ready for realistic steps for peace. The bombing was stopped a year ago. What happened? Nothing. The allied forces have been subjected to offensive after offensive, and the negotiations which have been in progress for months in Paris are still fruitless.

There still are requirements for the war in Vietnam which must be met. There is no way to avoid our own responsibilities.

That is why these amendments should be rejected, and they should be rejected overwhelmingly.

Mr. Chairman, I ask for a vote.

Mr. LIPSCOMB. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I have been listening to the debate in favor of the amendment. I felt the arguments made were not even worthy of being debated. It is an extremely serious matter to challenge the provision of the weapons and supplies needed in Vietnam. We must support our troops there to the full extent of our ability and we must strengthen the troops of the Government of South Vietnam so that they can assume the major role in the defense of their country.

This is a supplemental appropriation. We are proposing to give the fighting men the material they need to work with. The \$640 million recommended in Army procurement includes over \$393.7 million for our own men, \$338 million of which is for ammunition. Over \$246 million is to provide for going ahead with phase I and phase II of modernizing and equipping the Vietnamese so they can take over more of the war effort, and we can bring our boys home sooner.

This is what the \$640 million is for.

And we are replenishing the equipment destroyed in the Communist's Tet offensive of last year.

We are replenishing some funds we had to spend because the North Koreans became more aggressive in their actions, and seized the U.S.S. *Pueblo*.

I cannot understand why we should support amendments to abandon the responsibilities that we have supported with our wealth and with the lives of fine Americans. Therefore, I oppose the amendment to the amendment, and I oppose the amendment. I believe we

should go ahead and make this appropriation for our military operations in Southeast Asia.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. LIPSCOMB. I am happy to yield to the gentleman from Illinois.

Mr. YATES. I am informed by the staff of the Appropriations Committee that there are unobligated funds in the Army procurement appropriations of \$3.9 billion. Would that not be adequate to cover the \$600 million sought to be stricken out by this amendment?

Mr. LIPSCOMB. At this point in time, the Army is operating under deficiencies in some appropriations. On May 5 of this year, the Deputy Secretary of Defense sent a letter to Congress notifying us that in military personnel and operations and maintenance they were operating in a deficiency condition. This is not true of the procurement account in which funds remain available until expended, but as the gentleman knows—he is a member of the Appropriations Committee—the funds which are unobligated are committed to specific programs and have been taken into account in arriving at the sum now recommended.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. Mr. Chairman, I ask unanimous consent to withdraw the amendment to the amendment in order that it may be offered at the proper time.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. HUNGATE. Mr. Chairman, I rise in opposition to the amendment and move to strike the requisite number of words.

Mr. Chairman, I speak not critically either of President Johnson or of President Nixon, and perhaps at the same time critically of both of them. I believe they are using their best judgment in this situation. They are both in a better position, or should be, to know what is needed under the circumstances than are we. For this reason I think the supplemental appropriations as requested should be supported.

I think it is regrettable that we in the Congress, as the elected Representatives of all the people, have no real control over the expenditures of lives in Vietnam. This is not a declared war; it is a conflict which has gone on for some years; so it cannot be said to be a temporary, emergency, expediency measure.

I am further concerned, Mr. Chairman. It seems to me I recall that a few years ago under the administration of President Johnson an announcement was made that draft calls would be drastically reduced. I think they were cut in half. It seems to me that announcement preceded an election by not very much. I know that my phone rang constantly at the same time, and almost every reservist throughout my district was called up—without the benefit of a press release.

I am concerned at this time, Mr.

Chairman, because I hear rumors that 50,000 men may be coming home, and the July draft call may be drastically reduced. I have just been home. I was getting, at one point, three telephone calls an hour from men who might be drafted in June. The size of the May and June draft callups are not the subject of euphoric press releases.

This is a matter that concerns me. I hope we in the Congress can find some way better to control the expenditures of manpower in this country.

Mr. GIAIMO. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment of the gentleman from New York.

Let me make it clear at the outset that I do not intend in any way to short-change our fighting men in Vietnam. During the many years that I have had the privilege of serving in this House, I have consistently supported the requests of the Department of Defense, but I think the time has come when we in the Congress must exercise our responsibility to see to it that the Department of Defense is brought to task and required to justify its expenditures. For too long a period of time, Defense officials have come before us in a high and mighty fashion saying in effect, "Unless you give us every dollar that we ask for, either in the regular Defense budget or, if we miss the mark, in our supplementals, you are not being loyal to your country and you are not being loyal to the proper defense of your country." I believe this is nonsense. I think the defense of the United States is the absolute first priority of all of us in this Nation, but that does not mean that I have to put a rubber stamp of approval on every appropriation request of the Department of Defense. If we study their actions in recent years, we will see that the mark has been missed many, many times. Again, I say that we in Congress must compel the Defense Department to stop the loose spending and in some instances the squandering of billions of the taxpayers' dollars.

Today we are talking about a request for \$1.2 billion. We are now being told that if we do not appropriate this money we are jeopardizing our entire effort in Vietnam. Mind you, with a budget in the neighborhood of \$90 billion, the Defense Department is telling us that without this money it cannot afford to conduct operations in Southeast Asia. I believe that it can. I believe the Defense Department can tighten up. Most importantly of all, I think the success of this amendment will serve as notice to the Department of Defense that the Congress intends to exercise its rights and to perform its function by requiring that the taxpayers' money be accounted for properly.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I am delighted to yield to my chairman.

Mr. MAHON. The gentleman well knows that all of the funds requested by the Department of Defense last year were cut by more than \$5 billion. In the

request which is before us, in the title we have up now, the Committee on Appropriations recommended, and the amount contained in the bill represents, a cut of \$262.9 million. In the entire bill there is a cut of \$559 million below the budget request for the military. So this is not by any means a rubber stamping of the requests that have been made. I thought in connection with the gentleman's statement that this fuller statement might be made.

Mr. GIAIMO. I understand, Mr. Chairman. While I realize that this is only the first step in the progress of this supplemental appropriation bill, I sincerely believe that the time has come for us to take a stand in the Congress to compel the DOD to be more responsive to the will of the American people and to the will of the Congress. In my opinion, the passage of this amendment is the only way in which this can be accomplished.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on this amendment do now close.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. FRASER. Mr. Chairman, I object.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I move that all debate on the pending amendment do now close.

The motion was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. RYAN).

The question was taken; and on a division (demanded by Mr. SIKES) there were—ayes 25, noes 140.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

PROCUREMENT

PROCUREMENT OF EQUIPMENT AND MISSILES, ARMY

For an additional amount for "Procurement of equipment and missiles, Army", \$640,100,000, to remain available until expended.

AMENDMENT OFFERED BY MR. ECKHARDT

Mr. ECKHARDT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ECKHARDT: On page 3, strike lines 1 through 5.

Mr. ECKHARDT. Mr. Chairman, this is the same amendment that was offered a moment ago but, technically, since it was offered to a motion to strike out all of the title, there was no amendment that was appropriate to be offered at that time. So, I withdrew it and I am reoffering it at this time.

Much of the debate and opposition to the first amendment went to the argument that we should support the men overseas, to which I agree, and I, therefore, voted against the first amendment. This is an amendment which in no wise jeopardizes the position of our men overseas. It merely calls a halt to the mad armaments spending in a war halfway around the globe, which constitutes most of title I of this bill.

So, Mr. Chairman, I urge that the Members vote in support of the striking

of the sum of \$640 million for procurement, which is prospective for the obtaining of further military materiel, to continue a war which we hope will close, and we should be doing everything we can to close it.

Mr. YATES. Mr. Chairman, would the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, a few moments ago in an interchange with the gentleman from California (Mr. LIPSCOMB), I made the point that the staff of the Committee on Appropriations had informed me that there were unexpended funds in this item of \$3.9 billion. That point has been verified. There are unobligated and unexpended funds of that amount in this item.

It is true, I am told, that they have been programed, but the fact remains that they are not expended, nor are they obligated at the present time.

Mr. LIPSCOMB. If the gentleman will yield, there is a further point that the gentleman should make, and that is that they are committed funds.

Mr. ECKHARDT. There is nothing that we commit that we may not uncommit by this amendment.

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to this amendment.

I suggest that there is a serious incongruity among those who, on the one hand, say that we have got to get out of Vietnam, and that we have got to turn more of this war over to the South Vietnamese and then proceed to support this amendment which would deny equipment to South Vietnam. They are biting off their noses to spite their faces, because this \$640 million when broken down shows \$393 million for U.S. forces in South Vietnam to replace the equipment that is being used up so very rapidly in the toughest war we have ever fought, and the other \$294 million would go to buy military equipment for the South Vietnamese forces. This amount, when broken down, shows \$80 million for ammunition, \$2.6 million for weapons, and other combat vehicles, \$9.7 million for tactical support vehicles, \$17.3 million for communication and electronic equipment, and \$53 million for other support equipment.

How in the world can you say on the one hand that you want the South Vietnamese to take a bigger share of fighting in this war—and I support that position, and so does the President, and so do most of the Members of the Congress—how can you say on the one hand that you want the South Vietnamese to take on a bigger responsibility in the prosecution of this war and then not give them equipment with which to wage the war?

Mr. Chairman, I suggest that this amendment should be rejected by the overwhelming vote.

It would be my hope that the people of South Vietnam, their soldiers, and our own American soldiers who are fighting in South Vietnam in the cause of freedom, would receive renewed confidence and hope from the vote we just cast which rejected by this House over-

whelmily the previous amendment by a 6-to-1 vote, and that it would be an indication to them that we here in Congress support their struggle for freedom as we did when we overwhelmingly adopted the Tonkin Bay resolution, which put us into Vietnam in the first place.

If my memory is correct, I believe there was one dissenting vote in this Chamber, and that there were two or three dissenting votes in the other Chamber on the Tonkin Bay resolution.

Mr. Chairman, we have stood by the people of South Vietnam because we know this: the collapse of South Vietnam would only be the beginning of putting into captive bondage all the nations of Southeast Asia by the Soviet Union, just as the Communists put into Soviet bondage the captive nations of Europe and as the Soviets are now trying to put in Communist bondage and create captive nations out of all the nations in the Middle East.

Mr. Chairman, I am amazed at those who stand here today and say that they want us to get out of South Vietnam when they know that the Communists have 73 other countries on three continents earmarked for the same kind of brutal, barbaric, cruel aggression through subterfuge, and terror that they have tested for 5 years in Vietnam, and are continuing to use to this very date, if the forces of freedom should falter in South Vietnam.

I congratulate the committee for understanding the military needs of the people of South Vietnam and of the forces of South Vietnam, and if we really want the South Vietnamese to take on a bigger share of responsibilities, I suggest that you overwhelmingly reject this amendment.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman.

Mr. GERALD R. FORD. From the figures given by the gentleman from Illinois and the figures given by the gentleman from California and the gentleman from Florida, it is perfectly obvious that if this amendment is approved as offered by the gentleman from Texas you will slow down and materially hinder and hamper the effort to give greater responsibility to the South Vietnamese.

Mr. PUCINSKI. Precisely.

Mr. GERALD R. FORD. Therefore, I hope that for the benefit of the American military forces in South Vietnam that the amendment is defeated.

Mr. PUCINSKI. Mr. Chairman, I yield back the balance of my time.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on this amendment and on this title do now close.

Mr. BURTON of California. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I move that all debate on this amendment and on this title close in 5 minutes, and that

the 5 minutes be given to the gentleman from California (Mr. BURTON).

PARLIAMENTARY INQUIRY

Mr. BURTON of California. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman from California will state the parliamentary inquiry.

Mr. BURTON of California. Mr. Chairman, I deeply appreciate the chairman of the Committee on Appropriations suggesting that I be given the 5 minutes, but I am sure we all recall that on the Tonkin Bay matter, we had all of 60 minutes and we spend less than 2 hours annually discussing these matters in Committee of the Whole. My point of inquiry, Mr. Chairman, is if you really think 5 minutes is adequate time to discuss the pending matter?

The CHAIRMAN. Will the gentleman from Texas please repeat his motion.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I move that all debate on this amendment and on amendments to title I close in 15 minutes.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The motion was agreed to.

The CHAIRMAN. The Chair has noted the names of Members standing to be recognized under the limitation of time.

The Chair recognizes the gentleman from California (Mr. BURTON).

Mr. BURTON of California. Mr. Chairman, we have heard this old saw every time a supplemental appropriation comes before us, that but for these few billions of added dollars that was not anticipated—but for the approval of these few billions—all the American effort is going down the drain.

We have heard the old saw today that finally we are going to turn over the fighting to the South Vietnamese, if only we approve of this supplemental appropriation.

What absolute nonsense. The fact of the matter remains that we have uncommitted funds right now, if the Department of Defense wanted to use these funds, to arm or to train or to do whatever, with the South Vietnamese Army, and they could spend all the required money even if we do not do a darn thing but reject the pending proposal.

Mr. Chairman, I urge the adoption of this amendment so that we can reduce our excessive military expenditures on this occasion.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. LOWENSTEIN).

Mr. LOWENSTEIN. Mr. Chairman, I feel like Alice must have in Wonderland. Or maybe Rip Van Winkle. We talk as if nothing goes on outside this room. We talk as if it were 5 years ago. We talk nonsense in circles—vicious circles.

Outside this room this country spirals into worsening crisis. We are impervious. We debate the longest war in our history, the most disputed adventure of our national experience, for half an hour. Thirty minutes. Then time is up. But if

we cannot discuss these matters here, where can we? What is it we are so busy doing here?

Various Members have proclaimed today that we have an obligation to the Americans in Vietnam. That is one point we can all agree about: we have an obligation to the Americans in Vietnam. We have an obligation to the integrity of this Nation. That obligation is not met by abdicating the functions of the supreme legislative body of the greatest democracy on earth. It is not met by quartermaster-like issuing of ever more money to fight this pointless war which cannot be won and which is destroying national unity, poisoning the national purpose, crippling the national interest.

Does anyone still believe that voting supplemental funds to make possible supplemental Hamburger Hills will save American lives? Will increase the national security? Does anyone believe the Duke of Wellington is Chairman of the Joint Chiefs of Staff? Can all us Alices leave Wonderland long enough to face the consequences of acting on this proposal by rote, by slogan, by habit, while all around us men and women in ever-quiet desperation and ever-larger numbers despair of the democratic process and despair for the sanity of the Nation. If we cannot stop long enough to debate, can we at least stop long enough to think?

Mr. Chairman, that is what this vote is all about.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. FRASER).

Mr. FRASER. Mr. Chairman, I have participated in the very limited way that has been possible in this debate as it has recurred from time to time on the floor. I think every time I have had a chance to speak on this subject the time has been restricted to 1 or 2 minutes. I have been thoroughly unimpressed with the role of the committee in affording any direction other than to rubberstamp, essentially, the policies of the President. At some point the House of Representatives, if it is going to stand on its own feet and exercise its constitutional responsibilities, ought to face the policy questions involved here much more squarely than has happened in the past.

I do not believe that the Vietnam war has proven to be a wise venture. I take it from the actions and speeches of many of the Members here today that they think it has been a great venture for the American people. They support it. They are prepared to involve us in more Vietnams in neighboring countries in Southeast Asia. I deeply regret that we do not have more time to discuss these questions.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. RYAN).

Mr. RYAN. An appropriation bill is indeed the only opportunity which we have to vote on the fundamental policy inherent in the Vietnam war. I would like to point out, with respect to the question of military personnel which was raised earlier, that the funds under title

I are intended to cover and pay for increased deployment to Southeast Asia of some 17,400 Army personnel. According to the testimony of Gen. L. B. Taylor, director of Army budget, on page 361 of the hearings, and very significantly, in answer to a question posed by the gentleman from Alabama (Mr. ANDREWS) which was:

Do you have any plans to send any more there in the near future?

General Taylor said:

I think it goes up approximately [deletion] in the next fiscal year.

In other words, troop commitments in Vietnam will go up a certain number in the next fiscal year, according to General Taylor. Yet we do not have the benefit of knowing how many additional servicemen are scheduled for Southeast Asia because that has been deleted or censored by the Pentagon.

Mr. Chairman, I again urge the House to exercise its proper role and make it clear to the President that this war must be brought to a prompt conclusion.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, the lack of foresight that pervades the whole philosophy of those who would go pell-mell further into a war after they get to the level where the water is reaching their nostrils is illustrated by the argument here that we are going to arm and train the South Vietnamese Army under a supplemental appropriation.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. PODELL).

Mr. PODELL. Mr. Chairman, I congratulate the gentleman from Texas (Mr. ECKHARDT) and the gentleman from New York (Mr. RYAN) and associate myself with their remarks. I think it is about time that we in the Congress reclaimed the prerogative of Congress to initiate and to declare war and to stop war when it becomes an insanity as is Vietnam. I think it is time that we issued our protest of the war in Vietnam in forceful terms. I think this is an opportunity for the Members of the House to make this protest heard.

Once again we are asked to acquiesce in approval of more funds for Vietnam. Contained in title I of the supplemental appropriations bill before us, this request is yet another testimonial to muddled political thinking and futile military efforts.

Again we shall hear the same chorus of voices telling us military victory is just around the corner. We know it is not. Again we shall be assured that just a few more billion and a few more divisions are all that is needed for real power bargaining at the negotiating table. I refuse to believe it.

Once more we shall be told about viable patriotic democrats and heirs of Thomas Jefferson running the government in Saigon. We know they are a patchwork military junta whose jails are crammed with non-Communist opponents.

Still again we shall be told Ky and the

Armed Forces of South Vietnam are almost ready to take over a more meaningful role in the war. I have seen too many dead Americans.

Taking all these factors into full consideration, I emerge with one major conclusion—that this war is a civil conflict where we can only continue to waste our substance in vain. Further, that we are only pouring good men and money down a bottomless drain.

I feel we have reached a point where the military of our own country must be curbed and held in tether. Also, their never-ending sources of national funds must be choked off, and there is no better time or place for it to begin than right here and now.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, our colleague (Mr. PUCINSKI), related the fact of the overwhelming support of Congress for the Gulf of Tonkin resolution. Since that time a great many Americans and a great many Members of this Congress have felt that the policies then approved have proved to be bankrupt.

It is time that we reverse the inexorable increase in the amount we give to the military to prosecute the war and to ever expand it; it is time to stop pouring billions after billions of dollars down the bottomless pit of the military, especially when the military comes to us in this Congress and deliberately falsifies information and seeks to deceive us as it did in the case of the C-54 cargo plane. We simply can no longer take at face value that everything the military describes as "essential" is in fact essential.

We are now spending \$82.5 billion on the military. This constitutes some 60 percent of our free funds, not committed to payment of interest on the national debt. This is the largest and fastest rising item in the budget. Its rise must stop.

Many of us feel that the national security of our country is more threatened by internal explosion than by external invasion. A far greater proportion of our free funds must be devoted to education, job training, housing, and our environment if we are to survive. It is past time that we reverse the trend toward an ever larger war in Vietnam and an ever larger military commitment, all made perversely in the name of "peace."

This increase is a good place to start.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. GILBERT).

Mr. GILBERT. Mr. Chairman, I voted for the Ryan amendment to eliminate title I of the supplemental appropriations bill. I felt a vote for title I is a vote to continue the unpopular war in Vietnam. My support of the Ryan amendment is meant to indicate the dissent in my district and in the country. People are opposed to the Vietnam war, and we in Congress must make every effort to appeal to the President to take steps to end the war. Our best way in Congress to support our troops, is to withdraw them, as I proposed just a few days ago in a resolution introduced in Congress with

several of my colleagues. In supporting the Ryan amendment, I have attempted to register my protest, and that of my constituency, over any action to prolong fighting in Vietnam.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, I would think Members of this House would have learned something from the events of the past year and a half: That the intensity of the fighting in Vietnam does not bring peace closer, but that restraint does.

We would not even be negotiating as we are today in Paris if President Johnson had not shown restraint by stopping the bombing of North Vietnam. Support of this amendment would indicate support of the idea of restraint in the future by keeping down the violence and would bring peace closer.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, we are in Vietnam because of the overwhelming vote in the House and in the Senate in support of the Gulf of Tonkin resolution which put us there. America went there with its eyes open. Congress knew what the consequences would be and that it would be a tough war. Just because it has been a difficult war, they should not be coming in here whimpering to pull out.

The President was right when he said if the needless suffering continues at the hands of the North Vietnamese, we will have to reconsider our alternatives. I think there is a very good chance we may have to resume the bombing of the North. The last year during which we have had the pause in the bombing has only brought more casualties of American boys and no subsequent progress toward peace.

I believe we may very well have to resume the bombing of the North and at the same time withdraw our troops from Vietnam so that North Vietnam will realize it is in for a long bombing siege. Only then may we see some progress in Paris.

This money and equipment is needed to win the war. This war is not going to be won in this Chamber; it will be won by the fighting in Vietnam.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

Mr. KOCH. Mr. Chairman, it is not because this is a tough war or a hard war that I oppose it but because it is an immoral war, which is to say our involvement is politically, militarily, and economically indefensible. We therefore ought to get out of Vietnam.

The vote on this supplemental war appropriation is symbolic. If we were to vote it down, the President would know that we want a cease-fire now and a start of the withdrawal of American troops now.

This vote transcends the simple question of an appropriation; it is rather an opportunity for those who oppose the war to demonstrate their opposition.

We are told that we must vote for this appropriation in order to support our soldiers in Vietnam. I support our men in Vietnam. I want to bring them home.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. FARBSTEIN).

Mr. FARBSTEIN. Mr. Chairman, 5 years ago I remember the then Secretary of Defense and the military saying the war would be over in a couple of months. This is a broken record of constant reiteration and the war still goes on.

I think the only way we can effectively turn this war over to the South Vietnamese is by denying any further funds for procurement of materiel. There is sufficient funds in the pipeline for materiel so the Vietnamese can take over the war.

I believe this additional equipment is unnecessary to provide full protection to our present forces in Vietnam. It could only serve as a means of escalating the American presence in Vietnam and discouraging the South Vietnamese from taking over a greater degree of responsibility for the prosecution of the war.

I believe that the passage of the amendment offered by the gentleman from Texas to delete this \$640,100,000 would take us a significant step closer to the goal of getting out of Vietnam.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan, the minority leader (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Chairman, unfortunately the amendment as drafted is sloppy and poorly put together. The net result, however, is that we are faced with whether or not we will go along with the desire of the American people to transfer to our allies, the South Vietnamese, a greater and greater share and ultimately the total burden of the fighting in Vietnam.

If we vote for this amendment, we are voting to set back and to roadblock the effort to give the South Vietnamese a greater share of the fighting. Therefore, I truly hope that the amendment, badly drafted as it is, is defeated.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. LIPSCOMB).

Mr. LIPSCOMB. Mr. Chairman, the Nixon administration and the Subcommittee on Defense Appropriations have examined the requests for funds for military operations in Southeast Asia and has reduced them where not essential. The Subcommittee on Defense went very deeply into the requests and reduced over \$262 million in the revised request for procurement funds.

The amount requested in the procurement account are the very minimum needed to support not only our own effort in Vietnam, but to equip and modernize the South Vietnamese.

I ask a no vote on the amendment.

Mrs. CHISHOLM. Mr. Chairman—

The CHAIRMAN. The Chair must inform the gentlewoman from New York that under the time limitation she is not eligible for recognition.

Mrs. CHISHOLM. May I ask another Member to yield?

The CHAIRMAN. Yes. The gentlewoman may ask another Member to yield.

The Chair recognizes the gentleman from Texas (Mr. MAHON) to close debate on the amendment.

Mr. MAHON. Mr. Chairman, I yield my time to the gentlewoman from New York (Mrs. CHISHOLM).

Mrs. CHISHOLM. Mr. Chairman, I have just one brief statement to make, because I think most of the statements pertaining to the reasons why we should withdraw from this war in Vietnam have been made.

I speak on behalf of a minority in this country, the women and the mothers, the mothers whose sons have been lost in this war. Unfortunately, here in this body we do not have enough women to speak out on behalf of the women of this country who have been suffering as a result of the loss of their sons in this war.

I think there has to come a time when we have to recognize that we must withdraw, that we cannot continue to lose the cream of the crop of the young men in this country in a war that is unjust, a war that is highly immoral.

The mandate of the people of this country has not been paid any attention. We are supposed to be representing the people of the United States in this Chamber, and the mandate means absolutely nothing in terms of what the women of this country are speaking out about.

Thank you very much.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. ECKHARDT).

The question was taken; and on a division (demanded by Mr. BURTON of California) there were—ayes 23, noes 134.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

AGRICULTURAL STABILIZATION AND
CONSERVATION SERVICE
SUGAR ACT PROGRAM

For an additional amount for "Sugar Act program", \$7,500,000.

Mr. OTTINGER. Mr. Chairman, I move to strike the last word.

I rise to ask the chairman whether the amount listed on lines 11 and 12 of page 3—"For an additional amount for 'Salaries and expenses', for 'Plant and animal disease and pest control,' includes any amount that involves the spreading of pesticides such as DDT and other non-degradable pesticides, or whether this refers only to the sterile fly program for elimination of the screw-worm referred to in the report."

Mr. MAHON. Will the gentleman direct his question to the gentleman from Mississippi (Mr. WHITTEN) the chairman of the Subcommittee on Agriculture?

Mr. OTTINGER. I am glad to.

Mr. WHITTEN. This is limited to the sterilization of flies and the effort to stop the screw-worm infestation. Most of it represents money already expended under authority which permits deficit spending where life and property would otherwise be endangered.

None of it has the purpose in mind that the gentleman refers to.

Mr. OTTINGER. In that case I have no objection. Thank you.

I yield back the balance of my time. The CHAIRMAN. The Clerk will read. The Clerk read as follows:

CHAPTER III
DISTRICT OF COLUMBIA
FEDERAL FUNDS

FEDERAL PAYMENT TO THE DISTRICT OF COLUMBIA

For an additional amount for "Federal payment to the District of Columbia", for the general fund of the District of Columbia, \$10,365,000.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to ask someone on the Committee on Appropriations whether there are funds in this bill for the restoration of buildings that have been gutted by arson and fire and other acts of property damage at Howard University, including the destruction of a \$30,000 fire truck.

Mr. NATCHER. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman.

Mr. NATCHER. I would like for the gentleman to know that in this bill we have no money whatsoever for that purpose.

Mr. GROSS. I thank the gentleman.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

DEPARTMENT OF HOUSING AND URBAN
DEVELOPMENT
MORTGAGE CREDIT
HOMEOWNERSHIP AND RENTAL HOUSING
ASSISTANCE

The limitation on total payments that may be required in any fiscal year by all contracts entered into under section 235 of the National Housing Act, as amended (82 Stat. 477), is increased by \$40,000,000 and the limitation on total payments under those entered into under section 236 of such Act (82 Stat. 498) is increased by \$40,000,000.

Mr. FRASER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to indicate my support for the provision in H.R. 11400 which provides \$40 million in new contract authority for the section 235 homeownership program. I would like to have seen the Appropriations Committee approve the administration's full request of \$50 million for section 235 but the money in this bill will at least enable the program to continue operating. It is essential that we follow up action on this \$40 million supplemental appropriation with approval later in the session of the full 1970 budget of \$100 million for section 235.

The section 235 program has only been in operation in my district since the first of the year but already it is beginning to have a significant impact. In January the Minneapolis FHA office was allocated mortgage subsidy funds for 100 homes. Within 3 months all these funds had been obligated and the office now has a waiting list of over 200 eligible families.

The Minneapolis Housing and Redevelopment Authority has found that section 235 is a particularly useful aid for moderate income families displaced by

the urban renewal projects. A MHRA staff member wrote to tell me that three families relocated from a north Minneapolis renewal project had recently obtained FHA mortgages subsidized under 235:

They bought good houses—houses they could not have purchased without the subsidy. Home ownership will not be a burden because payments are related to their ability to pay. But for every home purchased, we had at least 8 inquiries. Many families are continuing to look for homes pending appropriations of more funds.

The following cases from the Housing Authority files provide interesting examples of how section 235 can make a real difference for families in need of good housing:

FAMILY "C"

Mr. and Mrs. "C" have two children, ages 3 and 2. The "Cs" purchased a FHA repossessed home in northeast Minneapolis. The home is a two story frame structure with four bedrooms, bath and kitchen, living room and dining room. It was built about 50 years ago and has been well maintained.

FHA approved a mortgage with a local savings and loan association on February 27, 1969. It was set at 7½% for \$17,300 with a \$200 down payment under Section 235. The "Cs" moved into their new home on April 1. Their share of the monthly payments is \$86.71 with a Section 235 subsidy of \$72.57 for a total of \$159.28 per month.

FAMILY "H"

Mr. and Mrs. "H" have three children, ages 10, 8 and 7. They are expecting their fourth child in August. The "Hs" bought a two-story home built in the early 1900s. A special attraction of this home is its location next to a school, so their daughter with cerebral palsy doesn't have to walk.

The "Hs" purchased their home for \$14,800. The total monthly mortgage payment is \$133.51. The "Hs" will pay \$82.15 and the government will subsidize \$51.36. The payment of \$82.15 is 20% of Mr. "Hs" adjusted monthly income. The reasonable amount of the "Hs" monthly payments should enable them to stay financially secure and build an equity from this purchase.

The human element in this new program is conveyed very effectively by a constituent who recently wrote:

I had been paying \$113.00 per month and I was only earning about \$300.00 per month for almost 10 years. With paying this much per month, I could hardly make any repairs. Things had reached the point where it was raining in every bedroom. When my children needed more and I could not keep up the payments, I was given 30 days to move out. This was the point where 235 came to my rescue.

Now with my small house, easy upkeep and the monthly payments are much less, I feel more confident in the future. I hope this greatly needed program may be expanded. I know from experience how terrible it is not to have a decent place to come home from work. When I see friends and neighbors under the conditions I was in, I feel I should try to let you know how much this can mean to people and how more should be done.

Mr. Chairman, the passage of the 1968 Housing Act held out the hope of homeownership for millions of low-income families. Now, a year later, when the initial excitement over this historic legislation has died down, it is up to us to make sure that the new housing pro-

grams really work. Unless we vote adequate funds for section 235 and the other innovative programs, the 1968 act will be nothing more than a token attempt to meet our country's critical housing needs.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

SALARIES AND EXPENSES

For an additional amount for "Salaries and expenses", equal to the total amounts of gifts, bequests, and devises of money, and other property received by each Endowment under the provisions of section 10(a)(2) of the National Foundation on the Arts and the Humanities Act of 1965, as amended, not to exceed a total of \$3,000,000, to remain available until expended.

AMENDMENT OFFERED BY MR. GROSS

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 13, strike out all of lines 13 through 20; and on page 14, strike out all of lines 1 and 2.

Mr. GROSS. Mr. Chairman, let me emphasize that this is a big bill. This is a \$4 billion supplemental appropriation bill making additions to the regular appropriation bills of last year. And, I want to underscore what the gentleman from Michigan (Mr. CEDERBERG) said earlier. He said, in effect, that these supplemental appropriation bills are coming too fast. They make meaningless the validity of the regular appropriation bills.

Mr. Chairman, my amendment would strike out the \$3 million for the Arts and Humanities Foundation. I would like to ask the proponents for handing over another \$3 million to this Arts and Humanities Foundation if they have read the latest casualty figures for Vietnam war, if they have, whether they do not think it is more than slightly tragic to be spending this money for poetry reading and ballet dancing when we are in the midst of a horribly costly full-scale war in men and money. We have lost 35,000 men killed in action in Vietnam, nearly another 6,000 dead from various other causes in connection with this war and 225,000 wounded. These arts and humanities people seem to be concerned mostly with bailing out bankrupt cultural centers, such as the one in Atlanta, Ga., while the Federal debt climbs and inflation gallops on.

I remind you of the testimony of Charles Mark, the planning and analysis director of this organization. He wants this money so they can transport actors from Louisville, Atlanta, Cincinnati, and Minneapolis—among other places—to Broadway at the expense of the taxpayers. When they get there, Mr. Mark said, they will dance dances, present chamber opera, whatever that is, and give poetry readings.

Mr. Mark failed to give any testimony on the subject of where the public's money has already gone at the hands of this Arts and Humanities setup.

It would be interesting to know, too,

if they plan any more grants to study Apache Indian history, or to make a computer analysis of style problems in epic poetry; or for research for a book on medieval comic opera.

Are they going to shell out more money for a study of aspects of Wordsworth's reading and writing "which have gone unnoticed or misinterpreted"?

Perhaps they have another grant in mind to study the background of 17th century members of Parliament.

Maybe they plan another grant or two for a study of the leading literary critics of the 19th century Spanish literature.

These people have never, as far as I can determine, financed a study of the flight of our gold to foreign countries, nor has there been a grant to find out what tune Nero was playing when Rome burned. Maybe we could use that tune today as a sort of a second national anthem, when we talk in terms of giving an additional \$3 million to people who engage in spending the taxpayers' money for purposes of this kind. Here is \$3 million we could save, and we had better start saving the millions or we are never going to save the billions.

Mr. Chairman, I urge adoption of the amendment and yield back the balance of my time.

Mr. THOMPSON of New Jersey. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I will not take 5 minutes. It is not necessary, I believe, because my beloved friend from Iowa has not caught up yet with the question that he asked 3 years ago when, of all things, being from an agricultural State, he said that he did not know the difference between a bale of hay and a ballet dancer. That is rather remarkable, being from that area. One might expect that someone from Manhattan or places like that would not know that difference, at least, they would not know a bale of hay.

Mr. Chairman, the fact of the matter is that this is really a startlingly small amount of money, even though it is what was requested for matching grants. The gentleman from Iowa and some of the members of the committee might find it perfectly easy to deride such things as interpretation of poetry and 19th-century Spanish literature, or anything else that makes life beautiful.

Mr. Chairman, to equate this amount of money with what happens in Vietnam is, I believe, ridiculous. Probably this amount of money would not even pump the water out of that submarine at Mare Island.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of New Jersey. I will be glad to yield to my friend from Iowa.

Mr. GROSS. Well, it might help.

Mr. THOMPSON of New Jersey. It might help. It would cost, probably, much more than \$3 million to pump it out, that is true.

Mr. GROSS. I did not know in New Jersey that \$3 million could be spent on notice, but perhaps that is true.

Mr. THOMPSON of New Jersey. That what?

Mr. GROSS. That \$3 million could be spent on notice, that it had any real meaning.

Mr. THOMPSON of New Jersey. This has very real meaning, I will say to my friend from Iowa. This covers the entire governmental operation with respect to those grants to the arts and the humanities, to scholarship, and to the beautiful things in life.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of New Jersey. I am delighted to yield to the distinguished majority leader.

Mr. ALBERT. Mr. Chairman, I wish to associate myself with the remarks of the gentleman from New Jersey. This appropriation item gives us the opportunity to get private contributions into this very important area. On another point, while the gentleman has called attention to some areas, that might be humorous to some of us, certainly, none of us would, I hope, undertake to hamstring the artists and humanists of this country by trying to circumscribe the areas in which they operate. This program has been well run. I have had an opportunity to examine its scope and operations, and I commend the great men who have administered it.

Mr. THOMPSON of New Jersey. I quite agree with the distinguished majority leader.

Mr. ST GERMAIN. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from Rhode Island.

Mr. ST GERMAIN. Mr. Chairman, I thank the gentleman for yielding. I would like to quote a project that took place just recently in Rhode Island. It was a very healthy and excellent demonstration. As a result of funding from the arts and humanities in Rhode Island, we had a project called Discovery which visited the high schools of the entire State—the theater.

The children who were benefited by this program were very disappointed when they found out that Project Discovery might very well not be continued this year because of lack of funding.

So they put on a demonstration march to the State House hoping that the State would help to fund and that private funds would come in so that they could continue Project Discovery.

I feel that if this type of demonstration can be generated from this funding, certainly it is a healthy thing for the future of our Nation.

Mr. THOMPSON of New Jersey. The gentleman has pointed out something that is very valuable, as has the majority leader.

The fact is that since the passage of this legislation nearly every State in the Union has formed its own State arts council and has turned the attention of the youngsters and of the populace of the States to the beautiful things in life. They may not have much value to some of us, but they do to me and they do to the children and they do to elderly people, such as my friend, Dr. Barnaby Keeney.

This money will generate probably three times as much as the appropriation provided for here. The Endowments on the Arts and the Humanities have done a truly magnificent job with very meager resources.

Mr. HUNGATE. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman.

Mr. HUNGATE. Mr. Chairman, if I understood the gentleman correctly, the possibility may be that some of our colleagues cannot distinguish a ballet dancer from a bale of hay, and I believe that this would justify a considerable expenditure for cultural enrichment.

Mr. THOMPSON of New Jersey. I suppose it would.

Mr. Chairman, I would like to express my appreciation to the subcommittee and to the committee and my gratitude and the gratitude of our great constituencies who are interested in the arts and humanities for their work and for this very modest contribution.

Mrs. HANSEN of Washington. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the \$3 million placed in this bill is to provide for matching grants. For every dollar that the Government spends here, another dollar or more of grants will be donated and used to further the program of the arts and humanities.

After listening to the debate a little earlier on another subject, I am just going to repeat what I said last year.

We have solved many technical problems. We have made magnificent contributions in the sciences and, yet, not yet does this Nation understand the depth of its soul. A better understanding of ourselves can be the contribution of the humanities.

To the gentleman from Iowa, may I ask, what is wrong with knowing the history—the proud history of the Apache Nation?

Mr. Chairman, I want to read a statement by a rather well-known business enterprise. A page advertisement was taken in the newspapers of the West about 3 weeks ago by the Pacific Northwest Bell.

At the top of the page appear the words "The Big Change in Arts and Culture." At the bottom it says:

Like many others in the business world today we recognize that the opportunity to enjoy the arts is an important part of the quality of living we enjoy here in the Pacific Northwest. And like any part of our environment, their growth must be nurtured and stimulated. You might say that's been our theme in this Big Change series. For what we've been saying is that the assets we have in Washington must be matched by the deeds of men if we are all to enjoy the productive life. And that's an unchanging assignment.

I strongly urge you to defeat this amendment.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mrs. HANSEN of Washington. I yield to the gentleman.

Mr. GROSS. How about the history of the Comanches, and the Arapahos and all the rest of them—the Mohawks, the Sioux, the Cherokees, and all other Indian tribes?

Mrs. HANSEN of Washington. If the gentleman will yield, I think the history of every group who has been part of this country's history is part and parcel of this country's great heritage and should be more widely known. It is part of our culture.

I am personally proud to have worked with the Indian people of this Nation and to understand their role and their relationship in today's world.

Mr. GROSS. The gentlewoman in the very brief hearings that we held on this subject said it was her understanding that the appropriations—

The CHAIRMAN. The time of the gentlewoman from Washington has expired.

Mr. McDADE. Mr. Chairman, I merely wish to point out to the Members on both sides of the aisle that this is a recommendation that comes from the subcommittee in unanimous fashion. We gave it what we thought was an important and extensive hearing. In our judgment, it is an item in which our Government, our Nation, our people, ought to be interested.

The question is really at what level. I believe all of us will agree that this is a minimal level of Federal funding. I would urge my colleagues on both sides of the aisle to support the position of the subcommittee and defeat the amendment offered by my colleague from Iowa.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. McDADE. I am happy to yield to the gentleman from Iowa.

Mr. GROSS. Did not the gentlewoman from Washington, in opening the quick hearing on this \$3 million item, say that, in effect, she was surprised that they would be asking for this funding since she thought supplemental appropriations dealt with emergencies? What kind of emergency is there in this situation?

Mr. McDADE. I would say to my colleague—and the gentlewoman from Washington, of course, is able to speak for herself ably—but I would point out that this is a matching program in which we are making an effort to stimulate non-Federal funding in this area, and in order to do this we are providing funds which can be matched in this bill.

Mr. GROSS. But that scarcely makes an emergency out of this thing.

Mr. McDADE. I think we have to do it in order to stimulate the non-Federal funding. We ought at least to come forward with some Federal funding to keep faith. That is what we are doing.

Mrs. HANSEN of Washington. Mr. Chairman, will the gentleman yield?

Mr. McDADE. I yield to the gentlewoman from Washington.

Mrs. HANSEN of Washington. May I say that in our committee questions were asked to develop the fullest amount of information necessary to find out what the funds were designed to do. We were told that for every dollar that would be provided in the Federal funding there is

more than a dollar pledged in gifts to the arts and humanities under the matching program. We did not want to appropriate more than would be necessary. We did want to know why, exactly, we needed the money at this time, and the complete answers are in the record of our hearings.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that all debate on the amendment close.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. JOELSON. Mr. Chairman, I object.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I move that all debate on this amendment close in 5 minutes.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The motion was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. JOELSON).

Mr. JOELSON. Mr. Chairman, I rise in opposition to this amendment. I think that when the history books of our Nation are written, we are going to be judged not on the number of angry bombs we were able to produce, or the screaming missiles, or the whining bullets, but by what kind of culture or civilization we created.

The gentleman from Iowa mentioned Vietnam. I believe the people of this country want to acknowledge that there are more things to life than wars, and that there are the pursuits of peace, and the advantages and the blessing of peace. We would like to acknowledge that we are a humane, an interested, and an aware people.

I do not think a Congress that today is appropriating \$1.2 billion for killing has the right to turn its back on a token \$3 million for the appreciation of culture and the blessings of democracy and learning. This may seem a very paltry matter, but I think it goes to the heart of what America is and what America would like to be and what America could become if we are willing to invest our wealth in our minds and our spirits. We must not become a nation of Philistines. We are not barbarians; we are human beings.

As one who would have chosen over Sparta, I urge the rejection of this negative amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. MAYNE).

Mr. MAYNE. Mr. Chairman, I would not want to take the position that \$3 million is a small amount of money, but considering the vast scope of this project, the National Foundation on the Arts and Humanities, this seems to me to be a very reasonable expenditure in this bill. I, therefore, speak in opposition to the amendment.

Cultural activities of this kind have never in the history of civilization operated at a profit. It has always been necessary to have either some Government subsidization or some other type of contribution from patrons or sponsors to

bring great works of art and literature to the peoples of the world. This has been necessary to make progress in raising the cultural and artistic standards of the human race.

We are not talking here about some vague experimental program, but of a program which has already proved its worth operating within the confines of a relatively modest budget.

As the gentleman from New Jersey (Mr. THOMPSON) said, the arts councils have been very successful throughout the United States. I can certainly assure my colleagues that the Iowa Arts Council, under the direction of Jack E. Olds, has been an outstanding success. This has been a bipartisan effort in the State of Iowa commenced during the administration of a Democratic Governor with an appropriation of \$50,000. This year a Republican Governor has recommended an appropriation of \$61,460 and the full amount has been voted by a Republican legislature. Using State and Federal funds, the Iowa Arts Council has been able to bring great music, great literature, and great drama to every corner of the State. The 1967-68 biennium report of the council shows that 33 projects were undertaken and presented in a great majority of Iowa's 99 counties.

To mention some of these, there were performances by the Des Moines Civic Ballet at Marshalltown and Des Moines and a performance by the Dubuque City Youth Ballet Company in collaboration with the University of Northern Iowa.

An extended tour by the University of Northern Iowa Concert Chorale and Concert Band; a tour of western counties by the Iowa State Symphonic Band; recitals by the internationally known Iowa violinist, Charles Treger, the only American to win the famous Wieniawski competition in Poznan, Poland, and by Pianist David Kaiserman.

A tour of 24 communities by poets from Iowa colleges and universities who read and interpreted their poems to an estimated 5,000 high school students; a drama consultation and technical services project from Iowa State University which brought staff members as consultants to about six communities.

An artist-in-residence program which brought the celebrated painter, Marion J. Kitzman, of Iowa State University, to two communities; a touring exhibition of prints by 12 Iowa printmakers; a traveling program showing and discussing films as an art form was presented in four communities.

An Iowa designer-craftsmen touring exhibit assembled by Donn Young, director of the Cedar Rapids Art Center, which has toured 22 communities.

These are some of the extremely worthwhile programs which the Iowa Arts Council has been carrying forward with the aid of grants from the National Foundation on the Arts and Humanities, and from the Iowa State Legislature. Even more extensive and rewarding programs for the people of Iowa are being planned for next year, if sufficient funds such as those provided for in this bill can be made available through the Arts and Humanities Foundation. The

Iowa Legislature has already done its share having appropriated the full amount of \$61,460 recommended by Governor Ray for the 1969-70 biennium. I strongly urge that this House similarly show its confidence in the worthiness of the program, by overwhelmingly rejecting this amendment, the purpose of which is to delete all supplemental funds for the Arts and Humanities Foundation.

Evidently some Members of the House are still unaware of the vigorous cultural and artistic activity which has long thrived in the State of Iowa. There has even been some intimation that one of the most beautiful of the performing arts, the ballet, is completely unknown in Iowa. Nothing could be further from the truth. In addition to fairly frequent appearances by national touring companies, a number of Iowa colleges, universities, and cities sustain their own ballet groups. I can assure the House that many Iowans know what ballet dancers look like. Thanks to the Iowa Arts Council and the National Foundation on the Arts and Humanities, increasing numbers of Iowans are having an opportunity to decide for themselves whether their lives are indeed enriched by the humanities and the arts. I urge all my colleagues to vote against this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana.

Mr. JACOBS. Mr. Chairman, the author of this amendment has said we should start with a half million dollars or with \$3 million before we can expect to save billions of dollars. The House has just rejected an opportunity to register a protest against the literally billions of dollars in waste which has been exposed in the Defense Department. Therefore, I would suggest a slogan for this amendment: "Billions for defense waste, but not one cent for what we are supposed to be defending."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. GROSS).

The question was taken; and on a division (demanded by Mr. GROSS) there were—ayes 21, noes 99.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

OFFICE OF EDUCATION

HIGHER EDUCATIONAL ACTIVITIES

For an additional amount for "Higher educational activities", including payments authorized by section 108(b) of the District of Columbia Public Education Act, as amended (Public Law 90-354, approved June 20, 1968), and annual interest grants authorized by section 306 of the Higher Education Facilities Act, as amended (Public Law 90-575, approved October 16, 1968), \$11,161,000, of which \$3,920,000 shall remain available until expended for said annual interest grants: *Provided*, That, in addition, \$160,000 shall be derived by transfer from "Community mental health resource support", Public Health Service, fiscal year 1969.

AMENDMENT OFFERED BY MR. SCHERLE

Mr. SCHERLE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SCHERLE: On page 15, at the end of line 6, strike the period and insert the following: "Provided further, That none of the funds appropriated by this Act for annual interest grants authorized by section 306 of the Higher Education Facilities Act, as amended by P.L. 90-575, shall be used to formulate or carry out any grant to any institution of higher education unless such institution is in full compliance with section 504 of such Act."

Mr. SCHERLE. Mr. Chairman, the amendment I am proposing would prohibit any part of the funds appropriated by H.R. 11400—under chapter VII, higher education activities found on page 14 of this supplemental appropriation bill—for the purpose of such annual interest grants to be granted to any institution which is not in full compliance with the provisions of section 504 of the Higher Education Amendments of 1968.

Under chapter VII of the bill before us, Congress is asked to appropriate \$3.9 million for interest subsidy grants for college construction loans. This Federal financial assistance would result in the colleges being able to obtain an estimated \$145 million in loans from non-Federal sources.

The taxpayers have a large stock in the higher educational institutions in this country—billions of their tax dollars aid it each year. There is an urgent need for college administrators to eliminate the radical troublemakers. The clear congressional intent is that the colleges either ought to clean up their campuses or suffer the consequences.

I can think of no more powerful way to impress upon the administrators the seriousness of their failure to impose section 504 than to tell them that such failure would mean that they will not be eligible for this additional type of aid.

Section 504—Public Law 90-575—basically requires that if any student is found, after a hearing by the college or university, to have either been convicted of a crime in a court of record or violated a school regulation which was of a serious nature and contributed to a disruption which prevented his faculty or other students from attending to their duties or engaging in studies, then that student shall not be eligible for certain Federal student loan programs for at least 2 years.

Some colleges are laboring under the false impression given by former Secretary of Health, Education, and Welfare, Wilbur Cohen, who felt that enforcement of section 504 was not mandatory. However, the present Secretary of Health, Education, and Welfare, Robert Finch, in testimony before a House Subcommittee on Special Education, of which I am a member, on April 18, 1969, made it clear that section 504 imposed a mandatory obligation on the college. Secretary Finch said:

As with any provision of law, Section 504 demands compliance in good faith by those to whom it applies. So we expect that colleges and universities will strive in good faith to implement its provisions for aid termination where the facts disclose the "abuses" have taken place.

The amendment only requires the institution of higher education which

wishes to qualify for funds under the annual interest grant program to obey the law as far as section 504 of the Higher Education Amendments of 1968 is concerned. Surely no institution of higher education can make any claim that it should be "beyond the law" in any respect, or that it should not have to comply with the provisions of section 504. It is in fact "bad faith" on the part of an institution of higher education if it applies for one form of Federal assistance while it is guilty of refusal or failure to comply with the requirements of the law in its administration of another Federal assistance program.

The intent of Congress that the colleges must hold hearings is most clear. Not only was it clear from the language used in section 504, but in addition the Congress last year passed substantially similar amendments to three different appropriations bills. They were the Labor and Health, Education, and Welfare Act for fiscal 1969, Independent Offices Appropriation Act—Public Law 90-550—and NASA appropriation—Public Law 90-373.

This amendment does not bring the Federal Government into the field of academic discipline. It merely states that none of the funds under this section will be granted to any institution that is unwilling to comply with the present Federal law.

The amendment is important not so much in the program that it amends, but in the principle that it establishes. The relatively new and small annual interest grants program is the only rather general assistance program relating to institutions of higher education in the present bill. My amendment will help the annual interest grant program, by insuring that the limited funds will go to those institutions which are willing to help themselves and to curb the violence and disorders disrupting and in many ways destroying these institutions by using all appropriate means available, including the tools made available to these institutions by section 504 of the Higher Education Amendments of 1968. Denial of an annual interest grant will not invoke serious injury upon any institution, but it would show the institutions that Congress is concerned and demands compliance with section 504 of the Higher Education Amendments of 1968. The experience gained under this amendment would be of great interest when the Congress considers Department of Health, Education, and Welfare Appropriations legislation for fiscal year 1970 later this year, and when it considers other legislation in the field of Federal assistance to higher education.

In brief, my amendment simply says that section 504 of the present law must be enforced, not ignored; that the time to stop disorder on the campuses of our Nation is now, not later; and that the American people are fed up with placid college administrators who are unwilling or unable to carry out their responsibilities to their colleges, their communities, or their country.

Mr. MAHON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, as I understand the amendment offered by the gentleman from Iowa, he is drawing attention to section 504 of the Higher Education Act and to sections of the Labor-Health, Education, and Welfare appropriation bill, the independent offices appropriation bill, and the Defense appropriation bill of last year which contain certain restrictive language with regard to aid to the colleges. To some extent, the gentleman's amendment merely seems to endorse the present law. I have no authority to speak for the Committee on Appropriations, but personally I do not see anything objectionable about the amendment.

I would ask, Mr. Chairman, unanimous consent that all debate on this amendment be closed in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. PODELL).

Mr. PODELL. Mr. Chairman, it disquiets me to see an effort afoot in the House to coerce universities and colleges into taking action against student protestors. Offered in the form of an amendment to the supplemental appropriations bill we are considering, it aims at a Federal intrusion onto almost every campus in the Nation, deciding who shall be penalized, and who shall not be.

Such an amendment requiring institutions of higher learning applying for Federal interest subsidies for construction projects to certify that they are complying with a legislative antidisorder measure passed by Congress last year. Here we have those who cry the loudest about Federal intervention, demanding such intervention in the worst possible manner.

Such an overshadowing Federal presence and the threat implied is the very antithesis of what Congress intentions were when Federal aid to colleges and universities was enacted into law. Shall the National Government use its freely offered aid to education to require each school to retain or expel students? Is the Government about to set up standards for scholarship as well?

Enactment of such a coercive measure would be the first step toward abrogation of all the liberties our campuses embody and teach. Academic freedom and the right to dissent will be next. This is intrusion with a vengeance.

I hold no brief for those who bring weapons onto campuses or destroy property. I have no sympathy with those who use the right of protest to prevent the vast majority from attending classes and obtaining educations.

Simultaneously, Mr. Chairman, I am vehemently opposed to those who have so little faith in our young people, our ideals and our institutions. At the first sign of trouble, their answer is coercion, abrogation of traditional liberties and the imposition of harsh laws and harsher penalties. Already overreaction is visible in the form of midnight arrests and pounding on the door in the wee hours.

This is no solution. It is the very antithesis of our country. We must not allow ourselves to be carried away by the frightened cries of those with little faith and no understanding of democracy.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

Mr. KOCH. Mr. Chairman, the potential effect of this amendment is most abhorrent. It would substitute the judgment of the Secretary of HEW for that of the chancellor of every university with respect to student discipline. And cruelly, if such oversight were exercised so as to find the university chancellor derelict, then under this amendment the Federal funds granted to the university for the construction of academic facilities would be withdrawn affecting all students, good and bad alike, violent and nonviolent.

Those who have always feared the assertion of Federal power in education now seem bent on using it in a punitive manner. Students must be held responsible for their conduct—but the Federal Government has no business using its funds to play schoolmaster.

This amendment establishes an ugly precedent and I oppose it.

The CHAIRMAN. The time of the gentleman from New York has expired.

The Chair recognizes the gentleman from Ohio (Mr. HARSHA).

Mr. HARSHA. Mr. Chairman, I rise in support of this amendment. The American people are fed up with the violence, destruction of property, intimidations, and disruptions on the college campuses. They are sick and tired of seeing their tax dollars used for purposes for which they were never intended. They are sick and tired of seeing educational facilities which they funded abused and misused for purposes for which they were never intended.

This amendment merely serves notice on the faculties and administrators that they must enforce the law on their campuses and they must put their own house in order so that academic freedom can be maintained in these institutions, so that the great majority of students who earnestly desire an education may pursue their efforts to improve their knowledge and skills in an atmosphere conducive to that goal.

This amendment is not repressive. It does not impose Federal intervention on the universities, but to the contrary will help insure academic freedom. It should serve notice, however, to the faculties and administrators that unless they do put their own house in order and bring a halt to this nonsense, that they themselves have encouraged, that the American people will no longer stand for such actions and that this Congress will undoubtedly take far sterner measures in the event that they continue to fail to meet their responsibilities.

This is a most proper amendment and is a proper area in which this Congress can act. Certainly there is a Federal interest involved here because of the great expenditure of Federal funds in the name of higher education, and the Congress has a responsibility to see that these funds are properly used and that the

facilities constructed with these funds are not destroyed or damaged.

I have been approached from several sources inquiring whether or not I would offer my bill as an amendment to this legislation, and I was also asked, in the event I did not offer my bill, if someone else offered it, would I support it as an amendment to this supplemental appropriations bill.

I informed those who made such inquiries that I would not offer my bill nor support anyone else who did in that event. While I feel very strongly on this issue, it is my feeling that the Special Subcommittee on Campus Disorders under the chairmanship of the distinguished lady from Oregon has acted very equitably and fairly in this matter.

They are conducting hearings on the issue and have been doing so for several weeks. They have afforded me an opportunity to express my views on behalf of my legislation and afforded others a similar opportunity. It is my feeling that we first should exhaust the usual legislative process before we resort to any other methods to legislate on this issue.

Therefore, I have indicated that I would not offer my legislation at this time.

I think the proper procedure is to let the committee work its will and to inquire into all the ramifications of this issue. I am convinced the committee is doing that and will come up with some suggested legislation to cope with this issue of such concern to the American people. In the event it does not, there will be ample time and opportunity to offer my legislation or other measures to cope with the situation.

I see nothing contradictory with that approach in supporting this amendment as the amendment merely clarifies existing law and tells the faculties and administrators that before they receive any future funds they must certify to the Secretary of Health, Education, and Welfare that they will comply with existing law. This is little enough to ask of these faculties and administrators, and I would hope that the committee would accept this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Maine (Mr. HATHAWAY).

Mr. HATHAWAY. Mr. Chairman, I rise in opposition to the amendment. As I understand, the gentleman proposes that institutions of higher education certify that they are in compliance with section 504 of the Higher Education Act as a prerequisite to making application for programs which will be funded under the second supplemental appropriation bill for fiscal year 1969. As a practical matter, this will mean that institutions will be required to make this certification with respect to just one program—the program providing Federal payments to reduce interest charges on loans obtained from the private money market for the construction of academic facilities.

Mr. Chairman, the bases for my opposition to this amendment are numerous. First of all, the amendment will be most selective in its application. Under the \$3.9 million supplemental appropriation

proposed for the interest subsidy program, it is estimated that less than 250 institutions of higher education, out of a possible 2,000, will be able to participate in the program. Thus, under the amendment only a small percentage of our Nation's colleges and universities will be obligated to meet the requirement mandated by the gentleman's amendment. All other institutions, many of them carrying on extensive student assistance programs, will not be required under the gentlemen's amendment to file a certification of compliance.

Mr. Chairman, more objectionable than this, however, is the very dangerous precedent which this amendment would establish. Action taken last year in the Higher Education Amendments of 1968 was directed at disruptive students. This amendment was not directed at institutions of higher education as is the gentleman's amendment. We must not confuse our purposes for it is a much different matter to suggest that we punish colleges and universities than it is to say that we should punish students for illegal actions.

As you know, the Subcommittee on Special Education has conducted extensive hearings on the question of student unrest and, not one witness, and I include Secretary Finch and Attorney General Mitchel, has suggested that we enact legislation directed at institutions of higher education. Quite the contrary is the case. Just yesterday, Attorney General Mitchel advised us that he did not recommend any additional Federal legislation at this time. What he was saying to us is what should be repeated here today—that there is sufficient existing authority to meet the problem.

There is clearly sufficient authority to deal with any institution of higher education which refuses to comply with section 504. There is absolutely no need to add the requirement the gentleman's amendment suggests. It can only be viewed as a totally unnecessary amendment which would be selective in its application and which would establish a most dangerous precedent.

The CHAIRMAN. The time of the gentleman from Maine has expired.

The Chair recognizes the gentleman from Colorado (Mr. EVANS).

Mr. EVANS of Colorado. If the proponent of the amendment would answer a question, I would like to pose an inquiry. If his amendment passes, how and by whom is it going to be determined as to whether a college or university is in compliance with the laws as passed last year?

Mr. SCHERLE. Mr. Chairman, will the gentleman yield?

Mr. EVANS of Colorado. I yield to the gentleman from Iowa.

Mr. SCHERLE. Under section 504, if they comply with the law as I indicated, there would be no problem whatsoever.

Mr. EVANS of Colorado. My question is how and by whom is it determined that they are complying with the laws which have been previously passed?

Mr. SCHERLE. We leave the determination in the hands of the college administrators, exactly where it belongs, and they will have to make the determi-

nation as to whether they are in compliance with the statutes.

Mr. EVANS of Colorado. When the gentleman mentions "compliance with the statutes," who will judge as to whether or not they are in compliance with such statutes under the gentleman's amendment?

Mr. SCHERLE. The Secretary of Health, Education, and Welfare will have final jurisdiction in the matter.

The CHAIRMAN. The time of the gentleman from Colorado has expired.

The Chair recognizes the gentleman from Iowa (Mr. SCHERLE).

Mr. SCHERLE. Mr. Chairman, the statement was made a moment ago that this is punitive with reference to the penalty involved. Certainly there should be a penalty. I think it is very important that the penalty be available for use. This is exactly what it would amount to: It would leave the authorization in the colleges and universities where it belongs and all we say is, "You enforce the law." We take no jurisdiction away from them. The discretion lies in the areas of the college and university and all we are asking is that they enforce the law.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. SCHERLE. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. If it remains in the hands of the office of education it would be handed over to the commissioner of education?

Mr. SCHERLE. It will rest in the Secretary of Health, Education, and Welfare.

Mr. EVANS of Colorado. In other words, he will have jurisdiction over every college and university which receives Federal funds?

Mr. SCHERLE. No, the decision to comply with section 504 would remain with the college and university administrators. If they do not comply with the law then funds would be cut off.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

The Chair recognizes the gentleman from New Hampshire (Mr. WYMAN).

Mr. WYMAN. Mr. Chairman, I rise in support of this amendment. It was my privilege to draft and introduce those portions of section 504 that do not relate to conviction. There is no reason why we should not now require compliance with statutes that were passed by this Congress by a vote of 6 to 1. The only action required on the part of the schools is either that someone should be convicted or that, after notice and hearing, they have been found by the school to have wilfully participated in a serious disruption of the university administration. This amendment would leave the control of the situation in the school administration where it belongs, except in cases of convictions in court, which, incidentally, I hope will be extended to include convictions for contempt of court at some later date.

Mr. Chairman, I think the amendment is a worthy one in coping with some aspects of the problems which we are now experiencing at our educational institutions. This is not the complete legis-

lative response, but it helps. In due course hopefully the subcommittee headed by the distinguished gentlewoman from Oregon (Mrs. GREEN) will present additional general legislation firmly imposing sanctions and appropriate penalties for the reprehensible deliberate insurrection we have been witnessing with dismay on too many campuses in this country.

The CHAIRMAN. The time of the gentleman from New Hampshire has expired.

The Chair recognizes the gentlewoman from Oregon (Mrs. GREEN).

Mrs. GREEN of Oregon. Mr. Chairman, section 504 was adopted by this Congress last year by an overwhelming majority. As I understand the amendment this does not cut off funds. It requires each university which wants to apply for funds to file a certificate of compliance—simply a statement to the effect that they will comply with the law.

I do not believe there is anything repressive about this; I do not believe it is punitive, but it serves notice upon the colleges and universities of this country that the Congress of the United States has a legitimate concern about the violence which is now current on our college campuses.

This Congress is concerned when advance amnesty is demanded. This Congress is concerned when it appears that a college faculty capitulates to nonnegotiable demands at the point of guns. This Congress is concerned when the faculty of a liberal arts college of a great university votes to ask that criminal charges be dropped for over 200 students and faculty members who participated in a recent riot. This serves notice that the patience of this Congress of the American people is not unlimited. This is to serve notice to the far left that we are sick and tired of the violence we see in this country, and that this Congress is determined to do whatever it can to see that it is stopped. This is to serve notice to the small minority in the SDS, in the Black Panthers that this country will not tolerate the tyranny of the minority.

My committee, I believe, will have other legislation that we hope will be helpful in this situation. I hope that it will be considered in an atmosphere that is calm—that reason will prevail. I will not support legislation that will fall into the plans of the militants. I hope that this legislation will come to the floor of this House within the next few weeks. But I say that I see nothing repressive about the amendment that has been offered today, and I rise in support of the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania to close the debate.

Mr. BARRETT. Mr. Chairman, the Housing and Urban Development Act of 1968 made many important advances in our efforts to provide good housing and good neighborhoods for all of our citizens. There is nothing in the 17 titles of that bill, however, that is more important than the new interest subsidy programs designed to foster homeownership

for families which could not otherwise afford it and a greatly expanded rental housing program. We all know the basic role which homeownership plays in our American way of life by giving families a sense of pride and dignity, a sense of responsibility for the community in which they live, and a sense of participation. The benefits of this aid for homeownership will go far beyond the individual families which receive them.

Mr. Chairman, I want to commend the Committee on Appropriations for the positive approach which they have displayed on most items in the complex supplemental appropriation request. At the same time I deeply regret that they failed to authorize the full \$50 million request for each of the interest subsidy programs. I am hopeful that the other body will grant the full request and hold it in conference. Another reduction which deeply concerns me is the complete elimination of the modest request for funds to enable HUD to carry out its extensive responsibilities under the fair housing legislation. The \$2 million requested in this supplemental is sorely needed for responsible administration of these duties. Again I am hopeful that the other body will include the full amount in its bill. In addition we should all stand behind the budget requests for the coming fiscal year which contains the full authorization for interest subsidies in the amount of \$100 million for each of the programs. In the case of fair housing funds, I am hopeful that the committee can be persuaded that the original budget proposal of \$14 million is fully justified.

Mr. Chairman, there is an urgent need to move ahead with housing legislation already on the books. My Subcommittee on Housing recently concluded hearings on our national housing goals and the witnesses were unanimous that these goals can be met if our existing authorizations are fully and promptly funded. I urge all of my colleagues to support this bill today so that we can get on with the job of providing a good home and a decent environment for every American family.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. SCHERLE).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. SMITH OF IOWA

Mr. SMITH of Iowa. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SMITH of Iowa: On page 14, delete lines 24 and 25 and on page 15, delete lines 1 and 2 and the first four words on line 3 and insert in lieu thereof: "\$7,241,000".

Mr. SMITH of Iowa. Mr. Chairman, this amendment eliminates the permission to begin a new program of interest subsidies for college construction in this supplemental bill. The bill carries \$3.9 million for this purpose. The Department has stated that if this permission is approved it will withhold direct loans from appropriations that have already been made for this fiscal year for the purpose of college construction.

Under this new program that they propose to fund, either colleges, junior colleges that are now being built, and universities, will sell bonds, and the Government will pay the interest above 3 percent. They do not propose to sell below face value in order to give an effective yield at the going rate of interest, and the Government pay the difference between the return and the face value, but instead to merely pay 1 year of the subsidy now, and then to go in debt for the rest, and pay it each year over a 35-year period.

So we see that obviously this is a gimmick to avoid the limitation in the Expenditure and Control Act of last year, or a gimmick to avoid the Mahon amendment limitation in this very same bill.

This proposition will cost \$140 million, but only \$3.9 million shows up in the budget, and we go into debt for the rest. This is only part of an overall plan that has been explained to us. In fiscal year 1970, they propose to spend \$7 million under the interest subsidy programs and to substitute that completely for the program of direct loans and grants to 4-year colleges. In other words, there will be no direct grants and no direct loans for undergraduate and graduate schools if we approve this approach.

Now in the two bills—\$3.9 million plus \$7 million plus a second year payment of \$3.9 million is all that shows up.

The cost of the Government is \$440 million. But all that shows up in the budget is about \$15 million and we will pay the rest over a period of 35 years.

This is deficit financing and backdoor financing and defeats the limitations in the Bow and Mahon amendments and in addition to that it makes the time that we spent on debt limitation bills a waste of time.

To make it more palatable, now they call this, "relying more on the public sector." But a rose by some name is still a rose. No matter what they call it. It is nothing but deficit financing.

I would not mind so much if we did not hurt junior colleges and colleges and universities at the same time.

I was on this subcommittee chaired by the gentlewoman from Oregon (Mrs. GREEN) when we developed the legislation that finally became this Higher Facilities Act. I thought we were trying to help the colleges, but now this is to be turned into a bill for the relief of investment bankers and it is not going to give the aid needed to the colleges.

The colleges face about a 50 percent or more increased enrollment in the next 7 or 8 years. They have already engaged in selling as many bonds as they feel they can market with the full interest rate. In addition to that, they need to get some grants and some direct loans to supplement what they can raise through contributions.

I think it is an involved subject and if we are going to substitute completely an interest subsidy program for the good college grant and direct loan programs, it should not be in a supplemental and it should be fully discussed here.

If we do not carry this amendment, then these debt limit bills, limitations

on expenditures and the Expenditure Control Act, and the Nixon budget, which claimed a \$4 billion reduction, all are as phony as a \$3 bill.

If my amendment does not pass, the cost to the Federal Government will be more, most of the cost will be hidden and colleges will be in worse financial condition.

I urge my colleagues to adopt this amendment.

Mr. FLOOD. Mr. Chairman, I rise in opposition to the amendment. Mr. Chairman, it pains me that I must oppose my colleague on my subcommittee who is generally my strong right arm.

The facts are these. Congress authorized this method of financing in Public Law 90-575, approved just last October 16; so Congress is on record as being for it. The exact number of dollars and appropriation language that is in the bill was requested of the Congress by the Johnson administration; so the Johnson administration was for it. It was approved by the present Nixon administration; so they are for it. Of course, it would not be in the bill if the Committee on Appropriations were not for it.

Thus, under no circumstances will the appropriation circumvent the Mahon and Bow expenditure limitation proposal which applies to the 1970 budget.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. FLOOD. I yield to the gentleman.

Mr. JONAS. Is it not true that the force and effect of this amendment would be to return to Treasury borrowing?

Mr. FLOOD. That is correct.

Mr. JONAS. And that it would require the Treasury to go out into the market and borrow \$145 million for a program which we can handle in the way the committee proposes to handle it.

Mr. FLOOD. The only thing wrong with that statement is that I did not think of it. That is absolutely correct.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. SMITH).

The amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SALARIES, OFFICERS AND EMPLOYEES
Office of the Speaker: From and after March 1, 1969, the basic annual lump-sum ceiling allowance applicable under this appropriation is hereby increased by \$2,230.

AMENDMENT OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. NATCHER: On page 16, strike out line 16 through 19, inclusive.

Mr. NATCHER. Mr. Chairman, this line item is no longer necessary. The amendment meets with the approval of the Speaker.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to ask why this item is being stricken.

Mr. ANDREWS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. When the committee met, we were requested by the Speaker to increase the basic lump-sum ceiling allowance for his office. Since that time the Speaker has lost his most valuable "right arm," his former administrative assistant, and has now promoted his legislative assistant to that position. The situation has changed and there is now no occasion for the item. I believe the gentleman would agree.

Mr. GROSS. I agree and I appreciate the gentleman's explanation.

Now that we are on the subject of a pay increase, and since there are salary increases on almost every page of this bill, and it is hard to pull together in any one place information with respect to them, let me ask the gentleman this question: Where are the funds for the pay increases for the Members of Congress that went into effect recently?

Mr. ANDREWS of Alabama. Page 23, in another section of the bill.

Mr. MAHON. Page 23, line 12.

Mr. GROSS. Page 23, line 12; and this is for what period of time for Members of the Congress?

Mr. ANDREWS of Alabama. To the end of the current fiscal year, that is, to midnight of June 30, 1969.

Mr. GROSS. Are there any funds in this bill, is there any forward funding in the bill providing pay increases for the leadership of the House and the other body? Are there any funds in this bill at all for the possible funding of the increase contained in the bill that passed the House and then was shelved in the Senate?

Mr. ANDREWS of Alabama. I again refer the gentleman to the figure on line 12, page 23, for the same period of time, for the rest of this fiscal year.

Mr. GROSS. For forward funding of the legislation that was passed by the House and that is now gathering dust over in the Senate? Surely there is no funding for the leaders' pay increase which has not been authorized.

Mr. ANDREWS of Alabama. Yes, it is in there.

Mr. GROSS. In the bill we are considering?

Mr. ANDREWS of Alabama. Yes.

Mr. GROSS. You are putting up the money without an authorization?

Mr. ANDREWS of Alabama. We held these hearings over 2 months ago, and inserted the funds to carry out the bill which had passed the House at the time. I should add, of course, that the funds cannot be paid unless the House bill passes the Senate and becomes law.

Mr. GROSS. How much other money is there in this bill on the basis of forward funding for items that have never been authorized by the Congress?

Mr. ANDREWS of Alabama. Referring to the bill in question, one-third of the annual amount involved. The actual amount would be \$19,835.

Mr. GROSS. One-third of the annual amount involved?

Mr. ANDREWS of Alabama. For these particular jobs.

Mr. GROSS. For these particular jobs?

Mr. ANDREWS of Alabama. That is correct.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman from Texas.

Mr. MAHON. The funds cannot be expended unless they are authorized. There is some money here in anticipation of authorization. That money remains in the bill, but as final action has not been taken on the legislative authorization, it is still alive as an issue, and there is nothing to be gained by striking this from the bill.

Mr. GROSS. Then this is not even a supplemental appropriation bill? Is this the procedure of the House Appropriations Committee to put in the supplemental bills funds for items that are not even authorized by Congress?

Mr. ANDREWS of Alabama. Mr. Chairman, we have not had a situation like this since I have been on the committee. This is the last supplemental bill for the current year and the last opportunity for the committee to fund these increased salaries—if the bill becomes law. The funds are in here on that contingency.

Mr. GROSS. If the leader's pay increase becomes law, there would be every opportunity to bring a bill to the House floor.

Mr. ANDREWS of Alabama. I hope this will be the last supplemental bill for this fiscal year.

Mr. GROSS. Does the gentleman mean it could not put it in a regular appropriation bill?

Mr. ANDREWS of Alabama. We will not have another one affecting this particular subject.

Mr. GROSS. Will we not have a house-keeping bill before this session is over?

The CHAIRMAN. The time of the gentleman from Iowa has expired.

(By unanimous consent, Mr. GROSS was allowed to proceed for 2 additional minutes.)

Mr. ANDREWS of Alabama. Mr. Chairman, if the gentleman will yield further, we will not have an appropriation bill for the legislative establishment for the remainder of this fiscal year. I doubt if we will get the regular legislative bill for fiscal year 1970 on the floor before the 1st of July.

Mr. GROSS. This is a most unusual procedure, I will say to the gentleman.

Mr. ANDREWS of Alabama. I say to the gentleman this is the first time we have had a situation like this since I have been on the committee. The money cannot be spent, and will revert to the Treasury if the bill now pending before the other body does not become law.

Mr. GROSS. If it is not acted upon by July 1.

Mr. ANDREWS of Alabama. That is correct. The extra funds can only be used if the bill pending in the other body becomes law.

Mr. GROSS. Then what is the gentleman going to do if the bill subsequently is passed?

Mr. ANDREWS of Alabama. We will not have anything to act on.

Mr. GROSS. After July 1, if the bill

subsequently is passed by the other body, then what will the gentleman do in order to get the money for the leadership?

Mr. ANDREWS of Alabama. We are meeting that contingency, making provision for that contingency in this bill. I say to the gentleman that this is the last opportunity this fiscal year that we will have to fund the increased salaries if the bill becomes law and the salaries are increased. If the bill does not become law, then the money will not be spent.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kentucky (Mr. NATCHER).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

TREASURY DEPARTMENT
BUREAU OF THE PUBLIC DEBT
ADMINISTERING THE PUBLIC DEBT

For an additional amount for "Administering the public debt", \$1,978,000; (and release of \$334,000 reserved under this appropriation pursuant to section 201 of Public Law 90-364).

Mr. GROSS. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I would like to ask the distinguished chairman of the Appropriations Committee about the increase of nearly \$2 million—apparently it becomes more than \$2 million if we take into account the release of other funds—for the Bureau of Public Debt. Why would there be a supplemental in this regard?

Mr. STEED. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Oklahoma.

Mr. STEED. In this item of operation in the Government there are certain fees they have to pay to the Federal Reserve Banks and to the commercial banks throughout the country for services rendered in the cashing of bonds and other transactions. The major part of this item here is what is needed to finish paying the claims they will have for the remainder of this fiscal year. The volume of this sort of business is turning out to be considerably more than the original estimates over a year ago.

Mr. GROSS. So the debt is going up? Is that what the gentleman is saying and increasing the business of the Bureau of the Public Debt?

Mr. STEED. Some of this item could be attributed to the fact that the debt has gone up. Most of it is in the item of reimbursement we make to the Federal Reserve Banks and to the commercial banks for various services they perform for the Treasury Department.

Mr. GROSS. But that deals with the Federal debt. What is the total appropriation for the operation of the Bureau of the Public Debt? What is the annual cost this one agency of the Government to administer what it does with respect to the Federal debt?

Mr. STEED. I think, with the approval of the supplemental, it will bring the total cost for this item for this year to \$58 million.

Mr. GROSS. Between \$58 million and \$60 million, is that correct?

Mr. STEED. That is correct.

Mr. GROSS. It seems to me the \$3 million which was just approved for culture could very well have been used to take care of the running expenses of the Bureau of the Public Debt. The public debt now is around \$370 billion. Is the interest alone on the debt about \$16 billion a year? What is the latest figure?

Mr. STEED. The interest on the public debt for the coming fiscal year is estimated to be \$17.3 billion.

Mr. GROSS. \$17.3 billion. It is going up fast. So is the cost of administering it. I can remember when that cost was down to around \$20 million. Does the gentleman remember that?

Mr. STEED. It has gone up \$300 million in the estimate since last January.

Mr. GROSS. Mr. Chairman, I yield back the remainder of my time.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

LEGISLATIVE BRANCH
HOUSE OF REPRESENTATIVES
COMPENSATION OF MEMBERS

Compensation of Members, \$1,975,000;

SALARIES, OFFICERS, AND EMPLOYEES

"Office of the Speaker", \$4,015;

POINT OF ORDER

Mr. GROSS. Mr. Chairman, I make a point of order against the language on page 23, lines 12, 13, and 14, on the ground that, as admitted by the committee, this contains moneys to be appropriated that have not been authorized by Congress.

The CHAIRMAN. The Chair will inquire: Does the gentleman's point of order refer to lines 12, 13, and 14?

Mr. GROSS. Lines 11, 12, 13, and 14.

The CHAIRMAN. Does the gentleman from Texas desire to be heard on the point of order?

Mr. MAHON. Mr. Chairman, the gentleman, I believe, does not seek to reduce funds for the Office of the Speaker, as shown on line 14. The gentleman is, I believe, only referring to the pay increase for the Speaker and other Members—the item on line 12.

Mr. GROSS. Very frankly, I do not know which one of these line items contains all the funds, so I am just trying to take as much as I can to be sure I get the funds covered. If the gentleman will tell me what line they are in I will amend my point of order, with the permission of the Chair.

Mr. MAHON. The funds which have not been authorized are included in line 12, in the \$1,975,000 figure.

Mr. GROSS. Those are the only funds that have not been authorized?

Mr. MAHON. Yes; that is the figure involved. A small portion of that has not been authorized.

The CHAIRMAN. Will the gentleman from Texas yield for a clarifying question on the part of the Chair? As the Chair reads this language it says, "for increased pay costs authorized by or pursuant to law." If the Chair understands language, this refers to a cost already authorized by and pursuant to law that is now in existence. Is that true?

Mr. MAHON. The Chair is correct.

The CHAIRMAN. The Chair is ready to rule.

Mr. GROSS. May I be heard, Mr. Chairman?

The CHAIRMAN. The gentleman from Iowa is recognized.

Mr. GROSS. The committee admits there are funds contained in line 12 that are not authorized by law.

Mr. MAHON. The \$19,835 included in line 12 has not been authorized. That is correct.

Mr. GROSS. You mean the \$1,975,000?

Mr. MAHON. No; \$19,835 has not been authorized. But it cannot be paid unless it is authorized. Otherwise, it would revert unused to the Treasury.

The CHAIRMAN. The Chair again is confused. The Chair sees no reference to a figure of \$19,835 in the bill or in the language referred to here.

Mr. MAHON. It is part of the figure of \$1,975,000.

The CHAIRMAN. Does the gentleman from Texas state to the Chair that of the amount of \$1,975,000 there is \$19,835 that is not authorized?

Mr. MAHON. \$19,835.

The CHAIRMAN. The Chair is still in a quandary because the language in line 7 says, "for increased pay costs authorized by or pursuant to law."

Mr. MAHON. Mr. Chairman, all compensation due by law to Members of Congress is authorized. If it is not authorized, it cannot be paid.

The CHAIRMAN. Yes.

Mr. MAHON. And this is for compensation for Members. Unless you go behind these figures it is clear that the whole sum would be authorized. What other sum Congress wishes to authorize can be authorized. It could be considerably above the \$1,975,000 because it is for the compensation of Members. If the figure is too high or in error, it is still authorized by law, because there is authorization for the payment of Members. Therefore, I have some doubt that the point of order lies against this. But the debate has disclosed the facts.

The CHAIRMAN. The Chair is constrained to hold that the gentleman's point of order is not well taken, because the money amount in line 12 cannot be used for any other purpose than increased pay costs authorized by or pursuant to law. Therefore, the gentleman's point of order is overruled.

Mr. GROSS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GROSS. What was the purpose of the bill which passed the House and is now in the hands of the Senate with no action taken upon it in that body? That was the authorization bill.

The CHAIRMAN. The Chair, of course, does not have that language before him and cannot answer the gentleman's question.

AMENDMENT OFFERED BY MR. HALL

Mr. HALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HALL: On page 23, line 12, strike "\$1,975,000" and insert "\$1,068,789".

Mr. HALL. Mr. Chairman, the purpose of this amendment is very simple.

This amendment simply deducts \$906,211, which is the amount of pay increase for ourselves in this body and on which we did not vote at any time. It does not apply to the 2 months which have already been paid.

In other words, Mr. Chairman, this would deduct that amount of this appropriation for our pay increase, only for the months of May and June. Assuming there is no forward funding in this portion of the \$1,975,000 that pertains to the pay of the Members of the House of Representatives, by taking one-sixth of \$12,500, times the number of Members in this House, one arrives at this figure. Deducting it from the \$1,975,000, we have the remainder of \$1,068,789. It does not affect the pay of the judiciary or the executive branches.

The entire purpose of this amendment is clear cut. It is to avoid any more of the "sky being the limit" philosophy of raising our own pay. It is to get back in the groove and on the right track with the general belt tightening, the general economy and cuts that we are asking other branches, departments and people to make. It is starting at the epitome and establishing a top in priority, where economy should begin and that is with ourselves. It is an attempt to rescind, in the hope that we can continue to rectify, when the next appropriation act affecting legislation of the pay of the Members themselves in fiscal year 1970 occurs, instead of the "Valentine's massacre" which I referred to on the floor of this House once before, as a massacre of the taxpayers when it was known that this pay raise which was brought on by this Commission would become effective on February 11, 1969. It did not. It became effective March 1, 1969. We have been paid for that and for the month of April, and this amendment calls for no retroactivity or payback of the Members.

This would simply deduct that amount which will be paid for in May and June, the balance of this fiscal year 1969.

Mr. Chairman, I hope the future good judgment of the Members of the House will preclude further payment in fiscal year 1970. It is that simple.

I urge support from those of you who have received many letters demeaning you for allowing a pay increase to go through without asserting or working the will of the House and voting ourselves in this matter.

Mr. GROSS. Mr. Chairman, I am pleased that my friend from Missouri has offered this amendment. We have long been joined in the fight against the unconscionable pay increase for Members of Congress, the judiciary, and the executive branch of Government.

It is most unfortunate that under the law it is impossible to get at the pay increases for others, some of whose paychecks were increased by an outrageous 70 percent.

Here is the opportunity by supporting the amendment to rectify part of the mistake that was made when the pay increase bill was slipped through the backdoor of the House while the Members

were conveniently on vacation last February.

And the Members of the House should be on notice, that unless the amendment of the gentleman from Missouri is adopted, a vote for this supplemental appropriation will be a vote for the first time by the Members of the House to give themselves an unconscionable 41-percent increase.

Mr. MAHON. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, there are a variety of views in the House with respect to the pay raise which was made effective for members of the judicial and executive and legislative branches of the Government. Some of us thought that a pay raise, while clearly justifiable in some respects was not timely at the moment it was put into effect and that the amount of the raise was too great.

I was among the group opposing the pay raise, but the pay raise has been enacted into law, and it is the law of the land. It has been in effect since March 1.

If this law is to be changed, then it is a matter for the appropriate committee of the Congress to consider, and it would be very inappropriate through this procedure to undertake to nullify the law with regard to one of the branches of the Government involving the pay raise.

So, regardless of one's original views as to the wisdom of the pay raise, to me it is clearly out of order at this time to undertake on an appropriation bill to revise or to modify the law with respect to the pay raise. The proper procedure would be through a legislative bill covering the entire Government and worked out by the Committee on Post Office and Civil Service and presented to the House.

There was not a direct vote on the pay raise legislation this year. There was a rollcall vote in 1967 when the Commission was authorized to set up a pay raise scale for officials of the Government. I was among those who voted against that proposal but it became the law.

As I stated, there was no direct vote on the pay raise issue this year but there was a rollcall vote in regard to the issue. Prior to the Lincoln Day recess it was proposed that the House not recess without taking a vote on the issue of the pay raise. I was among those voting not to adjourn for the recess because adjournment would have precluded any chance for a vote on the issue. I voted not to adjourn without taking action on the pay raise issue but a majority vote was to the contrary. This vote related to the issue but was, of course, not a direct vote on the issue. The debate in the House on February 5 just prior to the vote on adjournment made clear that the pay raise was the issue.

Mr. ALBERT. Mr. Chairman, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Oklahoma.
